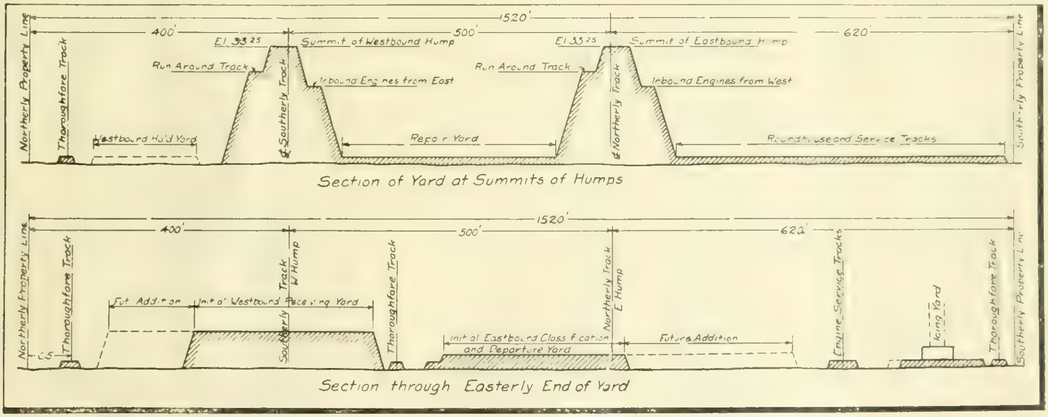
Canadian Railway and Marine World.

January, 1913.

Canadian Pacific Railway Clearing Yard at North Transcona, Man.

The C.P.R. has in course of construction at North Transcona, 6 miles east of Winnipeg, what will probably be one of the largest and most complete clearing yards on the continent, having an ultimate capacity when developed to the extent laid down in the present layout, of over 12,000 cars. The accompanying illustrations show the layout, profile and cross sections.

The yards are situated a short distance beyond the point where the Molson cut off branches from the main line via East Selkirk at Whittier Jct., these two lines forming the west and east boundary lines of the property respectively, the Canadian Northern Ry. Birds Hill branch crossing the Molson line at the eastern extremity of the yard. The grounds lie almost due east and west. Along the north and south sides there is a thoroughfare track for through freight traffic, clear of the several yards.



Cross Sections of the Yard Through the Humps and Through the Easterly End of the Yard.

The yards are divided into two grand divisions—the major and the minor yards. The major yards, consisting of the eastbound receiving yard, the westbound classification and departure yard, the eastbound classification and departure yard, and the westbound receiving yard, are each large yards symmetrically arranged about a central line through the summit of the humps, facilitating access to all parts of the grounds. The minor yards, consisting of the various auxiliary yards that are necessary to a terminal, such as hold yard, caboose yards, etc., are distributed to excellent advantage in the spaces between the four major yards, making a layout that is remarkably compact.

The yards have been designed to relieve the company's large Winnipeg yards, which are said to be the largest in the world, but which, from the rapidly increasing traffic, principally in grain, have become so overcrowded as to demand increased facilities. The ultimate development not being required at once, it is planned to construct only about half the layout proposed, the part at present under construction being shown in the three section plan of the grounds, in full lines; the ultimate expansion is indicated by the dotted lines. It will be noted that the layout is such that the part under construction at present is compact, and the future construction will add to the yard in such a manner as to be an outward extension, and not an internal rearrangement, the additions being along the outer edge of the several major yards.

Traffic from the west will come out from Winnipeg through Whittier Jct. and to the yards, over the main line, branching off into the yards at their west end, three tracks leading in. Parallel to these entry tracks, it is the ultimate intention to construct a 16 track grain yard, with a capacity for 730 cars to form part of the eastbound hold yard. The entry tracks lead into the eastbound receiving yard, which will eventually contain 4 tracks for 100 cars and 26 tracks for 65 cars, a total capacity of 2,090 cars. Only the northern portion of the yard is to be constructed at present, giving a capacity of 1,440 cars. From this yard, a double ladder converges to a double track over the eastbound hump to the eastbound classification and departure yard, which will have 8 tracks for 100 cars and 32 tracks for 65 cars, a total capacity of 2,880 cars. The initial construction only calls for a capacity of 1,440 cars. The eastbound classification and departure yard converges on double ladders out to the Molson line, and thence east, striking the main line at Molson. The Molson line is a cut off from the main line, practically an air line between Winnipeg and Molson on the original main line, whereas the latter makes a wide detour around by East Selkirk.

The westbound receiving yard, entered from the Molson line to the north of the eastbound classification and departure yard, is to have 4 tracks for 100 cars, and 26 tracks for 65 cars, or a total capacity of 2,090 cars, this yard being almost identical in layout, and the same in capacity as the similar yard for eastbound traffic. The initial development is to be for 1,440 cars as in the other yards. This yard will lead over a double track hump through a double ladder, leading out over the hump into the westbound classification and departure yard, which is to have 4 tracks for 100 cars, and 36 tracks for 65 cars, giving a capacity of 2,740 cars. The present layout calls for 1,440 cars capacity, making the initial development of all the major yards the same. The westbound classification and departure yard leads out to the north of the grain yard, to the main line, through Whittier Jct. to Winnipeg.

At a central point, opposite the humps, the plan calls ultimately for two roundhouses of 55 stalls each. At present, only 44 stalls of the easterly one is under construction. These roundhouses are to be of the latest C.P.R. standard construction. The outside diameter will be 425 ft., and in the centre there will be a 100 ft. turntable. Between the two roundhouses, which back up to each other, with an intervening space, there will be the usual roundhouse auxiliary buildings, including power house, small machine shop, and storehouse and office building. There will also be a 100,000 gal. tank between the two roundhouses. It is the intention to connect the two roundhouses by means of a through track between the buildings, through the rear walls. The layout of the two roundhouses as regards approach arrangements and service track facilities is to be identically the same, one lying to the east and the other to the west. The immediate yards under construction belong to the easterly roundhouse.

From the roundhouse will be two tracks, branching out to a series of service tracks. Two pairs of parallel tracks will run over cinder pits. To the east of that again will be a coaling pocket, beyond which will be two inspection pits, each with two pairs of tracks. To the south of this point will be a sand house. Beyond this point, the service tracks will converge to a single track, Paralleling this converging track will be an

Canadian Pacific Railway Clearing Yard at North Transcona, Man., laid out for a Capacity of over 12,000 cars.

located, there is to be a 225 car transfer yard to contain 4 tracks each side of a central platform. The present development only plans to lay 4 of these 8 tracks, giving a capacity of 125 cars. Near the east end of this yard is a double track crane.

An icing yard, similar in many ways to the transfer yard, will be located immediately to the south of the eastbound classification and departure yard, close to the southerly thoroughfare track. This yard will contain 6 tracks, 3 on each side of a 3,000 ton ice house, to have a capacity of 200 cars. The initial development is to be 4 tracks, with a capacity of 140 cars.

A temporary eastbound hold yard will be located in the undeveloped section of the eastbound classification and departure yard, having 5 tracks with a capacity of 325 cars. Part of the main eastbound hold yard will be to the south of the southerly thoroughfare track, containing 8 tracks with a capacity of 430 cars. This, with the grain yard, is to be completed later.

The two caboose yards, one for eastbound and the other for westbound traffic, will be very conveniently located, between the adjacent receiving and the classification and departure yards, the tracks at an angle to the main direction of movement, so that the through tracks will form the ladders for the short tracks of the caboose yards

Canadian Northern Railway Locomotive and Car Shops at Winnipeg.

By Frederick H. Moody, B.A. Sc.

The last issue of Canadian Railway and Marine World contained a very full description of the C.N.R.'s locomotive department at its Fort Rouge shops, Winnipeg. This present article completes the description of the entire shops:—

CAR DEPARTMENT.

The transfer table running east and west across the shop property forms the divisional line between the locomotive and car departments, and is the means by which the passenger cars are placed on the tracks running into the passenger car shop from the north, the cars coming on the transfer table from either the north or south over the through running track along the east side of the grounds. There are also five approach tracks into the car shop from the south, which allows of cars being placed in shop independent of the transfer table.

The General Car Foreman is A. McCowan, whose office is located in a central position at the foot of the next street south of the Superintendent of Rolling Stock's office, convenient to all parts of the car department buildings and grounds. The buildings in the car department group comprise the passenger car shop, freight car shop and planing mill, in addition to the several small buildings at the south end of the grounds, made use of by those working on the freight car repair tracks. From the nature and greater volume of the work handled, and also from the fact that the greater portion of the work can be handled in the open, more than two thirds of the shop grounds are occupied by the car department, as a survey of fig. 1 will indicate.

THE PASSENGER CAR SHOP, figs. 17 and 18, T. Hammill, Foreman, is the newest building of the group, the present freight car shop having until within a couple of years ago served the double duties of freight and passenger car shop. It is a brick structure, similar in general design to those of the locomotive department, 201 ft. long from north to south, and 154 ft. wide. In width, there are seven 22 ft. bays, all but the east having a through track. Over all but the outer bays there is a skylight 132 by 12 ft., located centrally over the roof, which slopes from the centre, north and south, from a clear height inside of 27 ft., to one of 20 ft. at the end walls. There are five rows of steel columns down the length of the building, built up of two 8 in. channels and two 10 by ¼ in. plates supporting 9 in. cross I beams, between which are 20 in. I beams carrying the roof stringers. The steel columns are carried on step concrete footings, 6½ ft. deep and 5 ft. square at the base, the wall abutments at the corresponding points extending to the same depth, with a width at base of 4 ft. 5 ins., and a length of 10 ft. 2 ins.

The shop floor is planked throughout, with the surface skimmed level with the top of the rail, and resting on 4 by 6 in. sleepers at 4 ft. centres. At a distance of 2¼ ft. each side of the rails, there is embedded a 12 by 12 in. cedar jacking beam, centering directly under the side sills of cars for jacking up.

As fig. 18 shows, there is a convenient system of movable platforms attached to posts braced from the shop columns, for convenience in working on the sides of the cars. Every track in the shop has a similar set along each side.

The full width of a bay along the east side of the shop, there has just been completed a gallery at a height of about 10 ft., carried on 12 in. I beams from column to column, and across from the columns to the east wall. The gallery is approached from either end by stairs.

Commencing from the south, along the east wall of the shop, there is first a walled in room for the lavatory. Along the outside of the north wall of this room, one of the gallery stairs is located, and backing against these stairs is a sash rack, with a similar rack parallel to it a few feet further along. Between these two sash racks are five benches for finishing work, such as pumice stoning and varnishing the sashes, which on completion are slipped into the racks mentioned. This section of the shop

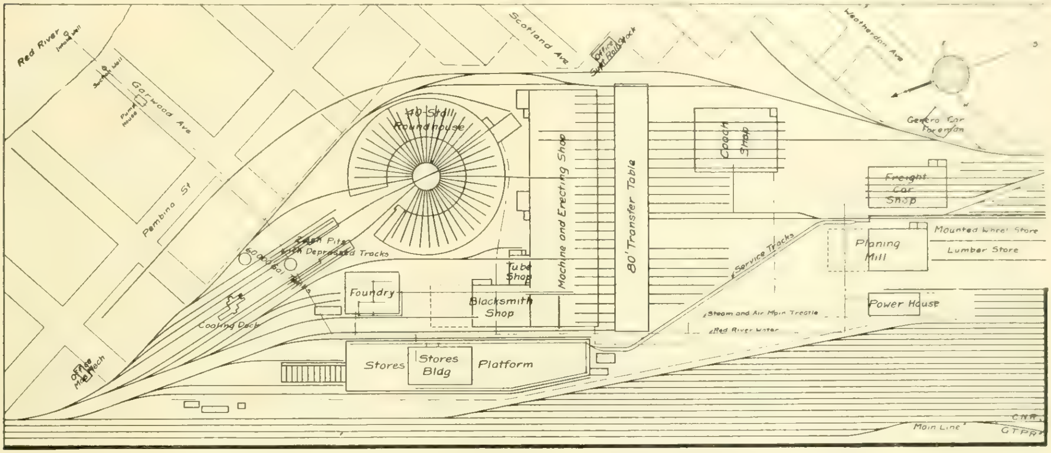

Fig. 1. Section 1.—Layout of C.N.R. Fort Rouge Shops—North End.

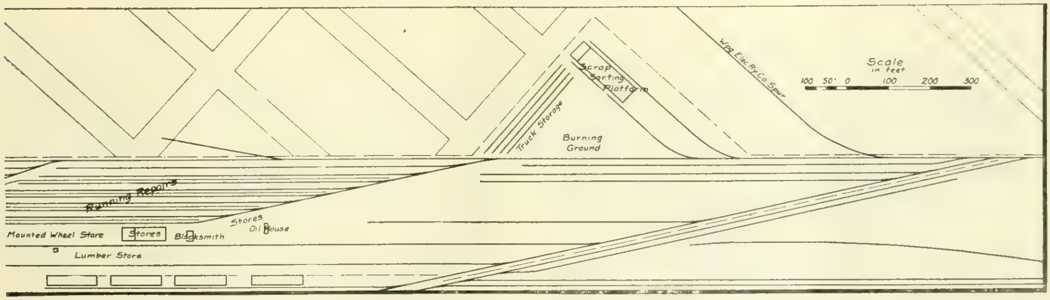

Fig. 1. Section 2.—Layout of C.N.R. Fort Rouge Shops—South End.

along to the side door has a cement floor, with a moulded gutter along the wall for draining off the cleaning water.

North of the sash finishing section is the glazers' department, provided with a 20 compartment glass rack, carrying all sizes of standard glass. One end of the glass rack forms a trimming table. Along towards the door against the wall there is a double 8 by 3½ ft. vat for washing and scouring window sashes, doors, etc., preparatory to pumice stoning and varnishing. This vat has steam and water connections for providing warm scouring water. The vat adjoining, beside the door, is a tank 2½ by 3½ ft., and is used for dyeing cushions, covers, and such other material that requires renovating. This vat is also provided with hot and cold water connections.

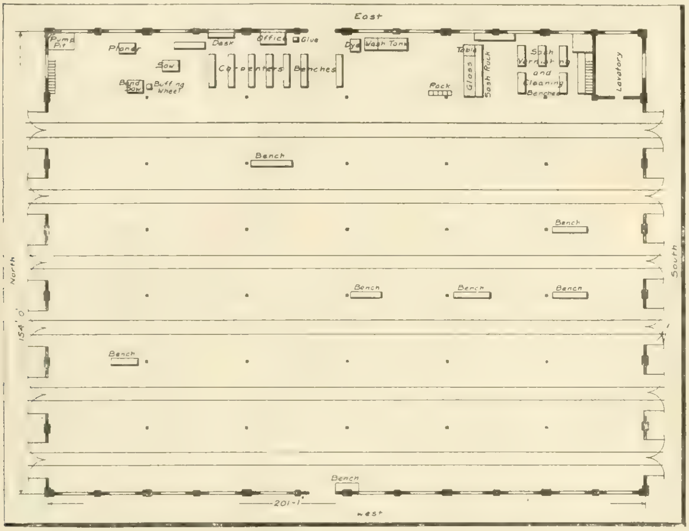

Fig. 17.—Interior Layout and Machine Distribution in Passenger Car Shop.

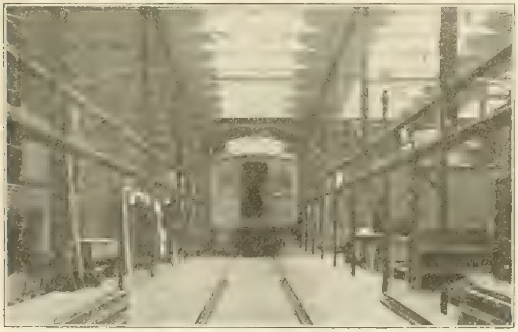

Fig. 18.—Arrangement of Track in Passenger Car Shop.

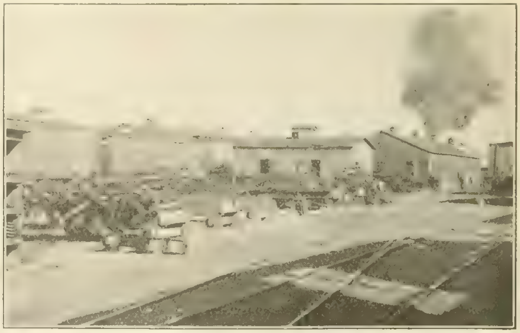

Fig. 19.—Freight Car Repair Track Buildings and Stores.

The foreman's office adjoins the side door of the building, and opposite this office is a row of seven carpenters' benches for car work. The passenger car shop woodworking department is at the north end, and contains a circular saw, planer, bandsaw, and buffing wheel, all operated from shafting below the floor, driven by a 15 h.p. motor, which is also under the floor.

At different points in the shop, between the tracks, there are permanent benches for carpenter and pipe work, and in addition there are several movable benches, which can be moved about to the most convenient point with regard to the work. A service track runs across the shop at the centre from the side door, over which the material from the stock piles and stores department can be brought into the shop.

The upholstering department occupies the greater portion of the new gallery along the east side, this department having been recently moved from a smaller gallery in a corner of the freight car shop, which, as previously mentioned, was formerly the passenger car shop. The new location provides much needed additional space. The department is provided with all the usual car upholstering shop equipment, and is located in a good position for the convenient handling of the work.

The north end of the gallery, with a separate stairway leading thereto, houses the dipping department. Owing to the nature of the work, that portion is provided with a cement floor, which will hold the drippings. This department has a steam heated lacquer oven 6 ft. long, 2½ ft. deep, and 4 ft. high; an oxidizing barrel; a 20 gal. jar of spent acid for preliminary pickling of new brass; three compartment washing tank, fitted with steam and water connections; 5 by 3 ft. lye vat; 20 gal. acid jar; and a 30 gal. potash jar. There are also work benches and a deep storage rack for finished and unfinished work.

The heating system of the whole shop corresponds to that of the other shops, there being 16 coils of 1½ in. pipe, banked along all sides between the doors and windows. Live steam is brought to the passenger car shop through a 6 in. main, paralleling that to the locomotive shop part of the way, and branching off at right angles to the passenger car shop as shown in fig. 1, coming into the latter at the southwest corner of the building. The condensation from the building heating system drains into a vacuum pump in a pit at the northeast corner of the building, the water being elevated thereby to a storage tank in a skylight, from which it is drawn off as desired for the washing and scouring requirements. Air is supplied the shop through a 2 in. main from the power house, paralleling the steam main.

The possibility of passenger car shop expansion is well shown by an inspection of the grounds plan, fig. 1. An extension to three times its present size is possible by knocking out the west wall and extending in that direction. Such a course is at present in contemplation.

THE FREIGHT CAR SHOP, T. A. Nelson, Foreman, to the south of the passenger car shop, as will be noted in the plan, fig. 1, is 192 by 100 ft., similar in design in most particulars to the passenger car shop, the freight car shop having served as the passenger car shop before the latter was constructed, as previously noted. Fig. 20 is a plan of the shop, and figs. 21 and 22, views along the south and east walls respectively, from the cab department in the southeast corner of the building.

There are three longitudinal bays in the shop, each 33 ft. 4 ins. wide, down the central one of which there are two tracks leading in from the north of the building, and one in each of the side bays, alongside the bay dividing walls, leaving a clear space along the side walls of the building for the machinery and work benches.

The walls and columns are carried on step footings at a depth of 6 ft., the bottom step of those at the wall being 4 ft. 8 ins. wide, and for the columns, 5 ft. square, of concrete. The brick walls are 16 ins. thick, and contain windows of ample proportions to give a well lighted interior, in conjunction with six cross skylights in size, 48 by 12 ft., located at 24 ft. centres, centrally in each of the 8 sections into which the shop is divided, excepting the end ones.

The roof columns are of steel, built up of two 8 in. channels and two 10 by ¼ in. plates, the clear height under the centre bay cross beams being 22 ft., the side bay beams sloping off to a height of 20 ft. The cross beams are 20 in. channels, on which rest the roof stringers. The slope of the roof is uniform, from the centre over the middle bay to the outer edge of the building.

The store room for the car department is in the small building adjoining the shop, at the southeast corner, the structure having originally been intended for the fan room, when the original intention had been to have the shops air heated. Adjoining this building, in a room of similar size, is located the lavatory, with the usual conveniences.

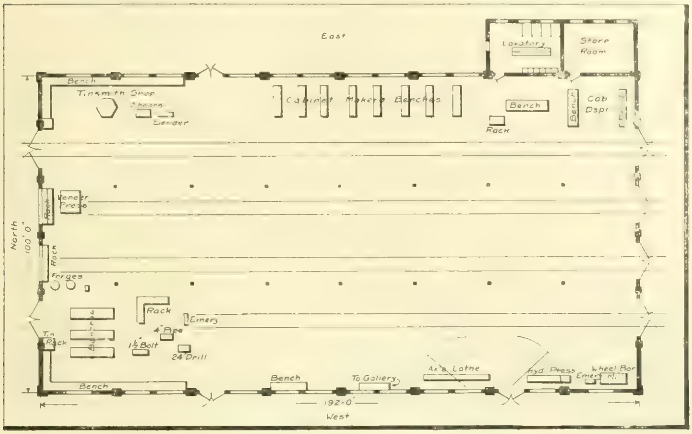

Fig. 20.—Interior Arrangement of Freight Car Shop.

The cab department occupies the southeast corner of the building. All the cabs now made on the C.N.R. are standard in design, and the parts, as made up in the mill, are assembled here into the completed cabs, which are stored just outside the shop, along the south boundary fence of the grounds, where they are conveniently located for loading on flat cars on the through running track, for removal to divisional points. The benches in the cab department are for fitting, one cab at a time being assembled in the space between these two benches.

Fig. 21.—South Side of Freight Car Shop.

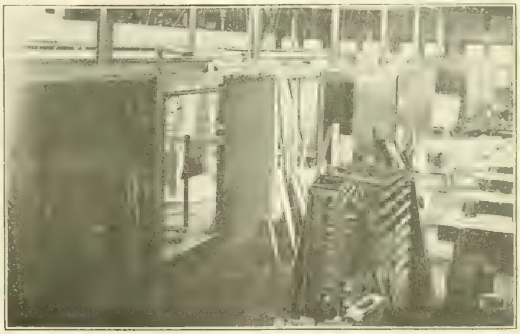

Fig. 22.—East Side of Freight Car Shop.

As a reminder of the time when the passenger car work was also handled in this shop, there is a row of 8 cabinet makers' benches along the east wall, where all the passenger car cabinet work is still handled, owing to lack of space in the passenger car shop. These benches are shown along the right edge of fig. 22, the rack in the foreground being for the storage of sash, etc., while undergoing refinishing by the cabinet makers. The work is brought from the passenger car shop and returned on completion.

Further along the east wall of the shop, in the northeast corner of the building, is the tinsmith shop, where all the tinwork for both the car and locomotive departments is handled. The larger tools here found include shears and sheet bender, and on the edges of the hexagonal table shown are the smaller tinworking tools to be found in well equipped shops. All repairs to such parts as headlights, etc., are here handled

In the northwest corner of the building is the car pipe fitting department, equipped with a 4 in. pipe machine, a 24 in. drill, 1½ in. bolt machine and an emery wheel. On the benches in the department are the various pipe tools required, and the benches are also fitted with pipe vises and ordinary vises. There are also two forge fires and an anvil for light forgings and bent pipe work. The rack, centrally situated in the department, carries the necessary pipe stock.

Over this northwest section of the shop there is a small gallery to be seen in the left background in fig. 22, and approached by a stairway along the side of the west wall. This gallery formerly contained the upholstering department, which has since been moved to the new gallery in the passenger car shop as mentioned before. Its future use will probably be for storage purposes.

The wheel and axle department occupies the whole of the southwest corner of the shop, as shown in fig. 20 and the foreground of fig. 21. To the north of the entry door in the west wall there is an axle lathe, and on the other side of the doorway an hydraulic wheel press. Next to this is an emery wheel, and in the corner a car wheel boring mill. This equipment, provided with the two jib cranes, is in a position to handle to good advantage large quantities of wheels, both for repair work and renewals.

The mounted wheel storage tracks, of which there are three, about 300 ft. long, are located to the south of the mill, which is directly to the west of the freight car shop. Wheels from and to these tracks pass into the freight car shop through the side door, the practice being to keep one track for mounted wheels that need renewal, and the other two for wheels that are ready for shipment or use in the shop. The convenient location of the wheel storage tracks to the freight car shop is apparent. A large part of the wheel renewal work is done directly, without the use of the wheel storage tracks. The car carrying the mounted wheels to the freight car shop from outside points on the system, for renewal, is brought up alongside the freight car side door on the track running down through the yards, where a yard crane, on a track adjoining, lifts them off to the planked space outside the door, and they can then be run into the shop without first placing in the storage space.

The freight car shop, on its four tracks, only has a capacity of about 15 cars, mostly for heavy repairs, rebuilding, and new rolling stock, such as cabooses, which the company builds in its own shops. The majority of the repairs are handled in the running repair, or rip tracks, directly to the south of the freight car shop. Here there are 8 tracks about 1,200 ft. long. These yards are under the charge of P. A. Musgrave, Foreman.

By a system devised by Mr. McGowan, the rip tracks are divided into sections, with different nature of repairs allocated to each. The nature of the repairs is divided into three general groups—heavy, medium and light—the car inspector in the receiving yards looking over the cars as they come into the yards, and labelling them with cards bearing in large red letters, H, M, or L, the yard locomotive switching the cars on their respective tracks at night, everything being in readiness on the commencement of work in the morning.

Between every second rip track there is a narrow gauge service track, similar to that in use in the locomotive department. These service tracks lead on to a common ladder at the north end, passing along between the freight car shop and mill, crossing over the yard track between the buildings by means of two small turntables, the service track being double tracked from that point across the space intervening between the locomotive and car departments, to the stores building, from which all the stores required by the car department are brought across with the least effort, and placed where required in the rip track yard.

Along the south side of the rip track yard are the various buildings belonging to that section of the work. This includes a combined stores and office building, blacksmith shop and oil house, as shown in fig. 19. The stores building carries all the local stores for the rip tracks, drawing from the main stores. The blacksmith shop is, of course, quite small, and handles only light work, such as repairing bent truss rods, etc. Along the ladder track in front of the oil house, as shown in the foreground in fig. 19, there are racks for carrying the larger car stores, including brake beams, and similar members. Reclaimed parts from the scrap sorting yard are also brought here if they appear to be within easy repair, and put in shape by the local blacksmith.

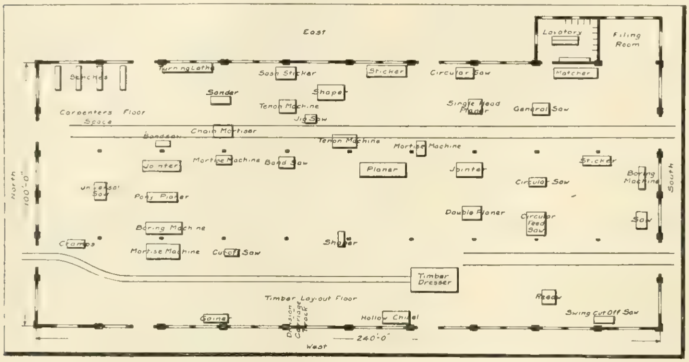

Fig. 23.—Interior Layout and New Machine Distribution in Mill.

All the wrecked cars and scrap car stock of all kinds, as brought in from the line on flat cars, is sorted over in a special yard at the southerly end of the grounds. Two tracks lead into this section from the easterly running track, on the southern one of which the flat cars carrying the wrecked material are placed. Between the two tracks is a platform at the car level, on which the scrap material is unloaded from the cars, and sorted there, the scrap parts being dismembered at the same time. On the track at the other side of the platform there are spotted several cars on which the different materials are loaded as sorted, each separate material on its own car, simplifying the operation of sorting scrap, and making it unnecessary to rehandle after sorting. In a small building at the north end of the platform are housed a bolt threader and shears for reclaiming bolts and cutting up scrap.

To the west of the platform, on an open piece of ground, is located the burning ground, where wrecked parts of cars are burnt away from iron members which it is desired to separate for the scrap piles. To the north of this are four tracks, on which are stored the trucks reclaimed from wrecks, the missing members for which are here fitted from less serviceable trucks, a considerable store being accumulated from time to time, which prove of value in car repair work, and in the building of certain new cars, such as cabooses.

THE PLANING MILL, J. E. M. Firby, Foreman, is located in the building directly to the west of the freight car shop, as shown in fig. 1. In common with the other shops of the plant, it has become so overcrowded that an extensive addition has recently been added. The plan of the shop, as extended with the proposed arrangement of the machine equipment, is shown in fig. 23; the interior arrangement prior to the addition, is to be seen in fig. 24, in which the crowded nature of the interior is shown.

The construction of the shop is identical in all details with the blacksmith shop, a description of which was given earlier, and to which the reader is referred. The building, as extended, is 240 by 100 ft., the addition being to the north, as shown in fig. 1. While this addition increases the length 96½ ft., there is still ample room for an increase in length of more than double the new length.

The interior arrangement of the machine tool equipment has been well thought out. It will be observed that the heavier equipment is along the west side of the shop and the lighter along the east side, with the machinery arranged in each case to form a steady forward movement from the south to the north end of the shop. Take, for instance, the path of car sills as they enter from the south; after laying out just inside the south door on the west side, they pass first to the swing cut off saw, from which, on a roller carriage track, they pass to the hollow chisel and the gainer, coming out completed as far as the principal operations are concerned.

Near the entry door there is a resaw, beyond which there is a timber dresser, fed from a standard gauge track leading in from the south end of the shop from the timber storage piles, located to the south of the shop in the position shown in fig. 1. The finished lumber is drawn off on a service track leading out from the north end of the building.

The other machinery in the building is arranged in the best possible manner to give a good layout. The balance of the equipment is as follows: Shaper, cut off saw, mortise machine, veneer cramps, boring machine, pony planer, universal saw, jointer, band saw, lathe, sander, chain mortiser, mortise machine, band saw, jig saw, tenon machine, sash sticker, shaper tenon machine, planer, mortise machine, sticker, circular saw, single head planer, jointer, double planer, circular feed saw, circular saw, general saw, matcher, sticker, boring machine and saw. These are given in the order in which they appear, proceeding along the west side from the south, and thence around the shop. In the southeast corner of the shop is a small building adjoining, where the saws are kept in repair, the room being equipped with various saw sets and filing machines. The pattern shop is arranged in a gallery in the northeast corner of the shop.

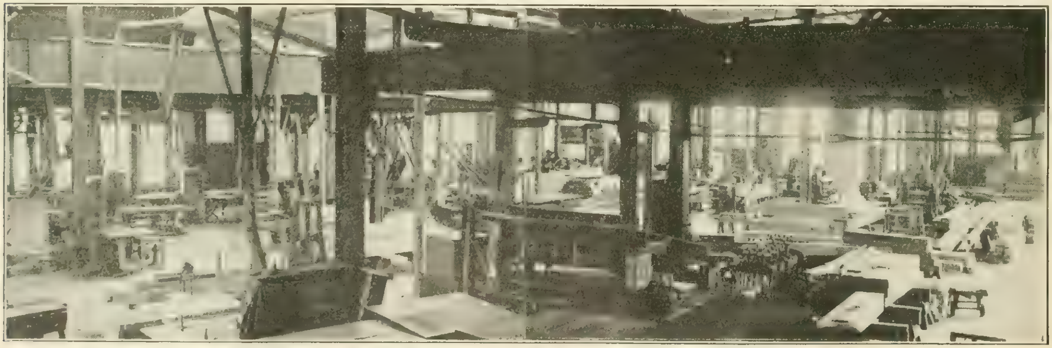

Fig 24.—Interior of Mill, showing Old Arrangement.

POWER HOUSE.

This is the building directly to the west of the planing mill, and is in charge of J. A. Fraser, Chief Engineer, Power House. It is 162½ ft. by 54 ft. 4 ins., divided into two separate rooms, the front one of which, contains the power units, and the other, fig 25, contains the boilers. This latter room has just had an addition of 35 ft. 2 ins. added for a further power reserve.

The building is of the same general design as all the others of the group, being of a brick construction throughout, except that its narrowness makes unnecessary the use of steel columns and the division of the building into bays. The walls are all carried on step footings at a depth of 6 ft., some of which are 4 ft. 11 ins. wide, and the others 5 ft. 11 ins., the latter for the outer wall abutments, and the other for the dividing wall.

Electrical power is used entirely throughout the plant, and is obtained from the Winnipeg Electric Ry. Co., which generates it at a hydro-electric development at Lac du Bonnet on the Winnipeg river. The power is delivered at 2,200 volt, 60 cycle, 3 phase alternating current to the power house of the railway shops, where it has to be transformed for general use in the shops.

Along the east wall of the power house are three 60 cycle, 150 k.w. transformers, that step the power down to 600 volts for transmission throughout the shops for the group and constant speed machine drives. Adjoining this battery of transformers is a 19 k.w. potential regulator. Along the north wall is a motor generator set, with a capacity of 80 k.w., receiving power in the induction motor end direct from the power line at 2,200 volts a.c., and delivering the same at 250 volts, d.c., for transmission through the shops for the variable speed individual drives. This motor generator set is shortly to be duplicated, as the increased demands on the single set are exceeding the capacity. The electrical equipment is all controlled from the 7 panel switchboard to the rear in fig. 25.

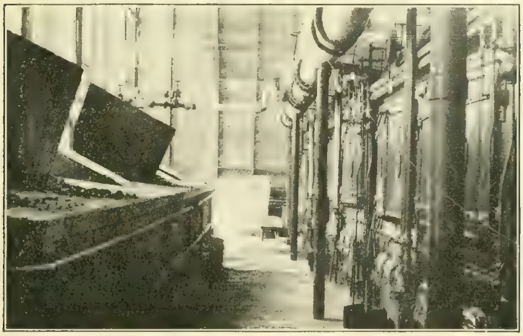

Fig. 25—Interior of Boiler Room.

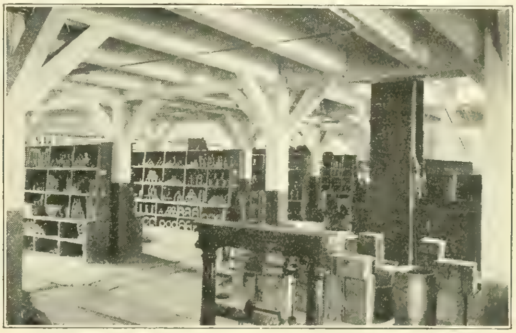

Fig. 26—Interior of Stores Building.

In rear of the motor generator set is located a 20x30x17x26x28 in. air compressor, handling 2,000 ft. of free air per minute, and delivering it at a pressure of about 110 lbs. This compressor being now overtaxed has made necessary the addition of a similar unit, which will shortly be added in an addition to the north end. The only other equipment in the compressor room, other than the oil tanks, are two small fan engines on a platform along the dividing wall of the building, driving the fans in the boiler room.

The long room to the rear of the compressor room, shown in fig. 25, is the boiler room. In it are six 250 h.p. Canada water tube boilers, and a seventh is being installed in the boiler room addition at the far end of the room, which it will be noticed in fig. 25, has only a temporary wall. Each boiler connects through a looped 7 in. pipe from the top of the boiler to a 15 in. header near the top front of the boiler, as in fig. 25, which leads into the compressor room, the connections to the other buildings leading out along the elevated trestlework before mentioned, except the one to the mill and freight car shop, which is to be seen to the rear in fig. 25.

The coal storage for the boilers is in the bins shown ot the left in fig. 25, coal being brought to the building on the track along its east side, as shown in fig. 1, being thrown into the covered bins along the inside of the building, in no way exposing the interior to the cold of the outside. The bins are about 10 ft. deep and are 6 ft. high, holding about 100 tons. In fig. 24, it will be noticed that there are the usual suction pipes for drawing off the shavings from the various machines. These pipes all lead to a suction fan on the power house side of the mill, the pipe from there slanting up at an angle of about 45 degrees to a point over the coal bins, where the shavings drop into a suspended bin, from which they are fired into the first two boilers in the boiler room. These two boilers are equipped for firing both the shavings and coal.

Forced draft is employed, with two 12 ft. fans on a platform at the north end of the boiler room, driven by the two fan engines mentioned before, discharging through a short 6 ft. smoke jack through the roof over top. Back of the boilers, and above the common smoke header, there are two Green fuel economizers with a combined capacity of about 1,000 h.p., so arranged that they can be by passed from the smoke header, causing the smoke draft to pass through at will.

There are two supplies of water—city and Red river. The Red river supply is obtained from a pumping station, shown in fig. 1, at the foot of Garwood avenue on the edge of the Red river. This station is to be increased by the addition of two 100 h.p. suction gas pumps, with a 24 hr. capacity each of 1,000,000 gals. Both supplies are connected together at the power house to the water system, but with drainage joints to prevent contamination of the city water by the impure Red river water.

The boiler feed water passes through a 1,000 h.p. Cochrane feed water heater, and is forced into the boiler by two 6 x 6 x 12 in. feed pumps. There are two auxiliary pumps of similar size for fire purposes, but so connected that in the event of necessity they can be connected for boiler feeding.

The exhaust from the compressor has two paths—one straight out to the atmosphere, and the other through the feed water heater. Under normal conditions, the feed is heated to a temperature of about 180 degs.

The drainage from the heating system of the freight car shop and the mill, returns to the power house, where it is handled by a 6 x 6 x 12 in. pump, and emptied into the feed water heater for delivery to the boiler. Steam traps all deliver to this pump for the same purpose.

STORES DEPARTMENT.

The general stores department for all the company's lines west of Port Arthur, Ont., is located in the Fort Rouge shop grounds, northwest of the machine and erecting shop. The General Storekeeper is A. E. Cox. The building is of brick, 150 by 100 ft., and has two stories and basement. It stands in the centre of a long, narrow platform, 575 by 175 ft., at car level, the main floor of the building being at the same level. At the southerly end of the building are the stores department offices, behind which on the main floor is a system of shelving for the storage of the medium weight stores, the upper story being similarly arranged for light material, and the basement for heavy stock that must be kept under cover, both reached by a freight elevator. The interior arrangement of the building is well planned for convenience. Down the centre and along the sides are main alleys from end to end; at right angles to these main channels are side alleys, on each side of which have been built up tiers of bins, which contain the stores, each in its separate compartment, as shown in fig. 26.

Rough stores are kept on the long platform to the north and south of the building, the platform being divided off into streets, crosswise and lengthwise, by white painted marking lines. The rough stores are thus as easily located and arranged as those in the building. Along both edges and the ends of the platform are service tracks, connecting the building with all parts of the platform, and with a double track line running from the platform diagonally across the grounds to the car department buildings. Along both sides of the platform there are also yard tracks, over which the stores are brought in cars, from the point of manufacture or assembly in the grounds, or from outside points. On the track to the west of the platform is usually spotted the stores supply car, which is to be taken out on the system for the replenishing of local stores at division points.

LOCOMOTIVE HOUSE.

To the north of the machine and erecting shop there is a 40 stall roundhouse, which handles all the motive power in and out of Winnipeg, taxing it to the limit. This is shortly to be relieved by the building of another across the Red river in the new east yards. The Roundhouse Foreman is J. H. McAlpine. The roundhouse is of a brick construction, and is divided into four sections, with 10 stalls in each. The stall at the northwesterly end is partitioned off for the office of the roundhouse foreman, the enginemen's room, oil room and machine shop. The machine shop only con-

[illegible] of the close proximity to the main shop, with which it is connected by a through track which enters the machine shop in the driving wheel and driving box departments. As these are the parts that have greatest need of repair between shoppings, the arrangement is remarkably convenient.

The roundhouse is entered from the north through a 70 ft. turntable equipped with impelling tractor. The pits under each track are concrete, the floor of each sloping to the rear, connecting with the drain. The [illegible] the pit, are em[illegible]. Over each pit is [illegible]

[illegible] driving wheel drop [illegible] trucks there [illegible] All these drop pits are hydraulic, with a full depth drop, non telescopic.

The heating system is provided for by five 75 h.p. boilers in an adjoining building. [illegible] around the outside of the roundhouse near [illegible] diminishing in size to the two extremities. At each pit an 18 in. branch comes down the outer wall and under the floor, discharging into the end of the pit. For [illegible] heating system for the heating of the two [illegible]

[illegible] roundhouse are three rows [illegible] roof being branched down [illegible] f these posts between each [illegible] an elaborate boiler washing [illegible] olumns next the entry doors. [illegible] In addition, there [illegible]

No capital issue has been made during the year.

On June 12 last special meetings of the various classes of security holders were held, at which resolutions agreeing to the amendment of your charter and confirming the agreement between your company and the [illegible] were passed. The C.P.R. shareholders at their general meeting on Oct. 2 also gave their sanction. The lease has accordingly [illegible] securities will be issued in exchange for those now existing

[illegible] receipts per mile of line operated were [illegible] from operation, $1,623. Of the freight traf[illegible] and merchandise, 19.69%. The total train miles run was 957,214; passengers carried, [illegible]

[illegible] with the main features in the report. He [illegible] line to the C.P.R. Co. were explained, and it was stated that the lease will go into effect on Jan. 1 next. In conclusion he [illegible] faithful services which they have rendered [illegible] buted in no small measure to the satisfac[illegible] was 153 miles, with 10 miles of sidings. The net earnings in 1888 were under $50,000, and the £25 shares were at the nominal value of about 5s. The first mortgage bonds, which are now represented by the 3% debenture stock, and 7% income bonds, were worth about £20. This last year the mileage increased to 253, with 52 miles of siding, and the net earnings were over $410,000. The shares are quoted now about £29, and the value of what were first mortgage bonds would make an equivalent of about £105. So, therefore, in handing over this [illegible] C.P.R., we can feel that the value of the securities has been greatly increased, and that the C.P. Co. has acquired a railway in a thoroughly sound condition physically and financially, on which they are never likely to be called upon to pay anything under their guarantee.

The retiring directors, E. Dent, A. Bremner, T. Lindley, F. H. Norman and S. G. Sheppard, were re-elected.

The General Manager, J. H. Walsh, said:—I thank the President for the kind manner in which he has referred to my connection with your company. I feel today [illegible] many trying and difficult conditions to meet and overcome in the early days of the company, it has, on the whole, been a pleasure to your Canadian staff to have been connected with a sound and prosperous little railway. From small beginnings, with a line in poor physical condition and weak financially, we have grown to be a railway for its length equal to any line in Canada, and of a finan[illegible] Originally a streak of iron laid through almost a virgin forest, with little population and no industries throughout its length, running only a [illegible] daily, we now have a line standard in character, with prosperous and enterprising cities and towns along its whole length, and serving a district which has grown through what I think I am justified in saying the enterprise of your company to rank among [illegible] progressive sections of eastern Canada—a line requiring [illegible] and many freight and extra trains daily to give the [illegible] and prominent have we grown to be in our [illegible] to be associated with, and become part of, the great[illegible] and I have no fear, gentlemen, but that the great C.P.R. Co. thoroughly appreciates the fine [illegible] the policy that you have followed of en[illegible] of the line. Before concluding, as this may be the last opportunity I may have of meeting the proprietors of our little line, which I have been connected with for over 30 years, I wish to thank the President and the directors for the uniform kindness and confidence that has been extended to me, both personally and as general manager, as well as to your whole Canadian staff. I can assure you we have all tried to live up to and be worthy of that confidence, and you transfer today to the C.P.R. a railway system and staff of employes of which you may well be proud.

[illegible] directors [illegible] Although it may be for the last time that [illegible] there will probably have to be yearly meetings, though [illegible] with regard to the earnings, as your interest is guaranteed. Still, I think we shall all follow the fortunes of the Q.C.R. Co. with great interest for many years to come, and I trust that Mr. Walsh will live for many years to preside over the com[illegible]

Railway Mechanical Methods and Devices.

Cutting Bolt Stock at Canadian Pacific Railway Winnipeg Shops.

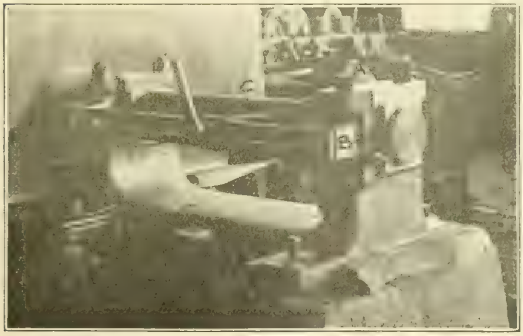
The customary method of cutting up bolt stock is under the shears, mating cutouts being formed in the upper and lower blades in which the different sizes of bolt stock is placed. This is a slow process, as the stroke of the shears being at a slow rate, it is impossible to produce them rapidly. The practice of cutting off several of a batch grouped together under flat blades has been tried at different shops with varying degrees of success, but this manner of handling work has certain decided disadvantages.

In the bolt department of the C.P.R. Winnipeg shops there are two special machines for the rapid cutting up of bolt stock, one of which is shown in the accompanying illustration. The machine is essentially the same in construction as the headstock of a lathe, there being a central spindle of generous size supported at either end of the machine frame in bearings as in the spindle of a lathe. The drive is from the left end of the spindle, behind the screen.

On the near end of the spindle there is a projecting arm, A, integral with the spindle, with which it revolves. To the front face of this arm is attached a shear section, consisting of a piece of hardened steel, and on the inner face of the front bearing standard there is a corresponding shearing piece, the revolving piece just clearing the stationary one as it revolves, the same as the two shear blades of a vertical shear would do.

Through the near bearing standard there is a hole, B, passing through the stationary shear blade. Through this hole the bar stock is passed, being sheared off on the inner face by the revolving shear, which revolves at a comparatively high rate of speed. The length of the bolts are set by the stop C. on the front face of the machine. This stop can be moved the length of the spindle along the slotted bar attached at each end to the bearing standards.

The rapidity of production is nearly as great as the speed with which the operator can feed the bar into place between shears. To maintain uniform operation, there is a heavy flywheel on the spindle behind the rear screen.



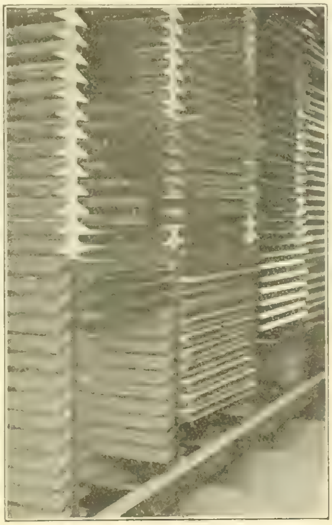
Special Machine for Cutting Bolt Stock.

F. F. Osborne, General Manager of the Bengal (India) Ry., is visiting British Columbia, to secure ties for the railway. An experimental shipment has been arranged.

Varnish Drying Racks at the Grand Trunk Railway Port Huron Shops.

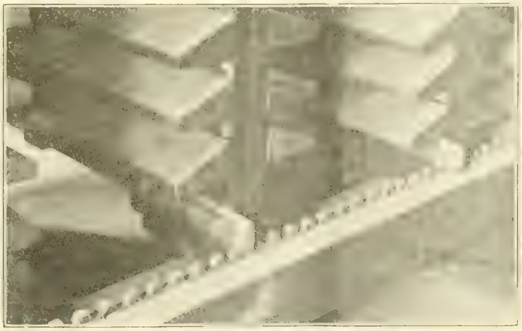
In the varnish department of the G.T.R. car shops at Port Huron, Mich., new drying racks for sashes have been constructed. The general appearance and details of construction are clearly shown in the two accompanying illustrations.

These racks are 25 ft. long, and extend from ceiling to floor. The partitions for carrying the sashes are movable, and it is in this particular that they are especially unique. Two beams, placed the depth of the drying racks apart, are raised about a foot above the level of the floor, and on the upper surface of these scantlings there is a notched strip of wood, as the detail photograph shows, these notches consisting of semi circular grooves about an inch apart, centre to centre. At the top of the rack structure there is a similar pair of notched scantling with cut-outs on the upper surface. The division walls to carry the drying sashes have a ⅜ x 1½ in. strip of wrought iron attached to both the top and [illegible] and projecting about 2 in. at either end. These are so placed [illegible] into the grooves on the surface of the supporting scantlings. The upper cross bar hangs in one of the grooves, while the lower one rests in the corresponding groove on the lower framework. Thus, the intermediate partition walls can be moved at will to accommodate any size of sash, the end ones, which form a part of the framework, being the only ones that are solid. Working from one end, the different standard widths can be set for handling normal conditions, and when there is a special rush of any particular size, the racks can be altered easily to accommodate this variation.



Adjustable Racks for Varnished Sash.

The ledges on which the sash rest are different from those found generally, though the same style is to be found in some car shops. The upper, or resting surface, on which the sashes rest, slopes down at about a 20 deg. angle, so that all of the sash that touches the shelves is the edge on which it is resting, the advantage being that the varnish is in no way marred, as it would be in places where the resting edges are horizontal and not sloping. An inspection of the filled racks shows what a very small portion touches. The sash surface comes out clear and unmarked by the resting surface. The marring of the edges is not a very serious matter when it is considered that the best part of it is hidden in the sash groove, yet a perfect job has such an added pleasure to the true mechanic as to make a kink of this type appreciated.



Details of Adjustable Rack for Varnished Sash.

Hot Water Mixer at Canadian Pacific Railway Montreal Shops.

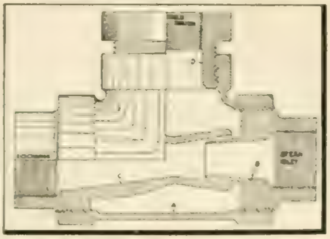
The accompanying plan shows a home made hot water mixer for locomotive boiler washout that can be made by any machinist in a short time, and with very little material. The main body A is a [illegible] 3½ in. T, and the piece B is made from a brass 1¾ in. pipe. This is the steam inlet. The piece C is the discharge end adapted for 2½ in. pipe, and the piece D is the cold water inlet adapted to suit a 2½ in. cold water union.

We have an extra water header combined with boiler for washout, and this hot water mixer we have connected in our piping, which serves as an emergency outfit when the header does not work, and the results are always of the best.—J. G. Koppell, Railway and Locomotive Engineering.

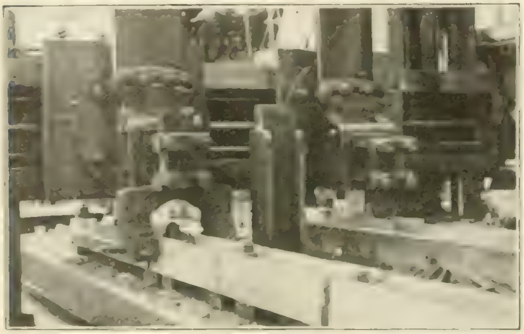
Planing Locomotive Shoes and Wedges at Canadian Northern Railway Shops.

The accompanying engraving shows the practice at the C.N.R. Winnipeg shops in the matter of machining locomotive shoes and wedges. [illegible] [illegible] [illegible] at different stages of the work.

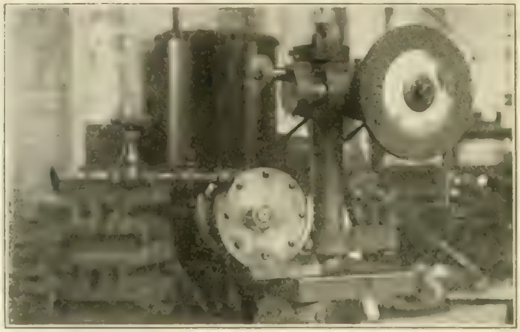
The castings are mounted in a row on the planer table, with a small block under each end. The casting ends are placed close together [illegible] holding down the two adjacent ends. A special forked tool is used for planing two sides, held in the head in the usual manner. Each arm of the fork has an inwardly projecting tool, [illegible] by a set screw in the



Hot Water Mixer



Planing Locomotive Shoes in Batches



Portable Grinder for the Horizontal Milling Machine

front face. The tool has a [illegible] in each fork, which frees the tool from the cut on the return stroke. [illegible]

When the sides of the shoes are planed, they are moved over [illegible] to operate on. On the table of the planer is fastened a long trough shaped jig, in which the shoes are secured by set screws from the far side. A tool of the correct width is held in the tool post, [illegible] between the two heads.

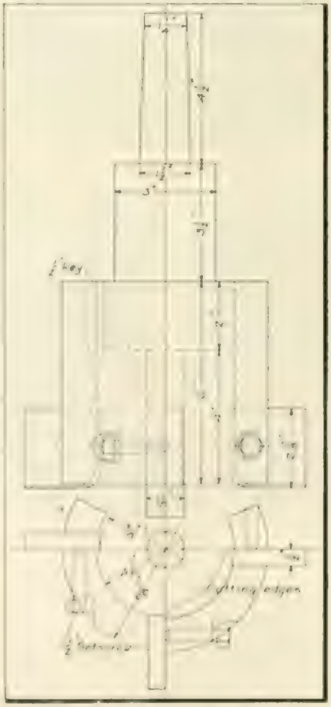
We are indebted to A. [illegible], Shop Engineer, for this information, and from [illegible] per day.

Tool for Turning Rocker Arm Bosses at the Grand Trunk Railway Stratford Shops.

The accompanying illustration of a tool [illegible] locomotive rocker arms [illegible] G.T.R. locomotive shops at Stratford, Ont. [illegible] shape. Different tools will be found in use, [illegible]

[illegible] cutters. The outside and inside diameters [illegible]

or shell cutter depending on the work with the drill press feed, reduces the bosses to



Tool for Turning Rocker Arm Bosses

size, and at the same time puts the fillets in [illegible] the cutters being ground to give this required corner.

Portable Milling Tool Grinder at Grand Trunk Stratford Shops.

The accompanying illustration shows a portable milling tool grinder for use on large horizontal millers. The principal use to which it is put is to regrind teeth that become broken in the middle of a job, removing the rough edges, or for the grinding of a new cutting edge inserted in the place of the broken one. The advantage lies in the fact that the cutter does not require to be removed from the lathe, a desirable factor, for the removal of the cutter spoils the cut to a certain degree, it being impossible to place the cutter back in exactly the same place. There is also the loss of time in the following of such a course, as the disassembling of the machine is no small task.

The base of the grinder is secured to some convenient surface such as the platen or the top of a side rod being milled, or any level surface. Under the tooth to be ground, the double swinging arm near the bottom of the stand is placed, so as to have the cutting face level. The emery wheel, carried on a shaft on a clamp block attached to the vertical rod of the stand, is located vertically to the correct level, and the adjustment radially to the cutter is made through the small adjusting screw near the top, which carries the grinding wheel arbor along that spindle.

The drive of the grinder is from a small impulse air motor, mounted on the grinder base, power being transmitted through a short section of circular belt. The saving in time on the horizontal miller from the speedy repair of cutters broken or requiring repair, is quite considerable, and the quality of the work performed is the equal of that which would be possible on a stationary grinder.

The Manchester Ship Canal Co., Manchester, Eng., has placed a contract for the construction of a 1,500,000 bush. reinforced concrete elevator on the American system. It was designed by John S. Metcalf Co., Ltd., Montreal and Chicago, who are acting as consulting engineers for the company on the work. It will be of reinforced concrete throughout, will have large capacity for receiving grain in bulk, storing, milling, and for shipping in sacks and in bulk. Approximate total cost, $500,000.

J. B. WAY, agent, C.P.R., Sault Ste. Marie, Ont., in remitting his renewal subscription, writes:—"I cannot understand how I got along without Canadian Railway and Marine World before I subscribed to it. I believe every railway man in Canada should have a copy on his desk."

Canadian Northern Railway Company's Annual Report.

The following directors' report, over the signature of Sir Wm. Mackenzie, President, was submitted at the annual meeting recently:

The result of operations for the year ended June 30, 1912, are as follows:

GROSS EARNINGS

Passenger traffic	$ 3,434,140.81
Freight traffic	15,567,998.17
Express, mail, telegraph, dining and sleeping cars, interest and profits from elevators and other subsidiary companies and investments	1,857,954.65
	$20,860,093.63
Working expenses, including taxes, etc.	14,979,048.52
Net earnings	$ 5,881,045.11
Fixed charges	4,630,844.12
Surplus	$ 1,250,200.99
Interest at 5% per annum paid on income charge convertible debenture stock outstanding	674,804.11
Net surplus for year	$ 575,396.88

The gross earnings show an increase of $4,499,381.24, or 27.50%, and the net earnings of $890,698.29, or 17.85% over the preceding year. The working expenses were 73.82% of gross earnings of the railway proper and 71.81%, including taxes, of the gross earnings from all sources, compared with 72.59 and 69.50% respectively last year.

During the year over 586 miles of newly constructed tracks were added to the system, the average mileage operated being 3,888 miles.

The classified table of freight carried again reflects a substantial development of the industrial and agricultural resources of the country served by your railway. The statistics covering grain, including the figures representing flour shipments, show a total movement of over 60,000,000 bushels, or approximately 32% of the total inspected crop of Western Canada. This shows a notable advance over any previous year, and is a reliable indication of the productiveness of the territories your directors have selected. An increase of 120% in the total bulk of commercial coal carried is also remarkable, the figures being 804,803 tons moved this year, compared with 370,161 for the previous year. This increase is indicative of the growth of the coal mining industry in Western Canada, which, upon the completion of the extensions of your railway now being constructed in the larger coal areas, will receive an even greater stimulus. There is also a further indication of the prosperous extension of the cities, towns and settlements along the lines of your railway, as shown by the increase of 48% over last year in the amount of building materials carried by your railway during the year.

Land sales during the year were 55,111 acres for $836,084.37, an average of $15.17 an acre, compared with 279,151 acres for $3,345,498.73, an average of $12 an acre, the preceding year. The reduction in sales is substantial, but your directors, recognizing that the value of productive acreages in Western Canada is assured, and being desirous of, as far as possible, selling to settlers only, have not pressed the sale of your lands. On the other hand they have adopted an aggressive policy of colonizing the free lands offered by the Dominion Government in territories adjacent to your railway; 2,479,000 acres of these lands were entered upon by settlers during the year, of whom a largely increased number were a most desirable class of British emigrants.

The operation of the Royal Line Steamships continues to vindicate the wisdom of engaging in the Atlantic trade. The increasing popularity of the route emphasizes the necessity for extending the service so that the company may take the full benefit of the business controlled by its organization. The negotiations referred to in the previous report, having in view the increase of the fleet, did not terminate satisfactorily and your directors are considering other means of attaining the object.

Your directors are pleased to report that a movement having as its purpose the adoption of more permanent methods of agricultural development in the prairie provinces is responding favorably to the impetus given to it by the demonstration and educational propaganda which is being actively carried on by the various railway companies in conjunction with the Dominion and provincial governments. This movement was inspired, primarily, to offset the reduction in production of beef and other cattle products which followed the settlement of the large ranch leases by homesteaders and small grain farmers. Climatic, physical and financial conditions encourage the pioneer farmer settler to engage in the production of grain to the exclusion of other agricultural products. There are, however, indications from the campaign for diversified farming which has been engaged in, of a change to more permanent methods. The progress of this movement is especially gratifying to your directors as the location of the lines of your railway in the prairie provinces is through country which is preeminently adapted to the practice of diversified farming in general.

Great progress has been made in the construction of the transcontinental line of the Canadian Northern system, which it is hoped will be completed by the end of 1913; the line through British Columbia to connect the western lines of your railway with tidewater at the Pacific coast is advancing rapidly. In addition to a very fortunate advantage of easy gradients, the location of the line enters without competition into a large territory, the physical characteristics of which will attract a very desirable class of settlers. The line will also give access to a hitherto unknown section of the Canadian Alps, of which the scenic attractions are such as will divert a large volume of the transcontinental tourist traffic to the route.

The work of linking up the lines of your railway in Western Canada with the railways of the Canadian Northern system in the eastern provinces is also making satisfactory progress, having regard to weather and other conditions. The resources of the country opened up by this line will be productive of great traffic advantages to your company. Capital is only awaiting the completion of these transportation facilities before entering upon the development of iron and other mineral deposits, extensive pulpwood and timber areas. In addition to the tonnage assured to your railway from this industrial development there are the traffic advantages which will accrue from the agricultural development of the great clay belt of Northern Ontario, through which your railway will pass for 350 miles. Experienced officers of your company who have carried out explorations of the entire area estimate that the industrial and agricultural resources of this territory will attract and support a population of over 2,000,000 of people.

During the year another section of the Canadian Northern Ontario Ry. was opened for traffic, but your directors regret that due to adverse weather and other conditions the completion of the line between Ottawa and Toronto has been delayed. The work is, however, progressing and it is hoped in a short time to establish a through service connecting Toronto with Ottawa, Montreal and Quebec. The pulp and paper industries in Northern Quebec are expanding quite satisfactorily, the traffic advantages of which accrue chiefly to railways operated under your control in the Province of Quebec.

The movement of the crop of 1912 has now begun, and recognized authorities estimate the yield of the Provinces of Manitoba, Saskatchewan and Alberta as follows: Wheat, 196,000,000 bush.; oats, 224,500,000 bush.; barley, 49,600,000 bush.; flax, 12,900,000 bush.; total crop, 483,000,000 bush. Having regard to the fact that the yield is greater than any previous year; that the quality is good and that the market value is satisfactory, your directors anticipate another year of substantial growth in revenue.

Since the close of the fiscal year the gross and net earnings for the months of July and August have been ascertained and the figures show a very satisfactory increase over the same period last year. They are as follows:

	1912.	1911.	Increase.
Gross earnings	$3,575,500	$2,896,500	$679,000
Operating expenses	2,710,100	2,220,200	489,900
Net earnings	$865,400	$676,300	$189,100

Your directors have noticed with great pleasure the keener interest in Canadian affairs generally displayed by statesmen and other leaders of opinion and thought in Great Britain and emphasized by the large number of prominent men who have visited Canada during the past summer. They hope to see a still larger number of visitors from the old country in the future, as they believe that a personal and unbiased examination of the actual and potential resources of the Dominion will result in still greater confidence in the future of Canada and the close co-operation in her development, which your directors have in the past endeavored to promote by every means in their power, in the interests of the Empire.

The accounts and statistical tables appended were submitted over the signature of D. B. Hanna, Third Vice President.

GENERAL BALANCE SHEET.

ASSETS.

Cost of railway and equipment		$191,993,350.92

Sleeping and dining cars	64	50
Passenger coaches	307	226
Baggage and mail and express cars	[illegible]	90
Business cars	14	11
Freight, refrigerator and stock cars	18,675	14 778
Conductors' vans	257	231
Boarding, tool, auxiliary cars, steam shovels and snow equipment	594	481

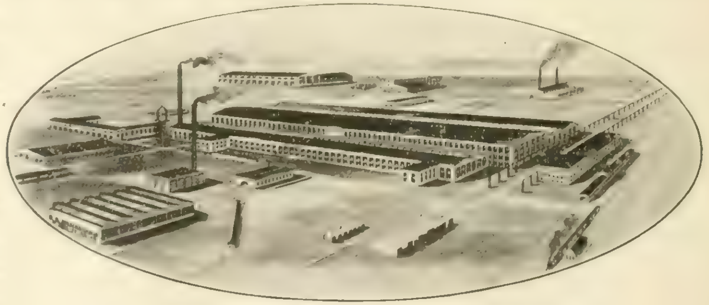
The total mileage owned and operated, including leased lines, at June 30, was 4,316.62 miles, located as follows: Ontario, 366.60; Manitoba, 1,758.25; Saskatchewan, 1,718.75; Alberta, 394.82; Keewatin, 44.50; Minnesota, 43.70.

The average mileage operated for the fiscal year was 3,888. The results per mile operated were as follows: Earnings, $5,365.25; expenses, $3,852.64; net earnings, $1,512.61.

The report was unanimously adopted at the annual meeting. The directors who were elected for the current year are: President, Sir Wm. Mackenzie; Vice President, Sir Donald Mann; other directors, Z. A. Lash, F. Nicholls, R. M. Horne-Payne.

Canadian Pacific Railway Ogden Shops at Calgary.

A complete preliminary description of these shops, with ground plan, was published in Canadian Railway and Marine World for February last. The accompanying illustration gives a birds eye view of the shops as they will appear when completed. It is not strictly accurate in all details, but is nearly correct, and gives a good general idea. The construction work has now reached a stage where the real magnitude of the completed plant may well be imagined. Under the direction of Engineer F. E. Caldwell, Westinghouse, Church, Kerr and Co., have 1,200 men at work on the 400 acre block which is the site of the new shops, between the irrigation canal and the Bow river. From the business portion of Calgary only the high concrete smokestack of the power house is visible over the banks of the river, but inside the grounds there is a busy scene where day work and a certain amount of night work is being carried on. All the structural steel is up and already considerable closing in has been accomplished. It is the intention to have this practically completed on all the buildings erected in 1912 so that the placing of machinery and preparatory work for repairing can be expedited. A great deal of machinery has already arrived. Immense quantities of material are arriving still, and there is every appearance that the contract to have the buildings completed early in 1913 will be carried out.



C.P.R. Ogden Shops, Calgary, Alta.

For the comfort of the employes the company has reserved a block adjoining the shops whereon are being erected the first lot of houses. These will be supplied with all modern city conveniences of water, light and sewage, etc. As soon as the electric railway bridge is finished across the river, the Calgary Municipal Ry. will operate a service so that employes may easily reach every part of the city. There are now many buildings on private property near the shops, a brick hotel facing the main entrance, picture theatre, etc., and, in fact, though only a few months since the ground was first broken, there is a town where but a very short time ago, except for passing trains, the section man, irrigation ditch rider or cowboy were the sole visitors.

Between the shops and the business portion of the city, a three track bridge is being built across the Bow river, and the C.P.R. will have a double track extending all the way.

Orders by the Board of Railway Commissioners.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the orders took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

17871. Oct. 30.—Approving revised location C.P.R. Sudbury to Sault Ste. Marie branch as now constructed, from mileage 31.76 to 34.76, westerly from Webbwood, Ont.

17872, 17873. Oct. 30.—Authorizing Campbellford, Lake Ontario and Western Ry. to construct across three highways, mileage 93.59 to mileage 95.8, Northumberland County, Ont., and across Sidney street and West street, Trenton, Ont.

17874. Oct. 30.—Refusing application of J. A. C. Ethier, M.P., for order compelling C.P.R. to erect platform for milk shipping purposes between St. Herman and Ste. Scholastique, at Cote St. Louis, Que.

17875. Oct. 29.—Authorizing C.P.R. to open for traffic Moose Jaw northwest branch from Outlook to Conquest, 9.3 miles, including bridge across South Saskatchewan river.

17876. Oct. 30.—Authorizing C.P.R. to build spur to its ballast pit near Olds, Alta., across Edmonton trail and road allowances.

17877. Oct. 29.—Approving proposed location C.P.R. station at Shelburne, Ont.

17878. Oct. 30.—Authorizing C.P.R. to build double track across G.T.R. at Delson Jct., and rescinding order 17437, Sept. 11, 1912.

17879. Oct. 30.—Allowing correction of plan showing location of stations at Gwydyr and Lampman, and addition to station grounds at Regent, C.P.R., Boissevain to Lauder branch, Man.

17880. Oct. 29.—Authorizing C.P.R. to build spur for Ontario Wind Engine and Pump Co., Calgary, Alta.

17881. Oct. 29.—Authorizing C.P.R. to build bridge 8.7 on Interprovincial and James Bay Ry., in Province of Quebec.

17882. Oct. 29.—Authorizing C.P.R. to open for traffic double track of Moose Jaw subdivision, from Belle Plain, mileage 117.0, to Pasqua, Sask., mileage 127.6.

17883. Oct. 30.—Further extending, until Nov. 30, 1913, time within which C.P.R. may complete branch line across highways near Marquette, Man.

17884. Oct. 29.—Authorizing Esquimalt and Nanaimo Ry. to build bridge over Little Qualicum river, on its Comox extension, B.C.

17885. Oct. 29.—Authorizing C.N.O.R. to build across three highways on its Hawkesbury-Montreal line, Laurent parish, Que.

17886. Oct. 30.—Rescinding order 17782, Oct. 17, 1912.

17887. Oct. 31.—Authorizing C.N.O.R. to build across and divert public road between lots 10 and 11, con. 8, Chisholm tp., Ont.

17888. Oct. 30.—Authorizing C.N.O.R. to build overhead across Montreal Tramways Co.'s tracks, near Cartierville, Que.

17889. Oct. 29.—Authorizing C.N.R. to build its Swift Current extension across two highways, Saskatchewan.

17890, 17891. Oct. 29.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to construct bridge over creek at mileage 72.75, and to build across nine highways, in Tyendinega tp., mileage 59.45 to mileage 65.75.

17892. Oct. 30.—Approving location G.T.P. Branch Lines Co., Moose Jaw-Northwest branch, mileage 48.55 to mileage 67.86, Saskatchewan.

17893. Oct. 30.—Authorizing G.T.R. to build bridge at mileage 109.35, 20th district, Middle division, over creek and public road.

17894. Oct. 29.—Authorizing city of Saskatoon, Sask., to carry its municipal street railway across C.P.R. at Avenue A and at Twenty-third street.

17895. Oct. 31.—Dismissing Canada Cement Co.'s complaint against charge of demurrage on cars ordered to a specific siding, and delayed on account of space not being available.

17896. Oct. 31.—Authorizing G.T.P. Branch Lines Co. to divert road at mileage 88.2, Calgary-Boundary branch, Alberta.

17897-17899. Oct. 31.—Authorizing C.P.R. to build spurs for D. Lalonde at Mile End station, Que.; for its Department of Natural Resources at Strathmore, Alta., and for S. Walker, at Winnipeg.

17900. Oct. 31.—Dismissing application of W. H. Dawson and residents in vicinity of Stonefield, Que., for order directing C.P.R. to stop trains at road between Staynerville and Grenville stations, to pick up shipments of cream.

17901. Oct. 30.—Approving C.P.R. plan showing extension of bridge 0.41, Fort William terminals, Ont.

17902. Oct. 31.—Approving proposed layout of C.N.O.R. station grounds at Clarendon, Que.

17903. Oct. 29.—Authorizing city of Saskatoon, Sask., to carry its municipal street railway across C.P.R. at Twentieth street.

17904. Oct. 29.—Authorizing C.P.R. to change location of station at L'Acadie, Que.

17905. Oct. 31.—Approving location G. T. P. Ry. proposed station at South Hazelton, B.C.

17906. Nov. 2.—Approving location C. N. O. R. through North Bay, Ont., mileage 343.55 to mileage 346.42 from Montreal.

17907. Oct. 26.—Authorizing G.T.P. Ry. to build spur for T. Jackson & Son, Winnipeg.

17908. Oct. 2.—Authorizing C. N. R. to build cut-off through Winnipeg to connect its Fort Rouge yards with its eastern yards.

17909. Nov. 4.—Certifying that correction of error, in location plan of Toronto Eastern Ry. at Bowmanville, Ont., is allowed, upon condition that company cross mill pond by trestle work and do no filling in the pond.

17910. Nov. 4.—Authorizing Campbellford, Lake Ontario and Western Ry. (C. P. R.) to build bridge 11.15, in Ontario.

17911. Nov. 6.—Postponing, to and including Dec. 31, certain railway tariffs covering increased charges for cartage.

17912. Nov. 5.—Authorizing N. St. C. & T. Ry. to build spurs for Thorold Pulp Co., Thorold, Ont., and Interlake Tissue Mills Co., Merritton, Ont.

17913. Nov. 4.—Authorizing St. John and Quebec Ry. to cross over C.P.R. tracks between 49th and 50th miles, north of McAdam Jct., N.B.

17914. Nov. 5.—Authorizing Campbellford, Lake Ontario and Western Ry. (C. P. R.) to build across Toronto and Eastern Ry. overhead at mileage 162.98, Whitby, Ont.

17915. Nov. 4.—Authorizing C.P.R. to build across road in lot 59, Kildonan parish, Man., main line, Winnipeg to East Selkirk.

17916. Oct. 31.—Approving location C. P. R. Swift Current southeasterly branch to junction with Moose Jaw southwesterly branch, mileage 45 to mileage 101.3, and to cross 57 highways.

17917. Nov. 5.—Directing C.P.R. to remove embargo on sand loaded in cars other than its own, shipped into Winnipeg from points on C.N.R. line.

17918. Nov. 2.—Authorizing C. N. R. to build spur for D. R. Fraser & Co., Edmonton, Alta.

17919-17921. Nov. 5.—Authorizing C. N. O. R. to build across Park avenue, Mance street and McPherson avenue, Montreal.

17922. Nov. 4.—Directing C. N: Q. R. to provide flag station for passenger purposes only at Larose station, Que.

17923. Nov. 5.—Authorizing G. T. P. Branch Lines Co. to divert Lake View avenue, Moose Jaw, Sask., and to construct Regina-Moose Jaw branch under it.

17924-17926. Nov. 4.—Authorizing G.T.R. to build sidings for Breithaupt Leather Co., Penetanguishene, Ont.; for Sarnia Chain Co., Sarnia, Ont., and for Beaverton Brick & Tile Co, Beaverton, Ont.

17927. Nov. 4.—Authorizing G.T.R. to build northerly track across Cote Noir road, St. Antoine de Longueuil parish, Que.

17928. Nov. 2.—Directing G.T.R. to install two sets of gates at crossings of Lapiniere road, between Greenfield Park and St. Lambert, Que.

17929. Nov. 2.—Directing G.T.R. to repair and extend to highway, the centre platform at Bulstrode station, Que., and to put culvert in repair.

17930. Nov. 4.—Approving revised location Central Ry. Co. of Canada from mileage 0 to 5, in Montreal, on condition that grade at crossing of St. Michel road be eliminated.

17931. Nov. 4.—Authorizing C.N.O.R. to cross jointly with the Lachine, Jacques-Cartier and Maisonneuve Ry., under the C.P.R., near Jacques-Cartier Jct., Que.

17932. Nov. 5.—Authorizing C.P.R. to open for traffic its Wilkie southeasterly branch from Wilkie, to Anglia, 35.3 miles.

17933. Nov. 5.—Approving proposed location G.T.P. Branch Lines Co. station at Beiseker, Sask.

17934. Nov. 4.—Authorizing C.P.R. to build across 58 highways from mileage 22.7 to 106.2 on its Pheasant Hills branch.

17935. Nov. 5.—Directing C.P.R. to install improved type of automatic electric bell at crossing at Sharbot Lake, Ont.

17936. Nov. 6.—Authorizing G.T.R. to build siding for Standard Steel Construction Co., Welland, Ont.

17937, 17938. Oct. 24.—Authorizing town of Pointe aux Trembles, Que., to extend St. Jean Baptiste street and First avenue across C. N. Q. Ry.

17939. Nov. 7.—Directing that cost of installing gates at crossing of Main street, Victoriaville, Que., be divided as follows: 20 per cent. out of railway grade-crossing fund; 30 per cent. by Victoriaville municipality, and 50 per cent. by G.T.R.; and that cost of maintenance be paid 70 per cent. by railway company and 30 per cent. by municipality.

17940. Nov. 7.—Authorizing C.N.Q.R. to build across two highways on its St. Eustache-St. Jerome line, Que.

17941. Nov. 6.—Authorizing C.P.R. to open for traffic its second track from Secretan to Chaplin, mileage 44.9 to 54.

17942. Nov. 9.—Authorizing G.T.R. to take certain lands in St. Antoine ward, Montreal.

17943. Nov. 9.—Approving by-law of Marconi-Wireless Telegraph Co. of Canada, authorizing J. H. Lauer, general manager, to issue tariffs of tolls.

17944. Nov. 7.—Directing G.T.R. to install improved automatic electric bell at crossing just west of Vineland station, Ont.

17945. Nov. 7.—Authorizing C.P.R. to build spur for N. K. Fairbank Co. in Lachine parish, Que.

17946. Nov. 7.—Authorizing C.P.R. to rebuild bridge 13.9, Owen Sound subdivision, Ont.

17947. Oct. 19.—Authorizing N. St. C. & T. Ry. to build its Beamsville extension across five highways in Louth tp., Ont.

17948. Nov. 5.—Authorizing N. St. C. & T. Ry. to build across 12 highways in Grantham and Niagara tps., Ont.

17949. Nov. 8.—Authorizing Campbellford, Lake Ontario and Western Ry. (C. P. R.) to build bridge across Front street in Trenton, Ont.

17950. Nov. 7.—Refusing application of Borden municipality, Sask., to extend Sheppard street across C.N.R.; and authorizing municipality to cross C.N.R., just east of west switch.

17951. Nov. 5.—Refusing application of C.P.R. for approval of station at mileage 17.5, Virden-McAuley branch; and approving location at mileage 21.5, Virden-McAuley branch, Man.

17952. Nov. 8.—Authorizing C.P.R. to divert highway adjoining west boundary of s.w. ¼ sec. 5, tp. 11, r. 10, w. 4 m., southwesterly, to connect with highway adjoining south boundary s.e. ¼ sec. 6, tp. 11, r. 10, w. 4 m., Alta.

17953. Nov. 8.—Approving Campbellford, Lake Ontario and Western Ry. (C. P. R.) plan for bridge at mileage 129.68, Hope tp., Ont.

17954. Nov. 8.—Authorizing G.T.R. to build additional track across Thompson road, Bertie tp., Ont.

17955. Nov. 8.—Authorizing G.T.R. to extend siding for Vineland Canning Co., Vineland, Ont.; and to build an additional siding.

17956. Nov. 5.—Authorizing N. St. C. & T. Ry. to build its Beamsville extension across eight highways in Clinton tp., Ont.

17957. Nov. 5.—Approving revised location James Bay and Eastern Ry., mileage 20.43 to 21.40 from Roberval, Que.

17958. Nov. 8.—Authorizing C.P.R. to take certain lands in Notre Dame de Grace ward, Montreal.

17959. Nov. 5.—Directing V. V. & E. Ry. & Nav. Co. to protect its railway between Ocean park and White rock as follows: One night watchman between mile posts 123 and 125, and one night watchman between mile posts 125 and 127; sectionmen to protect park during day time by going over the ground at least twice a day.

17960. Nov. 9.—Approving location C.N.R. through tp. 2, rgs. 6-8, w. 2 m., Sask., mileage 0.00 to 8.02.

17961. Nov. 8.—Directing G.T.R. to provide an electric bell at Woodbine avenue, Toronto.

17962. Nov. 8.—Authorizing North American Smelting Co. to build aerial tramway and electric power transmission line over C.N.O.R. in Loughborough tp., Ont.

17963. Nov 9.—Authorizing C.P.R. to lay sewer and water pipes across East Kildonan road or Kelvin avenue, and Bird's Hill road or Panet road, Man., and amending order 17391, Aug. 30.

17964. Nov. 7.—Authorizing C.P.R. to build spur for J. H. Preston Planing Mills Co., Medicine Hat, Alta.

17965. Nov. 8.—Relieving M.C.R. from providing further protection at sixth concession road, near Leamington, Ont.

17966. Nov. 8.—Approving G.T.P. Branch Lines Co. location of station at Frobisher, Sask.

17967. Nov. 8.—Approving revised grade of G.T.P. Branch Lines Co. from mileage 21 to 23, Cornwallis municipality, Man.; and rescinding order 17758, Oct. 14.

17968. Nov. 8.—Approving location and plans of G.N.R. station and detention house at Rossland, B.C.

17969. Nov. 5.—Extending until April 30, 1913, the time within which the C.N.O.R. install the permanent interlocking plant where it crosses G.T.R. and C.P.R. near Ottawa.

17970. Nov. 5.—Refusing application C.P.R. for order rescinding order 16838, June 20, dispensing with services of night watchman where C.N.O.R. crosses St. Lawrence and Ottawa Ry., east side of Rideau river, near Ottawa, Ont.

17971. Nov. 11.—Approving location C.N.O.R. station grounds at Chisholm, Ont.

17972. Nov. 8.—Relieving G.T.R. from providing further protection at highway three miles east of Brighton, Ont.

17973. Nov. 11.—Authorizing C.P.R. to build its Swift Current southeasterly branch across highways at mileage 69.29; and to divert a highway.

17974. Nov. 11.—Amending order 17921, Oct. 31.

17975. Nov. 11.—Authorizing C.N.O.R. to build across Cormanville street, North Bay, Ont.

17976. Nov. 14.—Extending until Nov. 28, time within which British Columbia Electric Ry. Co. may appeal to Supreme Court of Canada from order 17840, Oct. 14; and in meantime staying all proceedings under said order.

17977. Nov. 2.—Authorizing G. T. P. Branch Lines Co. to build extension of industrial spur in Yorkton, Sask.

17978, 17979. Nov. 12.—Approving revised location G.T.P. Ry., mileage 108.8 to 111.29, and from mileage 157.51 to 170.84, east of Prince Rupert, B.C.

17980, 17981. Nov. 12.—Approving G.T.P. Branch Lines Co. station sites and stations at Duff, Sask., and at mileage 142, Regina-Boundary branch, Sask.

17982. Nov. 12.—Authorizing G.T.R. to build siding for Canadian Billings & Spencer, Welland, Ont.

17983, 17984. Nov. 13.—Authorizing C.N.O.R. to build across Sixteen-mile creek, Trafalgar, tp., Ont., mileage 23.45 west from Toronto, and across road between con. 2, Westmeath tp., and con. 2, Pembroke tp., Renfrew, Ont.

17985, 17986. Nov. 12.—Authorizing C.N.R. (Vegreville-Calgary extension) to build over Secondary Canal A, sec. 2, mileage 247.5, and over Secondary Canal B, south branch, mileage 238.7.

17987, 17988. Nov. 12.—Authorizing C.N.R. to construct Calgary southerly branch across road between secs. 6 and 7, tp. 21, r. 88, w. 4 m., and under road between sec. 25, tp. 21, r. 29, and sec. 30, tp. 21, r. 28, w. 4 m.

17989, 17990. Nov. 12.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge 54.05, in Richmond tp., Ont., and approving revised location from mileage 61.87 to 64.09.

17991. Nov. 12.—Authorizing C.P.R. to build spur for McPherson Fruit Co., Calgary, Alta.

17992. Nov. 11.—Authorizing C.P.R. to divert certain highways, and to build across certain roads in Hussar, Alta.

17993. Nov. 12.—Authorizing C.P.R. to build Kerrobert northeasterly branch across 15 [illegible] to 35.15.

17994. Nov. 12.—Authorizing city of Vernon, B.C., to extend Lyons street across C.P.R.

17995. Nov. 12.—Approving rearrangement of siding from G.T.R. and C.P.R. into exhibition grounds, West Toronto.

17996. Nov. 12.—Authorizing Kettle Valley Ry. to open for traffic the portion of its railway from Merritt easterly 29 miles.

17997. Nov. 12.—Directing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build live-stock pass for N. Bellyou, in Murray tp., Ont.

17998. Nov. 12.—Directing M.C.R. to install an electric bell at highway crossing one mile east of Shedden, Ont.

17999. Nov. 15.—Authorizing C.P.R. to open for traffic new second track, St. Constant to St. Claude, Que., mileage 24.46 to 26.6.

18000. Nov. 13.—Directing C.P.R. to demolish or remove baggage room at Farnham, Que., before June, 1913.

18001. Nov. 13.—Authorizing C.P.R. to build sidings for Davenport Coal Co. at Burmis, Alta.

18002. Nov. 13.—Authorizing C.N.R. to build across C.P.R. in Moose Jaw, Sask.

18003. Nov. 11.—Approving C.N.R. plan of structures to be erected at crossing of Park road, Manitoba street, and 2nd and 3rd crossings of Moose Jaw creek, Sask.

18004. Nov. 13.—Approving location C.N.O.R. station grounds at Fitzroy Harbor, Ont.

18005. Nov. 13.—Authorizing C.N.O.R. to build across two roads in Fitzroy tp., Ont.

18006. Nov. 12.—Authorizing C.N.O.R. to build across road in St. Leonard de Port-Maurice parish, Que.

18007. Nov. 13.—Approving location James Bay and Eastern Ry., station grounds at Dufferin, Que., mileage 30.7 from Roberval; and rescinding order 16344, April 18.

18008. Nov. 14.—Authorizing G.T.P. Branch Lines Co. to build Prince Albert branch across highway in rural municipality 312, Sask.

18009, 18010. Nov. 11, 13.—Authorizing G.T.P. Branch Lines Co. to build Moose Jaw northwest branch across 22 highways, mileage 48.55 to 67.85; and build Calgary-Boundary branch across 8 highways, mileage 82.5 to 90.3.

18011. Nov. 9.—Authorizing Niagara, St. Catharines and Toronto Ry., to build across Carlton and Niagara streets, Grantham tp., Ont.

18012. Nov. 14.—Varying order 16846, June 25, to provide that Bartlett avenue be maintained, at grade, over C.P.R. and C.N.O.R. in North Toronto; that Ossington avenue and Christie street subways be built with 14 ft. clear headway; that Albany avenue be not reopened and Huron street be not opened across said lines, but that Bridgeman avenue be opened and graded through to Bathurst street.

18013. Nov. 12.—Extending until May 1, 1913, time within which Hull Electric Co. equip all rolling stock in use by it of 37 ft. or over in length, or weighing 35,000 lbs. or more, with power brakes, to be approved by the Board.

18014. Nov. 8.—Directing C.P.R. to file within 30 days plans of gates directed to be erected at McTavish street, Fort William, Ont., and to be operated by day and night watchmen.

18015. Nov. 6.—Directing C.P.R. and G.T.R. to protect from 6.30 a.m. to 6.30 p.m. daily by a watchman, crossing at George street, Toronto.

18016. Nov. 6.—Refusing application of T. H. and B. Ry. to cross at grade, Stanford avenue, Hamilton, Ont., with two branch lines or spurs.

18017. Nov. 6.—Directing T. H. and B. Ry., to protect by day and night watchmen, crossings at O'Reilly street and Ferguson avenue, Hamilton, Ont.

18018. Nov. 14.—Approving location C.P.R. station at Severn Falls, Ont.

18019, 18020. Nov. 14.—Authorizing C.P.R. to build spur for Neilson Furniture Co., Calgary, Alta., and crossover track opposite V. V. and E. Ry. and Nav. Co.'s freight sheds, to connect with G.N.R. at New Westminster, B.C.

18021. Nov. 14.—Approving revised location G.T.P. Branch Lines Co., Tofield-Calgary branch in sec. 10, tp. 50, r. 19, w. 4 m.

18022. Nov. 15.—Authorizing G.T.R. to build siding for Canada Furniture Manufacturers, Wiarton, Ont.

18023. Nov. 13.—Authorizing Oshawa Ry. to build branch line from end of present track on Bruce street, Oshawa, Ont., to property of Bricks, Limited, and to cross C.N.R., and Toronto and Eastern Ry. tracks.

18024. Nov. 15.—Recommending to Governor-in-Council for sanction, agreement of amalgamation of Western Dominion Ry. Co. and Alberta Pacific Ry. Co.

18025. Nov. 15.—Approving Nipissing Central Ry. standard passenger tariff C.R.C. 8.

18183. Dec. 2.—Amending order 18024, dated Nov. 13, 1912, by changing its date to Nov. 16, 1912.

18184. Nov. 30.—Authorizing G.T.R. to build sidings for Dyment Mickle Lumber Co., in Fenelon tp., Ont.

18185. Dec. 2.—Relieving G.T.R. from providing further protection at crossing of road about a mile north of Golden Lake, Ont.

18186. Dec. 2.—Directing G.T.R. to build siding for Carroll Bros., Humberstone, tp., Ont.

18187. Dec. 2.—Authorizing Empire Limestone Co., Ltd., to build tunnel under Carroll Bros. siding in Humberstone tp., Ont.; and repealing order 17007, July 13, 1912.

18188. Dec. 2.—Relieving Central Ontario Ry. from providing further protection at highway, short distance south of Wellington, Ont.

18189. Dec. 3.—Appointing A. Sullivan, of Winnipeg, barrister, to make inquiry and take evidence necessary to show whether or not the portion of the Winnipeg Electric Ry. to the C.P.R. shops is profitable.

18190. Nov. 30.—Extending until June 1, 1913, time limited by sec. 4, chap. 61, of the acts 7-8, Ed. VII., for approval of White Pass and Yukon Route tolls for telegraph messages between all points in Canada; and allowing tolls authorized to be charged under acts 7-8, Ed. VII., chap. 61.

18191. Nov. 30.—Extending tariffs of telephone tolls of the North American Telegraph Co. until June 1, 1913.

18192. Nov. 30.—Extending until June 1, 1913, time limited by sec. 4, chap. 61, of acts 7-8, Ed. VII., for approval of Canadian Northern Telegraph Co.'s messages, and allowing tolls authorized to be charged under said acts.

18193. Nov. 30.—Extending until June 1, 1913, time limited by sec. 4, chap. 61, of acts 7-8, Ed. VII., for approval of G.T.P. Telegraph Co.'s tolls, with exception of tolls between local offices, on Ottawa division, in Ontario and Quebec, and between them and Swanton, Vt., approved by order 11153, July 12, 1910; and allowing tolls authorized to be charged under acts 7-8, Ed. VII., chap. 61.

18194. Dec. 2.—Directing G.T.R. to keep all cars away from crossing just east of Jordan station, Ont., in both directions, for 100 ft.

18195. Nov. 30.—Extending tariff of telephone tolls of Bell Telephone Co. until June 1, 1913.

18196. Dec. 3.—Approving location C.N.R. through tp. 26, r. 7, w. 3 m., Sask., mileage 54.05 to 61.32.

18197. Dec. 3.—Approving location G.T.P. Branch Lines Co.'s Moose Jaw northwest branch, mileage 67.86 to 79.02, Sask.

18108. Nov. 30.—Extending until June 1, 1913, time limited by sec. 4, chap. 61, of acts 7-8, Ed. VII., for approval of G.N.W. Telegraph Co.'s tolls between points west of North Bay, also to and from points west of North Bay and to points east thereof, and east of and including Windsor, Ont., and allowing tolls which it was authorized to charge under said acts.

18199. Nov. 12.—Permitting Winnipeg Electric Ry. to lay and maintain tracks through subway under C.P.R. tracks on McPhillips street, Winnipeg.

18200. Dec. 3.—Directing C.P.R. to provide farm crossing in east ½ of lot 23, con. 11, Beckwith tp.

18201. Dec. [illegible]—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build its Glentay to Cobourg line over C.N.O.R. at mileage 95.1 from Glentay by overhead structure.

18202. Dec. 3.—Certifying that correction to show station grounds at Bayside in plan of Campbellford, Lake Ontario and Western Ry. Glentay to Cobourg line is allowed.

18203. Dec. [illegible]—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across road allowance in Hope tp., mileage 133.38 from Glentay.

18204. Dec. 2.—Authorizing G.T.R. to build siding for Empire Cotton Mills Co., near Welland, Ont.

18205. Dec. 2.—Authorizing G.T.P. Saskatchewan Ry. to connect its Weyburn branch with G.T.P. Branch Lines Co.'s Regina-Boundary line at Talmage, Sask.

18206. Dec. 2.—Approving proposed location G.T.P. Branch Lines Co.'s station in sec. 124, tp. 1, r. 3, w. 2 m., Sask.

18207. Dec. 3.—Authorizing G.T.P. Ry. to operate trains over portion of railway between mileage 164 and 176.8, east of Prince Rupert, B.C., and amending order [illegible], 1912.

18208. Dec. 2.—Temporarily approving G.T.P. Standard Freight Mileage Tariff, C.R.C. 12, between stations between Thornton, Alta., and Tete Jaune, B.C., inclusive.

18209. Dec. 3.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across road allowance between Haldimand and Cramahe tps., Ont., mileage 106.17 from Glentay; and eliminating item 10 of order 17361, Aug. 29, 1912.

18210. Dec. 3.—Suspending, pending hearing of application, the rate of 40c. a net ton on coal from Detroit, Mich., to Windsor, Ont., as published in M.C.R. Supplement 14 to Tariff C.R.C. 1288.

18211. Nov. 6.—Approving location C.N.O.R. through York and Scarboro tps., Ont., from mileage 0 to 7.60 from Yonge street.

18212. Nov. 6.—Directing T.H. & B.R. to cut down hill immediately east and south of railway at Gerrie's crossing.

18213. Nov. 6.—Authorizing London Street Ry. Co. to cross C.P.R. at Adelaide street, London, Ont.

18214. Nov. 22.—Authorizing G.T. Pacific Ry. to open for traffic its line between Fitzhugh, mileage 1027.8, and Tete Jaune Cache, mileage 1095.3.

18215. Dec. 4.—Authorizing local improvement district 18, w. 4, to build road across Calgary and Edmonton Ry. in east ½ sec. 20, tp. 35, r. 28, w. 4 m., Alta.

18216. Dec. 4.—Relieving British Columbia Electric Ry. from providing further protection on it Lulu island branch at Townsend road, Point Grey.

18217. Dec. 4.—Approving location of Canadian Northern Ry. Craven northeasterly line through tps. 20-21, r. 21-20, w. 2 m., Sask., mileage 0 to 8.79.

18218. Dec. 4.—Authorizing C.N. Ontario Ry. to connect with C.P.R. in Westmeath and Pembroke tps., mileage 82.02 to 82.61.

18219. Dec. 4.—Authorizing C.N. Alberta Ry. to operate trains over G.T. Pacific Ry. crossing in s.e.¼ sec. 31, tp. 53, r. 10, w. 5 m., Alta., for construction purposes only.

18220. Dec. 4.—Authorizing G.T.R. to build siding and spurs for Dominion Wood and Lumber Co. in Himsworth tp., Ont.

18221, 18222. Dec. 4.—Authorizing G.T.R. to build sidings for Kirkfield Portland Cement Co., Raven Lake, Ont., and for Canada Grip Nut Co., St. Johns, Que.

18223. Nov. 21.—Authorizing C.P.R. to open up Thirteenth avenue, Estevan, Sask., across its tracks and station grounds.

18224. Dec. 4.—Authorizing C.P.R. to build spur for Standard Chemical Iron and Lumber Co., Montreal.

General order 98. Dec. 6.—Respecting provision of heated refrigerator cars on railways in eastern Canada. This order is given in full on another page.

18225. Dec. 4.—Ordering C.P.R. to install a 12 in. pipe for drainage under its tracks in Vaudreuil, Que.

18226. Dec. 5.—Recommending to Governor in Council for sanction lease, of Oct. 2, 1912, between Alberta Central Ry. and C.P.R.

18227. Dec. 3.—Authorizing C.P.R. to build spur for Alex. Bremner, Ltd., in St. Felix de Valois parish, Que.

18228. Dec. 4.—Approving Campbellford, Lake Ontario and Western Ry. (C.P.R.) plan of structure across road near Parham, mileage 32.44.

18229, 18230. Dec. 5.—Authorizing Canadian Northern Ry. to build its Craven northeasterly line across eight highways, and its Maryfield branch across fourteen highways in Saskatchewan.

18231. Dec. 5.—Authorizing G.T.R. to build siding for Dunnville Brick and Tile Co., Moulton tp., Ont.

18232. Dec. 5.—Authorizing Palmerston tp., Ont., to divert and build road across Kingston and Pembroke Ry., near Mississippi station.

18233, 18234. Dec. 5.—Authorizing C.P.R. to build spurs for Calgary Terra-Cotta Co. near Calgary, Alta., and to Baynes lake across Government highway in Kootenay district, B.C.

18235. Dec. 6.—Amending order 18105, Dec. 6, re C.P.R. branch at Merritt, B.C.

18236. Dec. 7.—Approving British America Ex. Co.'s bylaw authorizing H. J. Herrold, General Agent, to prepare and issue tariffs of tolls.

18237. Dec. 7.—Approving Canadian Northern Ry. location through tps. [illegible] and [illegible], w. 2 m., Sask.

18238. Dec. 7.—Authorizing C.P.R. to build bridge 129.65, White river subdivision, Lake Superior division.

18239. Dec. 4.—Authorizing Toronto Power Co. to carry transmission line across G.T.R. and Wabash Rd., Thorold tp., Ont.

18240. Nov. 23.—Dismissing application of North Edmonton village and others for opening up Kelly avenue, Edmonton, Alta.

18241, 18242. Nov. 18, 19.—Authorizing city of Brandon, Man., to build its single track municipal railway across Canadian Northern Ry. at Thirteenth and First streets.

18243. Dec. 9.—Authorizing C.P.R. to build its Swift Current southeasterly branch across highway adjoining north boundary of sec. 27, tp. 12, r. 13, w. 3 m., Sask.

18244. Nov. 26.—Dismissing application of Tees and Persse, et al., to rescind order 17398, re C.P.R. spur from Princess street, Winnipeg.

18245. Nov. 22. Ordering Canadian Northern Ry. to build shelter and platform at Légal, Alta.

18246. Dec. 2.—Dismissing Vancouver and Nanaimo Coal Mining Co.'s complaint that Esquimalt and Nanaimo Ry. refuses to handle private coal cars over its main line.

18247. Nov. 28.—Dismissing application of corporation of Delta, B.C., to rescind orders relating to River road.

18248. Nov. 29.—Dismissing Pacific Machinery and Supply Co.'s complaint against first class rating of Canadian freight classification for band saws.

18249. Dec. 2.—Authorizing Esquimalt and Nanaimo Ry. to erect gates at Esquimalt road, Victoria, B.C.

18250. Nov. 28.—Authorizing British Columbia Transport Co. to cross Great Northern Ry. opposite water lots 94 and 97, New Westminster, B.C.

18251. Nov. 29.—Dismissing application of Imperial Rice Milling Co., Vancouver, B.C., for reductions from freight rates on rice and broken rice from Vancouver to points east of and including Calgary, Alta., to Winnipeg, Man., inclusive.

18252. Nov. 28.—Extending for five months from date time for completion by C.P.R. of station at Salmon Arm, B.C., required by order 17306.

18253. Nov. 29.—Extending for two months from date time within which British Columbia Electric Ry. be allowed to appeal from order 17840, re carrying certain streets over V.V. & E. Ry., overhead, in Vancouver.

18254. Nov. 22.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to lay rails across Canadian Northern Ry. on sec. 33, tp. 55, r. 25, w. 4 m., pending installation of permanent crossing authorized by order 17148.

18255. Nov. 29.—Ordering Great Northern Ry. to extend by 100 ft., siding at Western Paper Mills, Sapperton, B.C.

18256. Dec. 12.—Extending to June, 1913, time for C.P.R. to file telegraph tolls applying west of Sudbury, Ont.

18257. Dec. 9.—Approving platform for Windsor Plaster Co. on Dominion Atlantic Ry. at Brooklyn, N.S.

18258. Dec. 9.—Authorizing city of St. Thomas, Ont., to lay sewer under Pere Marquette Rd. on London and Port Stanley gravel road.

18259. Dec. 11.—Extending to Jan. 15, 1913, time within which G.T.R. is required to install gates at King and Sherbrooke streets, Peterboro, Ont.

18260. Dec. 9.—Authorizing Winnipeg Electric Ry. to build double track across C.P.R. spur on Talbot avenue, Winnipeg.

18261, 18262. Dec. 9, 11.—Authorizing C.P.R. to build bridge 17.1 on its Cowichan lake branch, B.C., and bridge 124.7 over Gage's creek, near Port Hope, Ont.

18263. Dec. 7.—Approving Campbellford, Lake Ontario and Western Ry. (C.P.R.) plans of bridges to be built at mileage 157.47 and 157.75, East Whitby tp., Ont.

18264. Dec. 10.—Authorizing C.P.R. to build spur for Northern Sand and Gravel Co., Milner, Man.

18265. Dec. 9.—Authorizing C.P.R. to build highway diversion to join road allowance on west boundary of sec. 12-11-10, w. 4 m.

18266. Dec. 9.—Authorizing C.P.R. to cross highways on its Weyburn-Lethbridge branch, Sask., mileage 112.1 to 131.43.

18267. Dec. 9.—Authorizing C.P.R. to build extension to siding, and additional spur in Victoria park, for city of Calgary, Alta.

18268. Dec. 9.—Authorizing C.P.R. to build extension to branch line in block 13, Fort William, Ont., for Fenton Elevator Co.

18269. Dec. 9.—Authorizing C.P.R. to build additional track across St. Louis street, Farnham, Que.

18270. Dec. 10.—Recommending to Governor in Council for sanction, agreement between Georgian Bay and Seaboard Ry. and C.P.R.

18271. Dec. 9.—Authorizing C.P.R. to build temporary track for one year on its Virgin northeasterly branch across East Kildonan road and Winnipeg Electric Ry. in Kildonan parish, Man.

18272. Dec. 10.—Ordering C.P.R. to provide farm crossing for S. Y. Brockman, Roseberry tp., B.C.

18273. Dec. 11.—Approving C.P.R. plan showing extension to bridge 45.8, McAuley subdivision, Man.

18274. Dec. 7.—Authorizing Canadian Northern Ry. to build its Bienfait-Estevan branch across C.P.R. Sault line in n.w. ¼ sec. 13-2-8, w. 2 m.

18275. Dec. 7.—Approving Canadian Northern Ontario Ry. station grounds at Meadowside.

18276. Dec. 7.—Approving Canadian Northern Ontario Ry. location through Deseronto, mileage [illegible] to [illegible].

18277. Dec. 10.—Authorizing Canadian Northern Quebec Ry. to build across public road in lot 27, con. 3, Arundel tp., Que.

18278. Dec. 12.—Authorizing G.T.R. to rebuild bridge 73 over Cheshire creek, mileage 136.56, district 15, Middle division, Ont.

18279. Dec. 11.—Authorizing Canadian Northern Pacific Ry. to build across Esquimalt and Nanaimo Ry. Cowichan lake branch, mileage 74.5, Cowichan lake district, B.C.

18280. Dec. 12.—Approving C.P.R. plan showing details of trestle on extension to spur for Spanish River Pulp and Paper Mills Co., at Sturgeon Falls, Ont.

The Canadian Northern Railway's Montreal Tunnel.

S. P. Brown, M. Am. Soc. C.E., M. Am. Soc. M.E., Managing Engineer, Mackenzie, Mann and Co., and Chief Engineer, Canadian Northern Montreal Tunnel and Terminal Co., read a paper on tunnelling before the Canadian Railway Club in Montreal recently in which he dealt with the subject most exhaustively, covering its history and the questions of classification, surveying, design, ventilation, signals, tracks, construction, plant, excavation, and linings very thoroughly. Following are extracts which refer particularly to the C.N.R.'s Montreal tunnel, which he places in class 2 of the three classes into which he divides tunnels.

Class 2.—Entries into cities, where natural surroundings make tunnels imperative, where city ordinances prohibit grade crossings, where land values do not allow of a private right of way for an open cut with bridges at street crossings, or where grades or cost of construction and maintenance make an elevated viaduct inadvisable or impossible.

The Canadian Northern is just completing its transcontinental system, for which terminal facilities in Canada's principal city are essential, especially as this city is the main eastern seaport during the busiest half of the year. Montreal's natural location, between the St. Lawrence river and Mount Royal, made the problem of entry appear complicated. To enter from either end of this narrow strip meant a detour that was undesirable, and might possibly have resulted in two separate stations for the east and west bound traffic. Grade crossings were out of the question. Cut, cut and cover subway, or elevated viaduct would have necessarily been of considerable length, which would have been difficult and expensive in many ways. The natural alternative was a tunnel; and as by developing the country back of the mountain, suburbanly, for Montreal's rapidly increasing population, much of the expense of the improvements could be covered, it was the only logical course. Furthermore, the topography of the city—combined with the distribution of business activity of different sorts—made the actual terminal location, yards, etc., equally logical and simple.

The line of the Canadian Northern Montreal Tunnel and Terminal Co., from its junction with the main line of the Canadian Northern Quebec Ry.—near the Jacques Cartier Union Ry.—is depressed through the new town of Mount Royal to the tunnel portal, where it passes under the C.P.R. belt line, about a mile from the latter's Outremont yard. From this point the tunnel goes down at a 0.6% grade, in an almost due easterly direction, to the McGill College grounds, where it curves into McGill College avenue, which leads to the main passenger terminal, situated in the blocks between Cathcart and Lagauchetiere streets and Ste. Monique and Mansfield streets. The grades and elevations are such that this tunnel passes under St. Catherine street, with ample room for a future rapid transit subway above it, and the tracks are able to be carried level through the station and over the lower town on the proposed viaduct, where a yard for light and perishable freight is contemplated, to connect with the proposed Harbor Commissioners' elevated and a possible bridge across the St. Lawrence river.

Two tracks will run both east and west from the main passenger station. The tunnel is something over three miles long, the viaduct about a mile long. The passenger station yard will be about a quarter of a mile long, with platforms over 1,000 ft. long and an area of about nine acres. Local passenger stations will be situated down town and back of the mountain, as traffic demands. The main yard will be located near the Back river, where the electrical transfer yard will also be situated. There will also be a delivery yard in Mount Royal and an elevated yard in the commercial part of Montreal.

The designs for the Mount Royal tunnel are not yet completed, but it is probable that both twin tunnels and double track sections will be used, depending on the ground. Where the rock is of the proper character to permit it, the tunnel may be left unlined, although this cannot yet be determined. The minimum clearance has been limited to 16½ ft. above the rail, but the standard tunnel clearance will be 17½ ft. The standard clearance in width is 6 ft. off the centre line of track, which may be slightly reduced near the bottom as, for instance, at station platforms.

In the twin tunnel, centre walk ways will be provided at about the level of the coach floors, and cross passages will be cut through the dividing wall, at intervals, for communication between the twin tubes. Refuge spaces are allowed for track men under the walk ways. The ducts will be carried in the centre wall. The relation of the train cross section to the tube area will be approximately 50%.

In the double track section the two tracks will be separated by the duct bench, which is the same height as the centre walk ways in the twin tunnel, so that in case of derailment one train cannot block both tracks.

The studies for electrification have not yet been completed, so that there is not much to be said on this subject. Owing to the climatic conditions outside the tunnel, it is improbable that a third rail will be used on the ground, which will probably force the adoption of some form of trolley. This means high voltage, either direct or alternating current. Great strides have been and are now being made in high voltage, direct current railway work and, until very careful and exhaustive studies have been completed, no decision can be made. This is important in the final design of tunnel cross sections, as the amount of head room for 10,000 volts alternating is quite different to that required for 1,500 volts direct current.

In the Mount Royal tunnel, where soft ground is encountered, a cap and post system of construction will probably be used, owing to the location of the rock surface: this running in general fairly near the roof line permits the full width timbering to be done without shifting posts, which rest directly on the rock. As fast as the roof excavation can be carried on in this manner, the arches will be built, so that the roof will be absolutely protected. After the arches are in, the lower excavation will be removed and arches underpinned, where necessary.

The plant for the Mount Royal tunnel will be quite complete. The compressor plants at each end consist of one direct connected cross compound unit of 2,200 cu. ft. per minute capacity, driven by a synchronous motor and three belt driven cross compound units of 1,100 cu. ft. per minute capacity, with induction motors. The power is three phase, 62½ cycles at 2,200 volts. Pumps, drills and some small motors are run by air. Most power used, however, is electrical. The drills used are the precussive type with the water attachment built largely of steel, to reduce their weight. Horizontal bars are used to support the drills, and carriages are being made to handle the full drilling outfit for each heading.

The muck cars are 3 ft. gauge, very low and narrow. They are built with a 3 ft. wheel base, 18 in. wheels and springs on the axles. Both gasoline and electric locomotives will be used. Part of the tunnel muck will be crushed for concrete stone and ballast; part being used for fill and subfoundation work. The crushers are gyratory and roll hammer types, to give the desired grades, and both revolving and oscillating screens will be used over the bins.

The cages used at the shafts are of the counter balanced automatic dumping types, with electric hoists. These are designed for a capacity of about 800 cu. yds. per day.

The shops consist of a blacksmith shop, equipped with an air hammer, shears, punches, drill sharpening machinery and the usual forges; machine shops equipped with large and small lathes, a shaper, radius drills, saws, pipe machine, emery and grindstones, etc.; carpenters shops, with band and circular saws and drill repair and testing shops, as well as garage for the maintenance, storage and repairs of automobiles and auto trucks.

The method of excavation adopted in the Mount Royal tunnel is a bottom centre heading, with breakups at intervals where the full sized tunnel section will be developed. The heading is driven by the horizontal bar method. Later, a carriage and other auxiliary apparatus is expected to be used, as described under plant. At the breakups, jumbo timbers will be placed in the heading so that traffic can be maintained and the upper portion of the tunnel stoped down on the top of this and run directly into cars in the heading by gravity. As many as these breakups will be opened as are found necessary to keep up with the heading progress.

The firing is done electrically, but an effort is being made to get some special fuses with electric igniters, by which the cut may be fired electrically, at the same time igniting the time fuzes of the relievers and line holes. This should give a better result than the ordinary time fuse method without its accompanying risk, and will relieve the men from the necessity of going back into the smoke to load the later rounds.

In the Mount Royal tunnel, at present, the average progress at the west end is 20 ft. per day. In the east end, where the ground is rather bad, requiring timbering, and where no shooting is allowed at night, on account of public annoyance, the average progress for the last two months was 12 ft. per day. Heading 9 x 12 ft., 4 cu. yds. per foot. No drill carriage; precussive drills used with water attachment. 24 in. gauge [illegible]

National Transcontinental Ry. Arbitration.—Sir Wm. Whyte has accepted the position offered him by the Dominion Government, with the consent of the G.T. Pacific Ry., as sole arbitrator in settling the points of difference between the Government and the company as to the operation of the Winnipeg-Lake Superior Jct. section of the National Transcontinental Ry. Involved in this question, M. Donaldson, Vice President, G.T.P.R., is reported as saying, Dec. 10, is the settlement of the point whether the shops at Transcona are part and parcel of the National Transcontinental Ry. Mr. Donaldson believed that possession of the shops would be taken Jan. 1, the details of the opening being aranged by G. W. Robb, Master Mechanic. An order-in-council will be passed making the appointment and defining Sir Wm. Whyte's powers as sole arbitrator. Sir William inspected the Transcona shops Dec. 17, and then went by special train over the portion of the N.T.R. east of Winnipeg on which rails have been laid.

Railway Development.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Interurban Ry.—[illegible] Minister of [illegible] route map of [illegible] Calgary to Cochrane, Alta., 45 miles.

The taxpayers of Calgary voted, Dec. 29, on a bylaw authorizing the city council to sign an agreement granting the company a right of way into the city, and on certain streets on certain conditions, for 25 years [illegible] Nov., 1912, pg. [illegible]

Algoma Central and Hudson Bay Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the main line from mileage 93 to Hawk Lake Jct., mileage 164.5 from Sault Ste. Marie, [illegible] Dec., 1912, pg. 604.)

Algoma Eastern Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the extension of the main line from Crean Hill, mileage 22.7, to West River, Ont., mileage 60.76. (Dec., 1912, pg. [illegible])

British Columbia and White River Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may build the lines authorized by chap. 45 of the statutes of 1911. Barnard and McKeown, Montreal, are solicitors for applicants. (July, 1911, pg. 645.)

Buctouche Ry. and Transportation Co.—Application is being made to the Dominion Parliament to changing the name of this company to the Moncton and Northumberland Strait Ry. Co., and to authorize the building of the following additional lines:—From Richibucto to Chatham or Loggieville; from [illegible] to Cape Tormentine, N.B. F. G. Evans, Moncton, N.B., is General Manager.

The Minister of Railways has approved of route plan of a proposed extension of the Moncton and Buctouche Ry. from Buctouche to Richibucto, N.B., about 20 miles. The M. and B. Ry. is owned by the B. Ry. and T. Co., and the extension named is a section of the line authorized to be built [illegible] May, 1911, pg. 409.)

Burrard Inlet Tunnel and Bridge Co.—The Board of Railway Commissioners has approved [illegible] location plan of site of the proposed bridge at Burrard inlet, Vancouver, B.C., and of the revised plans of the bridge showing opening spans of 225 ft. each, rescinding the previous order.

Application is being made to the Dominion Parliament to extend the time within which the bridge and connecting railways may be built. (Nov., 1912, pg. 556.)

Calgary, Edmonton and Fort McMurray Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build the following railways and to operate them by any motive [illegible] Edmonton, thence [illegible] Fort McMurray, [illegible] by the valleys of the Athabaska and the Slave rivers, to Fort Resolution on Great Slave lake; from near Fort Smith southwesterly to Fort Vermillion, thence southerly to Peace River Landing, and thence [illegible] Red Deer river north of the 52nd parallel to Red Deer. Christie, Green and Hill, Ottawa, are solicitors for applicants.

Canada Western Ry.—The Dominion Parliament is being asked to extend the time within which the lines authorized by chap. 69 of the statutes of 1909 may be built. Hough, Campbell and Ferguson, Winnipeg, Man., are solicitors for applicants. (Nov., [illegible])

Central Ry. of Canada.—We are officially advised that there is under construction a 38 mile section from Hawkesbury to South Indian, Ont., the contractors being C. J. [illegible] and Sons, London, Eng., and Montreal; and a 15 mile section from Ste. Agathe to Francestown, Que., the contract for which is held by H. Armstrong. A general contract has been let for the entire line from Montreal to Midland, but the two sections named cover all the mileage that has yet been brought to the construction stage. Tenders were received to Dec. 20, 1912, for 1,000,000 ties, to be delivered in quantities as directed at Ste. Agathe, Lachute, Montreal, Grenville, Que.; Hawkesbury, MacAlpine, Ottawa, South Indian, Carleton Place, Bannockburn, Fenelon Falls, Orillia and Midland, Ont. F. Stuart Williamson is Chief Engineer and General Manager. (Dec., 1912, pg. 604.)

Duluth and Northern Minnesota Ry.—J. [illegible], Vice President and General Manager, visited Fort William, Ont., recently, with some other officials, and is reported to have stated that the line would be extended to that point as soon as arrangements could be made, and that the route would be surveyed during the winter. The company's line starts from the Duluth and Iron Range Rd., at Knife River, 19.6 miles from Duluth, Minn., and runs by a rather circuitous route 62 miles northeasterly to Cramer, Minn.

Duluth, Winnipeg and Pacific Ry.—We are officially advised that track was laid on 73.4 miles of this line during 1912. This covers the entire line from Duluth to Silver Jct., Virginia, Minn., where connection is made with the section of the line extending to the Rainy River, opposite Fort Frances, Ont., at which point connection is made with the Canadian Northern Ry. by a bridge across the river.

Edmonton, Dunvegan and British Columbia Ry.—Tracklaying is in progress northerly from Edmonton, Alta., in the direction of Sturgeon River, which was reached early in December. Grading and bridge construction on the first 70 miles have been completed, and it was expected to have track laid on this mileage by Dec. 31. (Dec., 1912, pg. 604.)

Erie, London and Tillsonburg Ry.—The [illegible] map for this projected railway shows a line running north out of Port Burwell, thence direct northwesterly to Aylmer, then on to a junction with the G.T.R. main line from Hamilton, just east of London. The G.T.R. line over which the Wabash Rd. operates, is crossed at Aylmer; a little further on the Michigan Central is crossed, and the C.P.R. is crossed near Belmont. A. S. Going, of the G.T.R. staff, was the locating engineer. (Dec., 1912, pg. 604.)

Esquimalt and Nanaimo Ry.—We are officially advised that Moore and Pethick, Victoria, B.C., have been awarded the contract for grading and bridging a portion of the Courtenay extension, viz., from the Big Qualicum river, mileage 15.5 to Union Bay, mileage 34.79. The contract calls for the completion of the work by Aug. 31. A contract has also been let to C. Hoard, Victoria, for grading and bridging on the extension from mileage 34.79 to 40, the work to be completed by Mar. 31. (Dec., 1912, [illegible])

Fredericton and Grand Lake Coal and Ry. Co.—We are officially advised that track has been laid on this line as follows:—From Gibson, N.B., for 11 miles, and from the end of the New Brunswick Coal and Ry. Co.'s line near Minto, N.B., for seven miles in the direction of Gibson. Grading and [illegible] on the mileage between the two points to which track has been laid is well advanced. A. E. Trites and Son, Salisbury, N.B., have the contract. A branch line is to be built from mileage 0.5, near Gibson, to Marysville, three miles. The clearing and fencing on this branch have been done, but the contract for construction has not yet been let. H. W. D. Armstrong, Fredericton, N.B., is Chief Engineer. (Nov., 1912, pg. 556.)

Huron Lake Shore Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title, to build a railway from Sarnia, north-easterly through Lambton, Huron, Bruce and Grey counties to Meaford, Ont. W. B. Converse, Montreal, is solicitor for applicants.

Intercolonial Ry.—We are officially advised that track has been laid on diversions of line as follows:—From Nelson to two miles east of Chatham, N.B., 8.3 miles; and from George river to Sydney Mines, N.S., 9 miles.

The new station at Chatham, N.B., to replace the one destroyed by the big fire of 1910, was opened Nov. 29.

Tenders are under consideration for the building of an addition to the freight car repair shop at Moncton, N.B.

The Minister of Railways stated in the House of Commons Dec. 4 that the report, plans and estimates for the proposed terminal improvements at Halifax, N.S., were in course of preparation and would be submitted to the House as soon as possible.

In reply to questions in the House of Commons, Dec. 4, the Minister of Railways said the government had authorized the carrying out of the following works for which appropriations had not been voted by parliament: A new connection between the I.R.C. and the C.P.R. at Ste. Rosalie Jct., Que., at an estimated cost of $2,000, on which work about $100 had already been expended. A rearrangement of tracks at Rimouski, Que., and other work at a cost of $2,685, on which $150 had already been expended. (Dec., 1912, pg. 604.)

Joliette and Lake Manuan Colonization Ry.—We are officially advised that the first section from Joliette to St. Michel des Saints, Que., 60 miles, is under construction, the contractor being R. J. Craig, Cornwall, Ont. A further section of 90 miles from St. Michel des Saints to Weymontachene, Que., on the National Transcontinental Ry., is under survey. J. N. Patton, St. Felix de Valois, Que., is Chief Engineer for the British Canadian Construction Co., which is financing the construction. (Aug., 1912, pg. 412.)

Kettle Valley Lines.—The Board of Railway Commissioners has authorized the carrying of freight on the line from Midway to Carmi, B.C., 46 miles. (Dec., 1912, pg. 605.)

Kingston and Pembroke Ry.—The only construction done on this line during the past year was the ballasting of about 10 miles, and the putting of a number of bridges and cement culverts. (June, 1912, pg. 300.)

Little Nation Ry.—Subscribers to the common stock of this projected railway were called upon to pay a further 10% of their subscriptions by Dec. 28, and shareholders who had not met two previous calls of 10% each, have been notified that proceedings will be taken to forfeit their rights to the shares subscribed for. (Dec., 1912, pg. 605.)

Manitoba-Ontario Ry.—The Dominion Parliament is being asked to incorporate a company with this title, to build a railway from Fort William, Ont., to the Lake of the Woods, and thence to Winnipeg, with a branch southerly to the International boundary, and another northerly to the National Transcontinental Ry. within the

Kenora district. Lewis and Smellie, Ottawa, are solicitors for applicants.

Medicine Hat, Alta.—Among the bylaws voted on on Dec. 27 was one authorizing the spending of $20,000 for spur tracks to industrial sites. (Oct., 1912, pg. 502.)

Moncton and Buctouche Ry.—See Buctouche Ry. and Transportation Co.

North Ry.—It has been announced in Montreal that an arrangement has been made by which the G.T. Pacific Ry. will be given running rights over the section of the line between Montreal and Bell river, Que., the junction with the National Transcontinental Ry. It is reported that arrangements have been completed for starting construction on this section of the line during the current month. This will not consist of general construction work, but will be selected pieces of the line on which there is a lot of rock work, on which blasting is best done during the winter. (Dec., 1912, pg. 605.)

North Shore Ry. and Navigation Co.—We are officially advised that the following extensions of the line are under survey:—From Adamsville to Snow Shoe lake on the National Transcontinental Ry., N.B., 20 miles; and from Beersville to Richibucto Cape, N.B., 30 miles. C. Dean, Adamsville, N.B., is Superintendent. (June, 1912, pg. 301.)

Pacific and Hudson Bay Ry.—The Dominion Parliament is being asked to extend the time for the building of this projected railway, as set out in the statutes of 1910. Power is also sought to increase the capital to $25,000,000, and to enter into agreements with the Pacific Great Eastern Ry., the Edmonton, Dunvegan and British Columbia Ry., and British Columbia and Dawson Ry. W. F. Brougham, Vancouver, B.C., is solicitor for applicants. (Dec., 1912, pg. 605.)

Pacific Great Eastern Ry.—Grading has been started on the extension of the Howe Sound and Northern Ry., which has been acquired by the P.G.E. Ry., in the direction of Lillooet, B.C. P. Welch, the general contractor, is reported to have sublet the following mileages:—Four miles to foot of Bear Mountain, P. Welch; next seven miles, McAll and Wilson; next five miles, not yet let; next five miles, McGowan and Murchison; next five miles, —. McGillivray; next five miles, McAlpin and Cunningham. At the Lillooet end of the line 42 miles have been sublet in sections to the following:—D. D. McPhee & Co.; Kennedy and Welsh; Nicholson and Timlick; Burns-Jordan and Co.; Peter Salvas, J. A. Welsh. It is reported that a further 32 miles will be let as soon as the wagon roads, now under construction, are completed. (Dec., 1912, pg. 605.)

Peace River Great Western Ry.—The Alberta Legislature is being asked to extend the time within which the lines authorized by the statutes of 1910 may be built. Short, Woods, Biggar and Collisson, Edmonton, Alta., are solicitors for applicants. (Dec., 1912, pg. 605.)

Prince Edward Island Ry.—Track has been laid, we are officially advised, from Harmony Jct., to Elmira, 9.9 miles. (July, 1912, pg. 339.)

Quebec Rapid Transit Ry.—Power to build the following additional lines is being asked from the Dominion Parliament:—From St. Gregoire of Montmorency to L'Ange Gardien, Chateau Richer, and Ste. Anne de Beaupre; to cross over to the Island of Orleans and a belt line round it; and to build bridges from the shores of the St. Lawrence river to the Isle of Orleans. (Dec., 1912, pg. 605.)

The Reid Newfoundland Co. is making extensive alterations at the station building and offices at St. John's, Nfld. The old baggage and express departments have been added to the general office and station accommodation, and new quarters have been provided for baggage and express. (Nov., 1912, pg. 558.)

Southern Central Pacific Ry.—The Dominion Parliament is being asked to extend the time within which the lines authorized by sec. 7, chap. 191 of the statutes of 1903, and by sec. 1, chap. 141 of the statutes of 1911, may be built; and to change the provisional directorate. Macdoune, Honeywell and Graham, Ottawa, are solicitors for applicants. (May, 1911, pg. 413.)

Timiskaming and Northern Ontario Ry.—The new roundhouse at Hearst, Ont., construction on which was started June 15, is reported to have been completed.

Rapid progress is being made with the construction of the Elk Lake extension. The tracklaying gang reached the Montreal river Dec. 11, and J. L. Englehart, Chairman of the Commission, reported, Dec. 12, that it was expected to have the steel laid to Elk Lake by Dec. 22. (Dec., 1912, pg. 605.)

Vancouver, Westminster and Yukon Ry.—J. Hendry, President, is quoted as stating that there is no truth in the report that the C.P.R. had acquired this charter, and further, he said, "I may say that no negotiations are in progress looking for the acquisition of the charter. (Sept., 1912, pg. 451.)

Victoria Harbor Ry.—There has been deposited in the Land Registry Office at Victoria, B.C., plan, profile and book of reference of the proposed main line between stations 100 + 00 at Camel point to station 246 + 40 at Selkirk Water, including loops between stations 100 and 112 + 54.3 and station 100 and 112 + 46.4 and connection with Esquimalt and Nanaimo Ry. from station 00 + 00 to station 10 + 72.4, Rock bay, Victoria. H. J. Haffner is Chief Engineer. (Jan., 1912, pg. 23.)

The Canadian Pacific Railway's Enormous Rolling Stock Orders.

The C.P.R. during 1912 placed orders for rolling stock to the value of about $48,000,000, which is said to be double the amount ever ordered by any other railway system in North America in the same period.

When the orders are completely filled, the C.P.R. will have in commission 2,225 locomotives, 90,416 freight and stock cars of all kinds, 2,164 first and second class passenger cars, and 512 tourist sleepers, standard sleepers, diners and cafe cars, 1,383 conductors' vans, 4,329 boarding, tool and auxiliary cars and steam shovels—to be operated on over 12,500 miles of track.

The new equipment ordered during 1912 includes 467 locomotives, 26,653 box cars, 636 flat cars, 401 coal cars, 300 stock cars, 227 refrigerator cars, 94 first class sleepers, three compartment cars, 20 observation cars, 25 diners, 57 tourist cars, 117 first class and suburban cars, 138 baggage, mail and express cars.

Four motor cars, which will climb up the side of the mountain from Laggan, B.C., to the Lakes in the Clouds, will be placed in service—the tracks having already been laid—and will prove a great convenience to the tourists who invade that region yearly.

Out of the total expenditure the new locomotives cost over $9,000,000, the passenger cars nearly $5,250,000, and the freight and miscellaneous cars over $34,000,000. The equipment is being chiefly procured in Canada, but Canadian shops being unable to fill the orders in their entirety, the remainder had to be purchased in the United States, in order to obtain delivery within a reasonable time.

Canadian Northern Railway Earnings, Etc.

[illegible] net earnings [illegible] increases, [illegible] for 1911-12 [illegible]

	Gross Earnings	Expenses	Net Earnings	Increase
July	[illegible]	[illegible]	[illegible]	$133,000
Aug.	1,745,800	1,375,000	370,800	56,100
Sept.	1,671,500	1,248,000	423,500	[illegible]
Oct.	2,351,200	1,645,900	[illegible]	[illegible]
	[illegible]	[illegible]	[illegible]	[illegible]
Inc.	[illegible]	[illegible]	[illegible]	

[illegible] during Oct., 1911.

Approximate gross earnings [illegible] against $2,001,500 for Oct., 1911.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases or decreases, compared with those of 1911, from July 1, 1912:

	Gross Earnings	Expenses	Net Earnings	Increase
July	[illegible]	[illegible]	[illegible]	[illegible]
Aug.	12,251,715.87	7,533,790.21	4,717,925.66	642,354 65
Sept.	[illegible]	[illegible]	[illegible]	[illegible]
Oct.	[illegible]	[illegible]	[illegible]	[illegible]
	$48,944,246 23	30,466,952.63	$18,477,293 60	$2,100,142 71
Inc.	7,603,446.71	5,503,304,00	2,100,142 71	....

Approximate gross earnings for Nov., $12,145,000 against $10,399,000 for Nov., 1911.

The mileage under operation was increased with the commencement of Nov., to 11,354.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R. for Oct., 1912, compared with those for Oct., 1911:—

Grand Trunk Railway.

	1912.	1911.

Passenger Association Meetings. — The Niagara Frontier Summer Rate Committee will meet at the Chateau Laurier, Ottawa, January 21 to 23. On the first two days mentioned the representatives will arrange all details as far as possible, their report to be submitted to the general meeting Jan. 23 at 10 a.m. The Great Lakes and St. Lawrence River Rate Committee will meet at the same place immediately after the Niagara Frontier Summer Rate Committee's meeting. The International Water Lines Passenger Association will also meet in Ottawa on Jan. 23.

Quebec Bridge.—The shops at [illegible] near Montreal, in connection with the erection of the Quebec bridge, are practically completed. About 400 men will be employed preparing the steel work. W. P. Ladd, of the Canadian Bridge Co., Walkerville, Ont., will superintend the manufacture of the material, and W. B. Fortune has been appointed to superintend the erection.

Mainly About Transportation People.

SIR WM. WHYTE has been elected a governor of the Winnipeg Country Club.

W. [illegible], who died at Newark, N.J., recently, was an old G.T.R. official, formerly living in Montreal.

GEORGE BURNHAM, formerly President, Baldwin Locomotive Works, died in Philadelphia, Pa., Dec. 10, aged 95.

R. G. CHAMBERLIN, chief of the Vancouver city police force, has resigned to enter the C.P.R. service at Montreal.

MRS. E. F. SEIXAS, wife of the General Manager, Niagara, St. Catharines and Toronto Ry., died of angina pectoris, Dec. 9.

D. McNICOLL, Vice President, C.P.R., has declined to accept nomination for the position of mayor of Westmount, Que., for 1913.

LADY TYLER, widow of the late Sir Henry W. Tyler,, at one time President, Grand Trunk Ry., died in London, Eng., Dec. 8.

W. L. BEATTY, of M. Beatty and Son, Welland, Ont., manufacturers of dredges and contractors' plant, died there, Nov. 29, aged 71.

A. S. GOODEVE, a member of the Board of Railway Commissioners, was the principal speaker at the Canadian Club luncheon in Toronto, Dec. 9.

J. S. MACLAUCHLAN has been appointed Dominion Government engineer in charge of public works, on Vancouver Island, with office at Victoria, B.C.

J. L. ENGLEHART, Chairman, Timiskaming and Northern Ontario Railway Commission, has been elected a director of the Bank of Toronto.

J. E. DALRYMPLE, Vice President, G.T.R., and Mrs. Dalrymple have been spending some time recently in New York and other points on the Atlantic coast.

SIR DONALD MANN, Vice President Canadian Northern Ry., has been elected Honorary President of the newly organized Canadian Amateur Lacrosse Association.

J. T. LEGRAND, Bridge Engineer, G.T. Pacific Ry., Winnipeg, has been elected chairman, Manitoba branch, Canadian Society of Civil Engineers.

J. THOMSON, Superintendent, Canadian Transfer Co., Toronto, returned to Canada on the C.P.R. s.s. Empress of Britain, Dec. 7, after a short vacation in Scotland.

SIR DONALD MANN will close Fallingbrook, Toronto, for the winter, while Lady Mann and their son are in southern Europe, and will live at his former town house on St. George street.

P. J. DORAN, formerly well known in marine circles in Montreal, at one time representing the Thomson Line, died suddenly at the Jubilee rink, of which he was the owner, Dec. 7.

G. M. BOSWORTH, Vice President, C.P.R., and Mrs. Bosworth returned to Montreal, Dec. 9, from Great Britain, where Mrs. Bosworth christened the C.P.R. s.s. Empress of Asia at its launching.

F. SUTHERLAND, who retired from the position of Master Car Builder, G.T.R., about four years ago, died at Point St. Charles, Que., Dec. 7, aged 78. He entered the G.T.R. employ in 1855.

A. B. COMEAU, for a number of years travelling auditor on the Intercolonial Ry., died at St. Damien, Que., Dec. 5. He had been in failing health for some time, and was relieved from duty in Feb., 1912.

W. L. KELLOGG, formerly Superintendent of Motive Power, Pere Marquette Rd., Grand Rapids, Mich., has been appointed Superintendent of Motive Power, Missouri, Kansas and Texas Ry., St. Louis, Mo.

HON. J. S. HENDRIE, C.V.O., chairman of the railway committee during recent sessions of the Ontario Legislature, returned to Canada from Great Britain, Dec. 7, on the C.P.R. s.s. Empress of Britain.

G. O. Otty, K.C., has been appointed Chairman of the New Brunswick Public Utilities Commission in succession to the late D. McL. Vince, and A. B. Connell, K.C., Woodstock, has been appointed to fill the vacancy.

Two bundles of clothing, belonging to CAPT. SEALEY, until recently a Canadian Northern Ry. engineer, were found in the ice near Athabasca Landing, Alta., Dec. 3. It is feared that he was drowned.

J. W. SHARPE, Travelling Freight Agent, G.T.R., Hamilton, Ont., was married there Dec. 18, to Miss Ethel Warmington, until recently Secretary to J. Gray, General Agent, G.T.R., Hamilton. They went to California for a trip.

A. E. Rosevear,
Assistant to Vice President, Grand Trunk Railway.

F. PENNINGTON, a Wabash Rd. agent, is reported to be also interested with E. Pennington, President of the Minneapolis, St. Paul and Sault Ste. Marie Ry., in the heirship to the Muncaster peerage and estates, referred to in our last issue.

A. S. CHEEVER, for many years Superintendent, Fitchburg division, Boston and Maine Rd., Boston, Mass., has been appointed Assistant to the General Manager and will be assigned to special work in the operating department.

MRS. LICHTENHEIN, widow of A. Lichtenhein, who was the Galena-Signal Oil Company's Contracting Agent in Canada, and her family, have moved from New Rochelle, N.Y., to the Cliff Haven, 417 Riverside drive, New York city.

JOS. RAMSEY, JR., formerly of the Wabash Rd., has resigned as President and General Manager of the Ann Arbor Rd. He is succeeded as President by N. Erb, Chairman of the Board of Directors, and as General Manager by H. H. Harrison, Vice President.

C. N. ARMSTRONG, of Montreal, Vice Chairman, Central Ry. of Canada, who has spent most of his time in England for several years past, will, it is said, be the next conservative candidate in the Colne Valley division of Yorkshire for the House of Commons.

HOWARD JAMES, Director of Purchases, Great Northern Ry., and Vice President and General Manager, Great Northern Steamship Co., and S. B. PLECHNER, Purchasing Agent, G.N.R., were both killed, when their automobile upset, recently, near J. J. Hill's country home, adjacent to St. Paul, Minn.

W. C. HUNTER, formerly General Air Brake Inspector, Intercolonial Ry., afterwards Manager, New Brunswick Coal and Railway Co., and latterly railway sales representative for T. McAvity and Sons, St. John, N.B., has been appointed Manager, Record Foundry and Machine Co., Moncton, N.B.

SIR THOMAS TAIT, President, Fredericton Grand Lake Coal and Ry. Co., Montreal; H. J. FULLER, President, Canadian Fairbanks Morse Co., Montreal, and W. R. ALLAN, General Northwest Agent, Allan Line Steamship Co., Winnipeg, are directors of Atlantic Sugar Refineries, Limited, recently organized to operate at St. John, N.B.

A telegram received in Montreal, Dec. 3, stated that E. A. WILLIAMS, who resided there some years ago, had been killed in a street car accident in New Orleans. At first it was feared that the victim was E. A. Williams, formerly Superintendent of Rolling Stock, C.P.R., but enquiries showed that the latter was alive and well at Glen Ridge, N.J.

A. D. CARTWRIGHT, Secretary, Board of Railway Commissioners, is one of the executors of his late father, Sir Richard Cartwright, who left an estate of a net value of $83,239.90, the interest on which goes to his widow. After her death the estate is to be divided, the three daughters to receive $20,000 each, and the balance going to the six sons.

JOHN F. PIERCE, who has been appointed District Passenger Agent, Richelieu and Ontario Navigation Co., for New England territory and the maritime provinces, was born in Chatham, Ont., and prior to his present appointment, was for two years, Travelling Passenger Agent in New England territory, and for ten years chief clerk of the Traffic department.

A. E. ROSEVEAR, whose appointment as Assistant to the Vice President (Traffic) G.T.R. and G.T.P.R., Montreal, together with some biographical data, was given in our last issue, and whose portrait appears in this issue, was born at Montreal, Feb. 20, 1863. Prior to holding his present position he was Assistant General Freight Agent, G.T.R., from Apr. 20, 1908.

LORD FURNESS, of Furness, Withy and Co., Manchester Liners, Ltd., and Honorary President, Richelieu and Ontario Navigation Co., who died recently, in his will authorizes his trustees to expend, not exceeding £30,000, towards the founding of an institution for the training of boys for the mercantile marine service, with a view to their being engaged on vessels of the various fleets with which he had been associated.

A. P. BOLLER, of Boller, Hodge and Baird, Engineers, New York City, and Vice-President, American Society of Civil Engineers, died Dec. 9, aged 72. In the sixties he planned an International bridge over the Niagara river at Black Rock, which was not carried out owing to the collapse of the railway company in the same year. His firm designed the Algoma Central and Hudson Bay Ry.'s Montreal river viaduct, which was completed recently.

H. F. BRADLEY, whose appointment as Passenger Manager, Allan Line Steamship Co., Montreal, was announced in our last issue, was born at Waterville, Que., July 20, 1876, and entered Allan Line service in 1898, and was to 1906 attached to the head office in Montreal. He was appointed General Agent for Ontario, with office in Toronto, in 1906, which position he held to Feb., 1912, when he was appointed Assistant Passenger Manager.

C. B. WILKIE, whose appointment as Road Foreman of Engines, Canadian Division, Pere Marquette Rd., Port Huron, Mich., was announced in our last issue, was born near Lunenburg, N.S., Nov. 19, 1877, and entered railway service July 30, 1898, since when he has been, to Dec., 1898, in car shops and roundhouse, Lake Erie and Detroit Ry., Walkerville, Ont.; Dec., 1898, to the summer of 1900, fireman, same road; 1900 to Nov. 4, 1912, locomotive driver, same road and Pere Marquette Rd., the latter having absorbed the L.E. and D.R. in 1901.

Toronto Saturday Night published a portrait recently under which it put "GEORGE HERBERT SHAW, who has relinquished his post as Assistant General Freight Agent, Canadian Pacific Ry. lines west of Port Arthur, to become Traffic Manager of the Canadian Northern Ry." This is ancient history with a vengeance. Mr. Shaw "relinquished his post" with the C.P.R. in June, 1901, over 11 years ago, when he was appointed Traffic Manager, Canadian Northern Ry. In Feb., 1911, he was appointed General Traffic Manager, Canadian Northern Ry.

H. B. FLEMING, whose appointment as Assistant Superintendent, Halifax and St. John division, Intercolonial Ry., Moncton, N.B., was announced in our last issue, was born at Moncton, N.B., in 1858, and entered I.R.C. service in 1873, since when he has been, to 1874, in stationery stores department; 1874 to 1878, relieving operator and station agent; 1878 to 1879, relieving dispatcher at Truro, Moncton and Campbellton; 1879 to 1898, dispatcher, Halifax and St. John division, Moncton, N.B.; 1898 to Nov. 7, 1912, Chief Dispatcher, Springhill and St. John division.

G. A. STOKES, whose appointment as acting Terminal Superintendent, G.T.R., Toronto, was announced in our last issue, was born in Nassagawaya tp., Ont., July 23, 1879, and entered G.T.R. service, Nov. 15, 1897, since when he has been, to Oct. 15, 1898, operator, Listowel, Ont.; Oct. 15, 1898, to March, 1899, relieving agent; March, 1899, to April, 1907, agent, consecutively, at Harriston, Wingham, Wiarton and Brantford, Ont.; April, 1907, to Nov. 1, 1910, dispatcher, Stratford, Ont.; Nov. 1, 1910, to Sept. 13, 1912, Yardmaster, Don station, Toronto; Sept. 13 to Oct. 25, 1912, General Yardmaster, Toronto Terminals.

B. C. GESNER, heretofore Mechanical Expert, Galena Signal Oil Co., who has also been appointed Eastern Sales Agent for the company, was born at Cornwallis, N.S., Apr. 23, 1859, and entered Intercolonial Ry. service, Jan. 23, 1877, since when he has been, to Oct., 1882, fireman; Oct., 1882, to Sept., 1898, locomotive driver; Sept., 1898, to Oct., 1901, General Air Brake Inspector; Oct., 1901, to Dec., 1902, Master Mechanic, Stellarton, N.S.; Dec., 1902, to Apr., 1903, Air Brake Inspector; Apr., 1903, to Nov., 1912, Mechanical Expert, Galena-Signal Oil Co., with headquarters at Moncton, N.B. He is a medallist of the Imperial Service Order.

C. J. WILSON, whose appointment as Superintendent, district 3, Central division, Canadian Northern Ry., Winnipeg, was announced in our last issue, and whose portrait appears in this issue, has served the whole of his time spent in railway service, prior to his present appointment, in the U.S., having been telegraph operator and train dispatcher, Chicago, Milwaukee and St. Paul Ry.; dispatcher and trainmaster, Chicago, St. Paul, Minneapolis and Omaha Rd.; dispatcher, Assistant Superintendent and Division Superintendent, Northern Pacific Ry., and for the last nine years, Division Superintendent, Chicago, Rock Island and Pacific Ry.

HUGH SUTHERLAND, Executive Agent Canadian Northern Ry., Winnipeg, sustained a fracture of the left thigh by being thrown from his horse at Osborne street bridge, Winnipeg, Nov. 27. The lift span of the new bridge did not close by about 3 ins., so that the horse's foot caught in the opening, and as he pulled it out violently Mr. Sutherland was thrown over his head. After being taken home Mr. Sutherland was removed to the general hospital, where the fracture was reduced, and he was placed in a plaster cast, which will probably not be removed until well on in January. He is progressing favorably in every way, and is able to attend to his correspondence.

C. A. Dunham.
Signal Engineer, Grand Trunk Railway.

DONALD M. McINTYRE, K.C., whose appointment as Chairman, Ontario Railway and Municipal Board, Toronto, was announced in our last issue, is a native of Kingston, Ont., and a graduate in Arts of Queen's University. He was admitted a barrister in 1885 with honors and gold medal, and served on the Kingston city council, as alderman, from 1889 to 1905, with the exception of 1892, for which year he was elected mayor. He was appointed City Solicitor there in 1895, and acted in that capacity to the date of his present appointment. He was for many years a trustee of Queen's University, and a governor of the School of Mining, of which board he is chairman. He is also a governor of the Kingston General Hospital, and was chairman of the board in 1904 and 1905.

A. S. GOING, who has been appointed Engineer of Construction, G.T.R., Montreal, was Born in Portland, Ore., Apr. 7, 1860, and entered railway service in 1880, since when he has been, to 1881, instrument man, Oregon Ry. and Navigation Co.; 1881 to 1883, Assistant Engineer, Northern Pacific Ry.; 1884 to 1886, Assistant Engineer, Oregon Pacific Ry.; 1887, Resident Engineer, Seattle, Lake Shore and Eastern Ry.; 1888 to 1889, Resident Engineer, Northern Pacific Ry.; 1890 to 1902, in private practice in State of Washington and British Columbia; 1903, Division Engineer, Great Northern Ry.; 1904 to 1905, Exploratory Engineer for British Columbia, Grand Trunk Pacific Ry.; 1905 to 1907, Division Engineer, Minneapolis and St. Louis, Ry.; 1907 to Nov. 30, 1912, Locating Engineer in charge of surveys, reports, etc., G.T.R.

R. COLCLOUGH, whose appointment as Assistant to the General Superintendent, Intercolonial Ry., Moncton, N.B., was announced in our last issue, was born at Bic, Que., Feb. 24, 1871, and educated at Rimouski College and Laval University, graduating from the latter in arts in 1888. He entered I.R.C. service Dec. 9, 1889, since when he has been, to Nov., 1892, clerk in Superintendent's office, Moncton, N.B.; Nov., 1892, to Nov., 1901, private secretary to Chief Superintendent, General Manager and General Superintendent and Manager; Nov., 1901, to Oct., 1902, chief clerk, Manager's office; Oct., 1902, to June, 1911, clerk in General Manager's office and in the Managing Board's office; June, 1911, to May, 1912, chief clerk, General Superintendent's office; May to Nov. 7, 1912, Assistant Superintendent, Halifax and St. John division.

W. B. CRONK, whose appointment as General Superintendent, National Transcontinental Ry., Ottawa, was announced in our last issue, was born at Footville, Wis., Nov. 11, 1862, and entered railway service, Jan., 1878, since when he has been, to 1898, consecutively, operator, agent, dispatcher and chief clerk to Superintendent, Chicago and North Western Ry.; 1898 to 1900, dispatcher, Chicago, St. Paul, Minneapolis and Omaha Ry.; 1900 to 1902, chief clerk to General Superintendent and Division Dispatcher, Baltimore and Ohio Rd.; 1902 to 1903, chief clerk to General Superintendent, Chicago, Rock Island and Pacific Ry.; 1903 to 1906, in private business; 1906 to 1911, consecutively, dispatcher, Assistant Superintendent and Superintendent, C.P.R.; 1911 to Sept. 1, 1912, Superintendent, Grand Trunk Pacific Ry.; Sept. 1 to November, 1912, Superintendent of Transportation, National Transcontinental Ry., Winnipeg.

J. M. SHANLY, M. Can. Soc. C.E., Consulting Engineer, Montreal, who died there suddenly Nov. 28, was born at Waukegon, Ill., in 1857, and, after completing his education at Toronto university, moved to Montreal in 1878. He began his professional career under his uncle, the late Walter Shanly, and after spending several years on survey and construction work, was appointed Chief Engineer of the Beauharnois Jct. Ry. in 1887, and was subsequently Chief Engineer of the Montreal and Ottawa Ry., now the C.P.R. short line between those cities. He was subsequently engaged in the construction of the Central Counties Ry. (now partly the C.P.R.), the Baie des Chaleurs Ry., the Great Northern Ry. of Canada, the International Ry. of New Brunswick, and latterly he was engaged in connection with the Central Ry. of Canada. His connection with the Canadian Society of Civil Engineers, of which he was a councillor, dates from 1887.

S. BRUCE McCONNELL, A.M. Can. Soc. C.E., who has been appointed Assistant Engineer, C.P.R., Montreal, commenced railway engineering in the winter of 1897, as transitman on the Atlantic and Lake Superior Ry., since when he has been, April to May, 1898, transitman on location, Midland Ry. of Nova Scotia; May, 1898, to Apr., 1899, Resident Engineer on construction, same road; Apr. to June, 1899, transitman on location, Great Northern Ry. of [illegible] 1901: Assistant Engineer on water power development [illegible] Upper Saguenay river, Que.; Jan., 1901, to [illegible] Cuba; Jan. to June, 1902, locating engineer, South Shore Ry.; June to July, 1902, Assistant Engineer in charge of yard construction, C.P.R., North Bay, Ont.; July, [illegible] Resident Engineer, C.P.R., North Bay, Ont.; Sept., 1905, to Jan., 1910, Resident Engineer, C.P.R., Montreal; [illegible] 1912, Assistant Division Engineer, Eastern division, C.P.R., Montreal.

[illegible], General Manager, Canadian Northern Quebec Ry., Quebec and Lake St. John Ry., Halifax and South Western Ry., and Inverness Ry. and Coal Co., Montreal, died at Riverside, Cal., Dec. 13. He had been ill for some months, suffering from tuberculosis and diabetes, and spent most of the summer at Lethbridge, Alta. He returned to Montreal early in October, and after a short stay there went to California early in November. He was born at [illegible], N.B., Sept. 23, 1852, and entered railway service in 1867, since [illegible] to 1869, chainman, Western Extension Ry.; 1869 to 1870, assistant engineer, same road; 1870 to 1871, assistant engineer, Maine Central Rd.; 1871 to 1875, assistant engineer, Prince Edward Island Ry.; 1875 to 1876, engineer-in-charge, [illegible] Ry.; 1876 to 1877, assistant engineer, Intercolonial Ry.; 1877 to 1879, Principal Assistant Engineer, Eastern Extension Ry. of Nova Scotia; 1879 to 1881, Engineer, C.P.R., Winnipeg; 1881 to 1882, Division Engineer, Western division, C.P.R.; 1882 to 1883, Assistant Chief Engineer, same road; 1883 to 1885, acting Chief Engineer, same road; 1885 to 1886, Engineer, Alberta Ry. and Coal Co.; 1886 to 1888, Division Engineer, Great Northern Ry.; 1888 to 1890, Engineer, Foley Bros. and Guthrie, railway contractors; 1890 to 1894, General Superintendent, Alberta Ry. and Coal Co. and Great Falls and Canada Ry.; 1894 to May, 1899, Manager, same roads. From 1899 to 1906 he was engaged in railway contracting with Foley Bros. and Larson, of St. Paul, Minn. [illegible] 1907, [illegible] General Manager, Halifax and South Western Ry., and Inverness Ry. and Coal Co., and in March, 1909, he was also appointed General Manager, Canadian Northern Quebec Ry., [illegible] St. John R[illegible].

Railway Finance, Meetings, Etc.

Canadian Pacific Ry.—The Minister of [illegible] House of Commons, Dec. 4, that the President had informed him it was the company's intention to issue $60,000,000 of new stock under the authority [illegible] which the company had applied for the [illegible] No action had been taken upon this application.

Canada Southern Ry.—A new first and refunding mortgage has been signed to [illegible] consolidated 50-year 5% gold bonds, guaranteed both as to principal and interest by the Michigan Central Rd.

In connection with this issue, press [illegible] tion, stated that the M.C.R. had been acquired by the C.P.R. by an arrangement [illegible] River Rd.

Cap de la Madeleine Ry.—The Board of [illegible] the Governor in Council to approve of a conveyance, dated Oct. 3, 1912, transferring this line to the C.P.R.

The Central Ry. of New Brunswick, extending from Norton, on the Intercolonial Ry., to Minto, N.B., will be taken over by the C.P.R., Jan. 1. It will be operated in connection with the Fredericton and Grand Lake Coal and Ry. Co., which is now well advanced towards completion.

Grand Trunk Ry.—A London, Eng., cable says the underwriters have had to take 85% of the £1,000,000 4% debentures [illegible] recently.

Kingston and Pembroke Ry.—The Board of Railway Commissioners has recommended the Governor-in-Council to approve of a lease of this line to the C.P.R.

Quebec Central Ry.—By proclamation the Lieut.-Governor of Quebec has ratified the agreement for the lease of the Q.C.R. to the C.P.R. The Board of Railway Commissioners has recommended the Governor-in-Council to sanction the lease. These are the final steps necessary in the transfer of the line to the C.P.R.

D. M. McIntyre, K.C.,
[illegible] Ontario Railway and Municipal Board.

Quebec Oriental Ry.—A trust deed dated [illegible] 22, 1912, made between the company and the Royal Trust Co., Montreal, to secure an issue of 5% prior lien mortgage bonds on the Matapedia section was deposited with the Secretary of State at Ottawa, Dec. 3.

Rutland Rd.—The appellate division of the New York Supreme Court, Dec. 13, reversed the decision of a lower court which forbade the transfer of the control stock of the R. Rd., held by the New York Central and Hudson River Rd., to the New York, New Haven and Hartford Rd.

St. Marys and Western Ontario Ry.—The Board of Railway Commissioners has recommended the Governor in Council to sanction the leasing of this line to the C.P.R.

Shuswap and Okanagan Ry.—Application [illegible] to the Dominion Parliament to [illegible] the company to enter into agreements with the C.P.R.; to lease its line to the C.P.R., and to increase its bonding powers. The line has been operated by the C.P.R. for many years.

Stanstead, Shefford and Chambly Ry.—Following are the officers and directors for the current yeear:—President, S. W. Foster; Vice President, E. H. Fitzhugh; Assistant Secretary and Treasurer, W. H. Chaffee; other directors, E. J. Chamberlin, E. C. Smith, G. C. Jones, G. E. Robinson, G. Stevens and J. P. Noyes; Secretary and Treasurer, H. E. Allen.

Temiscouata Ry.—Net earnings for September, $4,389; aggregate net earnings for three months ended Sept. 30, $20,866.

Timiskaming and Northern Ontario Ry.—The Commissioners have paid the Ontario Government $510,000 on account of the net earnings of this line for the past financial year.

Dominion Government Expenditures on Railways.

The public accounts for the year ended Mar. 31, 1912, show that in addition to the consolidated fund expenditure the following outlays, chargeable to capital account, were made on railways:

Intercolonial Ry.	$1,710,448.56
Prince Edward Island Ry.	128,041.91
National Transcontinental Ry.	21,110,352.05
Hudson Bay Ry.	159,632.00
Quebec Bridge	1,153,778.27
Total	$24,262,252.79

The following amounts were paid during the year as subsidies in aid of the construction of railways:—

Central Ontario Ry.	$ 826.17
St. Marys and Western Ontario Ry.	365.00
Quebec, Montreal and Southern Ry.	23,885.70
Canada and Gulf Terminal Ry.	65,249.75
Quebec and Lake St. John Ry.	27,570.00
Canadian Pacific Ry.	108,608.00
Atlantic, Quebec and Western Ry.	91,279.60
Algoma Central and Hudson Bay Ry.	133,584.00
Canadian Northern Quebec Ry.	86,468.03
Thessalon and Northern Ry.	6,112.00
Quebec and Saguenay Ry.	101,992.00
Kettle River Valley Ry.	148,800.00
Vancouver and Lulu Island Ry.	61,760.00
Total	$856,500.25

The following bonds have been guaranteed by the Dominion under the authority of various acts of parliament:

Canadian Northern Ry. (1903)	£ 1,923,287	0	0
Canadian Northern Ry. (1908)	1,622,586	19	9
Canadian Northern Ontario Ry. (1911)	7,493,835	12	4
Canadian Northern Alberta Ry. (1911)	647,260	5	6
Grand Trunk Pacific Ry. (1905)	7,200,000	0	0
	£18,886,969	17	7

In addition £1,688,000 of G.T.P. Ry. guaranteed bonds have been pledged by the company against advances obtained for construction purposes. There has been paid to the G.T.P. Ry. $4,994,416.66 out of the consolidated fund to meet the obligations of the Crown to the company under par. 5 of the schedule to chap. 24 of the statutes of 1904, the "implementing" paragraph.

C.P.R. Lands.—The C.P.R. Co. has announced that in future it will not sell any farm lands to speculators, but only to bona fide settlers from North America, the British Isles and Northern Europe. The purchase price will be payable in instalments extending over 20 years, instead of 10 as heretofore. The company will also loan each settler up to $2,000, to be repaid in instalments extending over 20 years, with interest at 6%, and will sell the settlers live stock and poultry at cost price.

Wanted.—By an experienced Railroad man who has held positions as Yardmaster, Chief Dispatcher and Superintendent for the past 20 years, a position on Western Roads preferred; first class reference will be furnished.

Address, Box 1948, Canadian Railway and Marine World, Toronto, Ont.

Canadian Pacific Railway, Construction, Betterments, Etc.

St John, N.B.—It was reported in St. John, N.B., that about 1,000 acres of land has been bought in the vicinity of Lancaster, adjoining the city, for the C.P.R. and that changes are to be made in the route of the New Brunswick Southern Ry., so as to give it direct access into St. John. There are other reports that there is some likelihood of a new line being built across New Brunswick which will give the C.P.R. a direct line to Moncton, whence access is to be obtained to Halifax over the Intercolonial Ry.

Second Track, Etc., on Farnham Subdivision.—The Board of Railway Commissioners has authorized the opening for traffic of the second track from St. Constant to St. Claude, mileage 24.46 to 35.9, and from mileage 42.46 at Highlands, Que., to the south switch, mileage 43.91. The second span of the new bridge to carry the double track over the St. Lawrence river at Highlands was floated into position Nov. 26. The bridge will consist of four spans, each 408 ft. long. The bridge is being built by the Dominion Bridge Co. The foundations for the new bridge over the river at St. Johns, Que., have been completed.

Montreal to L'Epiphanie.—The Dominion Parliament is being asked to authorize the building of a line from south of Forsythe street, Hochelaga ward, Montreal, northerly to a junction with the company's line near L'Epiphanie, Que.

Ottawa, Northern and Western Ry.—Application is being made to the Dominion Parliament to extend the time within which the projected line from Maniwaki to James Bay, and the proposed extension to Lake Timiskaming, Que., may be built.

Interprovincial and James Bay Ry.—The surveys being made on this railway are under the charge of C. W. P. Ramsay, Engineer of Construction, C.P.R., Montreal. (Nov., pg. 558.)

Campbellford, Lake Ontario and Western Ry.—Application is being made to the Dominion Parliament to increase the company's bonding powers.

North Toronto Union Station.—The C.P.R. plans for a union station at North Toronto have been approved by the Canadian Northern Ry., and it is said that tenders will shortly be invited.

Bolton-Palgrave to Campbellville.—Application is being made to the Dominion Parliament for authority to build a line from the Toronto-Sudbury line between Bolton Jct. and Palgrave, through Peel and Halton counties to a junction with the Toronto-Windsor line near Campbellville, Ont.

Guelph and Goderich Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may build the branch lines authorized by chap. 81 of the statutes of 1904.

Collingwood Southern Ry.—Application is being made to the Dominion Parliament to extend the time for the building of the lines authorized by chap. 77 of the statutes of 1907. A. T. Thompson, Ottawa, is solicitor for applicants.

Sudbury Branch Revision.—The Board of Railway Commissioners has approved of revised location of the Toronto-Sudbury branch between mileage 20.73 and 21.40, and mileage 31.76 and 34.76, Webbwood subdivision.

Lake Superior Division Second Track.—The Board of Railway Commissioners has authorized the opening for traffic of the second track as follows:—Cartier to Geneva, 3.6 miles; White River and Tarpon, 3.5 miles; Crete to Sudbury, 3.2 miles; Devon to Eaper, 4.3 miles; Depew to River, 5.3 miles; Heron Bay to Peninsula, 8.7 miles; The Hall to Baro, 4.1 miles; Navin to Hedge, 4.1 miles.

Western Lines.—The Dominion Parliament is being asked to authorize the building of a line from near Snowflake, Man., westerly for about nine miles; a line from the present terminus of the Gimli branch northerly for about 60 miles to the north shore of Lake Winnipeg, thence northwesterly to the Little Saskatchewan river; from about 50 miles east of Sterling, Alta., to the Alberta Ry. and Irrigation Co.'s line near Sterling; from near Cayley on the Macleod branch to near Burmis on the Crowsnest subdivision. It is also desired to obtain an extension of time for the building of the following lines:—From Stonewall or Teulon, Man., northwesterly to the east shore of Lake Manitoba near the north of the boundary of tp. 25; from tps. 32-34, ranges 21-23, west of 2nd meridian, to Prince Albert, Sask., 130 miles; from Dysart or Lipton, southeasterly to a junction with the next mentioned line; from near Tantallon, Sask., to Craven on the Regina northerly branch; from sec. 12, tp. 9, range 26, west 4th meridian, on the Crowsnest branch westerly along the north side of the Old Man river to sec. 36, tp. 7, range 4, west 5th meridian, Alta.

Bergen Northeasterly.—The Minister of Railways has approved of route map for the extension of the line at Bergen, Man., for 9.92 miles northeasterly.

Lauder Extension.—The Board of Railway Commissioners has authorized the opening for traffic of the Lauder extension from Tilston to Alida, Man., mileage 28.7 to 54.72.

Manitoba and Northwestern Ry.—The Dominion Parliament is being asked to extend the time within which it may build the following lines: From Yorkton to Prince Albert, Sask.; from Russell to the northwest boundary of Manitoba; from between Portage la Prairie and Arden to the Manitoba boundary; from between Westbourne and Beautiful Plains northwesterly to Lake Dauphin on Duck mountains; from between Theodore and Insenger to tp. 32, range 18 or 19, west 2nd meridian, and from Bredenbury to Kamsack, Sask.

Sutherland to Saskatoon, Sask.—General Superintendent Taylor was recently quoted as stating that the company's engineers were completing surveys for the building of a second line from Sutherland to Saskatoon, Sask., that tenders would be let and work would be started thereon in the spring.

Second Track Work Near Moose Jaw.—The Board of Railway Commissioners has authorized the opening for traffic of the second track from Belle Plains, mileage 117.0 to Pasqua, mileage 127.6, on the Moose Jaw subdivision, and the second track from Secretan to Chaplin, Sask., mileage 44.9 to 54.0 west of Moose Jaw.

Moose Jaw Northwesterly Branch.—The Board of Railway Commissioners has authorized the opening of the Moose Jaw northwest branch from Outlook to Conquest, Sask., 9.3 miles. This mileage includes the bridge across the South Saskatchewan river. The Lacombe branch of the C. and E. Ry. is being extended easterly to a junction with this line at Kerrobert, and the Board of Railway Commissioners has authorized the temporary operation of this extension from Coronation to Consort, 32 miles.

Swift Current Southeasterly.—The Board of Railway Commissioners has approved of location plans of the Swift Current southeasterly branch with the Moose Jaw southwesterly branch, mileage 45 to 101.3.

Swift Current-Bassano Line.—The Minister of Railways has approved of route maps for the line from Swift Current northwesterly, 11.34 miles, and for the line from Bassano easterly, 118.1 miles.

Wilkie to Anglia, Sask.—The Board of Railway Commissioners has authorized the opening for traffic of the branch running southeasterly from Wilkie to Anglia, Sask., 35.3 miles.

Wilkie-Cutknife Branch.—The Board of Railway Commissioners has extended until July 1, 1913, the time within which the C.P.R. may operate its Manitou lake branch, from its Pheasant hills branch in sec. 6, tp. 40, r. 19, west third meridian, to sec. 32, tp. 43, r. 21, w. 3 m., mileage 0 to 27.8, between Wilkie and Cutknife, Sask.

Humberstone Coal Mine Spur.—The Board of Railway Commissioners has authorized the building of a spur line at mileage 788.21 from Winnipeg to the Humberstone coal mine, near Cardell, Sask.

Canadian Pacific Railway Hotel under construction at Calgary, Alta.

Bassano-Irricana Branch.—The Board of [illegible] 35.62 miles.

Alberta Central Ry.—[illegible] 1909, and chap. 50, statutes of 1911.

Alberta Central Ry.—[illegible]

[illegible] Deer, Alta., was suspended for the season Nov. 30. It is reported that construction [illegible] erly from Red Deer early in the spring.

Alberta Ry. and Irrigation Co.—The Dominion Parliament is being asked to extend the time within which the company may build the various branch lines authorized.

Calgary-Vancouver Second Track.—The Minister of Railways has approved route maps of revision of route on the second track work between Calgary, Alta., and Vancouver, B.C., as follows:—Grade revisions west of Calgary, 21 miles; grade revisions Ross Peak to Milk Creek, B.C., 20 miles; grade revisions Chase to Salmon Arm, B.C., 25 miles.

[illegible] engineer, who has been retained in an advisory capacity by the C.P.R. in connection with the double tracking of the line between Vancouver and Calgary, has completed an inspection of the route accompanied by F. F. Busteed, of Kamloops, B.C., Engineer in charge of the double track survey. Stops [illegible] Pass and its approaches, the valley of the [illegible] Rockies.

Kootenay Central Ry.—[illegible] British Columbia recently stated that the building of the K.C. Ry. would be completed next year. The line has already been [illegible] chene Landing, and from Coalmont northerly to Fort Steele, B.C. Grading has been completed on a large portion of the inter[illegible] steel is on hand for tracklaying.

Branch Line at Merritt, B.C.—The Board of Railway Commissioners has authorized the company to build a branch line at Mer[illegible]

Coquitlam Terminals.—[illegible] of the 12 stall roundhouse at the new ter[illegible] desired. A [illegible] river, in connection with the development of the terminals.

British Columbia Southern Ry.—[illegible] be constructed.

Kootenay and Arrowhead Ry.—[illegible] the time within which the company may build its authorized line from Gerrard to Arrowhead, B.C.

Victoria, B.C.—The Premier of British Columbia recently stated that preliminary arrangements had been completed between the C.P.R. and the Canadian Northern Pacific Ry. for the erection of a union station in Victoria, at an estimated cost of [illegible]

Plans are stated to be in course of preparation for the erection of an office building on the corner of Belleville and Menzies streets, Victoria. (Nov., pg. 565.)

Railway Rolling Stock Notes.

The G.T.R. has ordered 10 first class cars and 10 baggage cars from its Montreal [illegible]

The Grand Trunk Pacific Ry. has received 9 consolidation locomotives from the Canadian Locomotive Co.

The Intercolonial Ry. has received 258 box cars, 60,000 lbs. capacity, from the Nova Scotia Car Works.

The Timiskaming and Northern Ontario Ry. has received four steel underframe vans, nos. 70 to 73, from the Canadian Car and Foundry Co.

The Intercolonial Ry. has ordered one flanger to be built in its Moncton shops; 160 box cars from the Nova Scotia Car Works; 100 Hart convertible dump cars and 50 Hart-Otis steel dump cars, from the Hart-Otis Car Co., these to be built by the Canadian Car and Foundry Co.

The C.P.R., between Nov. 14 and Dec. 13, ordered the following rolling stock:—510 stock cars, 303 refrigerator cars, 6 vans, 12 flat cars, 1 second class car and 2 pile drivers from its Angus shops, Montreal; 800 flat cars, 200 stone cars and 500 ballast cars from the Canadian Car and Foundry Co.

[illegible] Central Rd. has decided to have built at its St. Thomas shops, Ont., will be 36 ft. long, 80,000 lbs. capacity. The erection will be commenced as soon as it is possible to get the material, and will be completed at the rate of 15 a month. They are intended for use on the Canada Southern Ry., operated by the M.C.R.

The G.T.R. has received the following additions to rolling stock:—18 Pacific type locomotives, 69 ins. drivers, from the Baldwin Locomotive Works; 63 refrigerator cars from the Canadian Car and Foundry Co.; 155 box cars from the Pressed Steel Car [illegible] Steel Car and Foundry Co.; 1 first class car and 2 baggage cars from its Montreal [illegible]

[illegible] Nov. 15 and Dec. 15, received the following additions to rolling stock:—45 box cars and [illegible] Car and Foundry Co.; one locomotive from [illegible] Foundry Co.; 50 flat cars from [illegible]

The Canadian Northern Ry., between Nov. [illegible] Nova Scotia Car Works, 543 box cars [illegible] flat cars, from the National Steel Car Co.

The Grand Trunk Ry., has ordered the following rolling stock, deliveries of which [illegible] cars, nos. 4106 and 4107, from the G.T.R. [illegible] 1021 to 1030, 5 colonist cars, nos. 3038 to 3042, from the Canadian Car and Foundry Co.; 15 sleeping cars, 6 parlor cafe cars, nos. 3905 to 3910, 6 dining cars, nos. 4006 to 4011, 5 tourist cars, nos. 3410 to 3414, and 10 first class cars, nos. 2054 to 2063, from the Pullman Co.; 15 baggage cars, nos. 418 to 432, and 14 mail and express cars, nos. 110 to 123, from the Osgood Bradley Car Co.

The C.P.R., between Nov. 14 and Dec. 13, received the following additions to rolling stock:—99 flat cars, 10 first class cars, 1 [illegible] plows and 3 D.4 locomotives from its Angus shops, Montreal; 618 box cars from the Canadian Car and Foundry Co.; 16 N.3 locomotives and 6 D.10 locomotives from the Montreal Locomotive Works; 618 box cars from the Standard Steel Car Co.; 173 box cars from the Western Car and Foundry Co.; 244 box cars from the Barney and [illegible] American Car and Foundry Co.

The Canadian Car and Foundry Co., between Nov. 14 and Dec. 23, received the fol[illegible] underframe flat cars, 40 tons capacity, 200 steel underframe stone cars, 40 tons capacity, and 500 ballast cars, 50 tons capacity, from the C.P.R.; 650 box cars, 30 tons capacity, and 2 snow plows, from the Canadian Northern Ry.; 5 colonist sleeping cars, from the G.T. Pacific Ry., and 10 steel underframe flat cars, 40 tons capacity, from the Toronto, Hamilton and Buffalo Ry.; and delivered 25 steel snow plows and 613 steel frame box cars, 40 tons capacity, to the C.P.R.; 5 first class cars and 1 wooden box car, 30 tons capacity, to the Canadian Northern Ry.; 389 steel underframe box cars, 30 tons capacity, and 69 refrigerator cars, 30 tons capacity, to the G.T.R.; 29 Hart convertible coal cars, 50 tons capacity, [illegible] bodies, to the Montreal Tramways Co., and [illegible] the Dominion Coal Co.

Toronto Terminals Railway Company.

This is the title of the company which is to build the new union station on the Toronto waterfront. The company was incorporated in 1906, the G.T.R. and the [illegible] the stock each. Application is now being made to the Dominion Parliament to increase the capital stock from $3,000,000 to [illegible] H. G. Kelley and W. Wainwright as provisional directors in place of C. M. Hays, E. H. Fitzhugh and F. H. McGuigan.

The interpretation of this application is that the two companies have completed the arrangements by which they shall be equal partners in the new station. Under the agreement governing the present station, [illegible] is said, however, that this agreement does not settle the viaduct question, upon which an appeal has been made to have the Board of Railway Commissioners' order for the [illegible] the C.P.R. plan for bridges over the tracks [illegible] plan the Toronto city council is strongly opposed.

[illegible]

[illegible]

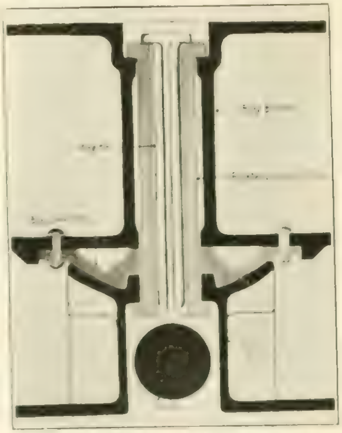
Anti-Telescoping Device on Grand Trunk Railway.

A [illegible] reduce the danger of passenger cars tele[illegible] and installed on several G.T.R. cars by J. [illegible]

[illegible] that telescoping would be nearly impossible [illegible] in some way prevented from leaving the car bodies, as it is due to the latter leaving the braking influence of the trucks that they slide forward through each other. To make the body and trucks a virtual unit was the aim. That this is generally recognized is evidenced in the circular issued by the Board of Railway Commissioners, pub[illegible] World for December, in which the railway companies were asked to consider the matter so that it might be discussed before an early sitting of the Board.

Hitherto, the only force available to prevent the body from moving off the trucks is the brakes which are applied to the trucks; there never was any means pro[illegible]



[illegible] pin, which is not sufficient. The distance [illegible] made more essential the need of some[illegible] trucks and telescoping. The heavy shock [illegible] impact; with the high ten[illegible] By [illegible] there are no means of applying any artificial power on the body of the car to stop [illegible] this purpose is to tie the body to the trucks.

The simple device shown herewith con[illegible] ing the additional weight of the trucks to the car body in the event of the latter lift[illegible] ends of the car platform having the effect of lifting the body from the trucks. This device will not interefere in any way with the present free and flexible movement of [illegible] any ordinary passenger car with but little increase in weight. It is being applied on a large order of new passenger cars for the Grand Trunk Pacific and Grand Trunk Railways, and will be standard on all passenger equipment for both lines.

Railway Building in Alberta in 1912.

[illegible] Government respecting the building of rail[illegible] miles were built in the 10 months ended [illegible] dian Northern Ry. has 448 miles of grading ready for tracklaying; the Grand Trunk [illegible] Dunvegan and British Columbia Ry. 70 miles, on which eight miles of track have been laid.

At the end of 1905 there were 1,060 miles of railways in the province, of which 946 [illegible] Alberta Ry. and Irrigation Co. These two companies are now one. In 1906 the Canadian Northern Ry. built 178 miles of line in the province, and in 1908 the G.T. Pacific [illegible] the end of that year being 1,306. At the end of 1911, the railway mileage in the province was 2,100, and with the present increase there were 2 798 miles of completed railways in the province. Of this mileage [illegible] Canadian Northern Ry., and 619 by the G.T. Pacific Ry. In preparing this statement the provincial government appears to have omitted the C.P.R. and Alberta Central Ry. from its calculations. This line [illegible] line, but has recently passed under C.P.R. control.

Protection of Railway Employes.—[illegible] following provision of order 12225, Nov. 9, [illegible] stands shall, by Nov. 10, 1912, be either removed or changed so that the same shall [illegible]

[illegible] voir in which sediment in the water supply [illegible]

National Transcontinental Railway Construction.

The Minister of Railways stated in the House of Commons Dec. 4 that the total expenditure by the Government on construction to that date was $125,053,267.53, of which $15,545,118.29 had been paid to the G.T. Pacific Ry. in respect of the construction contracts which that company held.

We are officially advised that during the construction season of 1912, there were laid 361.15 miles of track distributed as follows: Mileage 109 to 153 east of Quebec Bridge, 34 miles; mileage 1 to 75 west of Quebec Bridge, 7.50 miles; mileage 288 and 419 west of Quebec Bridge at different points a total of 84.75 miles; mileage 168 west of Cochrane and mileage 102 east of Lake Superior Jct., Ont., at different points a total of 235.90 miles.

A train service was put in operation on the section of the line from Moncton to the New Brunswick-Quebec boundary, Nov. 20, the timetable providing for west-bound service to Edmundston, N.B., on Mondays, Wednesdays, and Fridays, and an east-bound service to Moncton, Tuesdays, Thursdays and Saturdays. The passenger cars used have been hired from the Intercolonial Ry., and the locomotives and freight cars from the contractors, and the Intercolonial Ry. The operation of the line is under the charge of W. B. Cronk, General Superintendent, for the Commissioners at Ottawa, with E. P. Cronk as Superintendent at Edmundston.

The Minister of Railways stated in the House of Commons, Dec. 4, it was expected that the section of the line from the New Brunswick-Quebec boundary to Quebec city would be completed and ready for operation in Sept., 1913. It is reported that there are only about 12 miles of track remaining to be laid on this section of the line, and that the principal work to be done is the bridging, ballasting and levelling.

The whole question of the site of the terminals at Quebec, the Minister of Railways stated in the House of Commons, Dec. 4, is still under the consideration of the Commission. The matters being considered include the question of the construction of a tunnel under Cape Diamond, with the object of locating the terminals elsewhere than on the Champlain market site.

West of Quebec to 150 miles east of Cochrane, Ont., there remains only about 50 miles of steel to be laid. Track now extends from the last point named to a considerable distance west of Cochrane, and the Minister of Railways stated in the House of Commons, Dec. 2, that he expected to receive a report by Dec. 31, that all the steel had been laid to Graham or Lake Superior Jct. At the last report there were only 48 miles unrailed. R. W. Leonard, the Commisisoner, is quoted as recently stating that the Cochrane-Lake Superior Jct. section of the line would not be in a condition for the operation of trains until September. The section of the line from Lake Superior Jct. to Transcona, four miles east of Winnipeg, is completed, and a train service is being given by the G.T. Pacific Ry. under an agreement. Negotiations for a lease of this section are in progress. The Commission will give the G.T.P. Ry. the opportunity of leasing the various sections of the line as they are taken over from the contractors, but the company is not compelled," added Mr. Leonard, "to declare its policy until the entire line between Moncton and Winnipeg is completed." (Nov., 1912, pp. 562.)

Tenders will be received by the Commissioners, to Feb. 13, for the furnishing and delivery of machines, tools, appliances, motors, furnaces, cranes, etc., required for the equipment of the car department of the shops at Transcona, Man. Specifications and other information may be obtained from W. J. Press, Mechanical Engineer, Ottawa.

Grand Trunk Pacific Railway Construction.

The Dominion Parliament is being asked to authorize the company to make a further issue of perpetual or terminable debenture stock to an amount not exceeding $25,000,000, the same to rank with the debenture stock authorized to be issued by chap. 100 of the statutes of 1906. The proceeds of this issue are to be applied to the completion of the railway and for providing equipment.

The Minister of Finance is seeking power from the Dominion Parliament for the purpose of devoting part of the Dominion surplus for the financial year to the purchase of G.T.P. Ry. bonds, in order to offset any further calls on the Treasury by reason of the operation of the "implementing" clause in the guarantee given by the Government. About £6,500,000 of these bonds are as yet unissued.

Application is being made to the Dominion Parliament to confirm an agreement dated April 10, 1911, made with the Canadian Northern Ry., providing among other things for the joint use of a piece of line near Winnipeg, defining the rights of each company under the agreement, and declaring that the acquiring of these rights is a compliance with the schedule to chap. 71 of the statutes of 1903. It is also desired to secure confirmation of another agreement with the Canadian Northern Ry. made April 24, 1912, providing among other things for the joint use of a piece of line near Edmonton, Alta.

We are officially advised that during 1912 the following track was laid on the main line and branches:—Main line between Yellowhead and Prince Rupert, part westerly and part easterly, 128 miles; branch lines—Regina towards International boundary, 136 miles; Regina to Moose Jaw, 40 miles; Talmage towards Weyburn, 0.25 mile; Biggar towards Calgary, 104 miles; Oban to Battleford, 48.50 miles; Tofield towards Calgary, 92 miles; Bickerdike to Brazeau, 56 miles; a total of 609.75 miles.

The Minister of Railways stated in the House of Commons, Dec. 4, that the assistance granted by the Government to the company in respect of the building of the line from Winnipeg, Man., to Prince Rupert, B.C., was as follows:—Implementing guarantee, $4,994,416.66; loan under chap. 19, statutes of 1909, $10,000,000; guarantee of 5% bonds, $35,040,000; bonds pledged, $12,745,800.

The Board of Railway Commissioners has authorized the opening for traffic of the line from Fitzhugh, Alta., to Tete Jaune Cache, B.C., mileage 1027.8 to 1095.3.

J. W. Stewart, of the contracting firm of Foley, Welch and Stewart, on the occasion of his recent return to Vancouver from an inspection of construction in progress from Tete Jaune Cache, to the end of steel near Hazleton, easterly from Prince Rupert, is quoted as stating that good progress is being made. While there has been a considerable decrease in the number of foreign laborers employed on account of the war in eastern Europe, their places have been taken by men from the prairies. The only stretch of the right of way on which construction is not being gone on with is between Fort George and Fraser lake. Subcontracts on this stretch of 140 miles were reported to have been let, Dec. 4, as follows: Carleton Griffin; Burrs and Jordan; John Bostock; Stewart Bros.; D. Ross; M. Sheady; M. McHugh; N. McLeod; H. McLeod; Freiburg and Stone.

Contracts have been placed for the cutting and delivery along the line west of Tete Jaune Cache, B.C., during the current year of 500,000 ties.

The Board of Railway Commissioners has authorized the operation of trains over portions of the line between mileage 164 and 176.8 easterly from Prince Rupert.

GRAND TRUNK PACIFIC BRANCH LINES.

Extensive improvements and additions are being made to the terminal facilities at Fort William, Ont., where the company's Lake Superior branch reaches the Great Lakes from the National Transcontinental Ry. at Lake Superior Jct. The north shore of the Mission basin at the mouth of the McKellar river is being cribbed with concrete for about a mile. On the shore, the new 1,000 ft. freight shed is about completed; and the finishing touches are being given to the second unit of the company's grain elevator. This addition will hold 2,500,000 bush., bringing the capacity of the elevator up to 6,000,000 bush.

Regina, Sask., is the centre from which a good deal of construction is being carried on. It is reached from the main line by a branch from Melville, and arrangements have been completed for the laying out of extensive terminals.

The Saskatchewan Legislature is considering the confirmation of a bylaw sanctioning an agreement made between the city of Regina and the G.T. Pacific Branch Lines Co., under which the company will be granted certain lands for right of way and terminal purposes in consideration of establishing divisional terminals there; and the confirmation of a second bylaw granting certain lands upon which the company agrees to erect an hotel at a cost of $750,000, and $250,000 for furnishing and equipment. The clearing of the hotel site has been completed, and the foundation work is in progress. The company's General Passenger Agent recently announced that this hotel would be named The Qu'Appelle.

The line out of Regina upon which the greatest progress has been made is that running to the International boundary east of North Portal. It was expected it would be completed by the end of 1912. In connection with the building of this line M. Donaldson, Vice President and General Manager, is quoted as stating that if the necessary information is submitted to the company it is prepared to give a favorable consideration to a proposal to give connection with Estevan. On the other branch out of Regina, which runs to Moose Jaw, a limited train service has been put on for 34.7 miles. The ballasting will be done in the spring. Track was laid Nov. 24 into Moose Jaw, where construction work ends for the season. An agreement has been reached with the Moose Jaw city council as to the route through the city and in a northwesterly direction. The location plans for this branch have been approved for a considerable mileage, the most recent mileage being to 45 miles from Central Butte, across the South Saskatchewan river, and from mileage 67.86 to 79.02 from Moose Jaw.

The Board of Railway Commissioners has authorized the opening for traffic of the Biggar-Calgary branch from Biggar to no. 1 siding, 7.1 miles.

The Board of Railway Commissioners has authorized the opening for traffic of the Oban-Battleford, Sask., branch, mileage 0 to 48.5. This takes the line into Battleford. Press reports state that engineers are laying out a 40 mile line to connect Battleford with its Cutknife branch.

The Board of Railway Commissioners has authorized the opening for traffic of the

[illegible]

Dominion Government Railway to Hudson Bay

[illegible] all, for the [illegible]

London and Port Stanley Railway.

[illegible] to this [illegible]

The principal [illegible] however, has centred round the leasing of [illegible] River Rd., the Canadian line of the Pere Marquette Ry. [illegible] working out plans for the development of [illegible] propositions, and these are under consideration.

Canadian Northern Railway, Construction, Betterments, Etc.

James Bay and Eastern Ry.—The Board of Railway Commissioners has approved revised plans for the line mileage 20.43 to 21.40 from Roberval, Que. This line is under construction, J. P. Mullarkey being the contractor. Considerable grading has been done, but no track has been laid.

Canadian Northern Quebec Ry.—Application is being made to the Dominion Parliament to extend the time for the building of the projected line from Rawdon northerly to a junction with the National Transcontinental Ry., having a branch to Joliette, and the projected line from St. Jerome to St. Eustache, and to authorize the building of the following additional lines:—From Montreal, crossing the St. Lawrence river opposite the city, and from thence to Levis; and from some point on such line east of the St. Lawrence river to St. Rose Jct., thence to near Sherbrooke or Lennoxville

Application is being made to the Quebec Legislature to confirm an agreement between the city of Quebec and the company regarding the new shops at Limoilon which are practically completed.

Route plans have been approved by the Minister of Railways for 12 miles westerly from Huberdeau, Que., the present terminus of the old Montford and Gatineau Colonization Ry.; and from Rawdon, the present terminal of L'Epiphanie branch, to St. Donat, Que., 42 miles.

Canadian Northern Montreal Tunnel and Terminal Co.—The Board of Railway Commissioners has approved of location plans in Montreal from station 134+79.7, Lagauchetiere street, to station 447+17.9.

Sir Donald Mann visited the tunnel works Dec. 19, and is reported to have expressed himself thoroughly pleased with the progress being made. The total length of the tunnel under Mount Royal, from the northern portal to Dorchester street, Montreal, will be 3.5 miles. The heading from the northern end has already been driven 1,000 ft., and the heading from Dorchester street 500 ft. A shaft 238 ft. deep has been sunk immediately at the back of the mountain, and headings are being driven therefrom in both directions. Two additional shafts are to be dug, so that four additional headings may be driven. It is expected to have the tunnel driven by the end of 1913, and ready for the operation of trains by the end of 1914. From the southern portal to the St. Lawrence river the track will be an elevated one, the exact location and plan of the structure is under consideration by the Board of Railway Commissioners. From the waterfront to a point six miles north of the northern portal of the tunnel the line will be operated by electricity.

Montreal-Ottawa-Port Arthur Line.—The total length of this line under construction is 912 miles and is all under contract. J. P. Mullarkey has the contract for the section from Montreal to Hawkesbury, Ont., 60 miles. No track was laid on this line during the past year. From Hawkesbury to Ottawa the line is being operated, the distance between the two points being 59 miles. The next section under contract extends from Ottawa to Capreol, Ont., 309 miles, J. P. Mullarkey working on the mileage between Ottawa and Pembroke, and Angus Sinclair from Pembroke to Capreol. On this section 35 miles of track were laid during 1912. The line is completed and in operation from Capreol to Ruel, about 38 miles. The contract for the 543 miles from Ruel to Port Arthur is being carried out by Foley Bros. and the Northern Construction Co. On this section 115 miles of track was laid during 1912.

The principal work on the Montreal-Hawkesbury section is being done on the mainland north of Montreal island. The bridge over the river at St. Andrews is about completed and that over the Back river will be completed in the spring. is expected to have the line completed early this year, so as to enable a through service to be operated between Montreal and Ottawa, and Montreal and Toronto, during the summer.

The Board of Railway Commissioners has been approved. The company had given the age 55.23 to 59.42 in Hochelaga tp., through North Bay, Ont., mileage 343.55 to 346.42 from Montreal; mileage 280.5 to 290.6, in Algoma district; and through unsurveyed territory, mileage 398 to 413 from Sudbury Jct., Ont.

Canadian Northern Ontario Ry.—The Dominion Parliament is being asked to extend the time within which the lines authorized to be built by items 1, 2, 3, 4, 6, 9 and 10 of sec. 2, chap. 57, of the statutes of 1911; the line mentioned in par. c of the same sec. and chap.; the lines mentioned in sec. 2, chap. 93 of the statutes of 1908, may be built, and to authorize the building of the following additional lines:—An extension of the line referred to above as the line in par c., south-westerly from Berlin to Stratford and St. Marys, with a branch to Woodstock; a line from Sarnia to Chatham, and a line from Orillia to Goderich via Owen Sound, or with a branch to Owen Sound.

During 1912 track was laid on 45 miles of the line between Ottawa and Toronto. The uncompleted section is between Sydenham and Ottawa, 80 miles. J. P. Mullarkey has the contract for the entire distance, with the exception of certain work on a 20-mile section which was let to Ewen Mackenzie. The work on the section is well advanced.

Plans which have been approved by the Board of Railway Commissioners were recently filed at the Toronto City Hall for the line from Leaside Jct. to the union station at North Toronto, which is to be built by the C.P.R. for joint use with the C.N.R. The plan shows a line parallel with the C.P.R. from Leaside Jct., as far as Cottingham street, at which point the two lines will join.

We are officially advised that the company has under survey line from Toronto to Thorold, Ont., 83 miles, and from Hamilton to Brantford, Ont., 26 miles. In connection with the first of these lines plans have been filed for the projected subways on the north of Toronto, as far west as Geary street. The complete right of way is reported to have been purchased into Hamilton; certain plans for work in Hamilton have been filed with the city council. It is reported that the necessary arrangements are being completed for starting building in the spring. The Board of Railway Commissioners has approved revised location plans through Nelson tp., mileage 31.54 to 37.50 from Toronto.

Canadian Northern Ry.—Application is being made to the Dominion Parliament to extend the time for the construction of the lines mentioned in paragraphs a, b, c and h of sec. 2, chap. 92 of the statutes of Canada for 1908; the line of the Saskatchewan Midland Ry. from Humboldt to Melfort; and for power to build a line from near Swift Current westerly to a junction with the authorized Macleod-Lethbridge line; to confirm an agreement with the C.P.R. respecting the terminals in Regina, Sask., and to increase the company's bonding powers.

It is reported that plans have been prepared for the building of a new station at Fort William, Ont.

The bridge over the Assiniboine river at Winnipeg collapsed Dec. 3, and a new 200-ft. span was put in place and the bridge reopened for traffic Dec. 7. The original bridge was a temporary structure, and the new one is also intended to be temporary.

The Board of Railway Commissioners has approved location of line through tps. 7-11, ranges 2-6, west principal meridian in Manitoba, mileage 18.08 to 53.76.

In connection with the proposed line from from Bienfait to a junction with the Regina-Brandon line, the Minister of Public Works informed the Saskatchewan Legislature, Dec. 2, that surveys had been made, and the route laid out, but it had not yet of route plans of a line from Craven, to tp. government to understand that construction would be started early this year, and the branch completed by the end of the year.

The Minister of Railways has approved of route map for the extension of the line now terminating at Bienfait, to Estevan, Sask., nine miles, and the Board of Railway Commissioners has approved of location plans for the line through Estevan, mileage 8.02 to 8.98.

The Minister of Railways has approved of route plans of a line from Croven, to tp. 25, r. 19 west second meridan, for 39 miles, and the Board of Railway Commissioners has approved of location plan for the same line for 8.79 miles out of Craven.

The Board of Railway Commissioners has approved of location of branch line through tp. 26, range 7, west 3rd meridian, Sask., mileage 54.05 to 61.32.

The Minister of Railways has approved of revised route map of the Thunder Hill branch extension for 53 miles, and the Board of Railway Commissioners has approved of location plan for the 42.52 miles of the same being from tps. 35-38, range 8.14, west 2nd meridian, mileage 93.83 to 135.52.

The Minister of Railways has approved revision of route map for the Humboldt-Calgary branch for 30.9 miles.

The Minister of Public Works informed the Saskatchewan Legislature, Dec. 5, that surveys for the Lampman-Kipling branch had been completed, and that application had been made to the Government for the approval of the route. Surveys were being made for a line from Kaiser to Swift Current, but no application had yet been made for the approval of the route. The government, however, understood that it was the company's intention to build both lines during 1913.

Recent press reports state that 17 miles of grading have been completed on the line from Oliver through Pakan to St. Paul de Metis, Alta.

Press reports state that track laying is in progress on the main line west of the Pembina river, and that it was expected to have steel laid to the crossing of the Macleod river, a distance of 62 miles, by Dec. 31. The erection of the bridge across the Macleod river will be gone on with during the winter.

The Board of Railway Commissioners has approved of revised location of the C.N.R through tps. 30-31, ranges 17.20, west 4th meridian, Alta., mileage 280.62 to 303.03.

The Dominion Parliament is being asked to extend the time for the construction of the various lines authorized to be built by the Canadian Northern Alberta Ry., under sec. 8, chap. 56, of the statutes of 1911.

Canadian Northern Pacific Ry.—The first section of the line to be put in operation extends from Port Mann to Hope, B.C. Track laying is in progress from Hope, easterly, and some track laying is also reported to have been made from Kamloops [illegible]. A [illegible] of grading has been done on the remaining section of the [illegible] toward the Yellowhead pass. Work has been started at Kamloops on the branch line into the Okanagan valley. [illegible] and [illegible] track laying will be started early in the year.

Temporary divisional headquarters have been opened at New Westminster, the local construction work being in charge of W. F. [illegible] $2,500,000 [illegible] on the laying out of terminal facilities at Port Mann.

A. D. Davidson, C.N.R. Land Commissioner, is reported as stating that arrangements have been completed for the immediate construction of car building shops at Port Mann. Subsequent press reports state that arrangements have been made with an eastern Canadian car building company to [illegible] shop at Port Mann having a capacity of ten cars a day.

Tenders were asked, Dec. 10, for the building of a branch line "on the eastern boundary of section 11, block 4 north, to a point adjacent to the Y of the B.C. Electric Ry. on the west boundary of section 12. [illegible] distance of 10.2 miles. The line is to be completed within six months.

Vancouver Island Construction.—The Premier of British Columbia recently stated in a speech that an arrangement had been practically concluded between the C.N.R. and the C.P.R. for the building of a union station in Victoria at an approximate cost of $1,500,000.

The construction on the sections of the line under contract from Victoria to the Alberni canal is reported to be making good progress. A considerable amount of location has been done beyond this point, and surveys are in progress on other parts of the line. The provincial Minister of Railways has approved of route plan of the line from Quinsan river to Mucharlot arm, on Nootka sound, mileage 210 to 270; a branch from mileage 215.5 to Duncan Bay, six miles; and a branch from mileage 238.5 to Bottles Lake, 5.5 miles. (Nov. pp. 564.)

Birthdays of Transportation Men in January.

Many happy returns of the day to:—

W. U. Appleton, Assistant to Superintendent of Motive Power, Intercolonial Ry., Moncton, N.B., born there, Jan. 29, 1878.

R. Armstrong, Superintendent, district 3, Saskatchewan division, C.P.R., Saskatoon, born at Kingston, Ont., Jan. 27, 1865.

A. H. Bears, Master of Bridges and Buildings, C.P.R., Saskatoon, Sask., born at Charlottetown, P.E.I., Jan. 6, 1857.

F. X. Belanger, General Freight and Passenger Agent, Temiscouata Ry., Riviere du Loup, Que., born at Chlorydormes, Que., Jan. 20, 1876.

R. H. Bell, General Agent, Canadian Northern Ry., Chicago, Ill., born at Toronto, Jan. 13, 1865.

G. McL. Brown, European Manager, C.P.R., London, Eng., born at Hamilton, Ont., Jan. 20, 1866.

W. H. Burr, Traffic Manager, Dominion and Western Express Co's., Toronto, born at Bloomington, Ill., Jan. 19, 1864.

W. A. [illegible], Assistant to Assistant Chief Engineer, C.P.R., Eastern Lines, Montreal, born at Galt, Ont., Jan. 22, 1877.

J. E. Dalrymple, Vice President, G.T.R., G.T.P.R., and Central Vermont Ry., Montreal, born there, Jan. 1, 1869.

J. E. Everell, Superintendent, Montmorency Division, Quebec Ry., Light and Power Co., Quebec, born at Cap Rouge, Que., Jan. 1, 1863.

Sir Sandford Fleming, K.C.M.G., director, C.P.R., born at Kirkcaldy, Scotland, Jan. 7, 1827.

W. H. Geugeon, Locomotive Foreman, C.P.R., Cartier, Ont., born at Point Alexander, Ont., Jan. 16, 1872.

Gordon Grant, Chief Engineer, National Transcontinental Ry., Ottawa, born at Dufftown, Scotland, Jan. 2, 1861.

H. V. Harris, ex-General Manager, Midland Ry. of Nova Scotia, now of Louisville, Ky., born at Devonport, Eng., Jan. 16, 1857.

G. F. Hichborn, formerly Agent, Great Eastern Fast Freight Line, New York, born at Boston, Mass., Jan. 13, 1875.

C. W. Houston, Superintendent, Duluth, Rainy Lake and Winnipeg Ry., Virginia, Minn., born at Hardwick, Vt., Jan. 15, 1858.

Carl Howe, Manager, New York Central Fast Freight Lines, Chicago, Ill., born at Berrien Springs, Mich., Jan. 11, 1870.

W. C. Hunter, ex-Manager, New Brunswick Coal and Ry. Co., Sussex, N.B., born at St. John, N.B., Jan. 4, 1865.

W. J. Hunter, Division Freight Agent, G.T.P.R., and Commercial Agent, G.T.R., Winnipeg, born at Toronto, Jan. 10, 1864.

H. G. Kelley, Vice President, G.T.R., Montreal, born at Philadelphia, Pa., Jan. 12, 1858.

James Kent, Manager, C.P.R. Telegraphs, Montreal, born Jan. 15, 1854.

A. J. McGee, Secretary-Treasurer, Timiskaming and Northern Ontario Ry., Toronto, born at Lachine, Que., Jan. 24, 1876.

G. C. Martin, General Freight and Passenger Agent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., born at Creemore, Ont., Jan. 2, 1866.

G. Pepall, Assistant Foreign Freight Agent, G.T.R., and Agent, National Despatch-Great Eastern Line, Toronto, born at High Wycombe, Bucks, Eng., Jan. 15, 1849.

W. Phillips, European Traffic Manager, Canadian Northern Ry. and Canadian Northern Steamships, Ltd., London Eng., born in Toronto, Jan. 31, 1870.

W. Pratt, Superintendent, Sleeping and Dining Cars and Hotels, Canadian Northern Ry., Winnipeg, born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

John Pullen, President, Canadian Express Co., Montreal, born at Shepton Mallet, Eng., Jan. 23, 1863.

L. J. Rouleau, Travelling Freight Agent, G.T.R., and Agent, National Despatch-Great Eastern Line, Montreal, born there, Jan. 6, 1879.

B. G. F. Rutley, ticket agent, C.N.R. and G.T.P.R., Fort Garry Union Station, Winnipeg, born at Chatham, Ont., Jan. 25, 1879.

S. J. Shannon, Comptroller and Treasurer, Intercolonial Ry., Moncton, N.B., born at Halifax, N.S., Jan. 18, 1865.

J. G. Sullivan, Chief Engineer, C.P.R. Western Lines, Winnipeg, born at Bushnell's Basin, N.Y., Jan. 11, 1863.

Ross Thompson, Chief Engineer, St. John and Quebec Ry., Fredericton, N.B., born at Newry, Ireland, Jan. 1, 1865.

J. A. Villeneuve, Comptroller and Treasurer, Richelieu and Ontario Navigation Co., Montreal, born there, Jan. 4, 1864.

O. C. Walker, Inspector, Refrigerator Service, C.P.R. Western Lines, Winnipeg, born at Newport, Mon., Eng., Jan. 31, 1877.

F. J. Watson, Assistant General Freight Agent, G.T.R., Montreal, born at Toronto, Jan. 12, 1866.

G. H. Webster, C.E., Vancouver, B.C., born at Creemore, Ont., Jan. 31, 1858.

T. H. White, Chief Engineer, Canadian Northern Pacific Ry., Vancouver, born at St. Thomas, Ont., Jan. 27, 1848.

A. Wilcox, General Superintendent, Western division, C.N.R., Edmonton, Alta., born at Kincardine, Ont., Jan. 2, 1865.

Railway Route Maps Approved.

The Minister of Railways approved of the following route maps, Nov. 19:—

ALBERTA INTERURBAN RY.—Calgary to Cochrane, about 45 miles.

CANADIAN NORTHERN RY.—From Craven northerly to tp. 25, r. 19, west of 2nd m., 39 miles.

From MacRorie southeasterly, 44 miles.

CANADIAN PACIFIC RY.—Grade revisions on main line west of Calgary, about 21 miles.

Grade revision on main line between Ross Peak and Six Mile Creek, B.C., about 20 miles.

Grade revision on main line between Chase and Salmon Arm, B.C., about 25 miles.

Grade revision on main line between Indian Head and Qu'Appelle, Sask., about 8 miles.

Revision of Bassano easterly branch, 118.1 miles.

Revision of Swift Current northwesterly branch, 11.84 miles.

MONCTON AND BUCTOUCHE RY.—Buctouche to Richibucto, N.B., about 20 miles.

WESTERN DOMINION RY.—From tp. 6, r. 1, west of the 5th m., to mile 130, near Calgary, Alta., 130 miles.

Specifications for Railway Crossing Signals.

The Board of Railway Commissioners passed general order 96, Dec. 11, providing the following specifications for signals at highway crossings:

The signal must be placed upon a post of suitable structural material. If the post is made of wood, it must be of sound timber not less than 8 x 8 ins. and 18 feet long, and shall be firmly set in the ground to a depth of 4 ft. If it is made of iron or steel, it shall be not less than 4 ins. in diameter, shall extend at least 12 ft. above the ground, and shall be firmly bolted to a concrete or other foundation constructed below the frost line.

A bell, which shall emit a clear, loud volume of sound under all weather conditions, must be used.

A sign shall be placed upon the same post as the bell, with the word "danger" upon it in letters not less than 6 ins. long, to be illuminated, so as to be plainly visible after sunset. There may be added to the post, if so desired, the railway crossing sign provided for by sec. 243 of the Railway Act.

The bell and the illumination of the sign shall be controlled and operated automatically by the approach of trains, in such manner that only approaching trains shall operate the signal.

Any order of the Board providing for the installation of a highway crossing signal and referring to 'Standard Specifications for Highway Crossing Signals" is to be deemed as intended to be a reference to the specifications herein adopted.

These standard specifications come into force the date of this order, and apply to all highway crossing signals hereafter installed.

General order 12915, Feb. 7, 1911, approving specifications for the installation of electric bell signals at highway crossings, is rescinded.

Government Railways Management.—Replying to a question in the House of Commons, Dec. 4, the Minister of Railways said the whole question of management of the Government railways was under consideration, and he had no information to give as to which course the Government would be likely to take.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place and not those on which the orders were issued.

Wabash Rd. Cartage Tariff.

18088. Nov. 21. Re Wabash Rd. tariff charge for cartage, as shown in its Supplement 4 to C.R.C. 543, and the request of the Board that the company show cause for such increase. It is ordered that the effective date of item 40A of the said tariff, Supplement 4 to C.R.C. 543, covering the increased charge for cartage, be postponed to and including Dec. 31, 1912.

C.O.R. Tariff on Canned Goods.

18107. Nov. 22. Re application of Dominion Canners Limited, of Hamilton, complaining of refusal of Central Ontario Ry. to route shipments of canned goods via G.T.R. at same rates as via C.P.R. to the same points of destination. It is ordered that Supplement 6 to Central Ontario Ry. Special Joint Freight Tariff on Canned Goods, C.R.C. 298 (G.T.R. Co.'s C.R.C. No. E. 1928), in so far as it affects the joint rates from points on the Central Ontario Ry., as being in contravention of the second clause 1 of order 8984, Dec. 11, 1909, be disallowed; and that the rates of Tariff C.R.C. 298 from the Central Ontario stations be restored, with leave to the said railway companies to apply to the Board for a hearing.

Grain Rates from Grenfell, Sask.

18109. Nov. 22. Re application of Grenfell Milling and Elevator Co., Grenfell, Sask., for order directing the railways interested to provide a through rate on grain products from Grenfell to Glenavon and Kipling, via Regina. It is ordered that the C.P.R. and the Canadian Northern Ry. be required jointly to file a tariff of through rates on grain products, in carloads of the minimum weight of 30,000 lbs. per car, from Grenfell, via Regina, at 18½c. per 100 lbs. to Glenavon, Sask., and 19c. per 100 lbs. to Kipling, Sask., the tariff to be made effective not later Dec. 16, 1912.

Coal Rate, Detroit to Windsor.

18121. Nov. 26. Re application on behalf of the Windsor, Walkerville, and Sandwich boards of trade, protesting against the increased rate on coal proposed under C.P.R. Tariff, Supplement 9 to C.R.C. E. 1606, and the Pere Marquette Rd. Tariff, C.R.C. 1539; and applying for an order postponing the effective dates of the tariffs until a hearing can be had. It is ordered that, pending a hearing of the application by the Board, the Pere Marquette Rd. Tariff, C.R.C. 1539, and the rate on coal from Detroit, Mich., to Windsor, Ont., as published in C.P.R. Supplement 9 to Tariff C.R.C. E.1606, be suspended for 60 days from Dec. 1, 1912.

Switching Tolls in Quebec City.

18135. Nov. 27. Re complaint of Quebec board of trade, and others, against the tolls charged by the C.P.R. for switching traffic, in carloads, originating at, or destined to, points on the Grand Trunk, Quebec Central, and Intercolonial Railways, between the ferry dock and tracks and sidings in Quebec city. It is ordered that, without prejudice to the pending inquiry into interswitching services and tolls generally, and subject to any order that may be made in that inquiry, the tolls charged by the C.P.R. for interswitching the said traffic for any distance within, and including, four miles from Point-a-Carey wharf, shall not exceed 1 cent per 100 lbs., subject to a minimum charge of not more than $3 a car, to or from private sidings, and 1½ cent. per 100 lbs., subject to a minimum charge of not more than $3 a car, to or from public team tracks; the tolls to be payable by the shipper or consignee, and to become effective not later than Dec. 9, 1912.

Temporary Advance in Demurrage Rates.

18178. Nov. 28. Re application of C.P.R., G.T.R., Canadian Northern Ry. and Michigan Central Rd., on behalf of themselves and of other railway companies, for permission to increase, temporarily, the toll for car detention by shippers or consignees, with the object of minimizing the misuse of freight cars for storage purposes and alleviating the car shortage and congestion of traffic. It is ordered that, on the publication and filing of tariffs therefor, and for the period commencing Dec. 15, 1912, and terminating March 31, 1913, both inclusive, the said companies be permitted to increase the car service or demurrage toll prescribed by order 906, Jan. 25, 1906, from $1 a day to $2 a day for the first 24 hours or any part thereof, and to $3 a day for each succeeding 24 hours, or any part thereof, for delay beyond the free time allowed by the said order for loading or unloading cars; provided that this order shall not apply to cars held in transit at stopover points under published tariffs filed with the Board.

Grand Trunk Pacific Ry. Freight Tariff.

18208. Nov. 22. Re application of Grand Trunk Pacific Ry., under sec. 327 of the Railway Act, for the approval of its Standard Freight Mileage Tariff, C.R.C. 12, to apply between stations in Alberta and British Columbia, between Thornton, Alta., and Tete Jaune, B.C. It is ordered that the company's said Standard Freight Mileage Tariff be temporarily approved, pending the result of the enquiry by the Board into the rates charged generally by railways west of and including Crowsnest, Canmore, and Thornton.

Coal Rate, Detroit to Windsor.

18210. Dec. 3. Re application on behalf of the Windsor, Walkerville, and Sandwich boards of trade, protesting against increased rate on coal from Detroit to Windsor, Walkerville, and Sandwich, Ont., and applying for order postponing the effective date of the said rate until a hearing can be had. It is ordered that, pending a hearing of the application by the Board, the rate of 40 cents a net ton from Detroit to Windsor, exclusive of switching charges, as published in Michigan Central Rd. Supplement 14 to Tariff C.R.C. 1288, be suspended for 60 days from Dec. 1, 1912.

Refrigerator Cars for Less than Carloads.

General order 98. Dec. 6. Re application from Sanitaris, Limited, Arnprior; White and Co., Toronto; the Board of Trade of Hamilton; and others, for order requiring railway companies during cold weather to furnish heated refrigerator cars for carriage of perishable freight in less than carload quantities. It is ordered that, until further ordered by the Board, upon the receipt of reasonable notice from the shipper that such is required, railway companies operating in Eastern Canada, which own refrigerator cars, and according to their respective powers, furnish to any shipper, or combination of shippers, a heated refrigerator car, or cars, for the carriage, during cold weather, of fruit, vegetables, and eggs, in less than carload quantities, the same to be carted by the shipper, and loaded in the car by the shipper, in the order in which the shipments are to be unloaded; provided that under this order the carrier be not required to accept shipments necessitating more than five openings of any such car for unloading purposes; to furnish heated cars for transhipments from the original car for destinations off the route of the car; to accept less than a total weight of 12,000 lbs. in any such car, or a less aggregate [illegible] lbs. distributed proratably over the various shipments in any car; to accept such shipments unless the freight charges are prepaid; to assume liability for loss or damage to the property by frost while in the car, if caused by the opening of the car for loading or unloading purposes, or after it has been unloaded from the car.

Cartage on Freight.

General order 99. Dec. 18. Re [illegible] tariffs of railway companies, in crossing charges for cartage, and the request of the Board that the said companies show cause for such increases. It is ordered that the special tariffs of the railway companies, the effective dates of which were postponed to and including Dec. 31, 1912, by orders 17911, 18088, and 18153, be disallowed; and that, in lieu thereof the companies may make effective on statutory notice, special tariffs of tolls chargeable for cartage at those points in eastern Canada where cartage services are rendered by the said companies, or their agents, which shall not exceed 2½ cents per 100 lbs., provided that a minimum toll may be charged for the cartage of any single complete shipment, which minimum toll shall not exceed 15 cents.

The New Montreal Harbor Commission.

Ottawa press dispatches of Dec. 24, to daily papers supporting the Dominion government, and which are therefore, probably semi-official, say that the new Harbor Commission for Montreal will consist of W. G. Ross, Farquhar Robertson and E. A. Labelle, who will succeed G. W. Stephens, C. C. Ballantyne and L. E. Geoffrion, resigned, effective Dec. 31, 1912.

W. G. Ross was born in Montreal, Aug. 6, 1863, and engaged in auditing and accountancy work with his father as early as 1880. He was subsequently, successively, Secretary, Treasurer and Assistant Manager, Windsor Hotel Co., Montreal, and in 1892 became associated with Jas. Ross, who was then developing electric railways in Canada, and organizing their finances. He has been Comptroller, Secretary-Treasurer and Managing Director, Montreal St. Ry., also Managing Director, Montreal Park and Island Ry., and General Manager, Suburban Tramway and Power Co., now all combined as the Montreal Tramways Co., Treasurer, Mexican Light, Heat and Power Co., and is a director, Dominion Steel Co., and President, Asbestos Corporation of Canada, as well as being connected with a number of other companies with which the same financial interests are concerned. He was President, Canadian Street Railway Association for the year 1905-06.

Farquhar Robertson has been associated with the coal trade for a number of years, and has represented St. Andrew's ward in the Montreal city council for six years. He was Vice President, Montreal board of trade in 1908, and President in 1909.

E. A. Labelle is General Manager, St. Lawrence Flour Mills Co. and prior to holding that position had been connected with the Ogilvie Flour Mills, Ltd., since 1883. He was Lieutenant-Colonel of the 65th. battalion Mount Royal Rifles, transferred to the reserve of officers and later appointed Brigadier 19th Infantry Brigade.

The Minister of Marine introduced a bill into the House of Commons, Dec. 6, to amend the bill defining the jurisdiction of the Board, giving it complete control over the Montreal harbor, which is at present shared with the Marine Department, and to remove a number of minor harbors, which are at present controlled in conjunction with a portion of the ship canal, from its jurisdiction.

Electric Railway Department.

Montreal Tramway Company's Track Construction and Method of Cost Keeping.

In making up the type of this article by J. D. Evans, Chief Engineer and Superintendent of Construction, in Canadian Railway and Marine World for December, the two concluding paragraphs, which should have appeared on pg. 619, were omitted. They refer to the intersection work, and are as follows:—

After the new material has been all unloaded and placed, the crane car is then put to work loading the cars with the old intersection and returns to the store yard. With the use of the crane car the cost of our work has been reduced and it is absolutely necessary on account of the increased weight of the intersection parts, also we do not require as many laborers, and the street is not blocked with any of the intersection material. As soon as the new intersection is placed traffic is resumed and we then start the excavation, the sub-grade being 24 ins. below the top of rail. This work is carried on hand in hand with the placing of the ties. We have adopted long ties, that is ties varying in length from 8 ft. to 20 ft., the longest ties taking in the four rails. The attached plan shows the spacing of the special ties, with the list as to sizes that are in addition to the regular standard 8 ft. ties.

We use all ties sawn at least on two sides, the extra long ties being sawn on four sides, no hewn ties being allowed where concrete slab construction is adopted, on account of their varying thickness and unevenness. As fast as the excavation is completed and the ties placed in final position we block up the intersection per plan 164 T-G., so that the concrete slab can be laid and allowed to thoroughly set without carrying any load from the cars while running over the intersection. After the concrete has set for ten days the intersection is tamped up with one [illegible] of sand under the ties and brought to final surface. After this has been completed the concrete is placed for the pavement. As soon as this concrete has set, from four to seven days, we start laying the pavement which completes the job.

We feel that the Montreal Tramways Co.'s work ranks with the best of railways in America, and we believe the reason for this is on account of the efficiency and loyalty of the employes working together systematically.

Five Car Trains on Winnipeg, Selkirk and Lake Winnipeg Railway.

The accompanying illustration shows a five car multiple unit train, which is operated for excursion business on the W.S. & Lake Winnipeg Ry., a subsidiary of the Winnipeg Electric Ry., between the two terminals, Winnipeg and Selkirk, about 20 miles, making the run in 40 minutes each way. The train consists of 3 power cars in multiple and 2 trailers, with seating capacity for 320 passengers. The cars were built by the Winnipeg Electric Ry. at its own shops and have Canadian General equipment throughout. They are heated with hot water and hot air heaters, but the hot water is found much the better for the Manitoba climate. The train is operated by motorman, conductor and trainman, and as soon as the men became conversant with the equipment the operation gave no trouble.

Multiple Unit Train on Winnipeg, Selkirk and Lake Winnipeg Ry.

The train is very popular for excursions, securing business that would go to the steam railway if a solid train was not operated. During 1912 up to Mar. 30, the company carried 55 excursions from Winnipeg to Selkirk, ranging from 150 to 4,000 passengers per excursion. Then number of passengers carried between the two points for the first 11 months of the year was as follows:—Jan., 21,084; Feb., 21,207; March, 22,480; April, 21,783; May, 27,608; June, 39,087; July, 53,681; Aug., 54,673; Sept., 39,687; Oct., 37,495; Nov., 30,930.

The W.S. & L.W. Ry. is operated under G. Pettingill, Superintendent, who has his office at Selkirk.

Gas Electric Trains for suburban service are to be employed by the Pittsburg & Lake Erie Rd. in the district tributary to Pittsburgh, Pa. A single train, consisting of a gas-electric motor car and one trailer, will first be placed in operation on the regular local schedule as a test of the system. It will run on the four-track main line in connection with the regular steam trains. It is contemplated that the service will extend from near McKeesport, 17 miles south of Pittsburgh, to Beaver Falls, 32 miles north of the city. The motor car is 42½ ft. long, 10 ft. 5 in. wide and weighs 36 tons. It is driven by two 100 h.p. motors, operating at 600 volts. Its capacity is 42 people. The trailer is 45 ft. long, weighs 22 tons and seats 80 people. Both cars are of steel.

Lulu Island Railway Terminal in Vancouver.

The B.C. Electric Ry. has arranged with the city of Vancouver for the construction of a new terminal for its Lulu island interurban railway. This line extends from Vancouver through Point Grey to Eburne, from which point one division runs across Lulu island to Steveston and another extends along the north arm of the Fraser river to New Westminster. Along this route settlement has been very rapid of recent years and a large commuters' traffic is now carried on over the division. The line now enters Vancouver by a bridge spanning False creek, terminating at a station at the water level. This location is inconvenient, inasmuch as the station is located on low ground and passengers transferring to city lines must either walk up a steep hill or climb a spiral stairway to the level of the Granville street bridge, over which all the connecting city lines, except one, run.

The new arrangement proposed by the company is the location of an interurban terminal at the south end of Granville street bridge. By this plan interurban passenger cars will not be obliged to cross the False Creek bridge and they will be taken into the city directly on a level with the Vancouver city cars. The terminal will also be of advantage to the city system, as it is located near 4th and Granville streets, an important city transfer point.

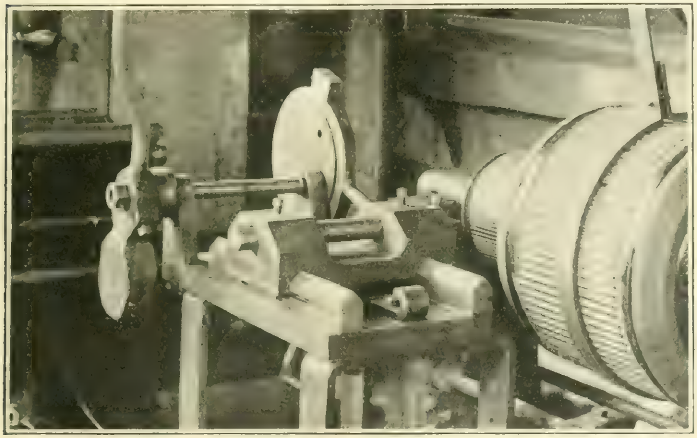
The station will consist of two wings, each about 40 by 28 ft., connected by a covered passage way 25 ft. wide, ample to accommodate the traffic from the interurban lines to the city system. In the south wing will be located the ticket office, agent's office, etc., while in the opposite wing will be a general waiting room and separate ladies' room. The terminal, being located on made ground, will be of wood construction. The plans call for a handsome structure which will cost between $30,000 and $40,000. The trackage arrangements will provide a terminus for the Lulu island cars on the west side of the station. The east frontage of the station will be located directly on the Granville street bridge, all the Fairview cars of the company passing this point on their way to the business centre of the city.

The first cars were run on the Toronto civic railway, Dec. 18.

Commutator Slotting Device at Winnipeg Electric Railway Shops.

It is a well known fact to all street railway shop men that the mica insulation between the individual segments of the commutator does not wear down at anything like as rapid a rate as the copper of the segments themselves. In consequence, it is necessary periodically to remove the mica slightly below the surface of the copper, as otherwise the brushes would not have a good bearing, but would skip from projecting fin of mica to the next projecting fin, with a great deal of incidental sparking.

In the shops of the Winnipeg Electric Ry. there is a simple little device for performing this operation of slotting down the mica mechanically. The machine in operation is shown in the accompanying illustration. The armature is mounted on V blocks on a stand about 30 ins. above the ground. In front and to one side is the machine for slotting. This machine consists of a bed plate, similar to the ways of a lathe, mounted on a light iron forged frame. This cast plate has V ways on its upper surface, on which a small carriage operates. Mounted in this carriage from side to side, is a bar, in the far end of which is carried a small parting tool, secured by a set screw. The main bar is secured in the carriage likewise by set screws.



Device for Slotting Commutator Insulation.

At the far end of the base, on two standards, is supported a cross shaft with a handle on the left end and an eccentric sheave and strap on the other. The latter is connected by a small rod to the carriage, the latter receiving its motion along the ways through this means.

The operation is simple. The slotting machine is set parallel to the armature, and with the slotting tool on a level with the centre of the armature. The tool rod is adjusted for depth of cut by the set screws in the carriage. The length of stroke is likewise adjusted by the small stop between the ways at the front end of the base. The carriage can thus be moved over just the correct amount, and not ram the end windings of the armature. Around the outside of the armature is clamped a band, with a projecting handle. By this handle, the operator locates the slot accurately with one hand, and with the other, draws over the slotting lever. Moving the armature around to the next position the operation is repeated, slotting out the surplus mica almost as rapidly as the operator can move.

New Route Between Vancouver and New Westminster.

The route of the Westminster interurban line, the original line connecting New Westminster with Vancouver and which started operation in 1891, has been altered by the recent completion of the Highland Park cut off. The old line entered New Westminster along 12th street, along which there was a very steep grade, rendering extreme care necessary in the operation of heavy interurban passenger cars or freight trains such as are used on this branch. The Highland Park cut off leaves the old interurban line at Highland Park, and proceeds by a winding route, taken for the sake of easier grades, into New Westminster. The running time between Vancouver and New Westminster has been lessened by ten minutes because of the change of route and the service is now operated on safer lines. With the Highland Park cut off in service it will be possible for the company to carry out its plans of operating two car trains between New Westminster and Vancouver. This is rendered necessary by reason of the rapid growth of the suburban traffic along the line both in the vicinity of Vancouver and New Westminster. The section of the Westminster interurban line which has been abandoned for interurban traffic will now be covered by cars connected with the New Westminster city system.

Water Lubrication of Street Railway rails has been in use for some time on a street in Rome, Italy, carrying heavy traffic. The street is on steep grade and has numerous sharp curves. At the top of the slope a stream of water is fed into each of the four rails of the double track line and flows downhill along the groove of the rail. Every 20 to 30 ins. a small wooden block is wedged in the groove, reaching up to wheel flange level, to break the flow of the water. It is reported that cars ride very smoothly on this lubricated track and the grinding noise of cars rounding curves is practically eliminated, while also the general noise of the car traffic is reduced. Grease lubrication at curves is rendered unnecessary.

British Columbia Electric Railway Company's Equipment Orders.

The B.C. Electric Ry. has ordered 60 city passenger cars from the Preston Car and Coach Co. This is the initial order for 1913 delivery. The cars are to be of double end type and 44 ft. long. The specifications are subject to minor changes, but the cars will be of the latest model throughout. Delivery will be made during April and May.

The company expects to operate its interurban line from Victoria north through the Saanich peninsula, 22 miles in length, early in January. For this line orders for rolling stock have been placed as follows:—2 baggage and express cars from the Niles Car Co., and 6 passenger cars from the St. Louis Car Co. For freight service 15 flat cars and 25 box cars have been ordered from the Seattle Car Co., and two 45 ton locomotives will be taken from the company's mainland system for use on the new interurban line.

For service on its mainland freight lines, the company has recently ordered 25 box cars from the Seattle Car Co., and five 50 ton locomotives from the Westinghouse Co. Other rolling stock recently ordered by the company consists of 2 snow sweepers from the Ottawa Car Co., and 6 Hart-Otis steel dump cars.

During December full delivery was made of the 24 interurban cars ordered from the St. Louis Car Co. last summer, and this equipment is now in service. The initial shipments have also been made by the Brill Co. on the large order for city passenger cars recently placed.

In announcing its contract with the Preston Car and Coach Co., the management stated that it was not the company's intention to abandon the car building work in connection with its New Westminster shops. It was stated that the schedule for new rolling stock for all lines of the system for 1913 is now being prepared and in this programme ample work would be allotted the New Westminster plant. At these shops is now being assembled and finished shipments of 25 steel city passenger cars which have been constantly arriving on an order placed some time ago in Great Britain.

Abolition of Grade Crossings in British Columbia.

The B.C. Government has declared against grade crossings, where these can possibly be avoided. The municipal council of South Vancouver decided recently to establish a grade crossing at Rupert street, where the road crosses the Westminster interurban line of the B.C. Electric Ry. There is a subway at the point but it was claimed that this was too low for ordinary traffic. The B.C. Electric Ry. entered a protest on the plans of the municipality, and ratepayers holding property in the vicinity also entered objections. The question was argued before the Provincial Minister of Railways at Victoria. After hearing both sides, the Minister stated that under no circumstances would he favor the establishment of a grade crossing at the point, the policy of all growing communities was to avoid grade crossings wherever possible and the idea of the South Vancouver authorities in substituting a level crossing for a subway at Rupert street would be a distinct retrograde movement. A few days after the argument the Minister announced his decision to the effect that the grade of the railway should be raised two feet at the road crossing, thus making possible a subway which would meet the conditions of the case.

British Columbia Electric Railway Company's Report.

The report for the year ended June 30, submitted at the annual meeting in London, Eng., Dec. 10, states that the business has continued to grow very rapidly, and the gross receipts show an increase of $1,601,994, or over 36%, and the net earnings, including income from investments and subsidiary companies, and after charging renewals, show an increase of $401,837, or 27%, over the preceding year. From the close of the period under review to September 30, there was a still further increase in gross earnings of $352,233, or 27%, and in net earnings $138,204, or 31%. The increase is well distributed over every department and all branches of the system, but is especially noticeable in Victoria.

[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	$ [illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
	$ [illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
	£ [illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
	6,590	[illegible]	[illegible]
[illegible]	$ 257,670	[illegible]	6
[illegible]	$ 264,260	9	2

During the whole of the year very large sums have been involved in various works and extensions under construction, and have consequently remained unremunerative.

The following charges have been made against revenue account:—

[illegible]	[illegible]	[illegible]	[illegible]
	£97,501	13	6
[illegible]	£ [illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
	£ [illegible]	[illegible]	[illegible]
Interest on debentures and [illegible]	£[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]

From this the directors have decided to recommend payment of dividend on deferred [illegible] for six months to June 30, [illegible], to transfer [illegible] 9s. 7d., a total [illegible] 9s. 7d., and to carry forward to next year £7,731 19s. 7d.

[illegible] capital [illegible] June, 1911. [illegible]

The growth of [illegible] indicated by the following figures:

	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]

The number of passengers carried was [illegible], an increase of 15,612,718. The number of lamps in use at June 30 was 735,426, an increase of 171,884.

In accordance with the established custom for some of the directors to visit British Columbia annually, T. Blundell Brown went there in May, and during his stay thoroughly discussed and investigated existing conditions and future prospects with the management and with many leading British Columbians. He reports much prosperity throughout the country, and is well impressed with the great expansion of the enterprise since his last visit four years ago. He is entirely convinced that the progressive policy adopted by the company is wise and justifiable.

Very important works have been carried out during the year, and are still under construction.

POWER PLANTS. The extension of the hydro electric power plant at Lakes Coquitlam and Buntzen has been successfully carried on, and will be completed during next summer. Already the work has provided the company with largely increased water storage. The magnitude of the undertaking may be gathered from the following particulars: A new dam is being built at lake Coquitlam, maximum height, 98 ft.; width at base, 600 ft.; length at crest, 850 ft.; width at crest, 40 ft.; storage capacity, 7,404,000,000 cub. ft., giving an available reserve during a dry season of 53,700,000 k.w.h. of electrical energy; 1,055,000 cub. yds. of material will have been handled on completion of the works; the number of men employed on the work during the last six months has varied from 1,289 to 1,514. An additional and separate power house of a massive character, with foundations on the solid rock, is being built at Lake Buntzen. Three hydro electric units will be installed therein, having a combined capacity of 40,500 h.p. These, added to the units already in operation in the old power house, will give a total available supply of 82,500 electrical h.p. The directors had hoped that these new units would have been ready for operation in November, but owing to labor troubles experienced in Great Britain, considerable delay occurred in the manufacture of the generators, and it was found impossible to ship the first generator from Birkenhead before Oct. 12. It is expected that the first unit will be in service during February. The completion of the works above referred to will place the company, so far as power is concerned, in a very satisfactory position, and after February next, in return for the heavy capital expenditure of the past three years, it will have a very large power development at an economical figure, and one in which maintenance and operating expenses will be reduced to a minimum. In every detail the most modern practice in hydro electric power plant design has been adopted the best features of European and American design having been combined to produce a plant which will, undoubtedly, be one of the finest in the world.

On Vancouver island the company is also largely increasing its hydro electric power installation to meet the rapidly increasing business in Victoria and surrounding districts. The first Jordan river installation was put into operation in Feb., 1912, and consisted of one unit of 6,000 h.p. impulse wheel on the shaft of a 4,000 k.w. alternator, with all necessary complementary equipment. A second unit of equal capacity has been completed within the last few weeks, and is now delivering power in Victoria. The dam connected with this installation was completed by May and has a capacity of 327,000,000 cub. ft., which is equivalent to the storage of 5,960,000 k.w.h. of electrical energy. The company is also constructing, near Victoria, with a separate transmission line, an auxiliary steam plant having an initial capacity of two 2,000 k.w. units. The design has been laid out so that in the future new units can be added very economically and quickly.

NEW LINES OF RAILWAY. The railway from Victoria through the Saanich peninsula, about 20 miles, is now nearing completion, and the board hopes that it will be in operation during Dec., 1912, and some 8 miles radiating from New Westminster have either been completed during the year or are approaching completion. The company is also building several extensions in North Vancouver, South Vancouver, Point Grey and Victoria, aggregating over 15 miles. Large purchases of rolling stock have been made, in addition to which the company's car shops at New Westminster have been kept working to full capacity, and have turned out a large number of cars. The terminal station and central offices in Vancouver have been completed, and constitute one of the most conspicuous and important structures in the city. The offices are now occupied by the staff, and the excellent accommodation which they provide should greatly facilitate the administration of business.

During the year the company was compelled to suspend traffic in Point Grey municipality owing to legal proceedings having been instituted which challenged the validity of its franchises. This matter has been satisfactorily terminated by a vote of the people, who by a very large majority passed a bylaw confirming the franchises for the unexpired 37 years.

Expenditure on Capital Account.

Rolling stock	$ 725,263.74
Permanent and double tracking and sundry improvements	926,552.71
Track extensions	648,928.10
Lighting extensions	278,046.67

Sundries	99,930.85
Transmission lines and railway feeders	45,187.06
	$4,513,[illegible].13

Electricity on Italian Railways.—Some important changes are being made on the Milan-Gallarate-Portoceresio electric railway in the north of Italy. This line was one of the first to be installed in the country, and is on the point of adopting modern methods. The old steam plant of Tornavento, which was expensive to work and is now too small, will be shut down, and the current for the road will come from the large hydraulic plant of Varzo on the south side of the Simplon. Current at 45,000 volts is brought to Gallarate by a power line running along the railway, and the current for the cars is supplied by seven substations spaced along the line, instead of the four stations which were formerly used. Owing to the increased amount of power which the railway now has at its disposal, it is able to run heavier passenger trains than before and also does away with the use of steam locomotives on the freight trains. For the heavy passenger traffic there are used five large electric locomotives of 2,000 h. p. At the hours of light traffic the trains will be made up of a few motor cars, according to the usual method.

The Board of Railway Commissioners has authorized C. J. Laughlin, Jr., Vice President, or H. Rooke, Secretary of the Niagara, Welland and Lake Erie Ry., to prepare and file tariffs for freight and passenger traffic and of telegraph tolls.

Electric Railway Projects, Construction, Betterments, Etc.

Assiniboia, Man.—At a meeting of the council of this municipality, Dec. 4, a resolution was passed favoring the building of a municipally owned electric railway. It is said that if the project materializes it will be carried out in connection with a similar enterprise in the Fort Garry municipality.

Brantford and Hamilton Ry.—It is proposed, as soon as the necessary powers can be obtained, to extend the line to Galt, Ont., about 20 miles. The Galt line would start from the present line at Langford. Application is being made to the Dominion Parliament for authority to build the extension. (Aug., 1910, pg. 681.)

British Columbia Electric Ry.—On Nov. 30 the company started operating cars over the Highland Park cut-off on the Vancouver-New Westminster line. This cut-off saves ten minutes on the trip between the two cities. An arrangement has been made with the city as to the rental to be paid by the company for the use of the new Connaught bridge. Plans have been submitted for changing the location of the passenger station near the Granville street bridge, and it is reported that plans will shortly be submitted for additions to the company's car barns in Vancouver.

Press reports state that plans are being prepared for the extension of the company's lines in South Vancouver.

The Provincial Minister of Railways has approved of plans and specifications for a bridge to be erected at the upper crossing of the Coquitlam river, on the Port Moody and Coquitlam Ry., a branch of the B.C.E. Ry. The bridge will consist of three 50 ft. Howe truss deck spans with trestle approaches.

A car service was put in operation on the Hillside avenue car line in Victoria, Dec. 2. It is expected that the extension to Deep Cove, in the Saanich peninsula, will be opened for traffic early this year. Arrangements are being made for terminal facilities in Victoria at an estimated cost of $200,000, and for the erection of car barns at Deep Cove. The new steam plant at Brentward bay, Tod inlet, has been completed, and was put in operation Nov. 24. The plant is intended to be used in case of any accident to the Jordan river plant. (Dec., 1912, pg. 622.)

Burrard-Westminster Boundary Ry. and Navigation Co.—Application is being made to the Dominion Parliament to extend the time within which the lines authorized by the statutes of 1907, as amended in 1911, may be built. A. J. Kitto, Vancouver, B.C., is solicitor for the company. (Oct., 1912, pg. 520.)

Calgary Municipal Ry.—Bylaws are being submitted to the taxpayers for authority to raise by debentures and to expend $108,500 on 10.5 miles of new lines; and $68,400 on building second track on existing lines during 1913. (Dec., 1912, pg. 622.)

Edmonton Interurban Ry.—The directors have made two calls of 10% on the shareholders, the first due Dec. 17, 1912, and the second payable Feb. 18. C. E. Barry, Edmonton, Alta., is Secretary. (Dec., 1912, pg. 622.)

Edmonton Radial Ry.—The Edmonton, Alta., city council, Dec. 9, unanimously approved of plans submitted by Inspector Moir for the building of a system of radial railways, having a total length of 120 miles. The plan provides for lines all over the limits of the city, so that no building site will be more than three and a half blocks from a car line. It is intended to begin working out this plan early this year, during which it is proposed to add 18 miles to the existing lines, and to begin making permanent improvements upon all the streets on which it is proposed to build car lines. (Dec., 1912, pg. 622.)

Fort Garry, Man.—Application is being made to the Manitoba Legislature for an act authorizing Fort Garry municipality to build an electric railway, with terminals in Winnipeg. R. A. C. Manning is Reeve of the municipality.

Grand Valley Ry.—The Brantford, Ont., city council has authorized the company to fix up the line at once, on condition that $10,000 of back taxes are paid immediately, and the balance in two instalments on Mar. 1 and May 1.

Hull Electric Ry.—Application is being made to the Dominion Parliament for an act declaring the company's line to be a work for the general advantage of Canada, and authorizing it to extend the line into Ottawa, by an independent line or over the line of any other company with which an agreement may be made. The H.E. Ry. is owned by the C.P.R. (May, 1912, pg. 251.)

Kingston, Portsmouth and Cataraqui Electric Ry.—H. W. Richardson, President, has informed the Kingston, Ont., city council that the line is not for sale. The city desired to obtain an option on the property with a view of settling certain matters as to which there is a difference of view between the council and the company. (Dec., 1912, pg. 622.)

Moncton Tramways, Electricity and Gas Co.—The car line has been extended to the new Intercolonial Ry. shops at Moncton, N.B., and a car service was started on the extension Dec. 5. (Dec., 1912, pg. 622.)

Morrisburg and Ottawa Electric Ry.—The Ottawa city council had under consideration, Dec. 2, the question of the route of this projected electric railway into the city. The railway committee recommended a route along Riverside avenue and Main street to the proposed terminal station near the Ottawa East bridge. The report was referred to the board of control for discussion. Ewart, Scott, McLaren and Kelley, Ottawa, are representing the company. (Nov., 1912, pg. 574.)

Niagara, St. Catharines and Toronto Ry.—The first sod of the extension from St. Catharines to Niagara-on-the-Lake was turned, Dec. 2. It was expected to have five miles graded by the end of the year. When the spring opens the line will be completed, and it is expected to have it open for traffic by June 30. (Dec., 1912, pg. 622.)

Nipissing Central Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the extension of the line from Haileybury to Liskeard, Ont. It is proposed to remove the car barns from North Cobalt to Haileybury. The present barns are too small, and are not central enough for the extended line. (Dec., 1912, pg. 622.)

Application is being made to the Dominion Parliament to extend the time for the building of the lines authorized in the statutes of 1907, as amended in 1908.

Ottawa Electric Ry.—We are officially advised that the company is building an addition to its Cobourg street barn, which will add four to the six tracks already there, and give accommodation for 30 more cars. (Nov., 1912, pg. 574.)

Porcupine Rand Belt Electric Ry.—The organization of this company was reported completed in Toronto, Nov. 26, with the following officers:—President, F. G. Earl, New York; Vice Presidents, S. A. Adila, Toronto; R. Mallett, Dublin, Ireland; W. J. Adams, [illegible], Ont.; Secretary-Treasurer, H. S. Rowland, Toronto; Chief Engineer, C. R. Fullerton, Liskeard, Ont. The company holds an Ontario charter of incorporation; it has secured a Quebec charter, and it is proposed to secure Dominion incorporation. Preliminary surveys are said to have been made for several routes under existing charters, viz.:—From Dane via Larder lake to North Timiskaming and Liskeard; from Ruel C.N.R. to Lake Porcupine and the N.T.R. via W. Shining Tree lake and the Mattagami river, and from Dane to Swastika and the G.N. Bend, Montreal river to South Porcupine.

The gradients on these routes are reported to be fairly easy, and the cost of construction, it is said, will not be excessive. It is proposed to use single storage battery cars, with trailers for freight. There are several good water powers along the routes which it is proposed to develop for recharging batteries. The company is authorized to make agreement for running rights with railways with which its line may connect. According to press reports the company proposes to make the line a portion of an electric railway system extending from Quebec to Winnipeg. (June, 1912, pg. 310.)

Rainy River Radial Ry.—Engineers are reported to be at work making surveys for a line from Fort Frances to the Lake of the Woods, as the first section of the projected system. (May, 1912, pg. 252.)

St. Laurent, Que.—Application is being made to the Quebec Legislature to ratify an agreement between the St. Laurent municipality, Que., and the Franco-Belgian Investment Co., whereby the latter has been granted an exclusive franchise for 25 years for the construction of an electric railway, and the operation of other public utilities in the municipality. (Nov., 1912, pg. 574.)

Saskatoon Municipal Ry.—It has been decided that this is to be the general title of the electric railway which is being built in Saskatoon, Sask., for the city, by the Stone and Webster Engineering Corporation, Boston, Mass. The car barns have been completed, and a temporary track was laid from the C.P.R. to the car barns for the hauling in of the cars, which were delivered Nov. 30.

The city of Saskatoon is asking the Saskatchewan Legislature to authorize it to acquire the rights and powers of the Saskatchewan Power Co., incorporated by the Dominion Parliament in 1908. (Dec., 1912, pg. 623.)

Stratford Ry.—The city council has approved of a new bylaw granting the company a franchise for the building of an electric railway in Stratford, Ont., and the taxpayers will be asked to approve of it, Jan. 6. At the meeting of the council, Dec. 3, a letter was read from Sir Wm. Mackenzie, in which he said that construction would be started June 1, 1913, and the line would be completed by Dec. 31, 1914, provided the bylaw was carried by the people and confirmed by the Legislature. (Dec., 1912, pg. 623.)

Toronto Civic Car Lines.—The first section of the municipally owned electric railway in Toronto was put in operation Dec. 18. The line starts at the terminus of the Toronto Ry.'s Parliament street line on Gerrard street, and runs along that street to Main street, East Toronto. Cars were purchased in the U.S.; power is being supplied by the Hydro-Electric Commission. A seven minute service is to be maintained, with a 2c. fare, or six tickets for 10 cents.

A suggestion has been made that this line should be extended under the proposed Hydro-Electric municipal plans, through Agincourt and other points to Markham, with a branch to Locust Hill and other points.

The Arnold Co., of Chicago, who were appointed to report on the street railway service in Toronto and to suggest what additional lines are necessary, have presented a report, accompanied by a map which shows new north and south lines on Greenwood avenue, Pape avenue, Terauley street, Claremont street, and its extension to St. Clair avenue and Dufferin street; a cross town line from Yonge to Bathurst street, running along St. Patrick street, and a line along Bloor street to Roncesvalles avenue. A number of lines in the districts annexed since 1891 are also recommended, as well as the routes upon which lines should be built outside the present city limits as the growth of the city demands. (Dec., 1912, pg. 623.)

The Winnipeg Electric Ry. operates 35 miles of single and double track lines in the city, and owns or controls, in and out of the city, 120 miles of track. It was expected that 12 miles of additional track would be added by Dec. 31, 1912. Most of this mileage has been completed and is being operated over. The extensions on which work was being done during December were:—From Inkster avenue to the city limits on Main street; Academy road line; and from Stafford street to Ash street on Godfrey avenue.

At a meeting at which representatives of various municipalities were present, in Winnipeg, Dec. 11, a resolution was passed inviting the W.E. Ry. to take into consideration the desirability of building an electric railway to Portage la Prairie, Man. A committee was appointed to secure information and to prepare a general plan for submission to the company and to the municipalities interested. (Dec., 1912, pg. 623.)

Winnipeg to Portage la Prairie.—Press reports state that preliminary details are being worked out for the building of an electric railway from Winnipeg, via St. Francois Xavier, to Portage la Prairie, Man

Electric Railway Notes.

The Moncton Tramways, Electricity and Gas Co. received a new car recently for its suburban service.

The Hull Electric Ry. has started the operation of pay as-you-enter cars between Aylmer, Que., and Ottawa.

The St. John (N.B.) Railway has received the six car coaches recently ordered, and is waiting for the delivery of the trucks.

Eleven single truck cars have been delivered at Saskatoon, Sask., for the municipal electric railway, now under construction. The cars were built in the U.S.

The Fort William, Ont., city council has recommended to the joint board operating the Port Arthur and Fort William Electric Ry. that a five minute service be put on between the two cities.

A vote is to be taken in London, Ont., at the municipal elections, Jan. 6, upon the question of the operation of cars on Sundays. Since the last vote was taken, the city limits have been extended.

The Board of Railway Commissioners has approved of standard passenger tariff of maximum tolls for the Nipissing Central Ry., which is owned by the Province of Ontario and operated by the Timiskaming and Northern Ontario Ry. Commission.

The Saraguay Electric and Water Co. is applying to the Quebec Legislature for authority to change its title to the Light and Power Co. of Montreal, or the Montreal Public Service Corporation, and for power to acquire franchises for electric railways, etc.

The Hamilton St. Ry. has granted a 2 cent an hour increase to first and second year men, and a 3 cent an hour increase to third year men, with 2 cents an hour extra for overtime and Sundays. Proportionate increases have been given to the men on the Hamilton and Dundas Ry., the Hamilton Radial Ry., the Hamilton, Grimsby and Beamsville Electric Ry., and the Brantford and Hamilton Ry. All these lines are owned by the Dominion Power and Transmission Co.

The street railway committee of the Calgary, Alta., city council, has recommended that an experiment be made with the "trackless trolley" car in the city. Applications are being made for the extension of lines in various parts of the city, but while the committee is desirous of giving the public every accommodation, they don't see that there is any prospect of a number of the extensions asked for paying, hence the suggestion that the "trackless trolley" be tried.

In reference to the crossing of the Winnipeg Electric Ry. tracks by the C.P.R. at Logan avenue, Winnipeg, and the question of the apportionment of the cost of the protection provided there, which came before the Board of Railway Commissioners in Winnipeg, July 18, 1912, the W.E. Ry. having failed to file a statement showing whether the portion of its line to the C.P.R. shops is profitable or not, the Board has appointed A. Sullivan, barrister, Winnipeg, to make an enquiry to ascertain the facts.

The Minister of Labor has, according to an Ottawa press dispatch, received the report of the board of conciliation which was established for the adjustment of disputes between the Quebec Railway, Light and Power Co. and its electric railway employes. Men who have been employed more than one year will get 17½ cents per hour; two years, 18½c.; three years, 20½c.; 8th year, 21½c.; 13th year, 22½c. $6,000; wharfage, outward, $5,500; from local After Nov. 1, 1913, the schedule is increased one cent an hour. The company has, it is said, undertaken not to offer any objection to employes being members of the union, and will reinstate employes whose dismissal was called into question.

Clubhouse for British Columbia Electric Railway Employes.

The B.C. Electric Ry. is providing for the comfort and convenience of the motormen and conductors employed on its Vancouver lines by the construction of a five story club building at the corner of Main and Prior streets, Vancouver, directly opposite the company's principal car barns in the city. The building will have a frontage of 25 ft. on Main street and a depth of 60 ft. on Prior street. The Prior street frontage to the rear of the block is owned by the company and in the plans arrangement is being made for the extension of the block should the need arise.

On the 1st floor will be a general waiting room for the men and offices for the station master and inspectors. On the 2nd floor will be a large billiard room, with billiard and pool tables. On the 3rd floor will be the reading room, and about half the floor space of this flat will be used for lockers. The 4th floor will be divided entirely for lockers, this accommodation in connection with the third floor providing lockers for over 500 men. The gymnasium will be on the 5th floor, the entire flat being left free of obstruction as far as possible. A complete set of gymnasium apparatus will be installed. The upper floor will be reached by an elevator as well as a winding stairway. Lavatory accommodation will be provided on each floor. The company's architect has studied the plans of similar buildings operated by electric railways on the continent, for their men, thus arranging for a building adapted to local needs and conditions and up to date in every particular. The block will be of brick construction, the frontage being trimmed with terracotta. The estimated cost is between $30,000 and $40,000.

Personal Paragraphs.

F. H. WILSON, Director, Montreal Tramways Co., has been elected a director of the Merchants Bank of Canada.

E. L. WHITE, of Saskatoon, Sask., has been appointed by the city council, Manager of the municipal railway.

T. G. CONNON, dispatcher, British Columbia Electric Ry., has been appointed Chief Dispatcher, vice F. D. Picken, promoted. Office, New Westminster.

H. McDONALD, who some years ago was connected with the Cape Breton Electric Co. and the Sydney and Glace Bay Ry., died at Glace Bay, N.S., of which city he was Mayor, Dec. 3.

Mrs. Anderson, widow of the late Walter Anderson and mother of JAMES ANDERSON, Manager, Sandwich, Windsor and Amherstburg Ry., died at Ayr., Ont., December 12, aged 90.

G. O. D. OTTY, K.C., Hampton, N.B., who has been a member of the New Brunswick Public Utilities Commission since its inception, has been appointed Chairman, succeeding the late D. McL. Vince.

J. E. RICHARDS, General Freight and Passenger Agent, Chatham, Wallaceburg and Lake Erie Ry., has been admitted a member of the Eastern Canadian Passenger Agents' Association.

J. D. EVANS, M. Can. Soc. C.E., Chief Engineer and Superintendent of Construction, Montreal Tramways Co., has been appointed a member of the American Electric Railway Association's committee on way matters.

PATRICK DUBEE, Secretary-Treasurer, Montreal Tramways Co., and President, Canadian Street Railway Association, has been appointed a member of the American Electric Railway Association's committee on taxes and assessments.

F. D. PICKEN, heretofore Chief Dispatcher, British Columbia Electric Ry., New Westminster, has been appointed Superintendent of the Victoria-Saanich line, which is under construction and will be put into operation shortly. His office will be at Victoria.

C. E. A. CARR, formerly General Manager, Quebec Ry., Light and Power Co., and latterly General Manager, New Orleans Southern and Grand Isle Ry., New Orleans, La., has resigned the last mentioned position and with his family has been spending Christmas and New Year's in Toronto.

Electric Traction on two mountain divisions of the Denver & Rio Grande R.R. is to supplant steam according to published announcements. The first section will be 114 miles in the Wasatch mountains, between Salt Lake City and Helper, Utah. The second section will be in Colorado, over Tennessee pass, between Salida and Minturn, 87 miles. Other sections will be converted until the entire line is under electric traction.

Construction and Operation of Regina Municipal Railway.

Following are extracts from a report to the city council of Regina, Sask., by H. Doughty, Superintendent of the municipal electric railway, dealing with the 10 months ended with Oct. 31, 1912:—

Mr. Doughty says that reviewing the development and success achieved in this municipal undertaking since the commencement of 1912, one cannot but express faith and certain success of its operation in the future, comparing the past returns with its present day operation.

CONSTRUCTION.—The car barns were occupied and put into service Jan. 22. Various track intersections providing satisfactory and suitable entrances have since been installed. Machinery needed for repair and maintenance work has been added from time to time. Several necessary machines are now on order, and when they are delivered we shall be able to handle all that work required for our present and future rolling stock, and, further, such will enable us to build ourselves all cars wanted, excepting passenger cars. The facilities established to date give us storage room for 45 cars, of which 23 can be placed under cover.

The estimates provided for an expenditure of $200,000, of which $150,000 was covered by bylaw, the remainder consisting of a surplus out of 1911 bylaw and stock on hand.

Approximately there was built during 1912 four miles of single track, made up as follows:—1¼ miles single track concreted and 2¾ miles single track ballasted, comprising as follows:—

Single track concreted, 16th avenue, Scarth to Broad street (completion of south belt line).

Double track concreted, Broad street, 15th to 16th avenue; Albert street, 16th to McCallum avenues.

Single track ballasted, 5th avenue, Retallack to Garnet street; car barn tracks to connect with C.N.R. spur; Winnipeg street, Victoria avenue to the Arcola line; Dewdney, Elphinstone street to R.N.W.M.P. barracks.

The last two mentioned tracks are incomplete owing to the non-arrival of special intersections required for same. Shipment, however, has been made and such routes should be ready for operation by Dec. 1, 1912. When these are completed they cannot be operated until further rolling stock is at our disposal.

The straight tracks installed to date are so arranged as to give a 10 minute schedule on all routes operated on, or those that will be operated over until spring.

A temporary feed system was constructed prior to the Dominion exhibition in 1911. The construction of a permanent one is under way. It was found impossible to have a satisfactory one installed in the first instance, owing to the construction of Broad street subway and the pole lines in that vicinity then established being indefinite. The quality and standard of that work done in 1912 equals any portion of that laid during 1911. It is one of the best types known, and is so constructed as to give long life and low maintenance charges.

The present mileage of single track laid is 14½ miles. Out of the remaining bylaw covering the 1912 expenditure there is approximately an amount on hand unexpended against estimates of about $30,000, partly saved through work not undertaken and postponed when the 1913 proposals and estimates were prepared.

OPERATION.—The rolling stock on Jan. 1, 1912, consisted of 2 double truck cars and 4 single truck cars. Two single truck cars were added on April 15 and 4 more on June 30, making the total rolling stock 2 double truck cars, 10 single truck cars and 1 snow sweeper. Since Oct. 31 eight more double truck cars were ordered, four for Dec., 1912, and four for Jan., 1913, delivery. Orders have also been given for 8 double truck and 6 single truck cars for the spring.

Following is a comparative statement of operation for Oct., 1911, and Oct., 1912, respectively:—

	1911	1912
Average daily revenue .	$ 129.61	$ 379.45
Total revenue	3,369.80	10,190.75
Passengers carried without transfers	68,220	227,047
Car mileage	17,793	41,074

In Jan., 1912, we had a daily passenger traffic of 4,300 people, today we are carrying on an average about 10,000 people, while our daily revenue in Jan., 1912, was $200, compared with $425 at present.

The operation for the 10 months ended Oct. 31, 1912, shows a revenue of over $15,000 above operating expenses, and gives a passenger total (transfers included) of 1,829,599. Cars have operated over 296,500 miles.

The operating staff now consists of 75 people, with a daily payroll of $240.

The programme covering proposed extensions for 1913 is ready for submitting in the form of a bylaw to the citizens. It includes some 18½ miles single track, with cost of passenger cars, gravel and garbage cars, additions to car barns, spur tracks, etc., at an estimated cost of about $800,000. This expenditure comprises in detail the following proposals:—Track construction, $600,000; rolling stock, $175,000; miscellaneous, etc., $25,000. The proposed extensions, if completed and adequately provided with necessary rolling stock, should in 1913 show a clear net revenue of $50,000 after payment is made in full covering operating expenditure and fixed charges.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Sept., $559,486; operating expenses, $345,366; net operating earnings, $214,120; renewal funds, $51,620; net earnings, $162,500; approximate income from investments, $35,000; net income, $197,500; against $453,391 gross earnings; $282,443 operating expenses; $170,948 net operating earnings; $37,935 renewal funds; $133,013 net earnings; $25,000 approximate income from investments; $158,013 net income for Sept., 1911. Aggregate gross earnings for three months ended Sept. 30, $1,651,474; net earnings, $579,342, against $1,299,241 aggregate gross earnings; $441,138 net earnings for same period 1911.

During the ten months ended Oct. 31, the B.C.E. Ry. paid to the Vancouver city council $63,968 on percentage account. The amount for October was $887.46, during which period 4,218,766 passengers were carried.

Montreal Tramways Co.—The city treasurer of Montreal received from the company, Dec. 1, $409,510.14, the city's percentage on the gross earnings of the company within the city limits for the year ended Aug. 31, 1912. The Montreal Terminal Ry., owned by the M.T. Co., sent $1,491.55, percentage on earnings for the same period.

An issue of $890,000 first and refunding mortgage bonds at 5%, recently placed on the market by N. W. Harris and Co., Boston, Mass., in denominations of $500 and $1,000, was announced to have all been taken up, Dec. 16. The statement of earnings, etc., for 12 months ended Sept. 30, 1912, reported in connection with the issue, was:—Gross earnings, $6,047,351.36; operating expenses, including taxes, $4,067,866.61, net earnings, $1,979,484.75; annual interest charge on all underlying bonds outstanding, including the new issue, $765,650; balance, $1,213,834.75. The net earnings show over 2½ times the annual bond interest charge.

Toronto Ry., Toronto and York Radial Ry., and allied companies. Gross earnings for Sept., $767,944; operating expenses, maintenance, etc., $404,171; net earnings, $363,773, against $705,961 gross earnings; $309,706 operating expenses, maintenance, etc.; $396,255 net earnings, for Sept., 1911. Aggregate gross earnings for nine months ended Sept. 30, $6,221,043; net earnings, $3,185,100, against $5,559,647 aggregate gross earnings; $2,886,405 net earnings for same period 1911.

The city has received from the company $45,151.63, as percentage on the November gross receipts of $455,855.83 on the Toronto Ry., being an increase of $6,553.13 in percentage, and $46,731.51 in gross earnings, as compared with Nov., 1911.

Winnipeg Electric Ry.—Gross earnings for September, $309,722; operating expenses, $162,870; net earnings, $146,852, against $321,664 gross earnings; $146,140 operating expenses; $175,524 net earnings for Sept., 1911. Aggregate gross earnings for nine months ended Sept. 30, $2,737,552; net earnings, $1,280,748, against $2,825,637 aggregate gross earnings, $1,433,507 net earnings for same period 1911.

Electric Railway Track Laid in 1912.

Below is a table showing track laid on electric railways in Canada during 1912. The table is not published as a complete one, owing to the fact that some of the companies have not replied to the circular sent, but it is believed to be approximately correct. The feature of the returns for 1912, like that for 1911, is the extension of lines in the western provinces. The * mark indicates that the figures given are estimated.

	Miles.	Miles.
Brandon Municipal Ry.—		
*Extensions		3.00
British Columbia Electric Ry.—		
Various extensions:—		
Vancouver	5.32	
South Vancouver	2.11	
Point Grey	4.20	
New Westminster	9.28	
North Vancouver	0.50	
		21.41
Calgary Municipal Ry.—		
Various extensions		17.50
Edmonton Radial Ry.—		
Three extensions		2.49
Guelph Radial Ry.—		
York road to City Limits		0.60
Halifax Electric Tramway—		
One new extension		0.80
In addition a second track was laid on 3.50 miles of existing lines.		
International Transit Co.—		
Extension in Steelton, Ont.		0.41
Lethbridge Municipal Ry.—		
Lines in city		10.50
Levis County Ry.		
St Romuald to Garneau's Bridge, Que		1.50
Moncton Tramways Electricity and Gas Co.—		
Three lines in Moncton, N B		0.74
Niagara, Welland and Lake Erie Ry.—		
Line in Welland, Ont.		1.00
Nipissing Central Ry.		
Haileybury, Ont., to stop line	1.32	
Liskeard, Ont. to Wabis River	1.61	
		2.93
Oshawa Ry.—		
Line to brick yard, Oshawa, Ont.		1.50
Peterborough Radial Ry.—		
Extensions		0.75
Saskatoon Municipal Ry.—		
*New Lines		10.50
Toronto Eastern Ry.—		
Bowmanville, Ont.		0.36
Toronto Civic Lines—		
St Clair Ave Line	3.20	
Gerrard St. Line	1.85	
Danforth Ave. Line	1.12	
		6.17
Western Canada Power Line—		
Ruskin to Stave Falls, B.C.		6.00
Winnipeg Electric Ry.—

Foundering of Steamboat Ceclilia L.

The following judgment re the foundering of the steamboat Cecilia L., in Lake St. Louis, Que., Nov. 1, was recently delivered by the Dominion Wreck Commissioner, Commander H. St. G. Lindsay, and concurred in by Capts. F. Nash and H. E. Webb, as assessors.

The loss was due to the fact that owing to the sudden shifting of the wind and the vessel being caught broadside on when struck, and owing to her upper works presenting such a large area of resistance and the cargo not being chocked and secured in a proper manner, and that the list taken by the vessel was so great that the cargo shifted suddenly and with such force that the side of the superstructure was carried away, causing the upper works to collapse, and the lower part of the vessel, the hull proper, to become filled with water and sink. The court feels deep sympathy with those who were bereaved, and points out that this vessel, as too often happens with vessels of her class, was built without due regard to stability, and recommends more careful supervision in this respect, and also that all passenger vessels carrying freight should be compelled by law to have their cargoes properly secured before leaving port, to avoid accident if the vessel lists or rolls. The opinion of the court is that no blame can be attached to anyone connected with the vessel, as she was loaded in the usual manner.

Canada Shipping Act Amendments.

The Minister of Marine introduced a bill into the House of Commons, Dec. 6, amending the Canada Shipping Act, regarding the conditions and methods of re-registering wrecked vessels after repair and naming and registering other vessels. The only actual change is to substitute the Minister of Marine for the Governor in Council as the authority in all such cases, with a view to dealing with these routine matters more expeditiously, and to relieve Council of similar matters of departmental administration.

The clause of the act relating to the Board of Steamboat Inspection is also to be amended, so that the Governor in Council may appoint any member of the board as chairman, and not necessarily an inspector, if it is in the public interest to do so.

Stranding of s.s. Bellona.

Following is the judgment rendered by the Dominion Wreck Commissioner, Commander H. St. G. Lindsay, and concurred in by Capt. F. Nash and Commander I. B. Miles, as assessors, re the stranding of the s.s. Bellona in the upper traverse of the St. Lawrence river, Oct. 31, whilst en route from Montreal to Aberdeen, Scotland, with a cargo of general produce.

The stranding was due to the erratic and incomprehensible behavior of the pilot, H. E. Larochelle, and in spite of the statement that he ordered the helm aport on the first occasion because he saw a small vessel which he was afraid of running down, it does not excuse his further action in porting a second time, and his certificate is therefore cancelled. The court also condemns the conduct of the master, J. Cunningham, for disregarding the safe navigation of his vessel in these narrow waters by staying below in his room, though he knew that the first mate had no experience in navigating the St. Lawrence, and his illness was not, according to his own statement, such as to disable him from attending to his duties as master. The court therefore suspends his certificate for three months, and also severely censures the first mate, C. Wischke, for neglect in not taking more interest in the navigation of his vessel by making himself conversant with the chart of the river and knowing the names and nature of the different lights to be passed during his watch. The court also criticizes the custom which appears to be too common in these waters, of the master practically giving over charge of the vessel to the pilot, and taking no further interest in the navigation of it.

New United States Lock at Sault Ste Marie.

Coincident with the construction of large permanent steel ore docks at Lake Superior shipping ports, capable of accommodating the mammoth carriers recently built, provision is being made to facilitate the passage of such vessels through the United States channel at Sault Ste. Marie, where the existing locks are proving inadequate to the service. The principal work now in progress is the building of the new Davis lock, which was begun in March, 1907, and will not be completed until 1916. Next to the Panama canal this is the most important aid to navigation now being carried out by the U.S. government; and it is due entirely to shipments of ore from Lake Superior ports.

The total length of the lock will be 1,715 ft. and its width 80 ft., 1,350 ft. being within the inner gates. Six culverts are provided for; 1,200 ft. of the wall is 50 ft. high and 26 ft. wide at the base. It is to be built up from bed rock in sections, alternate sections being constructed first and the intermediate sections later. They are 25 to 35 ft. in length. The concrete of the lock floors will be 1½ ft. thick. The work also includes lining about 325 linear ft. of tunnel rock, and the building of about 170 linear ft. of tunnel in trench, in addition to the tunnels and passages through the masonry.

The unusual dimensions of the lock are made necessary, both by the ever increasing traffic on the lakes, and by improvements that have been found necessary in the operation of the two present locks. The new length will not only be utilized in handling longer boats, but it will also make possible the entry of two of the longer craft in tandem style, a practice never yet indulged in. At present the two or more boats often passing the locks together are locked through abreast of each other. Vessel owners and masters declare this is a dangerous proceeding. The boats, they say, not only require more time to take their positions in the locks in this way, but also that there is great danger from suction to the boat remaining in the lock when the first one steams away. On more than one occasion lines have snapped and boats have drifted temporarily in a helpless manner in the locks.

The present largest lock, the Poe, is 100 ft. wide. The new one will measure but 80 ft., making it impossible to lock vessels through in any other way than tandem.

Probably the most distinctive feature of the new lock will be its depth. When opened for navigation it will present a loading depth of 24½ ft., or 6½ ft. more than the present depth accorded the boats of the great lakes. While all channels on the lakes are now dredged to a depth of but 21 ft., experts declare it will prove of less expense to dredge the channels deeper than to construct or remodel other locks.

The practical value of the depth presented by the present locks, an average of 18 ft., is displayed in the trouble the larger boats experience in locking through. Unnecessary delay is also experienced by masters by the upheaval of water at the bow of the boat. Such conditions, engineers say, are due to the excess of water caused by the entrance of the boat to the lock being unable to escape fast enough at the sides of the boat. With the additional depth presented by the new lock, this water, it is figured, will be forced under the boat to the escaping channels beneath the flooring. With such facilities at hand vessels will be able to lock through in less than half an hour, while it now takes many of the larger ones over an hour.

The importance of the work being done by the U.S. government on the new locks and canal may be seen from the fact that the present locks already float the greatest commerce of any inland waters of the globe. In 1911 the total tonnage amounted to 62,000,218, which is two and one-half times greater than that passing through the Suez canal, and seven times greater than that of the Kiel canal. What the traffic will amount to with the addition of another lock, the greatest yet constructed, remains to be seen.

It is said the present commerce exceeds that borne by all ships, British and foreign, entering the ports of Great Britain in one year, and valued at an average of $654,010,844 annually. When completed the new lock will not only be by far the largest in the world, but will represent an expenditure of about $9,000,000.

United States Wireless Telegraph Law.

The new wireless telgraphy laws, enacted by the U.S. Congress, affecting probably over 1,000 vessels, went into effect on Dec. 13. Government licenses are now required for all shore stations and for steamer equipments leaving U.S. ports, and operators have to be licensed.

Every steamboat with a carrying capacity of 50 passengers or more, on trips exceeding 200 miles, is required to have two operators for its wireless equipment so that a continuous watch can be maintained for distress signals. Safeguards are required to provide against any delay or interruption of the communication between the operating room and the bridge on each boat, and auxiliary machinery for continuing wireless communication in case of accident to the regular equipment, is also required.

These laws were framed shortly after the Titanic disaster and one of the provisions included is for giving the right of way to distress signals. The wording of this section is as follows:—"All stations are required to give absolute priority to signals and radiograms relating to ships in distress; to cease all sending on hearing a distress signal, and except when engaged in answering or aiding the ship in distress, to refrain from sending until all signals relating to the distress call are completed."

The use for commercial messages, of the naval stations on the South Atlantic and the Pacific coasts, and of the army stations in Alaska, where there are no commercial stations, has been authorized by these new regulations.

The Consolidated Elevator Co. is reported to have purchased from the C.P.R. 400 ft. of water frontage immediately east of the present site of the Consolidated elevator on the Kaministikwia river at West Fort William, Ont., on which it will construct a terminal elevator with a storage capacity of 2,000,000 bush.

Stranding of s.s. Royal George.

Full details of the stranding of the Canadian Northern Steamships' s.s. Royal George on the Island of Orleans, near Quebec, Nov. 6, were given in the last issue of Canadian Railway and Marine World. The investigation into the causes of the accident was held at Quebec, Dec. 3 to 5, before the Dominion Wreck Commissioner, Commander H. St. G. Lindsay, with Commander I. B. Miles and Capt. F. Nash as nautical assessors. Following is the judgment, which was delivered in Montreal, Dec. 11:—

The s.s. Royal George arrived at Father Point early on Nov. 6, and was there boarded by a licensed pilot, S. Rioux, and proceeded on her voyage towards Montreal, via Quebec. Everything appears to have gone well on the run up as far as Gross Isle, some slight fog or mist being encountered on the way. After arrival at quarantine, where she stopped, and after receiving clearance from the authorities, she proceeded at full speed towards Quebec, steering the usual course, leaving her position off the quarantine station at about 4.10 p.m., by the ship's time, which had been set to standard time at Father Point that morning, the weather at the time, according to the evidence, being cloudy and overcast.

At 4.50 p.m., she passed St. Jean light, which appears to have been plainly visible, although some doubt exists as to the actual distance it was off when abeam, and about this time the course was altered, and the vessel headed so as to pass St. Laurent light, which is six miles above the former light, but was not visible at that time, although it can be seen in clear weather at a distance of 11 miles. From the passing of St. Jean until just prior to the stranding, no lights nor landmarks were seen, and the speed, which was about 17 knots, remained unchanged, as the pilot states he was quite satisfied as to his course and position, as he could see the loom of the land on both sides of the channel. Shortly before the stranding a light was seen and reported about half a point on the starboard bow, and was, on account of its peculiarity, viz.: having the appearance of an occulting light, assumed by the pilot to be the Beaumont shoal light, which is situated on the south side of the river nearly opposite St. Laurent light. The pilot states he immediately ordered the helm to port, but directly that order had been carried out he discovered that the land was very close on the starboard side, and he states he at once ordered the helm hard astarboard, and that the vessel ran aground heading about west by south half south, this being, according to the evidence, the course she was steering when the light was sighted. Several attempts were made to release her by using the engines and by towing; but without avail, until the seventeenth day, when she was taken off in a damaged condition, by the salvage company.

The court, after carefully considering the evidence which as to some matters is of a contradictory nature, is of opinion that the actual causes of the stranding were due to overconfidence on the part of the pilot as to his position, and his reckless navigation in regard to speed. It does not consider that he showed the necessary prudence and caution in running to within 1½ miles of St. Laurent light at full speed, without seeing it or any other aid to navigation. For the pilot to suppose that the first light he picked up, which was half a point on the starboard bow, was the occulting buoy on Beaumont shoal, which should under ordinary circumstances have shown well out on the port bow, shows that he had a very indefinite idea as to the vessels' position at the time. The court is also quite satisfied that the weather conditions experienced after leaving St. Jean light, were not of such a nature as to justify the vessel being run at full speed, and therefore suspends his license for three years.

The court is of opinion that the master, J. Harrison, was not justified in being below and off the bridge under the conditions prevailing between leaving quarantine and the stranding, and it is unanimous in the opinion that had he been on the bridge in charge, the accident might have been avoided, and therefore suspends his certificate for 12 months.

The court also severely criticises the lack of initiative shown by the chief officer, T. S. Edwards, in not at once either calling the master when the lights on the St. Laurent pier and the buoy on Beaumont shoal were not sighted, when they should have been, knowing, as he did, that the sighting of these lights was necessary for the safe navigation of the vessel, or for not suggesting to the pilot the advisability of reducing the speed of the vessel until her position could be verified, and therefore suspends his certificate for three months.

The s.s. Royal George sailed from Quebec, Dec. 12, for Halifax, N.S., in charge of Capt. F. J. Thompson, the company's marine superintendent.

Capt. Harrison, prior to sailing for England, announced his intention of appealing to the British Board of Trade against the decision, as he claimed to be in no way responsible for the disaster.

Shipbuilders along the lakes are being asked for prices for lengthening the Inland Lines steamboat Empress of Midland, by 72 ft.

Following on the representations made to the Government by A. Allan, President, and T. Robb, Manager and Secretary, Shipping Federation of Canada, notice of a resolution was given in the House of Commons, Dec. 18, calling for the appointment of a special committee to investigate and report on the whole system of pilotage on the St. Lawrence, including the aids to navigation on the St. Lawrence route and the Great Lakes.

Storage of Grain in Foreign Vessels at the Dual Ports.

It was announced from Ottawa, Nov. 27, that arrangements had been made by which U.S. vessels presenting themselves at Port Arthur and Fort William, after Dec. 5, when the lake insurance expired, would be permitted to load grain, and remain at these ports until the re-opening of navigation, when they could deliver their cargoes at Point Edward, Goderich or Georgian Bay ports. The Government elevator at Port Colborne is not included in the permission.

When the matter was under consideration in Ottawa, A. A. Wright, L. Henderson, H. W. Richardson and Francis King, Counsel, of the Dominion Marine Association, placed the Association's views before the Minister of Customs, who was acting for the Minister of Trade and Commerce.

While not being definitely authorized to pledge the Association to any particular policy in the matter, they claimed to represent fairly the views of Canadian vessel owners. They particularly pointed out that there was no lack of Canadian tonnage to make use of the full loading capacity of the elevators at the dual ports, between that date and the close of navigation, and were prepared to protest vigorously against the introduction of U.S. tonnage at that stage, believing it would be extremely unjust to the Canadians engaged in the trade to crowd the loading ports beyond the limit and run the risk of even greater congestion at the Georgian Bay ports and on Lake Huron.

After some discussion a great part of the opposition was removed, when it was agreed that Canadian vessels will enjoy the benefits of the coasting laws during the season of navigation, and that U.S. tonnage ought only to be let in for storage purposes after the extended season closed. It was then stated that there would probably be no objection to permitting U.S. tonnage to be loaded at the ports named after Dec. 10, with the option of discharging cargoes in the spring at Georgian Bay ports, or at Goderich or Point Edward. It was considered only fair that Port Colborne be reserved for Canadian vessels, and it was pointed out that Canadian vessel owners were accepting the risk of considerable delay at unloading ports on the first trip on the re-opening of navigation, and the Government was called upon to see that there will be no congestion at the lower ports by reason of any lack of cars to keep the elevators clear.

Vessels Removed From the Register.

The following vessels were removed from the register during Nov., 1912, for the reasons assigned:—

STEAM.—Grilse, Lunenburg, N.S., 81 tons, sold to foreigners; Wm. Bonfield, St. Catharines, Ont., 13 tons, burnt; Winnitoba, Winnipeg, Man., 556 tons, burnt.

SAILING.—April, Vancouver, B.C., 96 tons, broken up; Archie Crowell, Shelburne, N.S., 175 tons, transferred to Demerara; C.W. 3, Vancouver, B.C., 86 tons, broken up; H.B., Prescott, Ont., 541 tons, lost; James Buckley, Prescott, Ont., 442 tons, lost; July, Vancouver, B.C., 95 tons, broken up; June, Vancouver, B.C., 79 tons, broken up; May, Vancouver, B.C., 46 tons, broken up; P. J. McLaughlin, Parrsboro, N.S., 147 tons, transferred to Bahamas; Sceptre, Lunenburg, N.S., 100 tons, wrecked; Yuba, Barrington, N.S., 6 tons, broken up.

Painters should not wash their hands in turpentine. Use horsehair with a little coal oil, and then finish with soap and water.

Compulsory Use of Radiotelegraphy on Vessels.

The Minister of Marine introduced a bill into the House of Commons, Dec. 6, under the name of the Radiotelegraph Act, providing that no person shall establish any radiotelegraph station or apparatus in Canada, or on board any vessel registered in Canada, except under license granted by the Minister of the Naval Service; also that after July 1, no passenger steamer, whether registered in Canada or not, carrying 50 or more persons, including passengers and crew, shall leave, or attempt to leave, any Canadian port, unless it is equipped with an efficient radiotelegraph apparatus in good working order, capable of transmitting and receiving messages over a distance of at least 100 miles by night and day, and in charge of a fully qualified person. The penalty for infringement of these provisions, on summary conviction, is a fine not exceeding $1,000 and costs, which shall constitute a lien on any such vessel. An exception to this section is made in the case of passenger vessels plying between ports not more than 200 miles apart.

Other clauses cover provisions for the transmission of messages by land companies, qualifications of operators, declaration of secrecy, penalties for sending false messages, search for stations illegally established, etc.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

298. Nov. 20. Nova Scotia, south coast, Port Felix harbor, Sampson rock, buoy established.

299. Nov. 20. Newfoundland, south coast, Lamalin harbor, range lights established, buoys established.

300. Nov. 20. North Atlantic ocean, Bermuda, northern reefs, North rock, light established, northeast breakers, submarine bell buoy established.

301. Nov. 22. New Brunswick, south coast, Bay of Fundy, approach to St. John, Black point, gas and whistling buoy to be moored northward of its station during May, June and July of each year.

302. Nov. 22. Quebec, River St. Lawrence, Saguenay river entrance, Tadousac, storm signal station established.

303. Nov. 27. Nova Scotia, west coast, St. Mary bay, off Meteghan, bell buoy established.

304. Nov. 27. New Brunswick, Chaleur bay, Petit Rocher, light carried away by storm, temporary light.

305. Nov. 27. Labrador, Belle ile strait, Red bay, Saddle island, change in character of light.

306. Nov. 27. Quebec, Ottawa river, chart of western portion of Lake of Two Mountains issued.

307. Nov. 27. Ontario, Lake Ontario, off mouth of Niagara river, position of gas and bell buoy, correction.

308. Nov. 27. Ontario, Detroit river, Livingstone channel, change in position of gas buoy, lighted buoy discontinued.

309. Nov. 27. British Columbia, Strait of Georgia, Burrard inlet, Atkinson point, new lighthouse, change in character of light.

310. Nov. 27. Alaska, Dixon entrance, Lord rock, light to be established.

311. Nov. 27. Japan, Kitami province, fog siren established at Soya-misaki lighthouse.

312. Dec. 2. Prince Edward Island, list of buoys replaced for winter by spar buoys.

313. Dec. 2. Quebec, Chaleur bay, St. Godfroy, hand fog horn at light station.

314. Dec. 2. Quebec, Chaleur bay, Ste. Adelaide de Pabos, light increased in height.

315. Dec. 2. Quebec, River St. Lawrence, chart, Bic island to White island, issued.

316. Dec. 2. Ontario, Georgian bay, Vic-Churchill issued.

317. Dec. 2. Quebec, Ottawa river, Pointe au Chene, buoys established.

318. Dec. 2. Ontario, Georgian bay, Victoria harbor, Port McNicoll, gas buoy placed.

Atlantic and Pacific Ocean Marine.

The Canadian Northern Steamship Co.'s liner Royal Edward is being overhauled, and is scheduled to sail again from Bristol, Jan. 8.

Four firemen engaged on the s.s. Royal George, were sentenced to four weeks imprisonment, at Quebec, Dec. 7, for refusing to do duty on the vessel.

British press reports state that with the opening of the 1913 season of navigation to Montreal, a new line will start sailings from Bristol, Eng., to Canadian ports.

Capt. Bertham has been appointed to the command of the C.P.R. steamship Empress of Russia, and will be succeeded on the Empress of India by Capt. Harley, heretofore chief officer.

The C.P.R. s.s. Empress of Japan, which recently arrived at Vancouver, from the Orient, carried a cargo of silk valued at ment, requiring 15 cars to transport it across the continent.

The Canada-Australia Line has decided to order another steamship, similar in size and power to the Niagara. It is reported that it is intended to equip the new vessel with internal combustion engines of the polar-Diesel type.

The Norwegian steamships Borgestad and Fritzoe, which were built expressly for the Sydney-Montreal coal trade, have been turned into oil tankers, and will be in future used in the crude oil trade, running between Mexican ports and Baltimore, Md.

Capt. Tait, Vancouver, has been appointed master, and W. H. Partington, formerly of the Princess Charlotte, chief officer of the steamship Kestrel, recently sold by the Dominion Government. The Kestrel left Victoria recently for Fanning island, for trading among the Pacific islands.

The Head Line steamship Bray Head sailed from Montreal for Maryport, Belfast and Dublin, Dec. 3. This was the last vessel to leave Montreal this season, and it is a coincidence that the Bray Head was the last vessel to leave Montreal for the 1911 season, the day and time of sailing being the same in each year.

It is announced that the C.P.R. has increased the pay of its officers on cargo boats, the new rates being, chief officer, £16 a month, rising to £17 after the first year; second officer, £12, rising to £13 after the first year; third officer, £11, rising to £12 after the first year, being an average increase of £2 a month.

Regarding the use of the Panama canal by C.P.R. vessels, G. M. Bosworth, Vice President, C.P.R., is reported to have said, Dec. 16, that there is no necessity for his company to operate through the canal. The company's Atlantic and Pacific steamship lines are working as assistants to the transcontinental railway, and if their routes were changed to a direct service through the canal the railway might be affected.

During the hearing of the case of the United States government against parties to the North Atlantic Conference, Dec. 2, Robert Kerr, former Passenger Traffic Manager, C.P.R., stated in evidence that his company received 5.42% of the passenger traffic from Antwerp to Canada and the U.S. He also stated that the gross income of the company's marine department for last year was $5,234,760, and the net profit was $711,842. An average of 4% was marked off for depreciation of equipment.

G. M. Bosworth, Vice President, C.P.R., on his return from Great Britain recently, is reported to have stated that orders will shortly be placed in Glasgow, Scotland, for two vessels for the Atlantic service, of the same cruiser type as those now nearing completion for the Pacific service. They will be combination passenger and freight vessels, 520 ft. long over all, 12,000 tons, with accommodation for 530 second class and 1,230 third class passengers. They will be built for a speed of 16 knots, and will make their maiden trips in June and July, 1914.

The C.P.R. s.s. Empress of Asia was launched at Govan, Scotland, Nov. 23, being christened by Mrs. Bosworth, wife of the Vice President. The sister vessel, Empress of Russia, which was launched about four months ago, will sail for British Columbia, by way of the Suez canal and the Orient, in the spring, with a special party, who will return to England via Canada and the C.P.R. Atlantic steamship line, thus completing a tour of the world, entirely by the C.P.R. Full description of these vessels was given in Canadian Railway and Marine World of Oct., 1912.

Maritime Provinces and Newfoundland.

Plans are reported to have been prepared for the building of a marine railway at Chatham, N.B.

The coal carrying steamboat Morien was reported overdue at Placentia, Nfld., from Louisburg, N.S., Nov. 22, and although search vessels were sent out, no news has been heard of her.

The building of the new vessels at Newcastle, Eng., for the Reid Newfoundland Co. has been retarded by labor troubles. It is expected, however, that the vessel for the Cabot strait route will be delivered at an early date.

The charter of the Imperial Drydock Co., St. John, N.B., is reported to have been acquired by the Norton-Griffiths Co. Application is being made to the Dominion Government for a subsidy contract for the building of a dock 1,150 ft. long.

The Reid Newfoundland Co's. s.s. Lintrose, under construction at Newcastle, Eng., will be launched about Jan. 6. It is anticipated that she will make her first trip to North Sydney, N.S., by the end of February, or early in March.

During the season of 1912 the Dominion Coal Co. had in its service 32 vessels of a combined capacity of 180,000 tons. Twenty-five of these were engaged in the Sydney-Montreal trade, and in their several voyages carried 1,600,000 tons of coal, about 400,000 tons in excess of that carried in 1911.

The Suburban Steamship Co. is applying for incorporation in New Brunswick, with a capital of $9,980 and office at Browns Flats, Kings county, to own and operate steam and other vessels, and carry on a passenger, freight and mail transportation business. C. C. Taylor, Sheffield, and W. I. Barton and L. T. Nase, St. John, N.B., are the provisional directors.

The Newfoundland Produce Co. has bought the freight and passenger steamship Sagona, and will put her on a route serving the west and south coast of the island, St. Pierre, Miquelon, Sydney and Halifax, N.S. The Sagona was built in Dundee, Scotland, 1912, and has been engaged in the mail service on the Labrador coast. She flies the French flag, and has accommodation for 60 passengers. Capt. de Lisle is master, with Capt. Marshall as navigating officer.

The Canada Atlantic and Plant Steamship Company's annual meeting was held at Halifax, N.S., recently. The following are the officers, directors, etc., for the current year:—President, A. W. Perry, Boston, Mass.; Vice President, McC. Grant, Halifax, N.S.; Treasurer, H. G. Perry, Boston. Other directors, H. McInnes; W. Mitchell, Halifax; Secretary and Eastern Manager, H. L. Chipman, Halifax; Auditor, W. D. Farnham. The new steamship Evangeline was formally accepted by the shareholders.

Province of Quebec Marine.

The Dominion Government is arranging for the operation of a semi-monthly steamship service between Quebec and St. Johns, Nfld.

It is said that the Richelieu and Ontario Navigation Co. is arranging for the purchase of some additional steamships, as well as for the building of several others.

The Montreal floating drydock, Duke of Connaught, was given a test Dec. 4, when the tug, Sir Hugh Allan, was docked. The test was reported to be highly successful.

The Allan wharf at Quebec is to be enlarged during the winter in preparation for the coming of the new steamships which are to be put on the trans-Atlantic run in the spring.

The Dominion Government steamboat Bellechasse made 12½ knots an hour on her trial trip near Kingston, Ont., Nov. 29. She left Kingston Nov. 30 to be fitted out for survey and inspection work on the St. Lawrence below Quebec.

During the season of navigation ended Dec. 3, 1912, the number of seagoing vessels entering the port of Montreal was 736, having a gross capacity of 2,403,934 tons, against 762 vessels of 2,378,252 tons in the season of 1911.

The Montreal Harbor Commissioners took formal leave of the staff, Dec. 9, presenting each of the department heads with a loving cup. The staff presented a walking stick to the retiring Chairman, G. W. Stephens, who subsequently sailed for Europe.

The steamboat Chateauguay, heretofore plying between Montreal and Beauharnois, Que., sank at her wharf at the latter place recently. She had not been in service for nearly two years, and was recently sold at auction to P. Parent, Verdun, Que., for $6,000.

The revenue for the season of navigation just closed, for the Montreal harbor, was $461,396.43, against $430,623.24 for 1911. The increases were, wharfage, inward, $6,000; warfage, outward, $5,500; from local traffic, $19,273.19. There was a decrease in the number of seagoing vessels arriving, there being 736, against 762 in 1911; the tonnage, however, being 2,403,924, against 2,338,252 for 1911.

Preliminary work will be gone on with during the winter upon the harbor improvements at Quebec. Tenants of warehouse properties along the riverfront, from the west end of the Custom House to St. James street, are moving, and these warehouses will be demolished at once. This will allow of the building of the new freight sheds, and the laying of tracks over the wharves to the foot of St. James street to connect with the Levis car ferry service.

Ontario and the Great Lakes.

The Department of Public Works received tenders, to Dec. 30, 1912, for the construction of a wharf or retaining wall, at Hamilton.

The new dock built by the Dominion Government at Amherstburg, Ont., is reported completed. It is 300 ft. by 75 ft., and is built of cement, reinforced by steel bars.

A cargo of sulphur on board the steamship C. A. Jaques began to burn, owing to atmospheric conditions, while the vessel was being unloaded at Port Arthur, Nov. 28. About $8,000 of damage was done to the cargo before the fire was got under.

The following steamboats, etc., have recently been sold on the Trent valley canal at Peterborough, Ont.:—Steamboat Monarch, to G. C. Wainwright; steamboat Water Lily, to G. W. Hatton; barges, Sultan and Davis, to D. Conroy.

Arrangements were made at Port Arthur and Fort William, Ont., recently under which a large number of vessels will lay up there for the winter. These vessels are being loaded with grain, so as to leave as much space as possible in the elevators, and will be ready to leave for eastern ports as soon as there is open water in the spring.

At the inquiry into the recent loss of the steamboat Mayflower on the Madawaska river, when nine persons were drowned, it transpired that the Inspector of Hulls and Equipment had given permission for her use as a tug, and to carry freight, and had prohibited the carrying of passengers until a licensed captain was secured.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for November, as follows:—Superior, 602.38; Michigan and Huron, 580.43; Erie, 571.90; Ontario, 246.08. As compared with the average November levels of the past ten years, Superior was 0.22 ft. below; Michigan and Huron, 0.08 ft. above; Erie, 0.07 ft. above, and Ontario, 0.51 ft. above. It was anticipated that there would be an average fall of 0.2 ft. during December, except in Erie, where the anticipated fall was 0.1 ft.

Manitoba, Saskatchewan and Alberta.

Lieut.-Colonel Potter, chief of the United States Government engineers for the Northwest, began an investigation at Grand Forks, N.D., Dec. 5, as to the possibility of improving the navigation of the Red river to such an extent that it may be possible to establish a trade route to Hudson bay.

The Minister of Public Works has announced that there will be included in the estimates to be submitted to the Dominion Parliament an amount for the proposed canals to connect Lakes Winnipeg and Manitoba, and also the last named lake with the Saskatchewan river, also for canals to connect Lake Manitoba with Lake Winnipeg via the Waterhen river, Lake St. Martin and the Dauphin river, with continuous navigation on these rivers.

There is under construction at the Polson Iron Works, Toronto, a steamboat for missionary work in the Arctic ocean. The vessel is 40 ft. long, with a breadth 9¼ ft. broad and 3½ ft. deep. She draws 18 ins. of water, and will be propelled by a 26 in. screw, which will operate in a tunnel in the stern, extending 10 ins. above the water level. The action of the screw will draw the tunnel full of water, so that the full power will be obtained, as if a screw was fully submerged. Power will be supplied by a Clyde boiler, 42 by 52 ins. This is the first vessel of this type built in Canada.

She will be shipped in 20 sections to Athabaska Landing, Alta., then transhipped overland to the Mackenzie river, where she will be put together.

British Columbia and Pacific Coast Marine.

The steamship Lonsdale, which has been running in the Vancouver-Mexico trade, has been sold to the Japanese. She left Vancouver for Japan early in December.

The Venture, owned by the Union Steamship Co., has been put on the ways at North Vancouver, B.C., for an overhaul, and the enlargements of her oil tanks.

The British Columbia Fisheries Co.'s steam trawlers, Canada and Triumph, arrived at Prince Rupert, B.C., Nov. 23, from Grimsby, Eng., a trip of 16,000 miles.

North Vancouver taxpayers will vote on a bylaw to repurchase the old ferry debentures amounting to $128,000 at an advance of 5%, and for the building of a new ferry steamer.

The British Columbia Government is considering tenders for the operation of a ferry service on the Fraser river between New Westminster, Port Mann, Annacis island and Coquitlam.

Tenders are under consideration for the first section of the proposed extensive harbor works at New Westminster, B.C. It is expected that about $500,000 will be expended under the contract.

The Union Steamship Co. announces the sale of the salved steamship Vadso, now lying at North Vancouver, B.C. The survey showed that 80 plates would have to be removed, but that other damage had been done by the stranding.

The G.T. Pacific Ry. tug recently completed a towing trip of 2000 miles. She took on tow three vessels carrying lumber from Vancouver, dropping one at Prince Rupert, and taking the others on to Granby bay, whence she took two of them back to Vancouver.

The West Vancouver Ferry Co. is inviting tenders for the building of two twin screw steamboats, each having the following dimensions: -Length, 95 ft.; breadth, 18 ft.; depth, 9 ft.; to be fitted with triple expansion, surface condensing engines, and water tube boilers. T. F. Merrick is Secretary.

The Victoria and Westminster Trading Co.'s steamboat Burlin broke down on a recent trip from Victoria to New Westminster, B.C., and after drifting about for three days, with all the blades of her propeller gone, and her machinery disabled, ran ashore on the Sandheads, Nov. 28. She was subsequently towed to New Westminster for repairs.

Telegraph, Telephone and Cable Matters.

The Canadian Northern Telegraph Co. has opened an office at Mafeking, Man., and has closed its office at Birch River, Man.

The United States Government has completed the installation of a chain of wireless telegraph stations along the Alaskan coast.

The Board of Railway Commissioners [illegible] to [illegible] the C.P.R. may file the tariff of telegraph tolls to apply west of Sudbury, Ont.

The Dominion Government has opened a 60 mile branch telegraph line from Fort Fraser to Stuart lake, B.C. The rate from Fort George to Stuart lake is 75 cents for 10 words and five cents for each additional word.

The C.P.R. Telegraph department has opened a branch office in the new C.P.R. building at Main street subway, Winnipeg, to serve the northern section of the city. It is also opening a down town office in the Stringer Building, Calgary, Alta.

The Dominion Parliament is being asked by the Minister of Marine to pass an act providing for the compulsory installation and inspection of radio-telegraph apparatus on certain vessels. Full particulars are given in the Marine Department on another page.

The Hudson's Bay Co. is reported to have made arrangements by which the trading post at Fort George, B.C., and the posts subordinate to it, will, in future be supplied over the G.T. Pacific Ry. Heretofore Fort George has been supplied by freight hauled over the old Caribou Road for 187 miles, and thence by a steamboat route of 150 miles.

The various C.P.R. offices in the eastern wing of the Vancouver station have been moved, preparatory to demolishing the building in preparation for the erection of the new station. The executive department has been moved to the Vancouver block, the Trans-Pacific Steamship offices to the Hastings street offices, and the other departments have been distributed between these two buildings and the Dominion Express Co.'s building. The train operating department has been moved into such of the vacated offices as are not in the section of the station to be demolished.

Sault Ste. Marie Canals Traffic.

The Canadian canal was opened April 24, and closed Dec. 19, 1912; season, 240 days.

The U.S. canal was opened April 24, and closed Dec. 16, 1912; season, 237 days.

TENDERS

TENDERS, addressed to the undersigned at Ottawa, and endorsed on the envelope "Tender for Halifax Lightship," will be received up to noon of the Thirty-First Day of January, 1913, for the construction of a first-class single screw steel steam lightship of the following leading dimensions, namely:—

Length between perpendiculars ....114 feet
Breadth moulded .... [illegible] feet
Depth moulded .... [illegible] ft. 8 inches
to be delivered at the Agency of the Department of Marine and Fisheries at Halifax, N.S.

Plans, tender forms and specifications of this Lightship can be seen at the office of the Purchasing Agent of the Marine and Fisheries Department, Ottawa, at the offices of the Collectors of Customs, Toronto, Collingwood and Port Arthur, Ont., and at the Agencies of the Department of Marine and Fisheries at Montreal, Quebec, St. John, N.B., and Halifax, N.S.

Plans, tender forms and specifications can be procured on application from the Purchasing and Contract Agent at Ottawa. All tenders must be made on the form prepared by the Department. The tender form is embodied in the specification.

Each tender must be accompanied by an accepted cheque on a chartered Canadian Bank in favor of the Deputy Minister of Marine and Fisheries, equal to ten per cent. (10 p.c.) of the whole amount of the tender, which cheque will be forfeited if the successful tenderer declines to enter into a contract with the Department or fails to complete the Lightship, in accordance with the contract prepared by the Department.

Cheques accompanying unsuccessful tenders will be returned.

The Department does not bind itself to accept the lowest or any tender.

Newspapers copying this advertisement without authority from this Department will not be paid.

ALEX. JOHNSTON,
Deputy Minister of Marine and Fisheries.

Stranding of s.s. Gladstone.

The following judgment re the stranding of the Norwegian s.s. Gladstone, under charter to the Nova Scotia Steel and Coal Co., on the Island of Orleans near Quebec, Nov. 6, was delivered by the Dominion Wreck Commissioner, Commander H. St. G. Lindsay, and concurred in by Capt. F. Nash and Commander I. B. Miles, as nautical assessors.

The stranding was caused by the gross [illegible] of the pilot [illegible] as [illegible] showed a total disregard for the safety of the vessel, knowing, as he ought to have done, the close proximity of the shore to the northward. His statement that he would do the same thing again under similar circumstances, shows that he is thoroughly unfitted for the position of pilot and a menace to the navigation of the St. Lawrence. It is the unanimous opinion of the court that the vessel also touched ground when off Goose island reef, and his license is therefore cancelled. The court desires to call attention to the gross negligence of the master in leaving his vessel altogether in the hands of the pilot and to the very poor system of navigation carried on board, with regard to compass corrections and lookout. It is, unfortunately, unable to deal with the master's certificate, but recommends that a copy of the evidence and this finding be submitted to the Norwegian government.

Size of Boats for Erie Canal.

A commission of New York state officials and others is holding public hearings for the purpose of obtaining expressions of opinions regarding the size of boats to be used in transportation on the Erie canal, [illegible] The original size of boats proposed for the canal [illegible] carrying capacity of 1,000 tons; hence the name 1,000 ton barge canal.

[illegible] normal canal prism is 75 ft. bottom width, 123 ft. water width and 12 ft. depth, which [illegible] channel width is 200 ft., more or less. On [illegible]

Book Reviews.

MACHINE DESIGN, HOISTS, DERRICKS and Cranes. By H. D. Hess, M.E., Professor of Machine Design, Cornell University. 368 pages, 6½ by 9¼ ins., 336 illustrations. Published by J. B. Lippincott Co., Philadelphia, Pa. Price, $5 net.

Many and varied are the works to be found on machine design, but a new and practically untouched field has been treated upon in this latest book on the subject, to, the matter of crane design in the past has been left, for the most part, to the development of the individual designer. This will be realized by all of that vast body of construction engineers who have required from time to time to design or replace a crane for special work. While dealing principally on crane design, the book has been written with the object of making the information contained of value to all machine designers, for after all the fundamentals of design are the same for all work. The attractive feature of the work is the manner in which practical problems are considered, and the design completely evolved from the fundamental principles, enabling the student to apply the information with which he is equipped, the author realizing that the principal difficulty with the study of machine design lies in the inability of the student to properly apply the information gained in his study of the subject. The book commences at the bottom in a logical manner, dealing first thoroughly with the common materials of construction, noting, in a practical manner, the considerations underlying the selection of the material to be used. From that basis the subject is developed. The book is divided into 12 parts as follows:—Introduction, Frames and Girders, Brakes and Clutches, Winches and Hoists, Pillar Cranes, Jib Cranes, Under Braced Jib Crane, Inverted Post Crane, Wall Crane, Overhead Electric Travelling Cranes, Hoisting Engines and Locomotive Cranes. The subject of cranes is thus approached from all angles, and should prove of particular value to all structural designers, as well as designers of machines.

THEORY OF MECHANICS. R. W. Angus, Professor of Mechanical Engineering, University of Toronto. 6¼ x 9¼ ins.; 238 pages; 147 illustrations. Published by Engineering Society, University of Toronto. Price, $3.

This book is written primarily for the student, the theory underlying machine design alone being touched upon, and in a very thorough manner, the design being considered a separate matter as far as the basic principles of mechanics are concerned. In a general way, the book follows the course of lectures given in the University of Toronto's mechanical engineering department, and as such, represents years of preparation and simplification of explanations, making the work of particular value to all who are desirous of delving into the subject unaided by teachers, the matter laid down in the book being particularly lucid. There are 25 chapters as follows:—The Nature of the Machine, Motion in Machines, Velocity Diagrams, The Motion Diagram, Toothed Gearing, Bevel and Spiral Gearing, Trains of Gearing, Cams, Forces Acting in Machines, Crank Effort and Turning Moment Diagrams, The Efficiency of Machines, Governors, Speed Fluctuations in Machinery, the Proper Weight of Fly Wheels, and Accelerations in Machinery. Most of the treatment followed in the book is that conventionally adopted in most treatises, with the exception of the matter on motion in mechanisms, which is treated by a method called the "phorograph," an improvement on the virtual centre method, invented by Prof. Rosebrugh of the same university. The principal criticism on the book lies in the illustrations, which are crudely gotten up. Printed on heavily coated paper the book would otherwise be a work of art, and it seems unfortunate that it should be marred in such a manner. Fortunately, the value of the work as a text book is in no way decreased thereby.

Among the Express Companies.

The Canadian Northern Ex. Co. has opened offices at Decker, Grays, and Grosse Isle, Man.; and at Macrorie and St. Gregor, Sask.

The Board of Railway Commissioners has approved the British American Ex. Co's. standard mileage tariff of maximum tolls for freight classified as merchandise, C.R. C.1., to become effective, Jan. 1.

The Board of Railway Commissioners has rescinded its order 16896, June 24, 1912, which defined the express delivery and collection limits for Montreal, and has established new delivery and collection limits covering Montreal, Westmount and Maisonneuve.

D. I. Roberts, heretofore General Manager and General Freight and Passenger Agent, Quebec, Montreal and Southern Ry., and Napierville Jct. Ry., and General Canadian Passenger Agent, Delaware and Hudson Co., Montreal, is reported to have been appointed President, United States Ex. Co.

The Canadian Northern Ex. Co. has closed its office at Bala Park, Ont., for the season. Shipments for Muskoka lakes points which bill on Port Carling during the winter are being handled via Bala Road and stage since Dec. 1. An office has been opened at Mafeking, Man., and the office at Birch River, Man., has been closed.

The Board of Railway Commissioners has passed orders establishing collecting and delivery limits as follows:—For Canadian Express Co., in Sackville and Sussex, N.B.; for Dominion Express Co., in Windsor and Yarmouth, N.S.; Sackville, Sussex and Woodstock, N.B.; McLeod, Alta.; for Halifax and South Western Ry's. express department, in Yarmouth, N.S.

The Minister of Railways has announced that arrangements have been made whereby the Dominion Ex. Co. will place its service on the Intercolonial Ry. and the Prince Edward Island Ry., and all Government railway branches, from Jan. 1, in addition to the service given by the Canadian Ex. Co., which has hitherto operated exclusively, over the Government lines.

W. W. Kemp, agent, Canadian Ex. Co., Portland, Me., has retired from the service after 50 years' continuous service with the company, under the provisions of the pension rules. The whole of his service has been at Portland, and he was appointed agent there, Mar. 26, 1903. John Pullen, President, wrote him recently conveying the company's thanks for faithful and efficient work.

The Dominion Ex. Co. has moved its shipping department in Winnipeg from the old quarters at the C.P.R. station to the new express building on the west side of Main street. The public entrance is at 714 Main street, and the team entrance at the head of King street, near the C.P.R. tracks. The company's business office will continue to be maintained at 212 Bannatyne avenue.

In the Divisional Court at Toronto, Nov. 15, judgment was given in the case of Wilkinson vs. Canadian Express Co., on an appeal by plaintiff from the judgment of Winchester, S. J. of the County of York of Sept. 12, 1912, in an action to recover $500 for the value of a [illegible] alleged to have been lost by defendants in transit and for damages. At the trial judgment was awarded plaintiff for $280 with costs up to payment into court and no set-off allowed to defendant. The Divisional Court gave the following judgment on the appeal:—The plaintiff is not within the special contract at all. The company is liable in our view for the full value of the goods. There is nothing to prevent the express company agreeing to pay twice the value of the goods carried, the order of the Railway Board notwithstanding. In this case what the company did was to take the plaintiff's goods as a common carrier and lost them without limiting its liability to him. The evidence justifies a verdict for $280, and we think plaintiff should have judgment for that sum, with costs here and below.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

THE CANADIAN WESTINGHOUSE CO. has declared a bonus of 2% in addition to the regular quarterly dividend of 1¾%, making a total distribution of 9% for 1912.

FRANKLIN RAILWAY SUPPLY CO., New York City, announces that Alan Lichtenhein, son of the late A. Lichtenhein, has entered its service and will look after its Canadian interests, as his father did up to the time of his recent fatal illness.

THE AMERICAN VANADIUM CO. Announces that on 30 Pacific type locomotives being built for the C.P.R. by the Montreal Locomotive Works the following parts will be made of Vanadium steel: main driving axles, piston rods, main crank pins and main frames. These locomotives will have a total weight of 220,000 lbs.

THE STANDARD UNDERGROUND Cable Co. of Canada, Ltd., Hamilton, Ont., has issued a booklet, "Sterling Rubber Insulated Wire and Cable," which will be sent on application to anyone interested. It explains the company's position as manufacturer of standard products, the company having been established so that the increasing Canadian business of the Standard Underground Cable Company, Pittsburgh, Pa., might be handled with economy and dispatch. Full particulars are given of the sterling rubber insulated wire made by the Canadian company in Hamilton, which is guaranteed as being identical in quality with that made by the U.S. company.

THE JOLIETTE STEEL CORPORATION, Ltd., has been formed with an authorized capital of $2,000,000, to take over the Joliette Steel & Iron Foundry, Ltd., at process converter steel castings, etc. The process converter steel castings, &c. The building of the new plant, which will have a capacity of four times the present one, will be started in February or March. The C.P.R. has put in a half mile spur to the site and there is also a good connection with the Canadian Northern Ry. Shawinigan electric power will be used. S. Vissot, manager of the Joliette Steel and Iron Foundry Co., will be manager of the new company.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries.

Canadian Car Service Bureau, J. E. Duval, 401 St. Nicolas Building, Montreal.

Canadian Freight Association (Eastern Lines), G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western Lines), W. E. Campbell, [illegible] Canada Building, Winnipeg.

Canadian Railway Club, J. Powell, St. Lambert, Que. Meetings at Montreal, 2nd Tuesday each month, 8.30 p.m., except June, July and August.

Canadian Society of Civil Engineers, C. H. McLeod, 413 Dorchester St. West, Montreal.

Canadian Street Railway Association, Acton Burrows, 70 Bond Street, Toronto.

Canadian Ticket Agents' Association, E. de la Hooke, London, Ont.

Central Railway and Engineering Club of Canada, C. L. Worth, 409 Union Station, Toronto. Meetings at Toronto 3rd Tuesday each month, except June, July and August.

Dominion Marine Association, Counsel, F. King, Kingston, Ont.

Eastern Canadian Passenger Association, G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal, R. W. H. Smith, Beaver Hall Square, Montreal.

Engineers' Club of Toronto, R. B. Wolsey, 94 King St. West, Toronto.

Great Lakes and St. Lawrence River Rate Committee, Jas. Morrison, Montreal.

International Water Lines Passenger Association, M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee, Jas. Morrison, Montreal.

Nova Scotia Society of Engineers, A. R. McCleave, Halifax, N.S.

Quebec Transportation Club, J. S. Blanchet, Quebec.

Ship Masters' Association of Canada, H. O. Jackson, 37[illegible] Huron street, Toronto.

Shipping Federation of Canada, T. Robb, 526 Board of Trade, Montreal.

Western Canada Railway Club, W. H. Rosevear, 25½ Princess St., Winnipeg. Meetings at Winnipeg 2nd Monday each month, except June, July and August.

Ottawa Northern and Western Railway

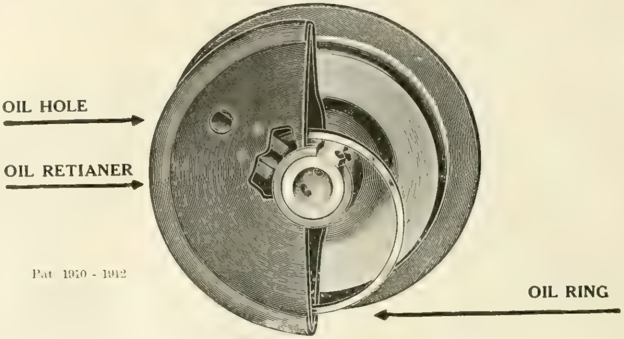
NOTICE. The Ottawa Northern and Western Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the extension of its main line from Maniwaki to a point at or near James Bay and the extension to Lake Temiscamingue, authorizing an increase of its bonding power, and for other purposes.

Dated at Montreal, this 23rd October, 1912.

H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

THE MOST IMPROVED TROLLEY WHEEL OF THE AGE



By actual tests this wheel has proved to outwear several ordinary trolley wheels, as the sides retain oil, making it an automatic oiler, sides to be filled with oil only once in 24 hours. It has also been tested on sharp curves with kinky overhead wire and found not to leave the wire, even under the severest test.

For Sale by

HAMILTON TROLLEY WHEEL CO., LIMITED
HAMILTON, ONT.

The Commissioners of the Transcontinental Railway.

NOTICE TO CONTRACTORS

Tenders for Machines, Tools, Appliances, Motors, Furnaces, Cranes, Etc.

SEALED TENDERS, addressed to the undersigned and marked on the envelope "Tender for Machines, Tools, Appliances, Motors, Furnaces, Cranes, Etc.," will be received at the office of the Commissioners of the National Transcontinental Railway, at Ottawa, until twelve o'clock noon of the Thirteenth day of February, 1913, for the furnishing and delivery of the Machines, Tools, appliances, Motors, Furnaces, Cranes, Etc., required for the equipment of the Car Department Shops, Transcona, Plant, of the Commissioners of the National Transcontinental Railway, at Transcona, Manitoba.

Tenders will be considered for any portion, or all of the equipment.

Specifications and forms of tender may be obtained at the office of Mr. W. J. Press, Mechanical Engineer, Ottawa, Ontario.

Persons tendering are notified that tenders will not be considered unless made on the printed forms supplied by the Commissioners.

Each tender must be signed and sealed by all the parties to the tender, and witnessed and be accompanied by an accepted cheque on a Chartered Bank of the Dominion of Canada, payable to the Commissioners of the Transcontinental Railway, for a sum equal to ten per cent. (10 p.c.) of the amount of the tender.

Any person whose tender is accepted shall within ten days after the acceptance thereof sign the contract, specifications and other documents required to be signed, and in any case of refusal or failure on the part of the party whose tender is accepted to complete and execute the contract with the Commissioners, the said cheque shall be forfeited to the Commissioners as liquidated damages for such refusal or failure, and all contract right acquired by the acceptance of the tender shall be forfeited.

The cheques deposited by parties whose tenders are accepted will be deposited to the credit of the Receiver General of Canada as security for the due and faithful performance of the contract according to its terms.

The cheques deposited by parties whose tenders are rejected will be returned within ten days after the signing of the contract.

The right is reserved to reject any or all tenders.

By order,
P. E. RYAN,
Secretary.

The Commissioners of the
Transcontinental Railway,
Dated at Ottawa, December 11th, 1912.

CANADIAN PACIFIC RAILWAY COMPANY.

Issue of New Ordinary Capital Stock.

For the purpose of taking a record of the Shareholders entitled to receive the rights to subscribe to Sixty Million Dollars additional Ordinary Capital Stock of the Company, the Common Stock Transfer Books will be closed in Montreal, New York and London at three p.m. on January 2nd, and will be reopened at ten a.m. on January 15th, 1913.

By order of the Board,
W. R. BAKER,
Secretary.

Montreal, December 20th, 1912.

CANADIAN NORTHERN ONTARIO RAILWAY COMPANY.

NOTICE is hereby given that the Canadian Northern Ontario Railway Company will apply to the Parliament of Canada, at its present session, for an Act defining and increasing the bonding powers of the Company.

Toronto, 19th December, 1912.

GERARD RUEL,
Chief Solicitor.

Canadian Railway and Marine World.

February, 1913.

Algoma Central and Hudson Bay Railway Terminals at Sault Ste. Marie.

By R. S. McCormick, M. Am. Soc. C. E., Chief Engineer

The Algoma Central and Hudson Bay Ry. Co. is constructing terminal facilities at Sault Ste. Marie, Ont., in connection with the work of completing the railway through to the National Transcontinental Ry. at Hearst, which are intended to provide accommodation for the expected business of that road. These terminals consist of locomotive house, machine shop, combined general stores and mechanical department office building, new station and yard office, all located in a new terminal yard at Tagona (town of Steelton, a suburb of Sault Ste. Marie), a new terminal station and office building at the foot of Bruce St., in Sault Ste. Marie, and a freight house at the foot of Dennis St. close by.

In addition to the building construction, the main line is being extended to Bruce St., and a siding extension to the New Ontario Dock, to provide for temporary dock facilities. A new freight and terminal yard is also being built at the site of the locomotive house and machine shop, together with an overhead combined electric railway and highway bridge crossing over this yard.

The new yard layout will provide yard tracks, entrance to locomotive house and a new transfer yard at that point. About six miles of new tracks are being laid, to provide for which it is necessary to excavate about 70,000 cu. yds. of mixed clay and boulder material. This excavated material is used to fill up areas below grade in the new yard, build approaches to the overhead bridge and to grade the main line extension to Bruce St. and on to the dock referred to.

The overhead structure consists of earth embankments leading up to steel trusses on concrete spanning the opening. This steel structure is designed under the Dominion Government specification for electric railway and highway loadings and is 26 ft. wide c. to c. of main trusses, carrying a single line of electric railway across on the south side. A roadway 15½ ft. wide in the clear is provided for alongside the car track. Outside the north truss there is provided a sidewalk 7 ft. wide on extension cross girders. The whole structure is 35 ft. wide and 190 ft. long, consisting of one 108.7 ft. and one 81.3 ft. spans. At present a temporary structure carries the electric railway over, pending the installation of the steel structure. On the west side of this crossing a pile trestle was driven to carry the electric railway temporarily, and this is now being filled and embankment widened to accommodate the highway and sidewalk. The concrete work for this structure was built in 1902, but the bridge was never completed. Due to the peculiar spacing and argle at which the abutments and the pier were located, the designing of the steel was much complicated. The Canadian Bridge Co. has the contract for erecting the steel structure complete, upon competitive plans submitted.

The locomotive house, machine shop, store building, coaling station, ash pit, sand house, etc., are all being constructed under contract with the Arnold Co. of Chicago, P. L. Battey being Chief Engineer of its industrial and railway shops department. This firm was called upon by the writer to submit preliminary plans for the entire layout in the spring of 1911. The plans submitted were then carefully gone into in conjunction with the Master Mechanic and Superintendent, and after long deliberation a plan was evolved, based upon the general plan submitted, which filled the requirements. The Arnold Co. was then awarded the contract to provide detail plans and construct the locomotive house, machine shop, store building, and the outlying structures and accessories, cinder pit, coal dock, tank, racks, etc. The Arnold Co. also installs the machinery and all other shop and locomotive house equipment. The railway company's forces are doing all track work, including the filling behind the abutments of the overhead crossing. The station and yard office building at this site is let by contract to the McPhail & Wright Construction Co., Sault Ste. Marie. This station building is a two-story brick veneered building, with basement of concrete. It is 26 by 40 ft. in size, with small waiting room, baggage room and office on ground floor, trainmen's locker room in basement, and Car Accountant, Trainmaster and road department offices on the 2nd floor.

LOCOMOTIVE AND CAR REPAIR SHOPS.

The shop layout consists of a locomotive house, machine shop and store house, with provisions made for adding a freight car repair shop, a woodworking shop and a passenger car repair shop in the future.

The yard layout provides through tracks for passenger and freight service, storage and switching tracks, and tracks serving all present and proposed buildings, with two tracks into locomotive house from the west and two into the machine shop from the east. On the two tracks to the locomotive house are located the cinder pit (having a single depressed track, with provision for another pit in the future), coaling station, and water tank of 50,000 gallons capacity. A line through the locomotive house and machine shop is in a northeast and southwest direction, but hereinafter will be called east and west to simplify explanations.

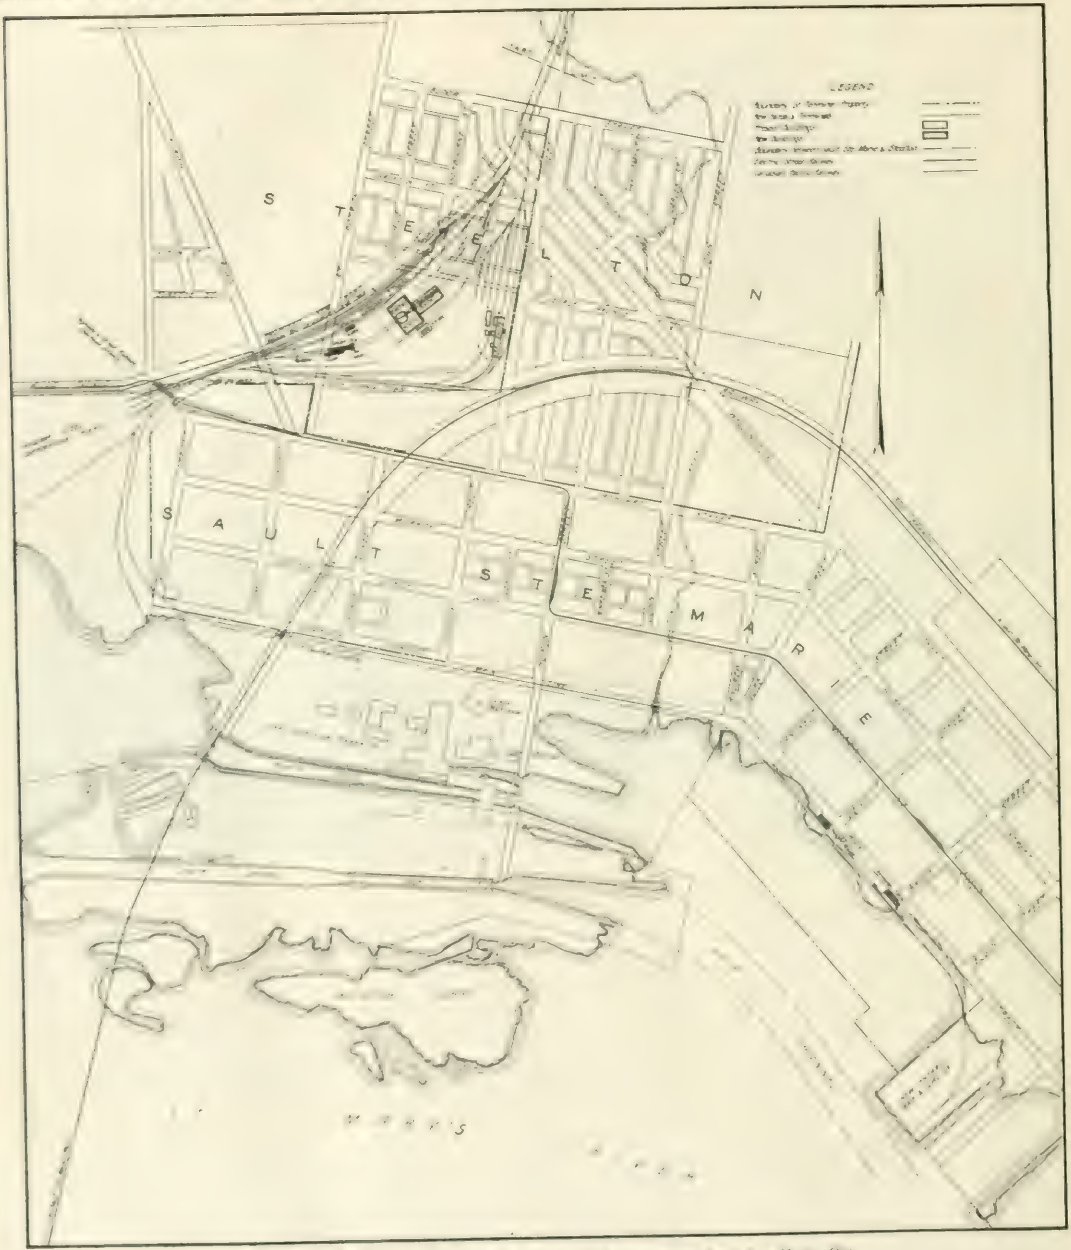
LOCOMOTIVE HOUSE: The present locomotive house covers an area of 178 by 266 ft. and is designed for a future extension of 88 by 266 ft. on the west side. The building is a departure from the ordinary locomotive house in that it completely shelters and encloses an 80 ft. deck turntable. There are at present 14 locomotive pit tracks radiating from the turntable within the building, and, with the future extension, the building will enclose 24 locomotive pit tracks in addition to the turntable. The operating advantages thus afforded by the enclosed turntable, eliminating many causes for delays due to weather conditions, and saving in the expense of handling locomotives in bad weather, will be readily appreciated by those familiar with the climate and deep snows prevalent in this or similar locations. There are two

Algoma Central and Hudson Bay Railway Mechanical Buildings and Yard.

[illegible] from the west, both leading direct to the turntable. There are also two radiating tracks [illegible]

[illegible] 5½ ft. above grade, or 5 ft. above the floor line. This wall has [illegible] capped off at the top for the full length.

also, by its color, contrasts with the brick above. Above this base the brick work is laid up in stretcher bond with struck joints of cement mortar and forming pilasters 3 ft. wide and 17 ins. thick. These pilasters



New Terminal Arrangement of A. C. & H. B. Ry. at Steelton and Sault Ste. Marie, Ont.

[illegible] drop pits.

[illegible] wall for the outside walls of brick is car-

[illegible] which [illegible]

are 22 ft. centres, alternate ones supporting [illegible] one third of the area is composed of pivoted sections which can be opened variable amounts for ventilation. A maximum amount of outside light is obtained through these windows, which are glazed with factory ribbed glass. Above the windows is a four course brick corbel, which brings the face of pilasters and panels above windows flush, and gives the effect of weight at the top of the building, though this wall is but 13 ins. thick. The brick work above window and door openings is supported on steel lintels of the I beam and bottom plate type. The window lintels have an angle on the bottom of the plate for its entire length, to which the top of the steel sash is fastened with hook bolts, providing a neat, secure and weathertight anchoring.

Rear View of A.C. & H.B. Ry., Tagona Shops.

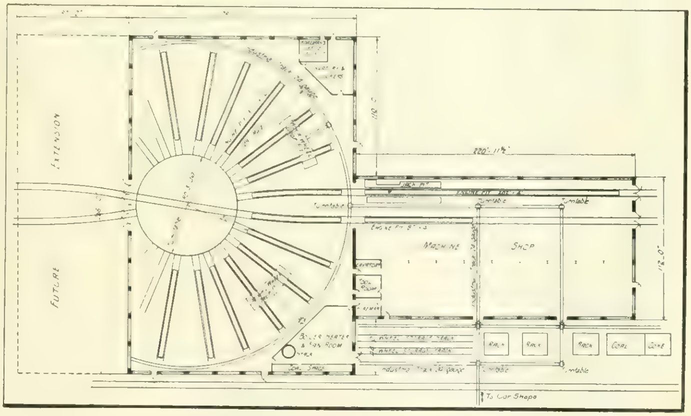
All outside doors in this building are of wood, the pass doors being 3½ by 7 ft., and the large track doors are 13 ft. wide and 17 ft. high. The track doors consist of two parts, each 6½ ft. wide with a 3¼ by 7 ft. pass door and a sash at the top with fifteen 10 by 16 in. lights. These doors are 3¼ ins. thick and are of a 3 ply construction, fitted with wrought iron stiffeners, heavy hinges and a locking device of special design.

Steel columns of latticed channel box type are used and are spaced 44 ft. centres each way, except at the turntable, which is in the centre of a clear space 88 ft. square. With the exception of the above mentioned space the roof is supported on 44 ft. steel trusses, 18 ft. clear above top of rail in all cases, with 22 ft. wide monitors over every bay running from east to west for full width of building, with one running in a transverse direction between two, over the turntable. These monitors are all equipped with Pond continuous steel sash hinged at top to swing out, the angle of which may be adjusted by the worm and gear gang operator, which is controlled from the floor. This sash is so built that when opened to its full extent it will permit of no rain entering under ordinary conditions, and consequently provides good ventilation at all times. Steel beam purlins resting on the roof and monitor trusses carry two inch wood sheathing, on which is laid a 5 ply Barrett specification roofing, finished off at edges with a copper gravel guard, giving a good, substantial roof. The roofs of the monitors drain over the edges to the roof below, which is saddled to drain water to cast iron conductor heads, set in top of box columns, and connected to cast iron soil pipe, set in concrete piers by wrought iron pipe downspouts, making a neat and inconspicuous disposal of roof water to sewers. The entire floor is of vitrified paving brick laid on edge in a sand cushion on a 5 in. base of concrete.

In the northeast corner of the locomotive house is a room approximately 40 ft. square, with partitions of wooden studs, expanded metal and cement plaster separating it from the rest of the interior. A portion of this room, 17 by 22 ft., is partitioned off for the foreman's office, and has a maple floor, one door to the outside and one to the inside of the building. The rest of the space is devoted to a locker and wash room, with concrete floor, for the employes. The equipment will consist of 154 steel lockers in double rows, back to back, with ample aisles between, in which there are seats; also a double row of lavatories, 32 in number, at one side of the room, which provide adequate washing facilities for the employes. This room is well lighted, having large windows on both sides, by which ventilation is also furnished.

In the southeast corner of the building is a space approximately 40 ft. square, partitioned off in the same corner as the locker room. In this room are located the boilers, stack, heating fan and engine, boiler feed pumps and vacuum pump. Along the south wall is a coal bin, 40 by 6 ft. wide, provided with small doors in the outside walls, permitting of unloading coal direct from cars into the coal storage space.

The turntable is 80 ft. long, 200 tons capacity, standard deck type, and is operated by a pneumatic turntable tractor. The turntable ring wall is of concrete, with four expansion joints equidistant on its circumference, the inside diameter of which is 80 ft. 5 ins. This wall is capped off at the base of rail with curved segmental curb timbers, 8 by 14 ins., each of which is fastened at two places with ¾ in. anchor bolts to concrete. The circular rail of the turntable is fastened to 6 by 8 ins. by 2 ft. creosoted ties anchored to a concrete base, cast integral with the ring wall. The pit floor is of 5 in. concrete pitched to drain to circular gutter 14 ft. from centre of pit, which drains to a large sump, the top of which is covered with a cast iron grating, and is connected to sewer. The centre pier is of concrete and liberal in size, being 11½ ft. square at the base.



A.C. & H.B. Ry. Locomotive House and Machine Shop.

All pits under locomotive stalls are of concrete, 70 ft. long by 3 ft. 11 ins. wide; are 2 ft. 8 ins. deep at the high end and drained to low end, which is 3 ft. 2 ins. deep, and has a sump covered with a cast iron grating and a connection to sewer. All pits are absolutely clear on the sides, having no projections of any kind, and the bottoms are paved with vitrified paving brick, arched at centre and laid in ½ in. sand cushion on concrete.

The 80 lb. rails used exclusively are supported on the concrete side walls of pits, spiked to 6 by 8 ins. by 1 ft 4 ins. creosoted cross ties, which are set and anchored in the concrete. Outside of the rails, parallel to same, and flush with floor, are 6 by 10 in. dressed jacking timbers, fastened to blocks, which may be readily taken up at any time when repair of rails is necessary, without disturbing any of the brick floor paving.

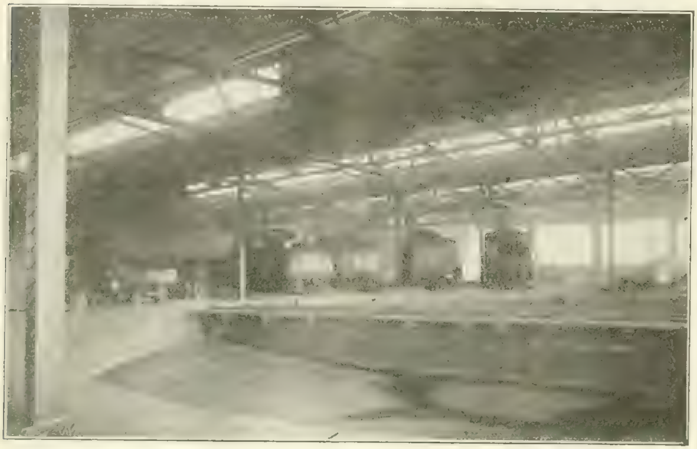
The wheel drop pits are of concrete and extend radially a little more than the width of two stalls, having a 24 in. gauge track on the concrete bottom from end to end for transferring wheels on truck, which, when lifted to floor level, are run on 24 in. gauge track connected to circular industrial track at end of stalls by a turntable. The pits are to be equipped with modern air jacks and removable rails, supported by I beams across the pit. Drainage is obtained by gutters, which drain to a sump connected to sewer.

The smoke jacks are of sectional cast iron construction, with an opening 8 ft. by 3 ft. and a 30 in. diameter stack with a hood at the top. The bottom of the jacks are 16½ ft. above the top of rail and the jacks are supported upon the steel roof members.

The building is heated by the indirect system, consisting of a steam driven fan and Green Positivflo horizontal heater coils. The hot air is forced through underground concrete tunnels and vitrified tile ducts to the turntable pit and all engine pits. Dampered outlets are provided, giving good distribution throughout the building. Steam for heating is supplied by three internally fired boilers of 150 h.p. each, for 100 lbs. working pressure, fitted with 50 in. inside diameter by 12¾ in. long, Morison furnaces. A steel smoke breeching connects the boilers to a Weber reinforced concrete chimney, both outer shell and lining of concrete, lining extending 39½ ft. above grade and top of outer shell 125 ft. above grade. The chimney is protected from lightning by modern lightning rods, well grounded.

Steam, air and water are conveyed to the locomotive stalls by pipe mains, with drops and valved outlets at the columns, between stalls. One set of drops fitted with double valves and connections serves every two stalls.

THE MACHINE SHOP is 112 by 221 ft. long, the long way being in an east and west direction, and is directly adjacent to the locomotive house, the west wall of the machine shop being the east wall of the locomotive house. All foundations are of concrete, as are the base walls to the sill lines, the same as described for the locomotive house. Brick is used for the walls above the sill line, and extends to under side of roof, being supported over window and door openings by steel lintels. The building consists of two bays, the one on the north side being 66 ft. and the one on the south side 44 ft. wide. Lengthwise of the building there are 10 bents at 22 ft. each.



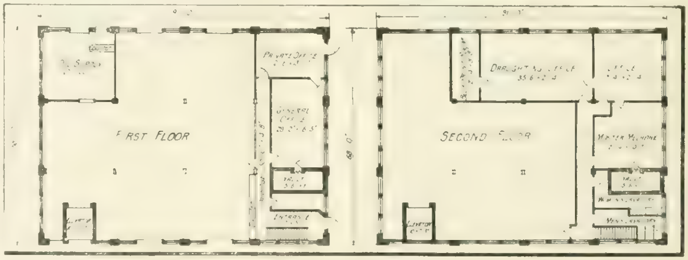
Interior of A.C. & H.B. Ry. Locomotive House.

Over the 44 ft. bay is a single pitch steel truss, supported by steel columns at each end with a clearance below to floor line of 18 ft. 2 ins. This truss carries I beam purlins, which in turn carry the concrete slab roof. Over the 66 ft. bay, with a clearance of 32 ft. above the floor line, is a steel truss with steel monitor framing, which is about 33 ft. wide and extends the full length of the building. I beam purlins are attached on both truss and monitor for the support of concrete roof slabs. These trusses are supported at the inside by the same columns that support the 44 ft. trusses and by steel columns at the wall. The inside and the north wall columns are of heavy construction, and at the height of 24½ ft. above the floor support a crane rail girder on which a 10 ton. 63 ft. 4 in. span, electric travelling crane operates.

Steel sash are used exclusively, both sides of the monitor, and that portion of the wall where the roof over the 44 ft. bay is lower than the one over the 66 ft. bay is equipped with two rows of 3 ft. high, Pond continuous sash, for approximately the full length of the building, one row being fixed in each case and the other operated by gang operator from the floor. The steel sash set in the brick walls are of the unit type, which, in the south wall, are 19 ft. wide by 14 ft. high in one horizontal row, and in the north wall are two rows, the lower one being of units 19 by 14 ft., and the upper 19 by 11 ft. All the sash have pivoted sections, which may be swung to secure the desired ventilation.

The roof is of reinforced cement tile, 1¾ ins. thick, cast in slabs about 5½ ft. long and 2 ft. wide. These slabs bear directly on the steel purlins and on the wall at the outside, and are covered with 5 ply Barrett specification roofing, which is finished off at the edges with copper gravel guards. Drainage from this roof is allowed to run off edges to the ground. The floor of this building is to consist of a 5 in. concrete sub-base and 1 in. sand cushion, on top of which will be laid 3 in. creosoted maple paving blocks.

In the southwest corner is located the foreman's office, approximately 12 by 12½ ft., with maple floor and partitions of sheet metal and sheet metal ceiling, all of which are supported on rolled steel sections. North of, and adjacent to this office, is the tool room, 22 by 22½ ft., with creosoted block floor and steel framed partitions of sheet metal and wire mesh, 8 ft. high. North of the tool room is a space about 11½ by 22 ft., which is provided for a general and private lavatory. This lavatory is to be equipped with seven automatic compression closets, inclosed in Brown sanitary water closet shields.



A.C. & H.B. Ry. Store House.

The erecting pits are located on the two through tracks leading from the locomotive house through the erecting shop. These tracks are on 21 ft. centres in the erecting shop. An electrically operated locomotive screw jack hoist is provided on one of these pits for unwheeling and mounting locomotives. The hoist consists of a pair of stationary screw jacks, and a pair of movable jacks mounted on rails outside of the pit rails. Each pair of jacks is provided with a lifting beam, which extends across the track from one jack to the other. The vertical movement of the beam is such as to permit the passage of a 72 in. driver underneath the beam when lifted to its full height. The jacks are all operated together.

The overhead 10 ton electric crane in this bay affords a method of handling heavy parts for repair work in any part of this section of the shop. A 24 in. gauge industrial track, running in the centre between the two standard gauge tracks, connected to the circular track in the locomotive house by a small turntable, extends to within 55 ft. of the east end of the machine shop. Two narrow gauge tracks are connected to this at right angles by turntables, one in the centre of the third bay from the east end and one in the sixth. These tracks run south through the machine tool department and through doors out into the yard.

The space used for the machine tools and blacksmith shop comprises the 44 ft. bay and about a 10 ft. strip of the 66 ft. bay, with the exception of the space allotted for office, tool room and lavatory, and space for the fan and heater. This building is heated in the same manner as the locomotive house, except the hot air is partially distributed through overhead galvanized sheet metal ducts.

THE STORE HOUSE is located in a position of easy access from all the present and proposed buildings, and has necessary facilities for the receiving and shipping of material, having platforms on each side adjacent to tracks. The building is 68 by 91 ft., and provision is made for an extension on the west end. It has three floors, a basement, first floor and second floor, and their heights are 10 ft., 13 ft., and ranging from 12 to 14 ft. on the second floor, respectively. The entire building, from foundation to first floor line, is of concrete, reinforced where necessary, including the 5 ft. permanent platforms and walls of same, in which are steel sash for the admission of light and ventilation to basement. The use of this space under platforms gives additional floor space in basement. The first floor is of reinforced concrete of the mushroom or flat slab type. The stairs to the basement, from the first floor in the southeast corner, are of reinforced concrete, and are inclosed in walls of expanded metal and cement plaster, with steel door and frame into basement.

Directly alongside of the stair well is located a lavatory room with light from the windows in the outside wall. A door from this room furnishes access to the janitor's closet under the stairs. At the east end, a little to one side of the centre, is a brick vault 6 by 16 ft., which is directly underneath the vaults on first and second floors. In the northwest corner of the basement is the oil storage room, approximately 27 by 22 ft. The walls of this room are of expanded metal and cement plaster, with one doorway 4½ by 7 ft., equipped with double sliding automatic fire doors. Light and ventilation are admitted through windows in north and west walls to this room. The entire basement floor is intended for the storage of heavy materials, and consists of

6 ins. of concrete.

A.C. & H.B. Ry. Terminal Building under Construction, Dec., 1912.

The first floor is used for the storage of both light and heavy parts, in racks and bins, and necessarily all shipping and receiving is done on this floor from platforms through doorways 8 by 7½ ft., equipped with rolling steel shutter doors, of which there are two on both the north and south sides. The main entrance is at the south end of the east wall. Just inside of the entrance is a stairway to the second floor and at the side of this is a hall, which leads to a counter in the storeroom. At the east end of this floor is located a small tool storeroom 5 by 16½ ft., a vault 6 by 15½ ft., a general office 16½ by 28 ft., and a private office 14 by 21½ ft. These rooms are partitioned off with wooden studs and lath and plaster walls, with the exception of the vault, which is of concrete. Access is had to these offices by a long hall at the back, running north and south, which is separated from the large storeroom by a long counter and railing with a pass gate. In the northwest corner on this floor is the oil supply room, which is fireproofed with expanded metal and cement plaster partitions and ceiling. The inside door is a double sliding automatic fire door, and access is had to the outside platform by a rolling steel shutter door and a pass door.

The superstructure above the first floor is of brick, with steel lintels over door and window openings, steel columns and girders, with second floor of heavy joist and plank construction. The brick walls and steel columns extend to roof, with steel girders between columns, which support the heavy roof joists and sheathing. The roof is of the low pitch type with standing gutters, and is drained by inside downspouts of wrought iron pipe connected to cast iron conductor heads at roof and to the sewer in the basement. Barrett 5 ply specification roofing is used and is finished off at edges of overhanging roof with copper gravel guards.

The second floor is used for the storage of light material and also for offices. These are partitioned off with wood studs and metal lath, and all the walls and ceilings of the offices are plastered. The rooms consist of the Master Mechanic's office, 30 by 21 ft., a private office 21 by 21 ft., a draughting room 21 by 35½ ft., a blueprint room 9 by 21 ft., a concrete vault 6 by 15½ ft., and two lavatory rooms. This whole building is well lighted from all sides by large windows of steel sash, provided with adjustable, pivoted, ventilating sections. A hand power elevator serving all floors and basement is located in the southwest corner of this building, the platform of which is 7¼ by 10 ft., with a capacity of 2,000 lbs. and a lift of 23 ft.

On the north side of the store house, outside of the concrete platform, there is a temporary wood platform 20 ft. wide for the full length of the building, and 25 ft. wide for a length of 40 ft. east of the building line, with a ramp 7 ft. wide and 30 ft. long, to grade level. A platform of the same type is built across the east face of the building, and provides storage space for parts that may be left exposed to the weather, also for additional receiving and shipping facilities, and the ramp provides for trucking to and from the building.

OIL STORAGE EQUIPMENT: The equipment of the oil storage room in the basement, and the oil supply room on the first floor of the storehouse, is very complete towards providing an efficient and clean system of oil handling and storage. The storage of oil is in five tanks located in the basement. These tanks are used for the following kinds of oil: 1. car oil, capacity 500 galls.; 2. locomotive oil, capacity 500 galls.; 3. headlight oil, capacity 500 galls.; 4. valve oil, capacity 300 galls.; 5. signal oil, capacity 300 galls. The tanks are ¼ in. black steel plate, with all seams single lap, thoroughly riveted and caulked. Three of the tanks are 4½ ft. in diameter by 5¼ ft. high, and two are 3½ ft. in diameter by 5¼ ft. high, these dimensions being inside. All tanks have a 4 in. pipe connection at the top, which extends to the first floor, where fill boxes are set in concrete slab and have easily removable covers flush with floor, which, when taken up, and cap on end of 4 in. pipe is removed, allows of rolling a barrel over the filling box and filling the tanks by gravity. Connected to these 4 in. pipes, just above tanks, are 2 in. pipes, which extend through building wall to outside track along the platform, where they each have a stop cock and hose connection, thus providing a method of filling the storage tanks from cars. Each tank has a 1½ in. vent pipe extending 18 ins. above the roof. The tanks are set 1 ft. above the floor level on a concrete base, in which is a small trench under each tank to allow for a 1¼ in. drain pipe and waste cock at the front of the tank. At the north side of this room, under the platform, is a fireproof room partitioned off for the storage of waste.

A tank for gasoline storage, 3½ ft. in diameter and 5 ft. long, is located 20 ft. west of the building, and is buried in the ground below frost line, and encased with 6 ins. of concrete. The filler pipe projects from the ground directly above the tank and a 1½ in. suction pipe extends to pump in oil supply room. This tank is also equipped with a vent.

In the oil supply room on the first floor are located six Bowser self measuring, hand operated, oil pumps for the distribution of oil. These pumps are arranged along the west wall and are of the positive suction type, and have a 1½ in. suction pipe from tanks. Directly below nozzles of pumps are drip pans with 1½ in. return connections. In the northeast corner of this room is a 3 ft. 2 in. by 7 ft. door, by which entrance is gained to oil room from the outside. Just inside of this door is a counter at which requisitions for material from this room are filled. Under this counter are racks for storage of a day's supply of waste.

COAL DOCK: The coaling station is located at the west end of the cinder pit on the south side of the south track leading from the turntable. Parallel to the track the structure is 161½ ft. long, with a width averaging about 10 ft. The building is constructed entirely of timber, well over size to allow for deterioration, and all posts rest on concrete footings and are anchored to same with heavy steel plate straps. The delivery bins consist of 13 inclined bottom coal pockets, graduated in capacity so as to deliver a predetermined amount of coal to locomotive tenders, the respective pockets each being designed to hold the following amounts of coal, namely, two 2 tons; one 3 tons; two 4 tons; three 5 tons; two 6 tons; one 7 tons, and two 8 tons. The bins and framework are built of timber and heavy plank. Each pocket is equipped with an Ogle coal delivery gate and spout, which is claimed to be frostproof, and the spouts are so counterbalanced as to permit of easy operation by the fireman. The entire structure is covered with a wood sheathed roof and composition roofing. Only a limited storage capacity has been provided in the delivery bins, since the supply of coal for the winter months is purchased during the summer and stored on the ground just west of the coal dock, from which storage pile it is conveyed to the coal dock for locomotives in quantities to meet the daily demands.

The process of conveying coal from the storage pile to the delivery bins consists of three operations, namely: (1) The coal is loaded into one ton steel buckets, each provided with a bail, and the buckets placed at either end of the coal dock; (2) the buckets are hoisted to a trolley track, which extends longitudinally over the elevated delivery bins by means of a plain inverted pneumatic hoist, the hoist operating in conjunction with a jib crane so as to allow the bucket bail to be swung around and hooked on to a plain I beam trolley on the runway track; (3) the hoist is then released by the operator, who pushes the loaded bucket along the track, directly over the pocket to be filled, and by releasing an automatic catch on the bail the bucket empties its load and is afterwards conveyed back to the coal storage pile for refilling. The coal dock is provided with a semi housed shelter at each end to enclose the pneumatic hoists and jib cranes and to afford protection for the operator. A walk extends the entire length of the coal dock just over and at one side of the coal pockets. The pneumatic hoists and jib cranes have a capacity of four tons each at 80 lbs. air pressure and are of the Curtis & Co. Manufacturing Co.'s make.

THE CINDER PIT is located on the main tracks leading into the locomotive house, and about 400 ft. west of the latter. At present only one pit is built, with the depressed track in the centre between the two main tracks, which are 28 ft. centres. All pit walls are of concrete, with concrete base for vitrified paving brick floor. The cinder pit is 48 ft. long and approximately 10 ft. wide, and has a solid concrete wall under the outside rail of the track, forming bearing for same, and to which the rail is fastened with cast steel clips and anchor bolts set in concrete. Along the inside edge at the top of this wall is a steel curb angle to prevent chipping of the concrete. One inch below the top of this wall is the toe of a 45° face, sloping to the bottom of the pit, which is 3 ft. below the base of rail. The bottom is about 8 ft. wide, pitched just enough to drain to gutter and sewer connection, which runs parallel and adjacent to the concrete wall between the pit and the depressed track, of which the difference in height is approximately 3 ft. The inside rail is supported on cast iron standards, 6 ft. centres on concrete piers, an inverted rail being applied to the running rail, base to base, for reinforcing between standards. The clear height under rails to base of pit is about 2 ft. 8 ins., giving easy access to locomotive fire boxes.

The depressed track is 6½ ft. deep and level for about 48 ft. opposite the cinder pit, with a steep grade at the east end to act as a bumper, and a 6 per cent grade on the run in end. Reinforced concrete walls are used on both sides for the full length, with gutters of paved brick at each side of the bottom. The clear space between walls is 12 ft. and the track is centred on this. Provision is made for easily removing part of the north wall opposite present cinder pit for another pit at such a time as it is required. All corners of walls are strongly reinforced to prevent cracking. The depressed track is laid upon 6 ins. of cinders, and is drained to the gutters at sides, which are sloped to a sump covered with a cast iron grating connected to sewer. Water service is provided for use about the pits.

R. S. McCormick, M. Am. Soc. C.E.,
Chief Engineer, Algoma Central and Hudson Bay Ry., and Algoma Eastern Ry.

THE MACHINE SHOP EQUIPMENT consists of the following tools, most of which are new:

	Method of Driving.
[illegible] Driving wheel lathe	Individual motor
400-ton hydraulic wheel press	Belt
[illegible] Engine lathe	"
[illegible] Engine lathe	"
16 in. Engine lathe	"
16 in. Toolmaker's lathe	"
Pratt & Whitney turntable lathe	"
[illegible] Vertical boring mill	"
16 in. Crank shaper	"
18 in. Crank shaper	"
No. 2 Universal miller	"
66 in. Radial drill	"
[illegible] Vertical drill	"
12 in. Sensitive drill	"
Power hack saw	"
Twist drill grinder	"
Wet tool grinder	"
Pipe bending machine	Hand operated
48 in. Punch and shear	Individual motor
Plate bending rolls	" "
Ryerson, pit type, flue cleaning machine, capacity 500 2 in. tubes per hour	" "
Flanging clamps	Air
Flange forge	"
22 in. Lathe	Belt
22 in. Axle lathe	"
36 in. Planer	"
24 in. Shaper	"
Wheel boring machine	"
Wheel press	"
Radial drill	"
6 Spindle drill	"
3 Vertical drills	"
Triple bolt cutter	"
Pipe threader	"
Wet tool grinder	"
2 Emery wheels	"
12 in. Punch and shear	"
Bolt threader	"
Bulldozer	"
2 Bradley hammers	"
Flue cutter	"

Bolt furnace, case hardening and spring furnace,
Annealing furnace, flue welding furnace,
Blacksmith forges, oil rivet forge, flue welder,
Steam hammer, and one blast and exhaust fan.

The motors for driving the group lineshafts and individual tools are 220 volt, 60 cycle, alternating current, induction motors. Power is purchased from the Tagona Water and Light Co., whose hydro-electric plant is located not far from the shops. Two motor-driven air compressors are located in the southwest corner of the engine house, and compressed air outlets are located at convenient points throughout the machine shop and locomotive house. The line shafts are supported by drop hangers fastened to steel shafting supports of special design, clamped to lower chords of the steel roof trusses. The supports are built of standard rolled steel sections, easily fabricated, and permit of very simple alignment of shafts and hangers. The motors driving the line shafts are supported by brackets, some of which are mounted on the steel columns and some on the brick walls. These brackets are constructed of standard rolled steel sections, with a base of reinforced concrete for the motors to set upon. Pipe sleeves are set in the concrete for motor base bolts, which gives a solid anchoring and minimizes vibration.

FUEL OIL STORAGE: Two 30 by 4½ ft. diameter steel fuel oil tanks are located underground outside the east end of the machine shop, the latter end of which accommodates the blacksmith shop department. Oil can be unloaded by gravity direct from tank cars into the tanks. It again flows by gravity into a small delivery tank, from which it is forced to the burners by compressed air at 20 lbs. pressure. All of the tanks and piping are equipped with heating coils to prevent the sluggish flow of oil during cold weather.

LIGHTING SYSTEM: The buildings and yards are all well lighted. The engine house is lighted with flaming arc lamps, one to each space between engine pits and three over the turntable pit. The erecting portion of the machine shop is also lighted with flaming arc lamps. Clusters of tungsten lamps are used in the machine shop. The shop offices, toilet and locker rooms, and tool room, are lighted with carbon filament lamps, and tungsten lamps are used in the store house and offices. All power, light and water is supplied by the Tagona Water and Light Co., one of the Lake Superior Corporation's subsidiary companies.

EXTENSION TO BRUCE STREET: The extension of the main line to Bruce St. involves an undercrossing of the C.P.R. Sault Ste. Marie branch, where excavation was made through part rock. This excavation, including the concrete abutments, was done by contract by the H. E. Talbott Co. of Sault Ste. Marie. A half deck girder span, 25 ft. long, spans the opening carrying the C.P.R. track over the A.C. and H.B.R., at this point. There is a full clearance of 22½ ft. from base of rail to under side of the girders. This extension is 1¼ miles long to the site of the terminal station at Bruce St. and lies along the water front of the St. Marys river.

THE TERMINAL STATION AND general office building is located on Bay St. at the foot of Bruce St., the center line of the building being on the east line of Bruce St., locating the main entrance into the station directly across Bruce St. It is a thoroughly modern and substantial structure, 46 by 150 ft., with three stories, a small basement, and a loft under its pitched roof; and, with the exception of the roof framing, the building will be fireproof. Construction was begun on April 21, 1912.

On the ground floor is located the general waiting room and ticket office, women's retiring room, men's smoking room, express room, separate entrance hall (giving access to the offices by ample stairway, and by provision for an elevator), and the baggage room. Along the street side, the floor of the baggage room is 3½ ft. higher than its main floor. The two elevations are connected by an inclined runway, but in addition baggage can be delivered directly from trucks to the high elevation and from there directly into drays at the elevation of the wagon box. The second floor provides space for the General Manager's general and private offices, the Traffic Manager's general and private offices, the Superintendent's general and private offices, the Auditor's general and private offices, the Car Accountant's office and the Train Dispatcher's office. On the third floor will be located the Chief Engineer's general and private offices, offices of the Bridge Engineer, the Engineer of Maintenance of Way, the office engineers, draughting room and Chief Draughtsman's office, plan room, blueprint room and store room. Lavatories are provided on all floors.

The footings are of concrete and were carried to rock below the elevation of the river. The foundation walls from the footing to grade are of rubble, 2 ft. thick. The walls of the building are of hard native sandstone from the Root River Quarry, grading in color from grey to red brown. From the water table to the first story sill course, the walls are of rock faced coursed masonry. Above this line, rock faced, hammered ashlar work is being used. The first story walls are 20 ins. thick, second story 18 ins., and third, 16 ins. The cut stone trim is of red Portage Entry sandstone, from Houghton, Mich., and blends well with the native sandstone. The trim consists of water table, sill course, flat and arched lintels of first story doors and windows, a heavy belt course at the level of the second floor; sills, lintels and corbels of the second floor, and sills and lintel course of the third floor. The walls are surmounted by a heavy copper cornice and gutter, and the building will be covered by a pitched roof of Vermont variegated green and purple slate. A hipped roof marquise covers the main entrance opposite Bruce St. Provision has been made for train sheds of the umbrella type, to be built in the near future.

The structural supports of the interior of the building are two rows of seven steel columns, on concrete piers carried to rock foundation, and one additional column in the panel containing the elevator shaft and stair hall, forming 24 bays; 16 of approximately 16 by 20 ft. along the sides of the building and carrying the offices, and 8 of approximately 9½ by 20 ft. down the middle of the building and carrying the corridors. I beams form the girders between columns, and between the end columns and the masonry walls. The second, third and loft floors are of reinforced concrete and tile, of the type known as the Johnson system. The first floor is of concrete throughout, resting directly on the fill, except the portion over the basement, which is reinforced.

The building will be heated with steam and the mains will run from the basement, where the boilers are located, through tunnels under the first floor. The building will be electric lighted. Conduits are carried from floor to floor through a wiring duct, with distribution closets at each floor, and the circuits for any one floor are carried in conduits laid in the concrete of the floor above. All partitions are of hollow tile and are plastered. Exterior walls are plastered on metal lath carried by metal furring. Stairs are of steel. Floors of entire first floor and of corridors and lavatories of second and third floors are of granolithic finish. Remaining floors in building are of maple or rough sheathing and sleepers, anchored in concrete. The general interior trim is red oak.

The present concrete train platforms will extend 100 ft. each way from the station, giving a total length of 350 ft. Walks will extend along the east side and front. The space at the west end of the station for 60 ft. out will be paved.

All outside work, including grading, tracks, etc., is being done by the company's forces. Plans for this building were made by the Arnold Co., and the McPhail & Wright Construction Co. are the contractors.

THE FREIGHT HOUSE is a frame building on solid concrete walls and piers, covered with corrugated iron and a prepared felt roof. It is 32 by 112 ft., with an office in the east end, and was built by the McPhail & Wright Co. on plans furnished by the railway company.

All the above work is being carried on under the writer's general charge as Chief Engineer, with J. A. Hedgcock in direct charge of the forces. L. B. Wulff, as Superintendent for the Arnold Co., in charge of their part of the work, and H. H. Dickinson, Engineer in charge of this work at the Chicago office, have rendered excellent service to the railway company. The writer is indebted to Mr. Dickinson for the above description of the terminal buildings. All outside work is being rapidly completed, and the inside work at the shops and station buildings will run into the winter. The Mechanical Department took possession of the Locomotive House on Dec. 1, and has been using it regularly since.

In addition to the above terminal work, the railway company is considering the construction of a modern coal dock with unloading machinery and storage capacity at this point. A similar dock is also planned for Michipicoten Harbor and Little Current.

Maintenance of Way by Contract.

The article on this subject in Canadian Railway and Marine World for October, pg. 507, and the extract from a railway official's letter published in the November issue, pg. 559, have aroused considerable interest among maintenance of way officials. The following contribution from J. B. Cameron, Somerset, Pa., will also be read with interest:

This subject has received more or less consideration from maintenance of way officials for several years without any railway of prominence as yet adopting the system; but such failure does not in any way indicate that a system of contracting would not result in increased efficiency and decreased costs, both of benefit to the railways.

Efficiency is the slogan of the day in all branches of railroading and especially in the maintenance of way department. Wages have increased, but the efficiency of the worker has not kept pace with them. It is one of the [illegible] and this is to be expected since the problem of labor depends entirely on the economic law of supply and demand, and a large demand results in small supply, increased wages and increased indifference on the part of the laborer.

If increase in wages will not result in increased efficiency it is apparent that any other scheme offering even a suggestion of improvement is worthy of careful consideration.

There are but two methods, the writer believes, that will increase the efficiency of the worker and they are, first, by awakening an interest in the laborer for his work, and second, by increased efficiency in supervision. Either scheme is in its elements a contract scheme, for to awaken in any laborer an interest in his work can only be accomplished by making his earnings depend on results and not on a fixed amount per diem. Thus the laborer becomes in a measure a contractor, and increased efficiency in supervision can in a similar manner be best obtained by making the cost to the railway company depend on results and not on a fixed daily wage.

To contract for work it is necessary to have unit costs on which to base payment for same, but a just basis for such payments can only be arrived at after careful study and investigation. There are many classes of work that have been thus standardized, and in railway maintenance work any material increase in the efficiency of the worker will only result after such a standardization as will insure to the laborer adequate compensation for a fair day's work.

The writer does not believe the method of awarding contracts for such work to a large contractor to be desirable at present, but he does believe in treating each foreman as a contractor in some such fashion, as is done by certain large industrial concerns. Men will do more work for the same individual as a contractor than they will do for him as a foreman of a railway company. As a contractor the foreman could therefore do work cheaper than he could as a foreman, providing he gave the work the same efficient supervision in each case.

Some people will claim that a poorer grade of work would result from such an arrangement, as the contractor, in order to obtain larger profits, would be satisfied with a poorer grade of work. This might well be answered, however, by considering the results obtained by the contract system on construction work.—Engineering Record.

The Alaskan Railroad Commission, after having completed an extensive tour through the territory, spent some time recently in Ottawa, Ont., investigating the methods of building railways in the northern regions and the Government attitude thereto, before returning to Washington to prepare a report.

W. M. PORTEOUS, Agent, Canadian Pacific Ry., Freight Department, St. Louis, Mo., in remitting renewal subscription, writes: "I might state that I enjoy reading Canadian Railway and Marine World very much, as it is the only reliable means of information regarding Canadian railway matters in general which I receive."

The Interstate Commerce Commission recently dismissed the Humboldt Steamship Co.'s application for the establishment of through routes and joint rates, with the White Pass and Yukon Route, between Seattle, Wash., and Dawson, Yukon, and other Canadian points, on the ground that it had no jurisdiction over a company located, owned and operated in a foreign country.

Classification and Percentage Rating of Canadian Northern Railway Locomotives.

Canadian Railway and Marine World readers who in the course of their daily pursuits come across Canadian Northern Ry. locomotives, will latterly have noticed a considerable change in outward appearance, and many will probably be at a loss to locate the nature of the change which has taken place. The change referred to is that of the manner of classifying and rating of locomotives and the means by which this information is concisely arranged in a convenient location on the sides of the locomotive.

The fact of the matter is that the C.N.R. has felt for some time that it has outgrown its swaddling clothes, and become a large system, the growth being rather marked for its rapidity. Becoming a system, the various details that go towards its makeup must in consequence become systematized likewise, and not be left in the haphazard manner that would be successful on a small line, but which would not be economical on a large system such as the C.N.R.

Until recently, there was no accepted method of classifying and rating locomotives on the system. An attempt at introducing some standard of comparison among the locomotives then in use, was introduced on the system several years ago, the basis of comparison being an order of 10 wheelers just then being delivered from the builders, and which were the largest then in use on the system. These locomotives had a tractive effort at the drivers of about 23,600 lbs., and from the fact that they were the largest in use, were considered as 100% locomotives. Having an odd number of pounds such as 23,600 as the unit of comparison, naturally led to considerable confusion in the rating of other existing locomotives from this basis, as while it was a simple matter to determine the percentage by a simple calculation, the percentage thus arrived at conveyed but little meaning, the unit being so unusual. That is to say, given a locomotive with maybe a rating of 70%, a calculation beyond the scope of the average person's powers of mental arithmetic would have to be made to ascertain the tractive effort that the locomotive would develop, resort being made to pencil and paper to determine the desired information.

The system of classification and percentage rating at present in use, and to be here described, was developed recently by S. J. Hungerford, Superintendent of Rolling Stock. Not only is it being applied to the C.N.R. locomotives, but also to the locomotives of all the Mackenzie-Mann interests in Canada and the United States. Realizing the failings of several of the different systems of rating, principally from the fact that some arbitrary unit has been selected as a standard, for which no logical reason can be given, consideration was given to the selection of a base that would be within the realm of logic. As in most other systems, the tractive effort has been taken as the ground work of rating. The question was to determine the unit of comparison. Tractive effort is usually measured in even thousands of pounds, hence the selection by Mr. Hungerford of 1,000 lbs. tractive effort as being a 1% rating. A locomotive with a tractive effort of 28,000 lbs. is in this C.N.R. rating a 28% locomotive, and this is the rating of the latest 10 wheel passenger locomotives on the system.

The classification scheme developed has necessitated the renumbering of nearly all the motive power. Previously, as each new batch of locomotives was received from the builders, they were given the series of numbers above the last lot of locomotives numbered, this scheme using up the numbers in properly ascending numbers, but without any system as regards the allocating of the different types of locomotives to any particular run of numbers. With but few exceptions, it was impossible to refer to any particular type of locomotive as say the "600 class." In the new scheme, certain runs of numbers are given to different types of locomotives, the number in each run depending as far as possible on the relative quantities of that particular type at present in use, with due regard to contemplated future additions to that particular type. That is a matter of pure conjecture, as new types are constantly being introduced, though, at the same time, it will be observed that there are certain general lines that appear to have become more or less standard—such for example as the 6 wheel switcher, the 10 wheeler, and the consolidation. The allocation of numbers is as follows:

Number	Type.
1 to 99	4-4-0 American
[illegible] to 199	2-6-0 Mogul
[illegible] to [illegible]	0-8-0 Switcher
[illegible] to 699	0-4-0 and 0-6-0 Switchers
[illegible] to [illegible]	4-6-2 Pacific
[illegible] to 1999	4-6-0 Ten Wheeler
[illegible] to [illegible]	2-8-0 Consolidation
[illegible] to ——	Mallet

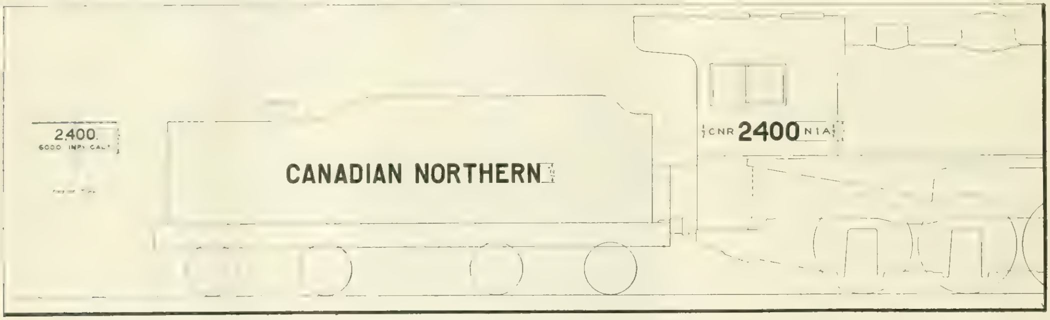
This provides for over 3,000 locomotives, giving the larger groups to 6 wheel switchers, Pacifics, 10 wheelers and consolidations. It is estimated that this arrangement will provide ample room for expansion for many years to come, as the number of railways operating over 3,000 locomotives is very few.

The planning of a system of locomotive classification involved different considerations. There is first of all the general type system of classification universally adopted, such as Pacific, consolidation, etc. The best basis of subdivision of these types was considered to be on the diameter of driving wheels, the locomotives of a certain type between given limits of driving wheel diameter are given a certain type symbol letter; for example, consolidation locomotives with driving wheels over 52 ins. diameter but under 58 ins. diameter, have the type symbol "M." This is the type of locomotives until recently in general use for freight, but they have been superseded by locomotives of a larger type, in the next or "N" group, for the heavier main line work. The general arrangement of type symbols is as follows:

Type Symbol Outside Diameter of Drivers
Wheel Arrangement, 4-4-0 (Standard).
A.........63 ins. or less.
B.........70 ins. or less, but over 63 ins.
Wheel Arrangement, 2-6-0 (Mogul).
C.........52 ins. or less.
D.........58 ins. or less, but over 52 ins.
E.........63 ins. or less, but over 58 ins.
Wheel Arrangement, 4-6-0 (Ten Wheel).
F.........52 ins. or less
G.........58 ins. or less, but over 52 ins.
H.........63 ins. or less, but over 58 ins.
I.........70 ins. or less, but over 63 ins.
Wheel Arrangement, 4-6-2 (Pacific).
J.........70 ins. or less.
K.........75 ins. or less, but over 70 ins.
Wheel Arrangement, 2-8-0 (Consolidation).
L.........52 ins. or less.
M.........58 ins. or less, but over 52 ins.
N.........63 ins. or less, but over 58 ins.
Wheel Arrangement, 0-6-0 (Switch).
O.........52 ins. or less.
Wheel Arrangement, 0-8-0 (Switch).
P.........52 ins. or less.
Wheel Arrangement, Mallet Articulated.
Q.........52 ins. or less.
R.........58 ins. or less, but over 52 ins.
Wheel Arrangement, 0-4-0 (Switch).
S.........58 ins. or less.

While it is possible, under the grouping of numbers before referred to, to roughly classify the locomotives, the object of this classification with type symbols, is to make it possible to refer to any locomotive by its type symbol, as the type symbol conveys concisely the locomotive type and its general size, as in each type, the size is more or less proportional to the driving wheel diameters.

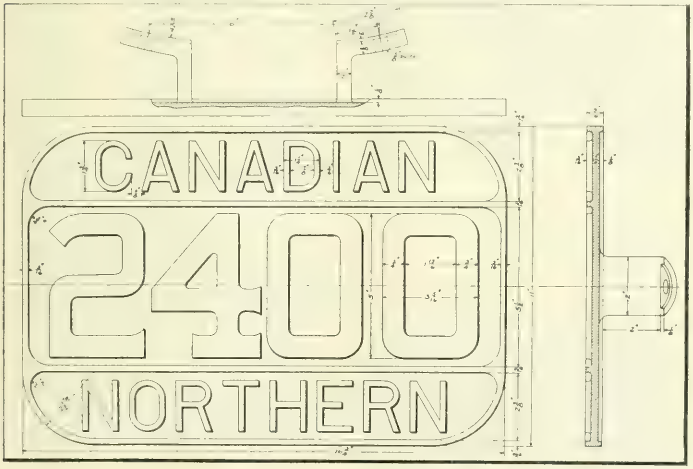
The type symbols are further subdivided into groups, symbolized by numerals, and sub-groups, symbolized by small letters. In each type symbol group, there are often several designs that are considerably different from each other, as for example when the same specifications are worked out independently by different builders. Now, any one of these different designs, if built again on a further order, might be slightly altered from the original and so could not



Standard Lettering and Numbering, Canadian Northern Railway Locomotives.

be included in the group designated by the numeral. Thus, in group M, there are say three different designs, 1, 2 and 3. Being the first of the group, there would be no subdesigns, so each group would have the subletter a. The first batches of the three designs would be designated respectively, M-1-a, M-2-a, and M-3-a. Now, suppose it was found that one of these designs was better than the other two, and it was decided to perpetuate that type with slight modifications, the next design would be given the subletter b. Thus, the next one in group 2 would be M-2-b. In some of the different groups, there are a great number of designs, running up to 16 in the G portion of the 10 wheeler group. The subgroups do not run as high, the highest being g in the H-6 class, the type of larger size 28% 10 wheelers that is being perpetuated for heavy passenger service.

The renumbering of the locomotives was made the occasion of the general change in the character of labelling the locomotives, the nature of which is shown in the accompanying two illustrations. Instead of printing the words "Canadian Northern" along the side of the cab as formerly, in the centre of the space the number of the locomotive is painted in letters 12 ins. deep, and to the left of the number, in letters 4 ins. deep, there is painted "C.N.R.," and on the opposite side to this, the classification of the locomotive, as for instance the one shown, the "N-1-a" class. The locomotive is further labelled on the smokebox door by a projecting brass plate 11 ins. deep and 16¾ ins. wide, on which the legend stands out in raised brass letters, the surface of which is buffed, and the background painted black. Along the top, in letters 1¾ in. high, is the word "Canadian," with the word "Northern" in corresponding letters along the bottom. Between the two words, in figures 5 ins. high, is the number of the locomotive, as instanced in the illustration, "2400." The top sides of the headlight have the number also in letters, cut out of tin, 4 ins. high, with corresponding letters of the same height in the top front of the headlight, above the glazing.



Standard Front End Number Plate.

The locomotive number formerly graced the sides of the tenders, but owing to the exigencies of the service sometimes requiring that the tenders be interchanged temporarily, (made possible by the standard type of tender used), it was deemed inadvisable to continue the practice of so locating the number. The present practice is to have the words "Canadian Northern" painted along that space in block letters 12 ins. high, utilizing to advantage a fine stretch of advertising space. The number of the locomotive is painted in letters 6 ins. high near the top of the rear end of the tender, in a place that would not be conspicuous in the event of a tender interchange. Below the number are letters 3 ins. high, giving the capacity in imperial gallons. All painted lettering on both locomotive and tender is in the company's standard golden yellow.

This policy of classifying and rating locomotives has been generally adopted all over the Mackenzie Mann lines. With slight modifications, the standard lettering and numbering has also been adopted on the other lines, the modifications for the most part occurring through the difference in names. This standard method of classifying and rating, involving the scheme of renumbering in a standerd manner, was only introduced during the past year.

Oil and Paint House of Grand Trunk Railway Port Huron Shops.

The oil and paint house of the G.T.R. car shops at Port Huron, Mich., labors under peculiar difficulties, from the fact that it does not possess an up to date equipment with self measuring oil tanks and automatic paint mixers such as are to be found in many recently constructed plants, or in old plants where a modern equipment has been introduced. Lacking these modern adjuncts of a well planned oil and paint shop, J. L. Hodgson, the Master Car Builder, was compelled to make shift with such facilities as could be readily improvised. Just how good a substitute for a modern installation he has been able to introduce will be seen from the ensuing description, and doubtless all will agree that a splendid means for handling the large quantities of oil and paint used in such a plant has been planned.

The oil and paint house is about 60 by 30 ft., parallel to the river, on to which it backs. All the buildings of the plant are located parallel to the St. Clair river. A partition wall the length of the building divides off the rear third of it, this portion being used as a rough store room for the paint and oil products, and is entered by doors from either end. The front two thirds of the building, facing across the rear of the freight car shops, is divided into three rooms, about 10, 20 and 30 ft. long, respectively. The 10 ft. room is used for a store for the finer paint and oil products, the central or 20 ft. end for a paint-mixing and distributing room, and the long room for the oil storage tanks. These rooms communicate with each other through end doors, and each has an entrance from the outside, the middle one through the front wall and the outer ones through the end walls.

The oil room at the northerly end of the building is the longest of the three front rooms. In it there are three rows of tanks as in figs. 1 and 2, one row as in fig. 1, down the rear wall of the room, and the other two back to back down the centre as in fig. 2. There are 16 tanks, ranging in size from 2½ to 25 barrels capacity each. They are all labelled with the oil contained, and have drawing off faucets near the bottom. the sides and bottom sloping to this point so as to completely drain the tank when necessary, an operation that is performed periodically, the interior being thoroughly cleaned out at the same time by washing.

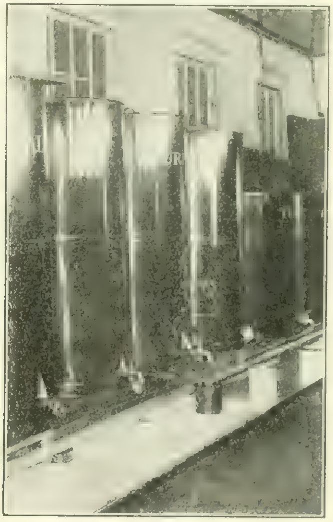


Fig. 1.—Oil Storage Tanks.

The tanks are all raised a few inches from the ground, on platforms. Below the platforms, on the floor, there is a drainage trough, with perforated stands on which the receptacle to be filled is placed. Beneath each of the faucets there is a drip can, which is always placed to one side when filling a can, and then replaced immediately afterwards, keeping the surface of the drain trough free from sticky oils and similar dirt. The reader will notice how clean and tidy the whole place appears, and it may be mentioned that the illustrations were made from photographs taken as it appeared under normal operating conditions, with no previous preparation to make it presentable. All the tanks are painted dark red, and are varnished over top. The drain troughs are painted white. Both tanks and trough are repainted at frequent intervals, and in consequence always present a neat appearance. Along in front of each of the troughs there is a strip of car aisle carpet, further improving the interior finish of the room. The walls are painted white above the tanks, and below this level black. This room has an upstairs where all the car stencils are cut out. This is the only portion two stories high. The ceiling of the lower room is finished in natural wood, varnished.

The oil tanks are filled in a novel manner, as indicated in fig. 2. The barrel to be emptied is brought in from the storage pile at the oil room end of the building through the door to the rear, and rolled up on to the shallow stand shown, where it is located, bung uppermost, by two wedges. In this position, the oil emptying apparatus is applied. An air connection from the left, carrying a gauge, connects to the side of a header that has a tapered threaded lower end that screws into the bung hole. This air connection leads into an annular space around the inside of the header. Down through the centre of the header there is a long sleeve, making the inner surface of the annular air space. Through this sleeve there is a length of pipe, making a fairly snug joint, but which is removable. This pipe is notched at its lower end, providing radiating channels through which the oil is free to enter. The air pressure on the top of the oil from the annular air space of the header forces the oil downwards, and up through the central pipe, which has a hose connection to the top of the barrel to be filled. All the attendant has to do is to turn on the air pressure, the barrel automatically draining itself, and when convenient to the attendant, he can turn it off, remove, and replace with another barrel. The operation is much simpler than it would be if a hand pump were used. Along the front wall of this oil room, there is a bench for repair work, etc., one end being separated for the oil room attendant's desk.

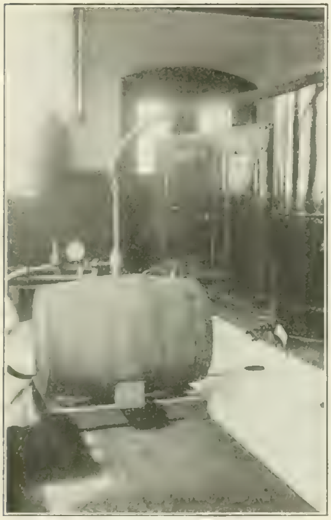

Fig. 2.—Filling Oil Storage Tanks.

The middle room is used for mixing, the tanks for this purpose being ranged along the rear wall as shown in fig. 3. These are simply large vats, each containing an air connection from the air pipe along the wall about 4 ft. above the vats. A jet of air bubbling up through the paint ingredients thoroughly mixes them. The ingredients are dumped in from the receptacles in which they arrive, in the proper proportions, and require no hand mixing. The amount of mixing required from this plant latterly has not been as great as heretofore, as liquid stocks are coming into more general use for the making of the paints, instead of powder. The mixed paints are drawn off from the bottom through faucets, as in the oil tanks, there being a painted drip trough below as in the former instance.

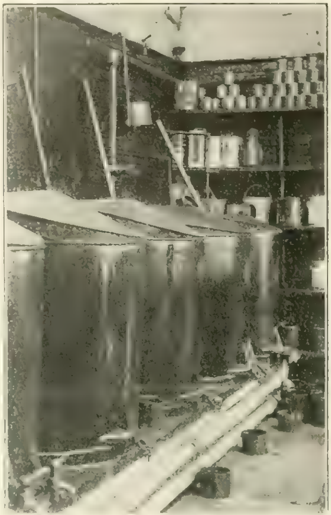

Fig. 3.—Paint Mixing Tanks.

Immediately in front of this row of mixing tanks there is a counter, carrying smaller mixing pots, and a paint stock pulverizer. This is immediately to the right of the central path through the oil house shown in the foreground in fig. 4. To the left in this illustration is the serving counter where the workmen receive their stock of paint and supplies. The serving portion of the room is entered from a door in the wall to the left. In the bins under this counter, there is kept the stock of white lead, powder, etc., each bin carrying a different product.

Fig. 5.—Workmen's Tool Record.

The system of keeping tab on all the tools issued from the oil and paint house centres on the tally board shown in fig. 5, located through the doorway as shown in fig. 4, on the end of the central rows of oil tanks in the oil room. This board is divided horizontally and vertically into blocks. Down the first column, there is a list of numbers, one for each of the painters on the payroll. At the head of each of the other columns, there is the name of the tool or tools issued, as for example, chamois, sponges, scrub brushes, paint cans, etc., every requirement of the men that it is possible to draw from stores being there recorded. Each morning, the painter is required to draw the supplies that will be required during the day, and in the block representing his number and the article drawn, there is inserted a peg in one of the four holes provided. If more than one of that particular article is drawn, a corresponding number of pegs is inserted in the block. Thus, 638 has drawn 1 chamois, 2 sponges, 2 scrub brushes, and water buckets. The supplies thus drawn at the beginning of the day must be returned the same night, leaving nothing of value that could be carried away lying around the shops. Ten minutes is allotted morning and night for this purpose. These supplies are kept in pigeon holes in the front of the counter to the rear of the serving counter.

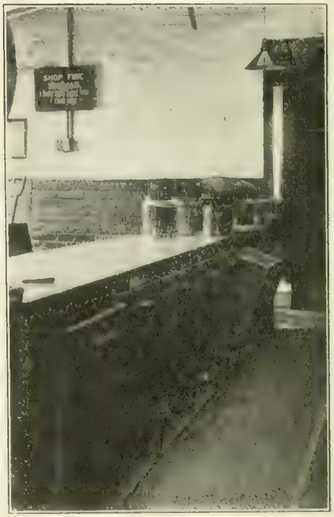

Fig. 4 Serving Counter and Stock Bins.

In the smallest room at the end opposite to the oil room, the rough stores that are in constant demand are kept. This is the only room of the lot that is not kept in a perfect condition at all times, but from the nature of the contents, and from the fact that considerable of the hand mixing is done there, it is impossible to keep it in the same condition as the other rooms.

In another building to the south of this end the inflammable materials, such as gasoline, are stored. This building is of concrete throughout, with vent holes a few feet above the ground. A division wall separates the building into two portions, the northern being for the purpose mentioned, and the southern being used for the storage of car stencils, which from their oily nature are very inflammable.

The whole oil and paint storage plant, considering the piecemeal evolution, is very complete, and handles the conditions admirably. The whole thing is handled by a single oil house man, showing the methodical manner in which it is laid out to make such a thing possible.

Railway Mechanical Methods and Devices.

Improved Link Motion Arrangement.

By M. Mahoney, Canadian Northern Quebec Railway, Joliette, Que.

It is often found necessary to redesign link motions to get away from the springing of the parts, inherent in the older designs. Where transmission bars are used, they have invariably to be set to clear the leading axle in connecting the link with the forward rocker. One arm of the forward rocker is usually set so that the transmission bar centre line, by means of pins, makes a 90 degree angle with the rocker arm, the object being to correct the distortion due to the angle the transmission bar makes with the motion centre line.

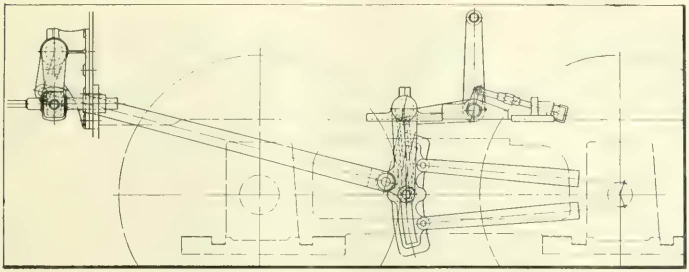

Fig. 1.—Proposed New Construction of Link Motion.

The gear arrangement shown in figs. 1 and 2 is a proposed redesign of an old gear. The diagrammatic view, fig. 2, shows the usual offset arm on the forward rocker, and a corresponding offset on the link rocker, imparting to the transmission bar a motion always parallel. The distortion in the angle of the transmission bar is thus corrected at both ends, instead of the usual correction at one end only. By doing this, a straight transmission bar is obtained, as by a combination of rocker arm lengths, the bar can be placed high enough to clear the forward axle without giving it any offset. An additional advantage lies in the fact that the usual long pin from the link block, providing bearing length for the rocker arm end and the transmission bar end, is shortened. Under this arrangement the transmission bar is attached to the link block pin in the manner indicated in fig. 1. The writer believes this construction is decidedly better than the usual transmission bar arrangement.

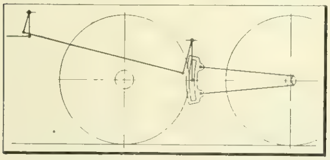

Fig. 2.—Diagrammatic View of New Construction.

Tests on driving spikes in bored holes of treated ties, show that the point should be tapered on four sides to drive centrally. The holding power is slightly decreased by boring before treating, and while the tie is more thoroughly permeated, the condition of the fibre to withstand splitting and crushing is not as good.

Drilling Retaining Rings at the Grand Trunk Railway Port Huron Shops.

In the machine shop at the G.T.R. car shops at Port Huron, Mich., one of the machines missed most is a radial drill, one of which they lack. In consequence, where it would be the practice in a great many places to do certain jobs on the radial, in these shops the upright drill must be used, and to make this possible, a great many different ingenious methods have had to be improvised to handle the work to the best advantage. Among these is the matter of drilling passenger car wheel centre and retaining ring bolt holes.

The jig used is shown in the accompanying illustration. On a heavy piece of plate, there is secured at a central point in the width a vertical pin. At four points equidistant from this centre, and radial thereto, are rollers, set into the surface of the plate to form a bearing for a wheel centre mounted on the plate. The left end of the plate is clamped to the drill table.

The wheel centre to be drilled is mounted on the plate over the central pin, resting on the four rollers. Over the pin to centre the wheel centre, there is slipped a tapered wooden plug, which bears out on the sides of the axle bore. On top of the wheel centre rim is placed a drilling jig. The table is swung around so that the drill spindle is over the left edge of the wheel centre, in which position the holes are drilled.

Jig for Drilling Retaining Rings on the Vertical Drill Press.

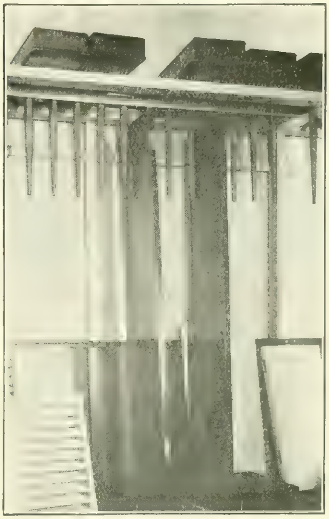
The same attachment is used for drilling the retaining rings. On the same pin centre, there is mounted a wooden ring frame, which centralizes the retaining ring, when the holes can be drilled to mate the wheel centre by the use of the drilling jig.

Using the vertical drill in this manner, it is claimed that equally rapid work can be performed as with a radial drill on the same kind of work. With a radial, the swinging arm must be changed in position each time, while with this attachment, the operator merely has to swing the centre or ring around on the roller bearings.

Varnished Door Drying Rack at Grand Trunk Railway Port Huron Shops.

In the G.T.R. shops at Port Huron, Mich., there is in use a rack for drying freshly varnished car doors in the varnishing room, that would appear to be a material improvement on existing practice.

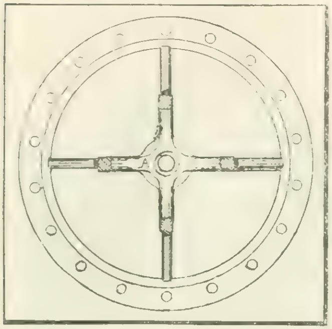
Projecting downward from a scantling located about a foot out from the wall, and at a spacing of about 4 ins., are tapered hardwood pins, the larger end in the scantling and the smaller end at the bottom. The object in such a construction is at once apparent. The freshly varnished doors, when placed in between these projecting tapered pins, can only have point contact with the pins at the top edge of the door, from the fact that each side of a pin presents a sloping surface, contact along which is impossible unless the bottom of the door be set over at a large angle. If stood upright, marring of the surface would be impossible. The door storage space in these varnish shops is quite considerable, two sides of the room being provided with racks of this type.



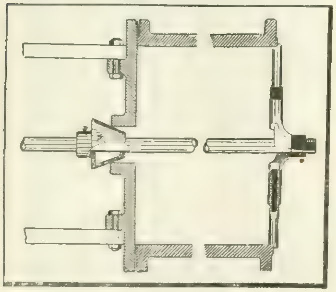
Rack for Drying Freshly Varnished Doors.

Setting Guides and Crossheads at the C.P.R. Montreal Shops.

The accompanying plans show a home made device for quick use in setting locomotive crosshead guide bars. A is the centre expander adjusted in the cylinder centre in the front end of cylinder, and can be readily proved to be in the centre by calipers or otherwise. B shows a tapering attachment, or cone, pressed as far as possible into the stuffing box in back end of cylinder. If the stuffing box is clean the cone is unerring in regard to the exact central position, and no time need be spent in further proof of the exact central location of the extending shaft. As is well known, a string is not only difficult of adjustment, but its flexibility is an abiding drawback to its reliability. With the device described, the best results may be obtained both in the perpendicular and horizontal adjustment of the guide bars. The dimensions of the parts of the device, of course, may be such as are readily adaptable to the sizes of the cylinders, but adjustable threaded ends on the front end appliance may readily give a range varying in several inches of diameters of cylinders.—J. G. Koppell, in Railway and Locomotive Engineering.



Cylinder Centring Device.



Centre Expander in Cylinder.

Reward for Automatic Train Stop.—A reward of $10,000 has been offered by the New York, New Haven & Hartford Rd., to the first inventor of "an automatic device that will safely arrest an express steam locomotive that has passed danger signals; the test of efficiency to be its adoption within 1913, 1914 or 1915, by the New Haven, the New York Central, or the Pennsylvania lines, and its approval or recommendation by the Interstate Commerce Commissioners."

Grinding in Air Brake Valve Seats at Grand Trunk Railway London Shops.

The accompanying illustration shows a simple outfit for grinding air brake valve seats, a method employed in the air brake department of the G.T.R. car shops at London, Ont. On the end of one of the benches there is rigged up a vertical support to which is attached an air motor, the spindle of which is fitted to carry the valve that is to be ground to the valve seat. The casting containing the valve seat is held under the revolving spindle by the operator, who moves it up to and away from the valve intermittently, to grind a good seat. Only the smaller valves are ground in, in this manner, a larger machine, specially designed, being employed for the larger sizes.

The air connection comes from the pipe above, and along the horizontal piping over the top of the motor, entering through the handle from the left. The twisting handle valve is not employed, as it has been found to close from the vibration of the machine when the operator is attending to the grinding. This valve is blocked open, and an air cock introduced, to be opened and closed without trouble from shifting.

Stand for Grinding in Air Brake Valve Seats.

The pipe in the right foreground has a short connection near the level of the table for the testing of angle cocks for leakage, etc. On the other side of the table, in the left background, the pipe terminates in a small pet cock, used for cleaning dirty valves, etc., by blowing a blast of air through.

Station and Other Buildings on the National Transcontinental Railway.

Contracts were let by the National Transcontinental Railway Commission during the past year, for the building of 59 station buildings of design A; three stations of design D; four ice houses, four store houses, three freight houses, three trainmen's houses, 59 tool houses, no 1; four tool houses, no. 2, and 59 coal boxes. The location of these several buildings is as follows:—

Section 13, district A.—Ice house, store house, no. 1 tool house. Sec. 14, district B. —11 design A station, 10 of which are to be fitted for bunks; 11 no. 1 tool houses and 11 coal boxes. Sec. 15, district B.—5 design A stations fitted for bunks; 1 design B station; ice house, store house, freight house, trainmen's house, 5 no. 1 tool houses and 5 coal boxes. Sec. 16, district D.—10 design A station fitted with bunks, 10 no. 1 tool houses and 10 coal boxes. Sec. 17, district E.—25 design A stations, 18 to be fitted with bunks; 2 design A stations, two ice houses, two storehouses, two freight houses, two trainmen's houses, 27 no. 1 tool houses, 2 no. 2 tool houses, and 25 coal boxes. Sec. 18, district F.—8 design A stations, 6 being fitted for bunks; 5 no. 1 tool houses, 2 no. 2 tool houses, and 8 coal boxes.

Following are some details of each of these buildings:—

DESIGN A STATION BUILDING.—This is a 1½ story frame building, on concrete foundations, and without cellar, 51½ by 16 ft. outside dimensions, with a kitchen to the rear, 14½ by 12 ft. On the ground floor of the main building are:—waiting room, office, living room, agent's bedroom, and baggage room. This latter is in some cases to be used as a bunk room. The upper floor has three bedrooms, reached by a stairway from the kitchen. Stoves are used for heating.

DESIGN D STATION BUILDING.—This building is used only at divisional points, and is a full two story frame building 130½ by 30 ft., on concrete foundations, and with concrete cellar. On the ground floor are:—lunch room and kitchen, general waiting room, women's waiting room, office, conductors' and trainmen's room, baggage room and lavatories. On the upper floor are 10 office rooms and toilet room. The building is heated by steam, lighted by electricity, and finished inside with plastered wall and hardwood trim in natural wood finish.

ICE HOUSE.—This is of wood, resting on sills and having double walls, the spaces being filled with sawdust. Dimensions, 59 by 24 ft. outside measurements. Capacity, 600 tons.

STORE HOUSE.—This is a one story brick building with concrete foundations and basement, and concrete oil storage room at the end. The dimensions over all are 74½ ft. by 20 ft. 2 in., the oil storage having accommodation for 10 oil tanks. The store house proper has a tar and gravel roof, and the oil storage a concrete roof. The building is fitted with steam heating and electric light.

FREIGHT HOUSE.—A one story frame building supported on piles, dimensions 60 by 28 ft., and consisting of an office, perishable freight room and freight storage room. The roof is of tar and gravel; the outside walls are battened, and the freight room walls are covered inside to a height of 5 ft. with 1½ in. plank. It is electrically lighted, and heated by stoves, storage for coal being provided in a bin underneath.

TRAINMEN'S HOUSE. This is a two story frame building, 37 ft. 4 in. by 39 ft. outside dimensions, on concrete foundations, with concrete basement, and tar and gravel roof. The basement contains furnace room, for heating the building, wash rooms, lavatories and dressing room, fitted with shower baths and basins with hot and cold water attachments. On the ground floor is a recreation room, a living room and two bedrooms, while on the upper floor are 20 bunk rooms with lavatories and closets. There is a two story verandah at the front, supported on concrete piers and roofed over.

TOOL HOUSES. These consist of frame buildings supported on pile heads, no. 1 being 12 by 10 ft.; and no. 2, 12 by 25 ft.

COAL BOX.—This is of 2 in. plank, and has a capacity of 10 tons. Its dimensions are 11 ft. by 7 ft. by 6 ft.

The Casting of a Locomotive Frame.

The advent of the cast steel locomotive frame into general use in the last decade, bringing with it the use of cast steel parts throughout the locomotive construction, has resulted in a wonderful expansion in the steel industry from a railway standpoint. The former method of building up a wrought iron frame by forging is familiar to all locomotive men; but very few have more than a passing knowledge of the initial stages through which a cast steel frame proceeds before it reaches the machine shop, the place where the majority make their first acquaintance with the cast steel frame. In consequence, it is believed that a brief description of the stages through which the frame passes before reaching the machine shop will not only be appreciated but will also be of value in leading to a proper understanding of the care and attention required before the production of the frame is possible. The information contained in this article was obtained at the Canadian Steel Foundries' new plant at Longue Pointe, Montreal, from Wm. Cox, Foundry Superintendent.

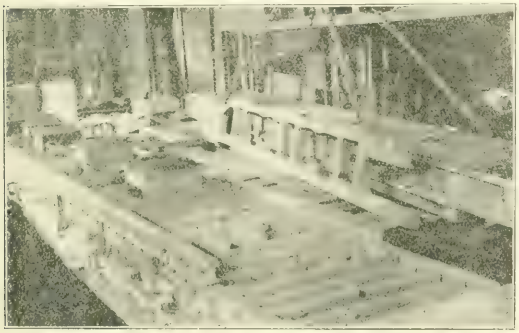


Fig. 1.—Cope and Flask with Drawn Pattern, and Mould ready to Pour.

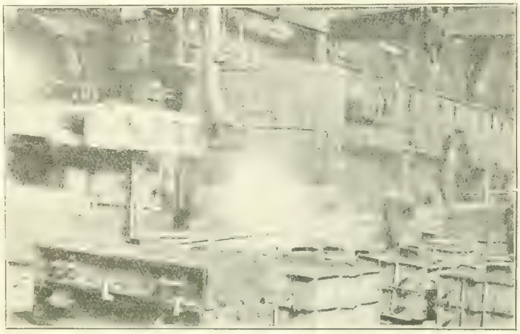

Fig. 2.—Pouring a Cast Steel Locomotive Frame.

The point that impresses the writer most forcibly is the striking difference in weights between the casting as it comes from the mould, and the same casting as it is finally ready to be built into the locomotive; the latter is less than half the original weight. Consideration of the various steps in the production of the frame will explain the reasons for the big difference. As a typical example, the frame for a small six wheel switching engine has been selected for descriptive purposes, it being the intention to follow this frame through from the pattern state to the time when it is ready for delivery to the machine shop.

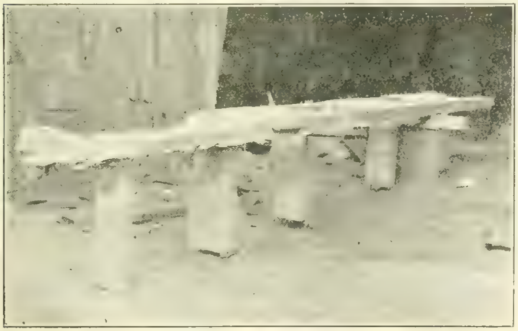

Fig. 3.—Frame Immediately after being Cast.

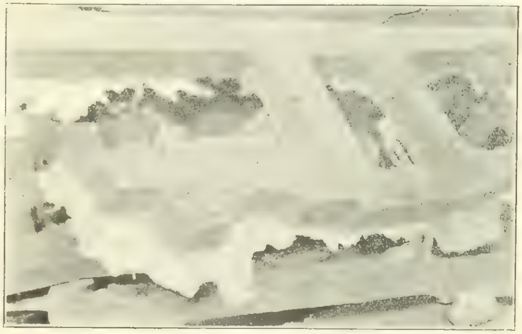

Fig. 4.—Section of Frame, Showing Test Bar.

There is nothing unusual about the pattern, other than the fact that the axle box opening has a cross brace at the bottom to prevent the top rail from warping the frame out of shape while cooling. The shrinkage is thus equalized top and bottom. The pattern shown in fig. 1, standing against the cope, has just been drawn from the sand of the mould. The mould is entirely contained in the flask, the cope presenting a smooth surface. A special grade of sand is used, and while being introduced into the mould is thoroughly rammed—to a greater degree than is necessary for cast iron. When the flask is filled, and rammed full to the level of the top of the flask, the surface is treated with a layer of separating sand, and the cope placed on top and similarly rammed full of sand. At the outer end of the slabbed portion of the frame, the pouring gate is located, with four risers or sprue holes at intervals along the length of the frame.

The construction of the cope and flasks that hold the moulds is in itself rather interesting, being of an exceptionally good design. The handling of moulds for long thin castings, is a more or less difficult task unless both cope and flask are particularly solid, for on account of the great length the whole sags in the centre. This precludes the use of wooden mould boxes. The moulds used are built up of cast steel sections, three lengths being joined along each side to form supporting beams. These side pieces are cast in channel beam sections, with outwardly projecting flanges. The shape is shown in fig. 1, but the method of joining up may best be seen in fig. 2, the pouring operation. Sagging is undesirable, as it tends to break the sand of the mould in addition to warping the resultant casting.

The flask, with contained mould, is lifted by a crane and carried across to an oven car, on which it is subjected to a surface treatment before it is baked. The surface treatment consists in filling the surface of the mould with long wire nails, closely spaced, especially along the edges of the mould where the sand is liable to break down from the rolling action of the molten metal traversing the mould. The nailed surface of the mould is next treated with a heavy saturation of molasses and water. Following this treatment of the flask, the cope is carried across and placed on top of the flask and treated in a like manner. The two are then placed in the oven for a thorough baking. The resultant mould must be much harder and more solid than for cast iron moulds. Following the baking of the moulds, the halves are secured together as shown to the left in fig. 1. Gates, as indicated, are built up around the pouring hole and risers.

Next in order comes the pouring of the mould, illustrated in fig. 2. One of the foundry cranes carries a 10 ton, bottom pouring ladle over to the pouring gate. The ladle gate being drawn, the mould is slowly filled from one end. As the molten steel finally creeps up the last riser, a signal is given for the pouring to stop, the ladle then proceeding along the mould to fill up each of the risers in order that a uniform liquid pressure may be presented through the full length of the casting, absorbing the liquid contraction while setting.

In from 10 to 15 minutes, the casting will have set sufficiently to permit of loosening the clamps which hold the cope and flask together. This is partially done to break up the mould sand in the frame openings. On further setting, the cope is loosened still more, and is finally removed entirely, the frame being left in this condition to cool. Its appearance on leaving the mould is shown in fig. 3; where it is shown inverted. The nearest projecting lug is the pouring sprue, the other four being risers. The amount of fins left, and the bulk of metal left to form struts in the journal spaces are shown to good advantage in fig. 4.

Kind of Steel	Analysis Carbon	Phosphorous	Manganese	Sulphur	Silicon	Vanadium	Elastic limit per sq. in.	Tensile strength per sq. in.	Elongation %	Reduction in area %
Vanadium	0.23	0.031	0.72	0.035	0.30	0.180	47,500	80,000	27	47.6
	[illegible]	[illegible]	0.66	0.029	0.33	0.175	47,[illegible]	80,000	27	53.5
Ordinary	[illegible]	[illegible]	0.73	[illegible]			37,750	72,000	30	44.1
	[illegible]	[illegible]	[illegible]	[illegible]			40,500	71,000	30	49.0

In this condition, fresh from the moulds with the sand removed, the casting weighs 5,380 lbs.

At two locations on the frame, short test bars, one of which is shown at the rear of the projecting rail in fig. 4, are cast integral with the frame. These are afterwards sawn off and subjected to various physical and chemical tests to determine whether they meet the required specifications.

Mounted as in fig. 3, the projecting fins are chipped off with air hammers, and the sand clinging tendency peculiar to steel castings, removed by the same means, leaving the casting clean. The casting is then removed to the cold cutting off saw, where the risers, test pieces and temporary struts are sawn off. The cleaned casting at this point, ready for delivery to the machine shop, weighs 3,670 lbs.

The casting next goes to the annealing oven, which is a long shallow pit, temporarily arched over during heats with brickwork. This is filled with castings, and a temperature of about 900 degs. F. maintained for several hours, temperature being taken by instruments. This produces a uniformly soft casting, at the same time removing the chill strains set up by unequal rates of cooling.

Next, the casting goes to the blacksmith shop, where under the steam hammer, heated if necessary, the frame is straightened and put in shape for machining.

In the machine shop it is subjected to the usual series of operations, successively on the planer, slotter and drill, still further reducing the weight to 2,560 lbs.

A summary of the weights at the different stages of completion is as follows: Immediately following casting, 5,380 lbs.; cleaned, 3,670 lbs.; and finished, 2,560 lbs. An examination of these figures shows what a large bulk enters into the production of a light frame. The finished product is less than half the weight of the initial casting.

Recently, there has been given a decided impetus to the use of the cast steel frame by the use of vanadium. Some tests made at the Canadian Steel Foundries' plant are given in the accompanying table, and show the remarkable superiority of vanadium steel to ordinary cast steel, the difference being almost as marked as that which exists between the old wrought iron and the more recently developed ordinary cast steel frame. With the use of vanadium in the frame, a big forward stride has been made.

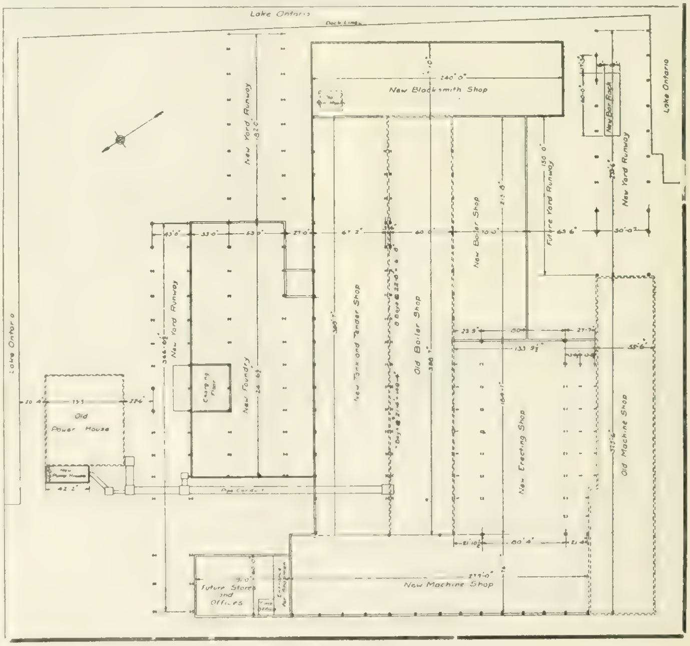
The Canadian Locomotive Company's New Plant.

An idea of the radically different layout of shops at the Canadian Locomotive Co.'s plant at Kingston, Ont., as at present being changed, may be gathered from the accompanying plan. On the completion of the buildings there shown, the whole plant will be essentially new, as while three of the buildings are shown as being old, the only one of these three that goes back 10 years is the machine shop to the right, completed some few years ago. The power house has only been in operation about eight years, and the old boiler shop less than two years old, so that with the new shops, the plant will be almost entirely new throughout, replacing the antiquated buildings with which the company has heretofore been compelled to do business.

The whole area shown in the plan has been more or less covered with a miscellaneous collection of old stone buildings, scarcely adapted to the work done, except under adverse conditions of operation. The problem presented was that of removing these old buildings, and replacing them with newer ones without interfering with the locomotive construction work. This is being accomplished by razing the old buildings one at a time, and on the cleared site, erecting the new ones. This work was commenced on the buildings to the north of the boiler shop, first erecting the new tank and tender shop on cleared ground, and then the foundry. Following this will come the construction of the new erecting shop, to replace the one on the site of the new machine shop, at the lower end of the old boiler shop. On the outer end of the pier on which the plant stands will next be erected the new blacksmith shop, to house the older one standing on the ground of the new erecting shop. This will be followed by the new boiler shop (an addition to the present one). Next in order comes the new machine shop and offices, replacing similar but smaller structures on the present site. All these buildings are to be of steel construction throughout.

The convenience of the layout is at once apparent. Every building will be in open communication with all the others. In addition, it will be noted that the focal point of construction is the erecting shop, about which every building in the plant is arranged, all the parts feeding directly into that final point.

The general design for these buildings has been worked out by the firm of Henry Goldmark, consulting engineers, New York; all details regarding buildings and their equipment, and the construction work, have been carried out under the personal supervision of C. J. Goldmark, of that firm.



Rebuilt Plant of Canadian Locomotive Co.

The effect of vanadium in plain carbon steel castings is said to be to increase the elastic limit about 30%, giving a much higher proportion of available strength for the same ultimate strength. Moreover, it increases the power of the castings to withstand repeated and alternating stresses fully 50%.

Orders by Board of Railway Commissioners.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

18281. Dec. 9.—Rescinding order [illegible], June 24, defining express delivery and collection limits for Montreal, and establishing collection and delivery limits in Montreal, Westmount and Maisonneuve.

18282. Dec. 11.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to divert road allowance at mileage 91.18 and cross same at grade at mileage 91.30 from Glentay, Ont.

18283. Dec. 12.—Amending order 17784, Oct. 17, re removal of spur at Tamarack station, B.C., by Nelson and Fort Sheppard Ry. (G.N.R.).

18284. Dec. 12.—Authorizing Canadian Northern Ontario Ry. to build bridge over Wistiwasing river (first crossing), Chisholm tp., at mileage 204.53 from Ottawa.

18285. Dec. 10.—Authorizing Canadian Northern Quebec Ry. to build across public road in lot 29, con. 3, Arundel tp., Que., by structure carrying highway over track.

18286. Dec. 12.—Approving British America Express Co.'s standard mileage tariff of maximum tolls for merchandise, C.R.C. 1, to take effect Jan. 1, 1913.

18287. Dec. 13.—Ordering C.P.R. to build public crossing over its Sault Ste. Marie branch, at Espanola station, Ont., 150 or 200 ft. west of existing private crossing.

18288. Dec. 9.—Approving Montreal and Southern Counties Ry. location, from cadastral lot 264, to Central Vermont Ry., on cadastral lot 203, St. Antoine de Longueuil parish, Que., 2¼ miles.

18289. Dec. 10.—Authorizing Canadian Northern Ry. to build across public road between secs. 11 and 14, tp. 21, r. 20, w. 2 m., on its Craven northeasterly line, Sask.

18290. Dec. 13.—Rescinding orders 16838 and 17970, June 20 and Nov. 5, re Canadian Northern Ontario Ry. crossing of C.P.R., near Ottawa.

18291, 18292. Dec. 13.—Authorizing C.P.R. to build spurs for McColl Bros. & Co., Montreal, and for Coquitlam Terminal Co., Coquitlam, B.C., connecting the latter with main line.

18293. Dec. 13.—Authorizing C.P.R. to build spur into Pickerel river Indian reserve, Parry Sound district, Ont.

18294. Dec. 14.—Authorizing C.P.R. to open for traffic its second track from Secretan to Walker, mileage 44.9 to 43.

18295. Dec. 14.—Authorizing C.P.R. to use bridges 53.7 and 65.6, Crowsnest subdivision, B.C.

18296. Dec. 13.—Amending order 18106, Nov. 22, by substituting Vancouver, Victoria and Eastern Ry. and Navigation Co. for Vancouver, Westminster and Yukon Ry. in second line of operative part.

18297. Dec. 13.—Approving, temporarily, Kootenay and Alberta Ry. standard passenger tariff of maximum local passenger fares, C.R.C. 1, to take effect Jan. 1.

18298. Dec. 14.—Ordering G.T.R. to file, on or before May 1, 1913, plans of proposed station and facilities at Jordan, Ont.

18299. Dec. 14.—Ordering C.P.R. to appoint permanent agent at Niverville station on or before Feb. 1, 1913.

18300. Dec. 14.—Authorizing C.P.R. to open for traffic its second main track from north of G.T.R. diamond crossing at St. Johns, Que., to St. Johns station, 1 mile.

18301. Dec. 14.—Authorizing C.P.R. to cross, with its third track, West street, Chatham, Ont.; and reserving for further consideration the installation of gates.

18302. Dec. 14.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to build across 20 highways, mileage 68.30 to 130, Alta.

18303. Dec. 14.—Authorizing C.N. Ontario Ry. to build across public road between lots 8 and 9, con. 2, Gibbons tp., Ont.

18304. Dec. 14.—Approving Edmonton, Dunvegan and British Columbia Ry. location from north boundary of sec. 23-62-67, w. 2 m., mileage 68.30, to east side of Athabasca river, sec. 15-71-1, w. 5 m., mileage 130, Alta.

18305. Dec. 16.—Approving Alberta Central Ry. location from mileage 73.3 to 100, west of Red Deer.

18306. Dec. 14.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to build across 3 highways, mileage 111.35 to 129.8, Alta.

18307. Dec. 14.—Authorizing C.N. Quebec Ry. to build siding for Donnacona Paper Co., Les Ecureuils parish, crossing public road on lot 80.

18308. Dec. 16.—Approving Canadian Northern Ry. plans showing standard trestle work to be used west of Port Arthur, Ont.

18309. Dec. 14.—Approving location G.T. Pacific Ry.'s station at mileage 404, east of Prince Rupert, B.C.

18310, 18311. Dec. 14.—Authorizing C.P.R. to build spurs for Guelph Stove Co., Guelph, Ont., and Alberta Linseed Oil Mills, Medicine Hat, Alta.

18312 to 18314. Dec. 16.—Approving Esquimalt and Nanaimo Ry. detail plans of bridges 39.9 over Trent river, and 8.5, and authorizing it to build bridges 3.4 over French creek, and 15.5 over Big Qualicum river, on its Comox extension, Vancouver Island, B.C.

18315. Dec. 14.—Authorizing C.N. Ontario Ry. to build across and divert public road between cons. 1 and 2, Pembroke tp., mileage 83.10 from Ottawa.

18316. Dec. 18.—Establishing collection and delivery limits for Dominion Ex. Co., in Blind River, Ont.

18317. Dec. 16.—Authorizing Canadian Northern Ry. to build across and divert public road between sec. 34, tp. 28, r. 7, and sec. 3, tp. 29, r. 7, w. 4 m., on its Goose Lake extension, Alta.

18318. Dec. 16.—Authorizing Provincial Natural Gas and Fuel Co., of Ontario, to lay gas pipe under G.T.R., near Stevensville station.

18319, 18320. Dec. 16.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to build across 16 highways in Alberta.

18321. Dec. 16.—Authorizing C.P.R. to revise grade of existing main line at approaches to G.T. Pacific Branch Lines Co.'s Melville-Regina branch grade crossing, Regina, Sask.

18322. Dec. 17.—Amending order 18002, Nov. 13, re Canadian Northern Ry. building across C.P.R. in Moose Jaw, Sask.

18323. Dec. 16.—Authorizing construction of subway at Eleventh avenue, Moose Jaw, Sask.

18324. Dec. 16.—Approving location of C.P.R. Suffield-Kipp branch from sec. 29-13-13, to sec. 9-13-17, w. 4 m., from mileage 32.85 to 57.45, and authorizing building of same across 24 highways.

18325. Dec. 16.—Authorizing C.P.R. to build its Lacombe easterly branch across 7 highways, mileage 149.20 to 153.69, Alta.

18326. Dec. 16.—Authorizing Clarence tp., Ont., to build road allowance across C.P.R. Montreal and Ottawa branch, between cons. 1 and 2, mileage 58.86.

18327. Dec. 16.—Authorizing G.T.R. to build two sidings for De Laval Dairy Supply Co., Peterboro, Ont.

18328. Dec. 16.—Authorizing C.P.R. to open for traffic its second main line, Cascade subdivision, B.C., between Vancouver and Westminster Jct., 16.44 miles.

18329. Dec. 14.—Authorizing C.P.R. to build its Pheasant Hills branch across highways in Sutherland, Sask., from mileage 206.11 to 317.15.

18330. Dec. 16.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to build across and divert highway in sec. 19-54-24, w. 4 m., by means of overhead crossing.

18331. Nov. 18.—Authorizing city of Saskatoon, Sask., to carry its municipal railway across C.P.R. at avenue H.

General order 99, Dec. 18.—Disallowing special tariffs of railway companies, effective dates of which were postponed to and including Dec. 31, by orders 17911, 18088 and 18153, Nov. 6, 21 and 30, and in lieu thereof the companies may make effective on statutory notice, special tariffs chargeable for cartage at points in eastern Canada where cartage services are rendered by said companies, which shall not exceed 2½c. per 100 lbs., provided a minimum toll be charged for any single complete shipment not to exceed 15c.

18332. Dec. 19.—Approving Hudson Bay, Peace River and Pacific Ry. location, from sec. 15-18-9, e.p.m., mileage 62.9, to mileage 70.9 from Winnipeg in unsurveyed territory.

18333. Dec. 17.—Authorizing National Transcontinental Ry. and Canadian Northern Ry. to operate trains over crossing, without first stopping, at mileage 246, St. Boniface, Man.

18334. Dec. 17.—Extending, for three months from Jan. 2, 1913, time within which Esquimalt and Nanaimo Ry. may complete spur for Swift Canadian Co., Victoria, B.C.

18335. Dec. 18.—Authorizing C.P.R. to build two spurs for Beaver Co. in Hull tp., Que.

18336. Dec. 18.—Authorizing Vancouver and Lulu Island Ry. to open for traffic its second track between Granville street, Vancouver, and 24th avenue, Point Grey, B.C., about 2¼ miles.

18337. Dec. 18.—Extending, to May 30, 1913, time for completion of spur from Winnipeg to Humberstone coal mine, by G.T. Pacific Ry., authorized by order 17827.

18338. Dec. 18.—Authorizing G.T. Pacific Branch Lines Co. to build highway across its Prince Albert branch, at mileage 23.9, Saskatoon district, Sask.

18339 to 18341. Dec. 17, 18.—Authorizing Canadian Northern Ry. to build across public road between sec. 19-2-6, and sec. 24-2-7, w. 2 m., on its Bienfait to Estevan line; to build across and divert public roads in n.e. ¼ sec. 33-33-9, w. 3 m., on its Goose Lake extension, and between secs. 9 and 10, tp. 65, r. 22, w. 4 m., on its Morinville branch.

18342. Dec. 28.—Approving supplement 11 to Express Classification 2, for use of express companies subject to the Board's jurisdiction.

18343. Dec. 13.—Dismissing complaint of J. B. McGugan, Kronau, Sask., against C.P.R., alleging discrimination in [illegible] Kronau and [illegible]

18344. Dec. 18.—Ordering Dominion Atlantic Ry. to install, within four months, an automatic electric bell at crossing of public road east of Weyburn station, N.S.

18345. Dec. 19.—Authorizing C.N. Ontario Ry. to operate trains, [illegible] over C.P.R. crossing, near Chaudiere Jct., Que.

18346. Nov. 12.—Authorizing restricted collection and delivery limits of express companies in Port Arthur, Ont.

18347. Dec. [illegible].—Authorizing T.H. & B.R. to build spur through Canada Steel Co.'s lands, Hamilton, Ont.; and to operate it jointly and on equal terms with G.T.R.

18348, 18349. Dec. 20.—Authorizing Canadian Northern Ry. to build spur to exhibition grounds, Brandon, Man., and to build across and divert Main St., Moose Jaw, Sask., and to cross Moose Jaw creek and a private road, all overhead.

18350. Dec. 19.—Authorizing C.N. Ontario Ry. to divert public road in lots 3 and 4, r. 2, Credit Indian reserve, Toronto tp.

18351 to 18353. Dec. 20, 19.—Authorizing G.T.R. to build sidings for Beardmore & Co., Acton; Beachville White Lime Co., Oxford tp.; and Davies Co., York tp., Ont.

18354, 18355. Dec. 20.—Approving C.P.R. plans showing location of station and siding proposed at St. Francois de Salle, Que., and plan A, showing revision of grade and subway proposed at Dundas St., Woodstock, Ont.

18356. Dec. 23.—Authorizing C.P.R. to use for construction purposes only, crossing where its third main track crosses Jacques Cartier Union Ry., Lachine parish, Que.; and approving plan of temporary protection.

18357. Dec. 21.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge 34.4 over Third Depot Lake, near Parham, Ont.

18358. Dec. 23.—Approving location of C.N. Ontario Ry. station grounds at mileage 305.19, Blueface, Sudbury district, Ont.

18359. Dec. 21.—Authorizing Canadian Northern Ry. to build across 7 highways on its Craven northeasterly line, Sask.

18360. Dec. 23.—Extending to June 1, 1913, time within which Atlantic, Quebec and Western Ry build crossings, culverts, and drains along its railway.

18361. Dec. 16.—Authorizing C.P.R. to build across Nairn St., Winnipeg, one additional track each on its north and south main lines, crossing to be protected by day and night watchmen.

18362. Dec. 16.—Authorizing G.T.P. Branch Lines Co. to open for traffic its Regina-Moose Jaw branch from mileage 0 to 34.7; and ordering that the line be fenced before June 1, 1913.

18363. Dec. 20.—Approving crossings of Front and Overend streets, Toronto, by subways, city to pave Mill St. from Cherry St. to Overend St.

18364. Dec. 21.—Ordering G.T. Pacific Ry. to cut off top of hill on south side of N. Gilmour's farm crossing, Moose Jaw, Sask., and improve grade.

18365. Dec. 20.—Dismissing application of city of Winnipeg for order requiring C.P.R. to remove spur track connecting with its Winnipeg Beach branch, St. John parish, and along Jarvis Ave., with its main line spur.

18366. Dec. 21.—Authorizing city of Edmonton, Alta., to open up Muskoka Ave., across Canadian Northern Ry.

18367. Dec. 21.—Rescinding order 11224, July 19, that C.P.R. remove fence placed across crossing A, between secs. 7 and 18, and 8 and 17, 9-25 w. 4 m., Alta., and carry out Standard Regulations Affecting Highway Crossings, as amended May 1, 1910.

18368. Dec. 21.—Authorizing C.P.R. to open original road allowance, known as Twelfth St., and dismissing application of town of Blairmore, Alta., for order requiring C.P.R. to build crossing at Eighth Ave.

18369. Dec. 21.—Authorizing Pleasant Valley municipality 288, Sask., to build crossing over C.P.R. between secs. 7 and 8, and 7 and 18, [illegible] 18, w. 3 m.

18370. Dec. 21.—Authorizing Regina, Sask., municipal railway to use C.N.R. crossing on Dewdney St., east of Albert St., and amending order [illegible], July 21, 1911.

18371. Dec. 24.—Authorizing G.T. Pacific Ry. to carry traffic over its main line in British Columbia between South Hazelton and New Hazelton, mileage 176.8 to 181.

18372. Dec. 23.—Authorizing C.N. Saskatchewan Ry. to cross G.T. Pacific Branch Lines Co.'s line, north of distant signal on latter line, and dismissing application to cross at point applied for.

18373. Dec. 17.—Authorizing Toronto Suburban Ry. to build across G.T.R. in Esquesing tp., Ont.

18374. Dec. 23.—Ordering Canadian Northern Ry. to macadamize approach and roadway under subway trestle work and erect fence in accordance with Railway Act, on west side of opening ae each end of subway for 300 ft., at Main St., Emerson, Man.

18375. Dec. 23.—Ordering G.T.R. to cut down trees on south side of crossing at 3rd and 4th

Steam Railway Statistics for Year Ended June 30, 1912

In the following table the column headed gross earnings includes passenger and freight earnings, as well as miscellaneous earnings; the latter not being shown separately; the next four columns give the operating expenses classified under their various headings, while the last gives the net earnings, which are arrived at by deducting the totals of the four columns referred to from the figures in the gross earnings column. The minus mark (—) before figures in the net earnings column shows that there was a deficit in the operations of the line to the extent of the figures given. The numbers in brackets—thus (1)—after the name of the railway refer to notes on page 68. The cents have been omitted in all cases, and the figures in the totals show the aggregate earnings, etc., including the cents, omitted from the detailed items.

Name of Railway	Mileage	Passenger Earnings	Freight Earnings	Gross Earnings	Maintenance of Way and Structures	Maintenance of Equipment	Traffic and Transportation Expenses	General Expenses	Net Earnings

Notes to Steam Railway Statistics.

(1) The Algoma Central Ry. and the Algoma Eastern Ry. (formerly known as the Manitoulin and North Shore Ry.) are owned by the Lake Superior Corporation. The A. E. Ry. has trackage rights over 3.25 miles of C.P.R. lines.

(2) The Atlantic, Quebec and Western Ry. was once known as the Baie des Chaleurs Ry. It has 1.75 miles of trackage rights over another company's line.

(3) Mackenzie, Mann and Co. Ltd. interests own or control and operate the following railways: Bay of Quinte Ry.; Brockville, Westport and North Western Ry.; Canadian Northern Ry.; Canadian Northern Ontario Ry.; Canadian Northern Quebec Ry.; Central Ontario Ry.; Halifax and South Western Ry.; Inverness Ry. and Coal Co.; Irondale, Bancroft and Ottawa Ry.; Quebec and Lake St. John Ry. and Schomberg and Aurora Ry.

The Bay of Quinte Ry. has trackage rights over 19 miles of another company's lines. The Central Ontario Ry. operates the Marmora Ry. and Mining Co.'s line (formerly known as the Ontario, Belmont and Northern Ry. The Toronto-Ottawa section of the C.N.O.R. connects with the Central Ontario Ry. at Trenton, and runs over the B. of Q. Ry. between Deseronto and Sydenham. The Irondale, Bancroft and Ottawa Ry. connects with the Central Ontario Ry. near Birds Creek. The Canadian Northern Ontario Ry. has trackage rights over 3.80 miles into Toronto Union Station.

The Halifax and South Western Ry. mileage includes the Nova Scotia Southern Ry., the Central Ry. of N.S., the Halifax and Yarmouth Ry. and the Liverpool and Milton Ry. It has traffic rights over 2.30 miles of the Intercolonial Ry. into Halifax.

The Canadian Northern Ry. mileage includes 3,672.22 miles of main line and branches, in Ontario, Manitoba, Saskatchewan and Alberta; the Manitoba Ry. including the Northern Pacific and Manitoba Ry., Winnipeg Transfer Ry., Portage and North Western Ry., Waskada and Northeastern Ry., 350.68 miles leased from the Province of Manitoba, and the Qu'Appelle, Long Lake and Saskatchewan Ry. Of the total mileage 397.72 miles are operated under lease, and 250.02 miles under contract. The Canadian Northern Quebec Ry. has 0.80 miles of second track, and has trackage rights over 58.60 miles of the lines of other companies.

(4) The Bedlington and Nelson Ry., the Brandon, Saskatchewan and Hudson Bay Ry., the Crows Nest Southern Ry., the Midland Ry. of Manitoba, the Midland Great Northern Ry., the Nelson and Fort Sheppard Ry., the New Westminster Southern Ry., the Red Mountain Ry., the Vancouver, Victoria and Eastern Ry., the Victoria and Sidney Ry., and the Victoria Terminal Ry. and Ferry Co. are owned by the Great Northern Ry., U.S.A. The several lines have trackage rights over other companies' lines as follows:—Bedlington and Nelson Ry., 8.67 miles; Manitoba Great Northern Ry., 0.99 mile; Midland Ry. of Manitoba, 69,.02 miles; Nelson and Fort Sheppard Ry., 5.42 miles; New Westminster Southern Ry., 1.48 miles; Vancouver, Victoria and Eastern Ry., 1.48 miles.

(5) The British Yukon Ry. is the Canadian section of the line operated as the White Pass and Yukon Route, connecting with steamboats on the Yukon River to Dawson, in the summer, and with stages in the winter.

(6) The Intercolonial Ry. mileage includes the old Canada Eastern Ry., 125.08 miles, the Fredericton and St. Marys Ry. bridge, and the Nova Scotia Steel and Coal Co.'s line; its mileage does not include the Windsor branch, which it owns but leases to the Dominion Atlantic Ry. It has 26.70 miles of second track, and has trackage rights over 77.90 miles of other companies' lines.

(7) The C.P.R. mileage includes 6,740 miles of main lines and branches owned; 3,972.30 miles of leased and proprietary lines, and lines operated under contract. It has 754.20 miles of second track, and has trackage rights over 37.30 miles of the lines of other companies. Its traffic returns include the figures relating to the Esquimalt and Nanaimo Ry., and whatever traffic there has been over the Kaslo and Slocan Ry., which it took over during the year, and which it is now reconstructing as a standard gauge railway. The lines operated by the C.P.R. include the Montreal and Atlantic Ry., and the Alberta Ry. and Irrigation Co., which report separately. The Montreal and Atlantic Ry. has 6.40 miles of second track, and a leased line—Lake Champlain and St. Lawrence Jct. Ry. The Alberta Ry. and Irrigation Co. owns the lines formerly owned by the Alberta Ry. and Coal Co. and the St. Marys River Ry., and has trackage rights over 1.60 miles of the C.P.R.

The Dominion Atlantic Ry., which is controlled by the C.P.R., includes the old Windsor and Annapolis Ry., the Yarmouth and Annapolis Ry., the Cornwallis Branch, the Midland Ry. of Nova Scotia, and Windsor Branch of the Intercolonial Ry., which is operated under an agreement. It has trackage rights over 14.42 miles of the Intercolonial Ry. into Halifax.

The Kingston and Pembroke Ry. is also controlled by the C.P.R. Its passenger and freight earnings in columns 3 and 4, are in excess of the gross earnings given in column 5, which figure is arrived at by deducting $1,405.90, which is marked "Cr." in another column in the statistics headed "other earnings from operation."

The C.P.R. also owns, with the New York Central and Hudson River Rd., the Toronto, Hamilton and Buffalo Ry.

(8) The Caraquet Ry. mileage includes the Gulf Shore Ry., 16.78 miles, which is operated under lease.

(9) The Cumberland Ry. and Coal Co.'s line, formerly known as the Springhill and Parrsboro Ry., together with the Sydney and Louisburg Ry., are owned by the Dominion Coal Co.

(10) The Eastern British Columbia Ry. gives the Spokane and British Columbia Ry. a connection with the C.P.R.

(11) The G.T.R. mileage includes 2,942.61 miles of lines owned, 161.30 miles of lines leased and partly owned. It has 706.81 miles of second trackage and has trackage rights over 13.94 miles of the lines of other companies. It owns the St. Clair Tunnel and approaches, and the Canada Atlantic Ry., which companies report separately, and the Magnetawan River Ry. The Central Vermont Ry., which operates the Montreal and Province Line, the Montreal and Vermont Jct. Ry., and the Stanstead, Shefford and Chambly Ry. (each of which reports separately), is controlled by the G.T.R. It also owns the G.T. Pacific Ry., with its branch lines, which is still reported as being under construction, although it has upwards of 1,000 miles built and in operation. The Canada Atlantic Ry. mileage includes the Ottawa, Arnprior and Parry Sound Ry., the Central Counties Ry. (leased), and the Pembroke Southern Ry. It has 0.88 mile of second track.

(12) No statistics, except mileage, are given for the International Ry. of New Brunswick, the records having been destroyed by fire.

(13) The Morrissey, Fernie and Michel Ry. mileage includes 5.03 miles of leased line. It is owned by the Crow's Nest Pass Coal Co.

(14) The Napierville Jct. Ry., and the Quebec, Montreal and Southern Ry. (which includes the East Richelieu Valley Ry., the United Counties Ry. and the South Shore Ry.), are owned by the Delaware and Hudson Co.

(15) The New Brunswick Coal and Ry. Co.'s line includes the old Central Ry. of N.B., and is operated by a commission appointed by the New Brunswick Government.

(16) The New York Central and Hudson River Rd. owns the Ottawa and New York Ry., and the St. Lawrence and Adirondack Ry. It also controls the Michigan Central Rd., which owns the Canada Southern Ry., and owns with the C.P.R., the Toronto, Hamilton and Buffalo Ry. The Ottawa and New York Ry. has trackage rights over 1.90 miles of other companies' lines. The St. Lawrence and Adirondack Ry. has trackage rights over 8.92 miles of other companies' lines, and its mileage includes 16.52 miles of leased lines. The Canada Southern Ry. operates under lease the Sarnia, Chatham and Erie Ry., 7 miles, and the Leamington and St. Clair Ry., 15.95 miles. It has 243.04 miles of second track and has trackage rights over 18.53 miles of other companies' lines.

(17) The New York, New Haven and Hartford Rd. controls the Boston and Maine Rd., the Maine Central Rd., and the Rutland Rd. The Boston and Maine Rd. operates the Massawippi Valley Ry., which has trackage rights over 2.95 miles of another company's lines. The Maine Central Rd. owns the Princeton Branch of the Washington County Ry. in New Brunswick, operating it under its own name, and also

owns the Hereford Ry. in Quebec.

(18) The Pere Marquette Rd., a U.S. company, owns the Lake Erie and Detroit River Ry. (which operates under lease the Erie and Huron Ry.), and leases the London and Port Stanley Ry. It has trackage rights over 159.81 miles of other companies' lines.

(19) The Quebec Central Ry. has trackage rights over 5.00 miles of other companies' lines.

(20) The Quebec Ry., Light and Power Co. operates a steam railway service, as well as an electric one, over the old Quebec, Montmorency and Charlevoix Ry., on which there are 9.50 miles of second track. It has trackage rights over 3 miles of other companies' lines.

(21) The Timiskaming and Northern Ontario Ry. is owned by the Province of Ontario and is operated by a commission. The Province also owns the Nipissing Central Ry., an electric line, which is run in connection with the T. & N.O.R.

(22) The Temiscouta Ry. has trackage rights over 0.25 mile of another company's line.

(23) The Toronto, Hamilton and Buffalo Ry. has 1.16 miles of second track. It has trackage rights over 4.74 miles of another company's line.

(24) The Wabash Rd. does not own any tracks in Canada, but operates over G.T.R. tracks under a lease.

The total given in the mileage column varies from the total railway mileage given in the general section of the statistical report by 76.03 miles. This difference is accounted for as follows:—Alberta Southern Ry., 19 miles, reported abandoned; Bessemer and Barrys Bay Ry., 5 miles, not operated; Bruce Mines and Algoma Ry., 17.28 miles, not reported on; Carillon and Grenville Ry., 13 miles, not operated during the year; Lenore-Mount Sicker Ry. Vancouver Copper Co.), 12 miles, not reported on; Nosbonsing and Nipissing Ry., 5.50 miles, not reported on; Pontiac and Renfrew Ry., 4.25 miles, not reported on.

Birthdays of Transportation Men in February.

Many happy returns of the day to:—

S. A. Baker, Canadian Freight and Passenger Agent, Chicago Great Western Rd., Toronto, born at Morrisburg, Ont., Feb. 1, 1877.

B. H. Bennett, General Agent, Chicago and North Western Ry., Toronto, born at Cobourg, Ont., Feb. 6, 1858.

F. L. C. Bond, Division Engineer, Eastern Lines, G.T.R., Montreal, born there Feb. 21, 1877.

C. H. Booth, Local Freight Agent, Midland Ry. of Manitoba, Winnipeg, born at Banff, Scotland, Feb. 16, 1882.

T. Britt, General Fuel Agent, C.P.R., Montreal, born there Feb. 3, 1871.

F. W. Churchill, C.P.R. ticket agent, Collingwood, Ont., born in London, Eng., Feb. 6, 1853.

H. R. Charlton, General Advertising Agent, G.T.R. and G.T.P.R., Montreal, born at St. Johns, Que., Feb. 9, 1866.

R. Colclough, Assistant to General Superintendent, Intercolonial Ry., Moncton, N.B., born at Bic, Que., Feb. 24, 1871.

F. W. Cooper, A.M. Can. Soc. C.E., Division Engineer, C.P.R., Montreal, born at London, Ont., Feb. 16, 1880.

R. Crawford, Northwest Agent, Northern Navigation Co., Winnipeg, Man., born at Kingston, Ont., Feb. 21, 1870.

R. W. Drew, Division Freight Agent, Kootenay and Boundary Divisions, C.P.R., Nelson, B.C., born at Kingston, Ont., Feb. 17, 1874.

E. A. Evans, M. Can. Soc. C.E., ex-General Manager and Chief Engineer, Quebec Ry., Light and Power Co., Quebec, born at Kensington, London, England, Feb. 26, 1855.

L. O. Genest, General Storekeeper, Western Lines, C.P.R., Winnipeg, born at St. Henri, Levis County, Que., Feb. 16, 1856.

J. H. Guess, General Purchasing Agent, Grand Trunk Ry., Montreal, born at Raleigh, N.C., Feb. 5, 1878.

J. C. Holden, A.M. Can. Soc. C.E., Division Engineer, C.P.R., Winnipeg, born at St. John, N.B., Feb., 1876.

T. C. Hudson, Master Mechanic, C.N.Q.R. and Q. &. L. St. J. Ry., Joliette, Que., born at Brockville, Ont., Feb. 20, 1873.

W. Jackson, C.P.R. Ticket Agent, Clinton, Ont., born there Feb. 4, 1860.

C. Gardiner Johnson, Lloyds' Agent for British Columbia, Vancouver, B.C., born at Dunblane, Scotland, Feb. 8, 1857.

R. S. Logan, Vice President, G.T.R., Montreal, born at St. Louis, Mo., Feb. 13, 1864.

G. L. McCrea, Local Freight Agent, C.P.R., Vancouver, B.C., born at Springtown, Ont., Feb. 9, 1876.

D. McDonald, Superintendent, Montreal and Ste. Flavie District, Intercolonial Ry., Levis, Que., born at Ste. Hyacinthe, Que., Feb. 28, 1862.

T. McNabb, ex-Master Mechanic, Alberta Ry. and Irrigation Co., now of Turin, Alta., born in Scotland, Feb. 16, 1849.

J. K. McNeillie, Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que., born at Toronto, Feb. 23, 1874.

D. C. Macdonald, Division Freight Agent, C.P.R., Regina, Sask., born at Elmsdale, N.S., Feb. 9, 1874.

C. S. Maharg, Superintendent of Terminals, C.P.R., Calgary, Alta., born in Dufferin County, Ont., Feb. 4, 1867.

D. MacPherson, M. Can. Soc. C.E., Assistant to Chairman, National Transcontinental Ry. Commission, Ottawa, born at Bath, Ont., Feb. 2, 1858.

G. A. Montgomery, Superintendent, Algoma Central and Hudson Bay Ry., and Algoma Eastern Ry., Sault Ste. Marie, Ont., born at Bradford, Ont., Feb. 11, 1871.

A. Z. Mullins, Commercial Agent, G.T.R., Grand Rapids, Mich., born at Appin, Ont., Feb. 14, 1862.

M. G. Murphy, District Passenger Agent, C.P.R., Toronto, born at Halifax, N.S., Feb. 26, 1878.

G. J. O'Dowd, City Freight Agent, C.P.R., Quebec, born at Montreal, Feb. 4, 1874.

J. E. Proctor, District Passenger Agent, C.P.R., Regina, Sask., born at Sarnia, Ont., Feb. 17, 1878.

A. H. Robinson, Superintendent, Elgin and Havelock Ry., Havelock, N.B., born at Elgin, N.B., Feb. 2, 1862.

J. E. Robitaille, Comptroller, Ha Ha Bay Ry., Chicoutimi, Que., born at Quebec, Feb. 17, 1870.

A. E. Rosevear, Assistant to Vice President, G.T.R., Montreal, born Feb. 20, 1863.

H. H. Schaefer, Division Freight Agent, Intercolonial Ry., St. John, N.B., born at Cologne, Germany, Feb. 10, 1848.

J. G. Scott, ex-General Manager, Quebec and Lake St. John Ry., Quebec, born there Feb. 13, 1847.

J. J. Scully, General Superintendent, Lake Superior Division, C.P.R., North Bay, Ont., born at Montreal, Feb. 3, 1872.

G. Spencer, Superintendent, C.P.R., Sudbury, Ont., born in London, Eng., Feb. 21, 1865.

H. E. Suckling, Treasurer, C.P.R., Montreal, born at Gibraltar, Feb. 27, 1851.

Hugh Sutherland, Executive Agent, Canadian Northern Ry., Winnipeg, Man., born at New London, P.E.I., Feb. 22, 1845.

Sir Wm. C. VanHorne, K.C.M.G., Director, C.P.R., and President, Cuba Co., Montreal, born in Will County, Ill., Feb. 3, 1843.

F. L. Wanklyn, M. Can. Soc. C.E., General Executive Assistant, C.P.R., Montreal, born at Buenos Ayres, Feb. 25, 1860.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	$1,829,700	$1,335,100	$494,600	$133,000
Aug	1,745,800	1,375,000	370,800	6,100
Sept	1,671,500	1,248,000	423,500	4,100
Oct	2,351,200	1,645,900	705,300	24,900
Nov	2,509,700	1,631,900	877,800	212,600
	$10,107,900	$7,235,900	$2,872,000	$430,700
Inc	$1,604,600	$1,173,900	$430,700	

Approximate gross earnings for Dec., $2,131,700, against $1,831,400 for Dec., 1911.

The mileage in operation at Nov. 30 was 4,297.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	$12,052,398.58	$7,604,221.68	$4,448,176.90	$745,148.57
Aug.	12,251,715.87	7,533,790.21	4,717,925.66	642,354.65
Sept.	11,579,733.98	7,329,430.13	4,250,303.85	332,857.05
Oct.	13,060,397.80	7,999,510.61	5,060,887.19	379,782.44
Nov.	12,362,666.42	8,104,527.38	4,258,139.04	270,772.55
	$61,306,912.65	$38,571,480.01	$22,735,432.64	2,370,915.26
Inc	$9,395,418.33	$7,024,503.07	$2,370,915.26	

Approximate gross earnings for Dec., $12,108,000, against $10,568,000 for Dec., 1911.

Commencing with Jan. 1, the mileage in operation was increased to 11,458.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R. for Nov., 1912, as compared with those for Nov., 1911:—

Grand Trunk Railway.

	1912.	1911
Earnings	$3,534,500	$3,152,800
Expenses	2,820,800	2,489,200
	$ 713,700	$ 663,600

Canada Atlantic Railway.

	1912.	1911.
Earnings	$223,500	$188,100
Expenses	211,400	163,800
	$ 12,100	$ 24,300

Grand Trunk Western Railway.

	1912.	1911.
Earnings	$621,000	$534,200
Expenses	523,800	424,600
	$97,200	$109,600

Detroit, Grand Haven and Milwaukee Ry.

	1912.	1911.
Earnings	$243,400	$226,000
Expenses	197,600	160,000
	$ 45,800	$66,000

TRAFFIC RECEIPTS OF THE SYSTEM

Aggregate from July 1 to December 31:

	1912	1911	Increase
G.T.R.	$22,408,122	$20,129,268	$2,278,854
C.A.R.	1,271,732	1,095,906	175,826
G.T.W.R.	3,745,760	3,428,738	317,022
D.G.H. & M.R.	1,329,057	1,231,301	97,756
Totals	$28,754,671	$25,885,213	$2,869,458

The Largest Individual Bridge Contract placed in Great Britain since that for the Forth Bridge has recently been secured by British firms in competition with those of Belgium, Germany and the United States. This contract comprises all the steel work for the railway and highway bridge to carry the Eastern Bengal State Ry. across the Lower Ganges, between Damukdea and Tera Ghat, India. The bridge, exclusive of approaches, comprises 15 main spans, each 359 ft. long and 52 ft. deep. These spans weigh about 1,300 tons each. The bridge will carry two broad gauge railway tracks and a footwalk supported on cantilevers from the main girders. The pier foundations for the main spans are carried to a depth of 150 ft. below the bed of the Ganges to guard against the deep scour of the river. The entire project involves an expenditure of about $6,000,000.

Railway Rolling Stock Notes.

The G.T. Pacific Ry. has received 4 con[illegible] from the Canadian Locomotive Co.

[illegible] Canadian Car and Foundry Co.

The Canadian Steel Foundries, Ltd., has received 6 slag cars from the Canadian Car and Foundry Co.

The Algoma Central and Hudson Bay Ry. has received 4 second class cars from the Preston Car and Coach Co.

The Intercolonial Ry. has ordered 5 refrigerator cars from E. E. Armstrong, Fal[illegible], N.S., and 50 box cars from its Moncton shops.

J. D. McArthur Co., railway contractors, have ordered 100 Hart ballast cars, 40 tons capacity, from the Hart-Otis Car Co. They will be built by the Canadian Car and Foundry Co.

The Canadian Northern Ry., between Dec. 15, 1912, and Jan. 15, ordered 250 [illegible] cars from the National Steel Car Co. and 100 refrigerator cars from the Mount Vernon Car Mfg. Co.

The Algoma Eastern Ry. has received 13 fifty ton Otis dump cars and 1 forty ton steel underframe flat car from the Canadian Car and Foundry Co., and 1 second class car from the Preston Car and Coach Co.

The Canadian Northern Ry. has ordered, from the National Steel Car Co., 200 steel underframe cars, 41 ft. long, 40 tons capa[illegible]; 598 standard 30 ton box cars, 36 ft. long, and 9172 I beam brake beams, 5 ins. [illegible].

The Toronto, Hamilton and Buffalo Ry. [illegible] box cars, 100 flat cars, 36 ft. long, and 150 steel hopper bottom coal cars, 50 tons capacity, from the National Steel Car Co.; and 50 Hart convertible cars from the Hart-Otis Car Co.

The C.P.R., between Dec. 13 and Jan. 13, placed orders for the following rolling stock:—20 stock cars, 2 freight refrigerator cars, 7 vans and 7 flat cars, with its Angus Shops; one Atlantic steam shovel, with Mussens, Ltd.; and 100 air dump cars, with the Western Wheeled Scraper Co.

The G.T.R. has received the following additions to rolling stock.—1 first class car and 5 baggage cars from its Montreal shops; 25 refrigerator cars and 293 box cars from the Canadian Car and Foundry Co.; 8 Pacific type locomotives from the Baldwin Locomotive Works, and 598 box cars from the Pressed Steel Car Co.

The Canadian Northern Ry., between Dec. 15, 1912, and Jan. 15, received the following additions to rolling stock,—8 cabooses from its Winnipeg shops; 2 first class cars, from the Canadian Car and Foundry Co.; [illegible] and 20 [illegible] cars from [illegible] Co.

The Intercolonial Ry. has received the following additions to rolling stock:—106 box cars from Nova Scotia Car Works; 50 Hart-Otis coal cars, [illegible] capacity, built by Canadian Car and Foundry Co., from Hart-Otis Car Co.; 10 refrigerator cars from Canadian Car and Foundry Co.; 2 locomotives from Canadian Locomotive Co.; 1 steel plough from Wendell and McDuffie, New York.

The C.P.R., between Dec. 13 and Jan. 13, received the following additions to rolling stock:—21 flat cars, 10 first class cars, 1 double track snow plough, 1 double track flanger, 18 single track snow ploughs, and 7 locomotives, class D.4, from its Angus shops; 511 box cars from the Canadian Car and Foundry Co.; 19 locomotives, class D. 10, from the Montreal Locomotive Works; 353 box cars, from the Standard Steel Car Co.; 280 box cars, from Barney and Smith Car Co.; and 523 box cars from the American Car and Foundry Co.

The Canadian Car and Foundry Co., between Dec. 15 and Jan. 15, delivered the following rolling stock:—13 Otis dump cars, 50 tons capacity; 1 steel underframe flat car, 40 tons capacity, to the Algoma Eastern Ry.; 483 steel frame box cars, 40 tons capacity, to the C.P.R.; one first class car to the Canadian Northern Ry.; 6 slag cars to the Canadian Steel Foundries, Ltd.; 344 steel underframe box cars, 30 tons capacity, to the G.T.R.; 1 refrigerator car, 30 tons capacity, to the G.T. Pacific Ry.; 14 Hart convertible coal cars, 50 tons capacity, 54 steel underframe flat cars, 40 tons capacity, and 6 steel underframe stock cars, 30 tons capacity, to the Intercolonial Ry.; 6 steel street car bodies to the Montreal Tramways Co.; one snow plough to the Quebec Oriental Ry., and is building one steel box car, 40 tons capacity, for its own purposes.

The Quebec Harbor Commission has ordered 3 six wheeled switching locomotives from the Montreal Locomotive Works. Following are the chief details:—

Cylinders	[illegible]
Tractive power	[illegible]8,720 lbs.
Factor of adhesion	4.19
Wheel base, engine	11 ft. [illegible] ins.
Wheel base, engine and tender	[illegible] ft. 7 ins.
Weight in working order	120,400 lbs.
Weight, engine and tender	[illegible]
Boiler, type	Straight top
Boiler, outside diar. first ring	[illegible] ins.
Boiler pressure	180 lbs.
Firebox, type	Narrow
Firebox, length and width	102 x 33 ins.
Crown staying	Radial
Tubes, no. and diar.	259. 2 ins.
Tubes, length	11 ft.
Heating surface, tubes	1,480 sq. ft.
Heating surface, firebox	140 sq. ft.
Heating surface, total	1,620 sq. ft.
Grate, area	23.4 sq. ft.
Driving wheels, outside diar	50 ins.
Axles	[illegible]
Journal boxes	Cast steel
Brakes	Westinghouse American
Tank, type	U shape, sloping top
Capacity, water	3,500 U.S. gals.
Capacity, coal	[illegible] tons

The Toronto, Hamilton and Buffalo Ry. has ordered 2 superheater six wheeled switching locomotives, type S137, one superheater six wheeled switching locomotive, type S165, and one superheater Pacific passenger locomotive, from the Montreal Locomotive Works. Following are the chief details:—

	Type S137	Type S165
Cylinders, diar. and stroke	20 by 26 ins.	21 by 28 ins.
Tractive power	[illegible] lbs.	[illegible] lbs.
Factor of adhesion	4.39	4.46
Wheel base, engine	10 ft., 6 ins.	11 ft. 6 ins.
Wheel base, engine and tender	43 ft. 2 ins.	45 ft. 4½ ins.
Weight, engine	137,000 lbs.	165,000 lbs.
Weight, engine and tender	247,000 lbs.	275,000 lbs.
Boiler, type	Straight top	Straight top
Boiler, outside first ring	64¼ ins.	67¼ ins.
Fire, type	Wide	Wide
Firebox	[illegible]	72 by [illegible] ins.
Crown staying	Radial	Radial
Tubes, no. and diar.	154 [illegible] ins.	165 [illegible] ins.
Flues, no. and diar.	21 [illegible] ins.	24 [illegible] ins.
Tubes, length	10 ft. 9 ins.	16 ft.
Heating surface, tubes & flues	1,183 sq. ft.	1,879 sq. ft.
Heating surface, firebox	146 sq. ft.	129 sq. ft.
Heating surface, total	1,350 sq. ft.	2,021 sq. ft.
Grate area	29.9 sq. ft.	32.7 sq. ft.
Driving wheels, diar.	51 ins.	[illegible] ins.
Tender wheels	33 ins.	33 ins.
Journals	8½ x 10 ins.	9 x 12 ins.
Journal boxes	Cast steel	Cast steel
Brakes	Westinghouse American	
Tank, type	U, level top	U, straight top
Capacity, water	[illegible] U.S. gals.	[illegible] U.S. gals.
Capacity, coal	[illegible] tons	[illegible] tons

Pacific Type.

Cylinders, diar. and stroke	[illegible]
Tractive power	32,800 lbs.
Factor of adhesion	4.2
Wheel base, driving	[illegible] ft.
Wheel base, engine, total	3[illegible] ft. 7 ins.
Wheel base, engine and tender	67 ft.
Weight in working order	219,000 lbs.
Weight on drivers	138,000 lbs.
Weight on trailers	41,000 lbs.
Weight on engine truck	40,000 lbs.
Weight, engine and tender	[illegible]
Boiler, type	Extended wagon top
Boiler, diar. first ring	64 ins.
Boiler, working pressure	[illegible] lbs.
Firebox, type	Wide
Firebox, length and width	108 by 65¼ ins.
Crown staying	Radial
Tubes, no. and diar.	177. 2 ins.
Flues, no. and diar.	26 5½ ins.
Tubes, length	20 ft.
Heating surface, tubes and flues	2,575 sq. ft.
Heating surface, firebox	165 sq. ft.
Heating surface, total	2,768 sq. ft.
Grate area	49 sq. ft.
Driving wheels, diar.	69 ins.
Journals	Main 10 by 12, others 9 by 12 ins.
Journal boxes	Cast steel
Air brakes	Westinghouse American
Tank, type	Water bottom
Capaciy, water	9,000 U.S. gals.
Capacity, coal	12 tons

Referring to the information as to additions to rolling stock by the G.T.R., given in our last issue, it was mentioned that 18 locomotives had been received from the Baldwin Locomotive Works, but it should have read as 13.

Recent Quebec Legislation.

At the recent session of the Quebec Legislature the following acts were passed affecting transportation interests:—

ALMA AND JONQUIERES RY.—Incorporation.

CALUMET AND NORTHERN RY.—Incorporation.

HUNTINGDON AND HEMMINGFORD Ry.—Incorporation.

L'AVENIR AND MELBOURNE RY.—Extending time for construction.

LITTLE NATION RY.—Extending time for construction.

QUEBEC AND NORTHEASTERN RY.—Incorporation.

RAILWAY ACT.—Amending Quebec Rail- Act with respect to expropriation proceedings.

RAILWAY SUBSIDIES.—Amending act of 1912 granting subsidies in aid of certain railways.

ROBERVAL AND SAGUENAY RY. — Extending time for construction.

SAGUENAY HYDRAULIC CO.—Granting company right of expropriation under Quebec Railway Act.

Dominion Railway Subsidy Agreements.

The Dominion Government has entered into agreements, under the acts granting aid for the construction of railways, with the following companies:—

Esquimalt and Nanaimo Ry., Oct. 19, for line from Wellington to Alberni, B.C., 60 miles.

St. John and Quebec Ry., Nov. 5, for line from St. John to Grand Falls, N.B., exclusive of railway bridge over the Kennebecasis river near Perry point, and two railway bridges over the St. John river, 228 miles.

Canadian Northern Alberta Ry., Nov. 29, guaranteeing principal and interest of company's securities to extent of $35,000 a mile for line from 150 miles west of St. Albert westerly to British Columbia boundary, in Yellowhead Pass, 115 miles.

Algoma Central and Hudson Bay Ry., Dec. 28, from the C.P.R. northerly towards the National Transcontinental Ry., not exceeding 50 miles; from 50 miles northerly from the junction with the C.P.R. northerly to the National Transcontinental Ry., not exceeding 65 miles.

Canada Southern Ry.—It was reported in New York, Jan. 9, that $16,500,000 of the C.S. Ry. consolidated guaranteed 5% bonds had been taken up, and that the remaining $6,000,000 were being exchanged for C.S. Ry. second mortgage 5% bonds.

Western Dominion Ry.—The Minister of Railways has approved of route map for this projected railway from tp. 6, r. 1, west 5th meridian, to near Calgary, Alta., 130 miles. (Dec., 1912, pg. 605.)

Steam Railway Track Laid in 1912.

In the figures published in last month's issue respecting track laid in 1912, as officially reported by the companies to Canadian Railway and Marine World, a total of 2,099.79 miles was shown. A number of revised figures and additions have since been received, which brings the total mileage laid up to 2,179.09, against 1,869.24 miles laid in 1911. In the figures published by a U.S. contemporary, and reproduced in one or two Canadian publications, the total mileage laid in Canada is given as 2,232.10, in which is included the Alberta Central Ry., 65 miles, in regard to which we were officially advised, Jan. 13, that no track whatever was laid in 1912; about 50 miles of C.P.R. branch lines, in reference to which the reports furnished us give a smaller mileage to the total extent mentioned; and over six miles on the Timiskaming and Northern Ontario Ry., which is now being laid. Our table includes returns from five lines, representing nearly 70 miles, which are not included in our contemporary's table.

The statement that the Edmonton, Dunvegan and British Columbia Ry. laid 8 miles of track north from Edmonton, first published in our January issue, was based on a report received from a correspondent in Edmonton, to whom we wrote after failing to obtain any information from the railway company. We have since heard from another source that the company claims to have laid 23 miles of track, and although we have been unable to verify this, we have inserted the latter figures in our table. Following are the details:—

	Miles.	Miles.
Algoma Central and Hudson Bay Ry.—		
Mileage 97 to 117	20.00	
Mileage 194.5 to 244.5	50.00	
		70.00
Algoma Eastern Ry.—		
Mileage 22.7 to 43.00	20.30	
Mileage 49.75 to 84.95	35.20	
		55.50
British Columbia Electric Ry.—		
Port Moody to Coquitlam (steam line).		8.70
British Yukon Ry.—		
Mileage 106 to Pueblo mines		13.00
Canadian Northern Ontario Ry.—		
On Toronto Ottawa line	45.00	
Between Ottawa and Capreol	35.00	
Between Ruel and Port Arthur	115.00

Earlton to Montreal River, Ont		22.70
Vancouver, Victoria and Eastern Ry.—		
Abbottsford to Kilgard, B.C.	4.52	
Kilgard to Sumas Landing	3.00	
		7.52
National Transcontinental Ry.—		
At various points between:		
Mileage 109 and 153 E. of Quebec Bridge	33.00	
Mileage 1 and 8.6 E. of Quebec Bridge	7.50	
Mileage 288 and 419 W. of Quebec Bridge	84.75	
Mileage 168 west of Cochrane and 102 east of Lake Superior Jct., Ont.	235.90	
		361.15
Total		2,179.09
Actual track laid in 1911		1,851.98

Of this mileage, 1,860.07 miles were laid in connection with three systems, the following being the comparison of the mileages laid by the same lines in 1911:—

	1911 Miles.	1912 Miles.
Canadian North Eastern	11.00	.. ..
Canadian Northern Ontario	75.20	195.00
Canadian Northern Pacific	46.00	41.75
Canadian Northern Ry.	446.10	303.63
	578.30	540.38
Canadian Pacific	465.20	353.79
National Transcontinental	280.25	361.15
Grand Trunk Pacific	54.00	608.75
	534.25	969.90
Total of the three systems	1,577.75	1,864.07

The remaining 314.93 miles were laid by 13 companies.

In addition to the new mileage the C.P.R. laid 300.33 miles of second track, 30.33 miles being in Quebec, 59.40 in Ontario, 86.60 in Saskatchewan, and 24.00 in British Columbia.

The Minneapolis, St. Paul and Sault Ste. Marie Ry., a C.P.R. subsidiary, laid 103.93 miles from Fordville to Drake, N.D. The Duluth, Winnipeg and Pacific Ry., a Canadian Northern subsidiary, laid 73.4 miles in Minnesota.

Divided by provinces the track laid compares as follows:

	1912 Miles.	1911 Miles.
Ontario	[illegible]	[illegible]
Alberta	[illegible]	[illegible]
Saskatchewan	501.94	[illegible]
British Columbia	331.34	216.00
Quebec	[illegible]	
New Brunswick	26.61	[illegible]
Manitoba	[illegible]	
Yukon	13.00	
Nova Scotia	9.60	[illegible]
Prince Edward Island	9.90	
	2,179.09	1,851.98

Grand Trunk Railway Betterments, Construction, Etc.

Construction for 1913.—We are officially advised that the undermentioned works are more or less definite as to construction and completion during 1913:

Lachine, Jacques Cartier and Maisonneuve Ry.—From Jacques Cartier Jct. to the east end of Montreal, 7.00 miles.

Port Hope Cut off.—About one mile to connect the Northern Divison with the Eastern Division at Port Hope, Ont.

Holmedale Spur.—From West Brantford, Ont., to the Holmedale industrial area, about 3 miles.

Erie, London and Tillsonburg Ry.—From Port Burwell to London, Ont., about 34 miles.

Detroit and Huron Ry.—From Cass City to Bad Axe, Mich., 68.5 miles. (Jan., pg. 30.)

Kingston, Ont.—E. J. Chamberlin, President, has informed the Kingston City Council that it would cost about $1,000,000 to divert the main line through Kingston. While the change would be desirable, the company cannot, owing to the financial situation, consider making it.

Montreal Track Elevation Project.—The City Board of Control has decided to obtain an estimate of the cost of depressing the G.T.R. tracks in the city. The question of elevating them has been under consideration for several years.

Portland, Me.—Press reports state that a large area of land on the east end of Portland has been acquired by the G.T.R. R. S. Logan, Vice President, is quoted as stating, Jan. 17, that the company has made an exchange with the Portland Parks Commission, the G.T.R. securing some water front land for land on a higher level.

Toronto Yards.—A plan has been submitted to the Toronto City Council for a new 26 stall locomotive house with machine shop attached near the foot of John Street. Seven tracks are shown leading to it. The building is intended to replace some existing buildings.

New Brunswick Coal and Ry. Co.—Central Ry., of N.B. — We are officially advised in connection with the press reports that the C.P.R. had made arrangements to take over these lines from the New Brunswick Government, Jan. 1, that no decision has been reached in regard to them. The taking over of these lines by the C.P.R. is a part of the bargain made with the New Brunswick Government in connection with the building of the Fredericton and Grand Lake Coal and Ry. Co.'s line, which connects the C.P.R. system with Minto, the terminus of the N.B.C. and Ry. Co.'s line.

The Canadian Ticket Agents' Association has admitted to membership C. Casselman, C.P.R., Chesterville, Ont., and L. Atkinson, Newmarket, Ont.

Mainly About Transportation People.

J. A. McKEE, Western Steamship Co., who died in Toronto recently, left an estate of $532,958.

C. GREENWOOD, for many years in the C.P.R. [illegible]

GEORGE BURY, Vice President, C.P.R., left Winnipeg, Jan. 20, for a trip to Japan expecting to return about Mar. 21.

SIR WM. WHYTE, of Winnipeg, has been elected Vice President for Manitoba of the Canadian Red Cross Society.

B. A. MACNAB, at one time in the Intercolonial Ry. service, has resigned his position as editor of the Montreal Star.

W. J. CROSSEN, President, Crossen Car Co., has been elected Honorary President of the Cobourg, Ont., Horse Show Association.

Mrs. King, wife of R. KING, Superintendent, C.P.R., London, Ont., died there Jan. 9, and was buried at St. Stephen, N.B.

H. J. FULLER, President, Canadian Fairbanks-Morse Co., Montreal, has been elected a director of the Canadian Bank of Commerce.

J. W. TROUP, Manager, British Columbia Coast Service, C.P.R., sailed from St. John, N.B., Jan. 10, on the s.s. Empress of Britain, for England.

CHARLES BERESFORD FOX, M. Can. Soc. C.E., of Wragge & Fox, Toronto, who died there in April, 1912, left an estate valued at $65,158, mostly in England.

J. A. GLASSFORD, formerly Superintendent of the Fort Garry Joint Terminals, Winnipeg, has been appointed industrial and publicity agent at Portage la Prairie, Man.

SIR FREDERICK W. TAYLOR, Manager of the Bank of Montreal in London, Eng., who was knighted by the King at the New Year, is a director of the Allan Steamship Line.

F. H. PHIPPEN, General Counsel, Canadian Northern Ry., accompanied by his wife and son, left Toronto Jan. 21 for New York, whence they sailed for England, en route for Egypt.

J. S. DARLING, of the Canadian Northern Ry. Land Department in Montreal, has been elected first Mayor of Mount Royal, the C.N.R. model city at the back of Mount Royal, Montreal.

A. L. CODY, who was employed as an inspector of construction at the C.P.R. yards, St. Boniface, Man., disappeared Oct. 18. His friends are offering a reward for news of his whereabouts.

S. W. FURNESS, M.P., has succeeded the late Lord Furness, his uncle, as Chairman of Furness, Withy and Co., and other shipping interests with which both have been associated for several years.

MRS. JAMES WILSON, whose husband [illegible] Claims Agent, Ontario Division, C.P.R., Toronto, and before that General Superintendent, Ontario Division, died in Toronto, Jan. 14, aged 78.

T. McKEAG, of the local freight staff of the [illegible] was presented with a cabinet of silver, Jan. 18, by the staff, on the occasion of his marriage to Miss E. Roland, of the same office.

J. McDOUGALD, Cornwall, Ont., who celebrated his golden wedding Jan. 9, was active in promoting the building of the original Canada Atlantic Ry., and was Secretary-Treasurer of the company for about ten years.

W. BORBRIDGE, Master Mechanic, C.P.R., District 3, Montreal, was presented with a gold watch and chain by the staff, Dec. 31, on his being transferred to a similar position on the Montreal Terminals and Montreal-Smiths Falls district.

W. L. KELLOGG, heretofore Superintendent of Motive Power, Pere Marquette Rd., Grand Rapids, Mich., has been appointed Superintendent of Machinery and Equipment, Missouri, Kansas and Texas Ry. of Texas, at Parsons, Kan.

H. HOLGATE, M. Can. Soc. C.E., of Montreal, and D. Moran and C. Sooysmith, of New York city, were elected members of council for three years of the American Institute of Consulting Engineers at the annual meeting Jan. 14.

JAS. ROSS, Montreal, with a party of friends, is making an extended tour in his yacht Glencairn. He reached Bermuda Jan. 2, and was expected in the Canary Islands Jan. 20, after which he proposed to visit Madeira, Gibraltar and Mediterranean ports.

A. D. MacTier,
General Manager, Eastern Lines, Canadian Pacific Railway.

ROSWELL MILLER, Chairman of the Board, Chicago, Milwaukee and St. Paul Ry., and President, between 1888 and 1899, died at New York, Jan. 3. He was born at Hartford, Pa., Oct. 28, 1843, and retired from the Presidency on account of ill health.

J. LUMSDEN, owner of the Lumsden Line of steamboats on Lake Timiskaming, Que. and Ont., has given the Bellevue hotel and grounds at the foot of Lake Timiskaming, Que., to the National Sanitarium Association. The property is valued at $55,000.

V. H. WILLIAMS, who has been appointed Travelling Freight Agent, Western United States, Intercolonial and Prince Edward Island Rys., Chicago, Ill., was born at Litchfield, Ill., Jan. 24, 1892, and has served with the I.R.C., in the U.S., since Dec. 15, 1910.

F. W. EMMERSON, Judge of the Probate Court, Westmoreland county, N.B., who died at Moncton, N.B., Jan. 6, was father of R. H. Emmerson, Resident Engineer, Intercolonial Ry., Levis, Que., and brother of Hon. H. R. Emmerson, formerly Minister of Railways and Canals.

W. W. JOHNSTON was presented with a gold watch by his colleagues recently on his resignation of the position of City Freight and Passenger Agent, Canadian Northern Quebec Ry., and Quebec and Lake St. John Ry., Quebec, to take an appointment in the Provincial Treasury Department.

HON. ARCHIBALD CAMPBELL, who died at Toronto Jan. 5, was until recently President of the Central Ry. Co. of Canada. He was father-in-law of G. S. Deeks, President, Dominion Construction Co., contractors for the construction of the Campbellford, Lake Ontario and Western Ry. (C.P.R.).

JOHN M. BOAK, who has been appointed Travelling Freight Agent, Intercolonial Ry., was born at Halifax, N.S., May 13, 1877, is a son of J. A. Boak, Western U.S. Freight Agent, I.R.C., Chicago, Ill. Prior to his appointment, Dec. 23, 1912, he was engaged in private business in Chicago.

JAMES PLAYFAIR, President, Northern Navigation Co., Midland, Ont., is President of Mexican Mahogany and Rubber Corporation, Ltd., bonds of which have been offered to the public recently. H. W. Richardson, of James Richardson and Sons, vessel owners, Kingston, Ont., is also a director.

JNO. McLEAN, who died in Montreal, Jan. 4, aged 81, was for over 60 years well known in connection with the marine interests of the city. At different times he represented the Montreal Transportation Co., the Kingston and Montreal Forwarding Co., and latterly was associated with the Inland Lines.

R. O. MACKAY, the senior partner of the former firm of R. O. & A. B. Mackay, vessel owners, Hamilton, died there, Jan. 26, aged 59. The vessels owned by his firm were taken over some time ago by Inland Lines, Ltd., which latter company has since been absorbed by the Richelieu and Ontario Navigation Co.

D. B. HANNA, Third Vice President, Canadian Northern Ry., was among a deputation which waited on the Ontario Minister of Agriculture recently to urge that a larger grant be given the Toronto Women's Hostel. He stated that the organization had promoted the immigration of a better class of girls and women.

C. ELSON, a sub-contractor on the Canadian Northern Ontario Ry., left his camp recently to walk to Nemegos, on the C.P.R., for a trip home to Sweden. His body was found in the snow some distance from the C.P.R., Dec. 24. A large sum of money he carried was missing, and there is every evidence that he met with a violent death.

SIR WILLIAM MACKENZIE was dismissed from a case, Jan. 16, in which he was joint defendant with the Toronto Ry. Co., in which damages were claimed for injury sustained by a pedestrian who claimed to have been knocked down by the company's automobile, something over two years ago, in which Sir William was a passenger.

GEO. HANNAH, who recently resigned his position as Passenger Manager, Allan Line Steamship Co., Montreal, was entertained to dinner there, Jan. 15, by a number of transportation officials, on the occasion of his retirement from active service after 45 years as a steamship official. He was presented with a silver tea service and tray, suitably inscribed.

C. W. PRICE, who has been appointed Chief Dispatcher, Intercolonial Ry., Moncton, N.B., was born in New Brunswick July, 1867, and entered I.R.C. service Oct., 1882, since when he has been, to June, 1886, operator at Petitcodiac, N.B.; June, 1886, to

Nov., 1888, operator, Moncton, N.B.; Nov. 1888, to May 15, 1893, relief dispatcher; May 15, 1893, to Nov. 25, 1912, trick dispatcher, Moncton, N.B.

E. W. DAHL, Travelling Freight Agent, G.T.R., Cincinnati, Ohio, and his six year old son, were killed by a freight train while crossing a trestle near there, Jan. 1. He had been in G.T.R. service for about 20 years, and had been located in Cincinnati for six years, having previously been stationed at Detroit, Mich. He was First Vice President and a director of the Cincinnati Transportation Club.

HON. F. COCHRANE, Minister of Railways; C. Murphy, General Superintendent of Transportation; W. Stitt, General Passenger Agent, Eastern Lines; H. E. Macdonell, General Freight Agent, Eastern Lines, and G. H. Ham, of the Publicity Department of the C.P.R., were guests at a dinner given by the Orillia Board of Trade Jan. 10, in connection with the recent advent of the C.P.R. into Orillia, through its Georgian Bay and Seaboard line.

M. A. FULLINGTON, who has been appointed Assistant Division Engineer, Eastern Division, C.P.R., Montreal, was born at Johnson, Vt., May 12, 1880, and entered C.P.R. service Oct., 1904, since when he has been, to Apr., 1907, rodman, transitman, and Assistant Engineer of Terminals, London and Toronto; Apr., 1907, to Feb., 1912, Resident Engineer, districts 1 and 4, Ontario Division; Feb., 1912, to Jan. 1, 1913, Engineer, Dominion Atlantic Ry., Kentville, N.S.

B. F. BUSH, M. Am. Inst. M.E., President of the Missouri Pacific Ry., has been elected President of all the so-called Gould railways, including the Missouri Pacific, the Denver & Rio Grande, the Iron Mountain, the Western Pacific, the Texas & Pacific and the International & Great Northern Rys., a system embracing 13,844 miles of track. J. M. Johnson, Vice President of the Missouri Pacific Ry., will be Vice President in charge of traffic of the entire system.

JOHN PATTERSON, who has been active in the promotion of the projected Hamilton, Waterloo and Guelph Ry., died at Hamilton, Ont., Jan. 26, aged 56. He was intimately connected with the origin of what is now known as the Dominion Power and Transmission Co. He had been in ill health for two or three years, but has been to London, Eng., several times in that period, in connection with the financing of his project, but without having brought it to a successful conclusion.

A. D. MacTIER, whose appointment as General Manager, Eastern Lines, C.P.R., Montreal, was announced in our last issue, and whose portrait appears in this issue, was born at Blairgowrie House, Scotland, Dec. 27, 1867, and entered C.P.R. service, May, 1887, since when he has been, to Apr., 1896, successively, in General Baggage Agent's Office, General Superintendent's Office, Superintendent Sleeping, Dining and Parlor Cars Stores, and Car Service Departments; Apr., 1896, to Nov., 1899 General Baggage Agent; Nov., 1899, to June, 1907, General Fuel Agent; June, 1907, to Dec. 31, 1912, Assistant to the Vice President, Montreal.

J. McGILLIVRAY, who has been appointed General Manager, Inverness Ry. and Coal Co., Inverness, N.S., was born at Nairn, Scotland, Nov. 13, 1867, and entered railway service in 1887, since when he has been, to June, 1902, stenographer to Assistant Superintendent, C.P.R. lines between Port Arthur, Ont., and Winnipeg; secretary to General Superintendent Western Division, C.P.R.; secretary to Manager of C.P.R. lines west of Lake Superior; chief clerk and accountant to Superintendent C.P.R. Manitoba Division; chief clerk to Superintendent of Transportation, C.P.R., Winnipeg. In June, 1902, he left C.P.R. service with E. A. James, Superintendent of Transportation, and remained with him as chief clerk on his appointment as General Superintendent, and afterwards as Manager, Canadian Northern Ry., Winnipeg; July to Aug. 30, 1904, Trainmaster, C.N.R., Kamloops, B.C.; Aug. 30, 1904, to Dec. 16, 1912, superintendent, Inverness Ry. and Coal Co.'s railway lines, Inverness, N.S.

D. CROMBIE, who has been appointed General Superintendent of Transportation, G.T.R., Montreal, was born at Hamilton, Ont., May 13, 1864, and entered railway service in 1882, since when he has been, to 1887, telegraph operator G.T.R.; 1887 to 1889, ticket clerk same road, Chatham, Ont.; 1889 to 1890, train dispatcher same road, London, Ont.; 1890 to 1892, train dispatcher, Flint and Pere Marquette Rd., Saginaw, Mich.; 1892 to 1894, car distributor same road; 1894 to Jan. 1, 1900, Car Service Agent same road; Jan. 1, to July, 1900, Superintendent Car Service Pere Marquette Rd.; July, 1900 to 1903, Superintendent of Transportation same road, Detroit, Mich.; 1903 to Feb., 1907, engaged in commercial business; Feb. to Oct., 1907, Master of Transportation, G.T.R. Middle division, London, Ont.; Oct., 1907, to Nov. 22, 1910, Assistant to General Transportation Manager, G.T.R., Montreal; Nov. 22, 1910, to Jan. 14, 1913, Assistant to the Vice President (Transportation, Maintenance and Construction), Montreal.

A. WILCOX, who has been appointed General Superintendent, Central Division, Canadian Northern Ry., Winnipeg, was born at Kincardine, Ont., Jan. 2, 1865, and entered railway service in 1881, since when he has been, to 1883, successively, operator, ticket and freight clerk, Toronto, Grey and Bruce Ry., Owen Sound, Ont.; 1883 to 1887, operator and agent at various points, and relieving dispatcher, C.P.R., Winnipeg; 1887 to 1890, train dispatcher, C.P.R., Moose Jaw, Sask.; 1903, Chief Dispatcher, C.P.R., Cranbrook, B.C.; July, 1903, to July, 1904, Chief Dispatcher, Canadian Northern Ry., Port Arthur, Ont.; July, 1904, to Jan., 1908, Superintendent, District 2, C.N.R., Winnipeg; Jan., 1908, to May, 1909, Superintendent, District 1, C.N.R., Port Arthur, Ont.; May to Nov., 1909, Superintendent, District 3, C.N.R., Dauphin, Man.; Nov., 1909, to Nov. 1, 1911, Superintendent, District 1, C.N.R., Port Arthur, Ont.; Nov. 1, to Dec. 1, 1911, Assistant General Superintendent, C.N.R., Winnipeg; Dec. 1, 1911, to Dec. 30, 1912, General Superintendent, Western Division, C.N.R., Edmonton, Alta.

J. W. Eber.
General Manager, Toronto, Hamilton and Buffalo Railway.

GRANT HALL, whose appointment as General Manager, Western Lines, C.P.R., Winnipeg, and portrait appeared in our last issue, was born at Montreal, Nov. 27, 1863, and entered railway service as an apprentice in the G.T.R. shops, Montreal. He has been, from Mar. to July, 1888, Master Mechanic, International Ry., Sherbrooke, Que.; Aug., 1888, to June, 1889, Locomotive Foreman, C.P.R., Megantic, Que.; July, 1889, to March, 1890, Locomotive Foreman, C.P.R., Brownville Jct., Me.; Apr., 1890, to Feb., 1893, Locomotive Foreman, C.P.R., Windsor St., Montreal; Mar., 1893, to Aug., 1898, General Foreman, Intercolonial Ry., Moncton, N.B.; Sept. to Dec., 1898, Locomotive Foreman, C.P.R., Windsor St., Montreal; Jan., 1899, to Jan., 1901, General Foreman, C.P.R., McAdam Jct., N.B.; Feb. to June, 1901, General Foreman, C.P.R., Winnipeg; July, 1901, to Nov., 1902, Master Mechanic, Pacific Division, C.P.R., Revelstoke, B.C.; Dec., 1902, to Feb., 1904, Assistant Superintendent of Rolling Stock, C.P.R., Montreal; Mar. to Sept., 1904, Assistant Superintendent of Motive Power, C.P.R., Montreal; Oct., 1904, to Jan., 1908, Assistant Superintendent of Motive Power, C.P.R., Winnipeg; Jan., 1908, to Oct., 1911, Superintendent of Motive Power, C.P.R., Winnipeg; Oct., 1911, to Dec. 24, 1912, Assistant General Manager, Western Lines, C.P.R., Winnipeg.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:

Crushed Stone Rates.

18449. Jan. 7. Re application of Power City Stone Company, Niagara Falls, Ont., complaining of change proposed by Michigan Central Rd. in routing of crushed stone from the applicant's quarry, near St. Davids, Ont., to Toronto, under Supplement 10 to Local and Joint Commodity Tariff, C.R.C. 1743; and applying for an order disallowing or suspending the said change. It is ordered that the said supplement be disallowed; and the M.C.R. and the G.T.R. are directed to continue the joint special commodity rate of 60 cents per ton of 2,000 lbs. on crushed stone in carloads of the minimum weight of 30 net tons from St. Davids to Toronto, via Niagara Falls, Ont., the said rate to be apportioned 20 cents to the M.C.R. and 40 cents to the G.T.R., unless the companies mutually agree to apportion otherwise.

Rates on Rice, etc., from Vancouver.

18251. Nov. 29. Re application of the Imperial Rice Milling Co., Vancouver, B.C., for reductions from present freight rates on rice and broken rice (or brewers' grits, from Vancouver to points east of and including Calgary, Alta., to Winnipeg, inclusive. The application is dismissed.

Rates Between Kronau and Lajord, Sask.

18343. Dec. 13. Re complaint of J. B. McCugan, of Kronau, Sask., alleging discrimination in freight rates between the towns of Kronau and Lajord on the C.P.R. Arcola line. It is ordered that the complaint be dismissed, without prejudice to complainant's right to re-open the matter upon giving proper notice to the Board and the railway company.

Return Tickets on Great Northern Railway.

18376. Dec. 24. Re complaint of Fruitvale Conservative Association of Fruitvale, B.C., complaining that as no agent is maintained at Fruitville by the Great Northern Ry., the residents have been unable to get the benefit of a cheaper rate by purchasing return tickets. It is ordered that the G.N.R. Co. arrange within 30 days from date for the sale on its trains of return tickets to passengers from points at which no agents are maintained.

G.T.P.R. Freight Tariff.

18393. Dec. 23. Re application of Grand Trunk Pacific Ry., under section 321 of the Railway Act, for approval of its Standard Freight Mileage Tariff, C.R.C. 13, cancelling C.R.C. 11, to apply between stations in British Columbia, Prince Rupert to New Hazelton, inclusive. It is ordered that the company's said tariff be temporarily approved, pending result of enquiry by Board into rates charged generally by railways west of and including Crowsnest, Canmore, and Thornton.

Interswitching at Orillia, Ont.

18454. Dec. 31. Re application of Board of Trade of Orillia, Ont., it is ordered that the Grand Trunk Ry. and the Canadian Pacific Ry. at Orillia be so connected as to provide for the reasonable receiving, forwarding, delivering, and interswitching of traffic between their respective railways; the railway companies to file, within sixty days from date, a plan showing the proposed connection and interchange tracks; and, in the event of the companies failing to agree upon a point of connection, the same to be fixed by the Board's Chief Operating Officer.

Coal Rates from Detroit, Mich.

18464. Jan. 14. Re application on behalf of the Windsor, Walkerville and Sandwich Boards of Trade, protesting against increased rate on coal from Detroit, Mich., to Windsor and Walkerville, Ont. It is ordered that the G.T.R. and the Wabash Rd. forthwith file with the Board tariffs restoring the rate on coal, in carloads, from Detroit to Windsor and Walkerville, which was in effect prior to the publication and filing of Supplement 11 to the G.T.R. Tariff C.R.C. no. W.113 (I.C.C. no. A.1143), and Tariff C.R.C. 656 (I.C.C. no. 3138) of Wabash Rd., and cancelling the rate of 40 cents a net ton shown therein, pending hearing on a date to be fixed by Board.

Railway Finance, Meetings, Etc.

Canadian Northern Ry.—Application is being made to the Dominion Parliament to define and increase the company's bonding powers.

Dominion Atlantic Ry.—Estimated earnings for Nov.:—Passenger, $46,150.65; freight, $64,844.19; gross, $110,994.84; for December:—Passenger, $37,743.07; freight, $43,341.22; gross, $81,084.29.

Georgian Bay and Seaboard Ry.— An agreement between the company and the C.P.R., increasing the rental payable by the latter, under the original agreement of Jan. 3, 1910, has been deposited with the Secretary of State at Ottawa. There has also been deposited a duplicate of a mortgage dated Oct. 3, 1912, made between the company, the Royal Trust Co., and the C.P.R.

Grand Trunk Pacific Branch Lines Co—The G.T.R. Co. issued a prospectus in London, England, Jan. 10, offering £240,700 four per cent. first mortgage sterling bonds of the Grand Trunk Pacific Branch Lines Co., due 1939, principal and interest unconditionally guaranteed by the Saskatchewan Government, also £238,600 similar bonds due 1942, principal and interest unconditionally guaranteed by the Alberta Government. The issue price was 94. The proceeds are to be applied in building the following branch lines:—Extension of Biggar-Calgary branch, Sask., 54 miles; extension of Biggar-Battleford branch, Sask., 3.2 miles; extension of Prince Albert branch, Sask., 1.5 miles; extension of Yorkton-Canora branch, 31.3 miles; Alberta Coal branch from Bickerdike, Alta., southerly and westerly for 58 miles. A London cablegram of Jan. 16 states that 75% of the issues was taken up by the underwriters.

Grand Trunk Pacific Branch Lines.—A second supplementary instrument, dated July 31, 1912, to the original trust deed dated June 24, 1909, made between the company, the Royal Trust Co., and the Province of Saskatchewan, securing a further issue of 4% first mortgage sterling bonds, has been filed with the Secretary of State at Ottawa.

Grand Trunk Ry.—There has been deposited with the Secretary of State at Ottawa, copy of agreement of conditional sale between Blair & Co., the G.T.R. and the Bankers' Trust Co., series B., dated Nov. 1, 1912.

London and Port Stanley Ry.—At a meeting of directors Jan. 20, it was decided to ask all interests desirous of putting in bids for the lease of the line, to send in their offers by Feb. 15.

New York Central Rd.—Michigan Central Rd.—A supplemental agreement made between these railways, and other lines in the United States, dated Oct. 1, 1912, has been deposited with the Secretary of State at Ottawa. The N.Y.C. and H.R. Rd. owns the Ottawa and New York Ry., and shares with the C.P.R. the ownership of the Toronto, Hamilton and Buffalo Ry., while the Michigan Central Rd. owns the Canada Southern Ry.

St. Marys and Western Ontario Ry.—A duplicate of a mortgage entered into between the company, the Royal Trust Co., and the C.P.R., has been filed with the Secretary of State at Ottawa.

Temiscouata Ry.—Net earnings for Oct., 1912, $1,399. Aggregate net earnings for four months ended Oct. 31, $22,265.

Victoria and Sidney Ry.—After three months consideration, and several conferences with Great Northern Ry. officers, the Victoria, B.C., City Council has unanimously decided not to accept the company's offer to pay $60,000 in full settlement of the claims of the city and the provincial government for interest paid under the guarantee of the V. and S. Ry. bonds. The company offered $36,000 to the city and $24,000 to the Government and to assume all further liability on the $300,000 of bonds, which have still five years to run. The city expressed its willingness to accept $100,000 in full settlement. The line, according to the auditors, is not paying operating expenses and fixed charges, and the G.N. Ry. officials state that an immediate expenditure of $105,000 is necessary for betterments. The company informed the city council Dec. 30, that it will not increase its offer beyond the amount already named and will not consider the city's proposition. The city council is considering the desirability of taking legal proceedings.

Eastern Canadian Passenger Agents' Association.

At a meeting in Montreal, Jan. 7, the following officers, etc., were elected for the current year:—

Chairman:—G. C. Martin, G.F. & P.A., Toronto, Hamilton & Buffalo Ry.

Executive Committee:—T. Henry, T. M. Richelieu & Ontario Navigation Co.; W. Stitt, G.P.A., Canadian Pacific Ry.; H. G. Elliott, G.P.A., Grand Trunk Ry.

Rules Committee:—W. Stitt, H. G. Elliott, R. L. Fairbairn, G.P.A., Canadian Northern Ry.; J. W. Hanley, G.P.A., Central Vermont Ry; F. T. Grant, A.G.P.A., Boston & Maine Rd.; N. Mooney, G.A.P.D., New York Central Lines; W. H. Underwood, A.G.P.A., Michigan Central Rd.; J. M. Lyons, G.P.A., Intercolonial Ry.; A. J. Parr, G.F. & P.A., Timiskaming & Northern Ontario Ry.

Canadian Ticket Agents' Association.

At a meeting of the executive committee in Toronto, Jan. 21, it was decided to hold the annual meeting at Cleveland, Ohio, on Oct. 8 next. The Hollenden Hotel will be the headquarters.

W. McIlroy, City Ticket Agent, C.P.R., Hamilton; W. Jackson, City Ticket Agent, C.P.R., Clinton; and J. A. McKenzie, City Ticket Agent, G.T.R., Woodstock, Ont., were appointed a committee to visit Cleveland in August to make arrangements in connection with the entertainment of the party, etc.

C. E. Horning, City Ticket Agent, G.T.R., Toronto, was appointed the Association's delegate to attend the American Association of General Passenger and Ticket Agents' annual meeting.

Railway Route Maps Approved.

The Minister of Railways has approved the following route maps:—

EDMONTON, DUNVEGAN AND BRITish Columbia Ry., Dec. 7, 1912; revision in tps. 62-70, r. 27, west of 4th meridian, and rgs. 1 and 2, west of 5th meridian, about 50 miles.

HUDSON BAY, PEACE RIVER AND Pacific Ry., Dec. 18, 1912; from near Winnipeg, towards Port Nelson, 7½ miles, at crossing of Winnipeg river.

Sharp Flange Wheels on Locomotives and Tenders.

The Board of Railway Commissioners has issued the following circular:—"The Board's inspectors are reporting quite a number of locomotives in service with sharp flanges on wheels of both locomotives and tenders, flanges in many instances being worn down to and below the M.C.B. standard allowance gauge. Some of these locomotives are running on fast passenger trains; and while it is expected that freight cars may sometimes be found with flanges of wheels in the condition described above, it does not seem reasonable or safe to allow locomotives in service with wheel flanges worn so badly that they would not be accepted on cars at interchange points. The Board therefore urges upon you the importance of issuing to those in charge of motive power on your lines such instructions as will ensure change of wheels before flanges are so badly worn as to come under the M.C.B. standard defect gauge."

Great Northern Railway Lines in Canada.

Midland Ry. of Manitoba.—Application is being made to the Manitoba Legislature to extend the time for the building of the various lines authorized for a further period of five years.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Guthrie, McDougall and Co., who have the contract for a 50 mile extension westerly from Princeton, B.C., are reported to have sublet a portion of the work to Werdenhoff and Jacobson, St. Paul, Minn.

Press reports state that the question of building a double track line eight miles long, up the west fork of the Otter river to Otter Summit, is under consideration.

Victoria and Sidney Ry.—The British Columbia Government issued an order Jan. 2 directing the company to make considerable betterments on its line in Victoria during the next 12 months. (Jan., pg. 30.)

Canadian Pacific Railway Lets Contracts for Building Over 800 Miles on the Western Lines.

A press dispatch from Winnipeg, Jan. 18, states that the C.P.R. has let contracts for the building of 526 miles of new branch lines, and 317 miles of second track on the transcontinental line, and adds that the firms to which these contracts have been let will not consider them binding until they have been formally ratified by the President.

The transcontinental line now has at present second track from Port Arthur, Ont., to Brandon, Man, 556 miles. The contracts now let start at Kemnay, 12 miles west of Brandon, and the first two cover the distance to Regina, 217 miles. The contract for the first section from Kemnay to Virden, 40 miles—is reported let to J. D. McArthur, and the second section from Virden to Regina, 177 miles, is reported let to Foley, Welch and Stewart. A second track is already in operation from Regina to Chaplin, Sask., 96 miles. The third section for which a contract for second track construction is reported let, extends from Chaplin to Juava, 60 miles, the contract being let to Janse Bros., Boomer and Hughes. Juava is a short distance west of Swift Current, near the point at which the Swift Current-Bassano line diverges from the present transcontinental line. The fourth section of the second track work to be put under contract, is from Gleichen to Shepard, Alta., 40 miles. Gleichen is about nine miles west of Bassano, where the cut off from Swift Current joins the present transcontinental line. The contract for this section is reported let to Foley, Welch and Stewart.

There are ten contracts reported let for extensions to existing lines covering altogether 586 miles. This mileage includes the following:—

Extension of Winnipeg Beach and Gimli branch in Manitoba, from the present terminus at Gimli, to Rivertown, 40 miles, let to Foley, Welch and Stewart.

There is a line from Wood Bay on the Winnipeg, Deloraine and Lyleton branch, south easterly through Snowflake to Windygates, Man. A contract has been let to J. D. McArthur for the building of a branch of nine miles south westerly from Snowflake, parallel with the International Boundary.

The extension of the line from Weyburn, Sask., to Lethbridge, Alta., is in operation to Viceroy, Sask., and under contract for some distance further. A contract has been let to Foley, Welch and Stewart, and E. Peterson, of Omaha, Neb., for the building of a further section of 145 miles. While this line is called the Weyburn-Lethbridge line, it is to connect with the Alberta Ry. and Irrigation Co.'s line near Stirling, Alta. A branch line is under construction easterly from Stirling, and a contract for a further distance of 20 miles has been let to Geo. Webster. These mileages, with the work already under contract, will complete the line.

The branch line running north westerly from Moose Jaw, Sask., passes through Milden, Anglia and Kerrobert, and connects with the extension of the Manitoba and Northwestern Ry., and the extension of the Wetaskiwin branch of the Calgary and Edmonton Ry. at Macklin, Sask. A contract has been let to Janse Bros., Boomer and Hughes, for the building of a line from Milden to Empress, 126 miles. A second contract has been let to the firm for the extension of this line from Empress to Bassano, Alta., 118 miles. What is referred to as the Swift Current Bassano cut off is in operation from Swift Current to Cabri, Sask., 41 miles, and is under construction for some miles further. It would therefore appear that the present construction will connect up at Empress with the line now put under contract from Milden, and so complete the Swift Current-Bassano line, and a further connection with the north at Milden.

A branch line was started three years ago from Wilkie, on which one section west of Tramping Lake has been completed to Kerrobert, and a second section east of Tramping Lake has been completed to Kalfield. A contract has now been let to Geo. Webster for building a line from Anglia northerly for 30 miles, which will connect with the branch east of Tramping Lake.

A contract has been let to Janse Bros., Boomer and Hughes for a line from Kerrobert, Sask., 60 miles, westerly to a junction with the extension of the Lacombe branch of the Calgary and Edmonton Ry., which is in operation to Coronation, and is under construction for some distance further east.

A contract has also been let to Janse Bros., Boomer and Hughes, for a line northerly from Coronation, Alta., for 24 miles.

A line is being built from Suffield, Alta., southwesterly, of which about 57 miles are under construction, and on which about 26 miles of track were laid in 1912. This carries the branch to near Ritlaw, from which point a branch is to be built northerly, the contract for which has been let to Geo. Webster.

The contracts for the new lines call for the completion of the several works during this year. All the work is said to be average prairie construction, with the exception of the extension from Gimli, Man., on which there is considerable rock work. It is estimated that the contracts let to Janse Bros., Boomer and Hughes call for the shifting of 16,000 cubic yards of material; the Foley, Welch and Stewart contracts, 4,000,000 cubic yards, and the other contractors have to shift about 2,000,000 cubic yards between them.

Official Announcement of New Works.

The following official announcement was made Jan. 24, after the foregoing matter had been put in type:—

The annual appropriations for the Western Lines have been engaging the attention of Sir Thos. Shaughnessy for the past two days. The appropriations had all been passed upon by George Bury, Vice President, prior to his departure from Winnipeg for Japan on six weeks holiday, and were placed before the President by Grant Hall, General Manager Western Lines.

The policy of Mr. Bury, concurred in by the President, is that the terminals shall be increased and the main line double tracked to such an extent that they can care for the present traffic and for a reasonable prospective increase. On the building of branch lines Mr. Bury has also a distinctive policy. Early in the year he told a delegation that waited on him, asking that the C.P.R. build a branch line into a city already supplied with one railway, that he considered it a far more constructive policy to build branch lines into territory fairly well settled, but not served by a railway, than to build into places where all requirements of transportation are fairly well met. Mr. Bury considers that every farmer who is given an advantage over what he now possesses in placing his products on the market is adding an asset to the country. To reach the farmer who now has to haul his products beyond what is considered a reasonable distance, to enable him to compete with one who has been in the country a much longer period, is, Mr. Bury thinks, doing something that will encourage the man who is on the ground as well as the man who contemplates coming.

Last year there was put in operation in the West by the C.P.R. about 450 miles of new line. In addition to the new lines placed in operation the great bridge at Outlook, Sask., was finished, thus completing a practically new line from Moose Jaw to Edmonton. The Outlook bridge is over 3,000 feet long. The big Ogden shops at Calgary are enclosed and steps are being taken to put them in operation. It is estimated that the population of the Calgary district will be increased by 10,000 by the opening of these shops. The high level bridge at Edmonton is 75% completed and will connect the two sections of the city for both railway and highway traffic. At Fort William, Ont., the company has completed a 1,000,000 ton coal handling plant and bridges across the river at that place are nearing completion, thus placing the terminal there in position to care for the immense traffic now coming out of the West. On the Pacific coast the terminal station at Vancouver will be one of the best on the continent, and on the British Columbia division the double tracking is going steadily ahead, the rock ballasting through that section being one of the most permanent in track building that has ever been accomplished. Add to all these improvements the building of the yards at North Transcona, near Winnipeg, to care for 12,000 cars, some of the immensity of the work accomplished and in contemplation on Western lines can be gleaned.

The improvements on the Western lines will include: Fort William, six stall addition to locomotive house, increase of storage capacity of elevator to 4,000,000 bushels, and increase of size of freight car repair shops. Kenora, six stall addition to locomotive house. Minnedosa, Man., five stall addition to locomotive house. Arcola, Sask., four stall addition to locomotive house. Additional trackage at Regina, Moose Jaw, Saskatoon and Sutherland, Sask. Sicamous, B.C., additional trackage facilities. Vancouver, complete new terminal station and wharf, additional trackage at False Creek yards.

New branch lines: Kootenay Central, Skookumchuck, B.C., to mileage 60; Coronation to Sedgwick, Alta., 25 miles; Kootenay Central, mileage 42 to mileage 60, south of Golden, B.C.; standardization of Kaslo and Slocan Ry. from Whitewater to Kaslo, B.C., 17 miles; Snowflake, Man., west, 9 miles; Lacombe, Alta., east to Kerrobert, Sask., 66 miles; Stirling, Alta., east, 25 miles; Suffield, Alta., southwest, 25 miles; Weyburn, Sask., west, 145 miles; Assiniboia, first division point west of Weyburn, new yard; Bassano, Alta., to Empress, 118 miles; Gimli to Tiverton, Man., 26 miles.

New second track: Kemnay to Virden, Man., 40 miles; Whitewood to Broadview, Sask., 15 miles; Broadview to Grenfel, Sask., 16 miles; Indian Head to Regina, Sask., 44 miles; Chaplin to Swift Current, Sask., 57 miles; Swift Current to junction point with Swift Current northwest branch, 6 miles; Gleichen to Shepard, Alta., 40 miles. In addition to the above double tracking there will be 81 miles of double track in British Columbia from Vancouver to Ruby Creek. A portion of this, between Vancouver and New Westminster Jct., is already in operation. The balance to Ruby Creek will be completed this year. The terminal at North Transcona will be

further developed during the year to provide for increased traffic both east and west.

Other works include additional trackage at Dunmore and Calgary, Alta., automatic block signals between Ogden and Sunalta, Alta. Passenger coach house with ice house, coal shed, etc. Alyth, Alta., six stall addition to locomotive house. Strathcona, Alta., increased trackage facilities, overhead bridge at Anthony St. Edmonton, increased trackage facilities. Wetaskiwin, Alta., increased trackage facilities and extension to express room. Lacombe, Alta., two stall addition to locomotive house and 50 ft. addition to freight shed.

British Columbia coast service, new tug boat for car barge between Vancouver and Vancouver Island, lengthen Princess Mary by 40 ft., increase stateroom capacity from 60 to 80, and instal Princess Sophia with fuel oil apparatus. British Columbia lake and river steamboats: new steam tug for Okanagan Lake, eight car barge for Okanagan Lake, eight car barge for Arrow Lake, 15 car barge for Kootenay Lake, deck barge for Kootenay Lake, steel hull steamboat for Okanagan Lake.

In addition to new work of constructing branch lines and double tracking many of the lines now in operation will be improved and laid with heavier steel, roadbed improved and additions made to smaller stations and general improvement to yards and passing tracks. Altogether it will be one of the busiest years the C.P.R. has ever had in building and improving the system. The new lines to be built total 532 miles; miles of double track, 260.

Railway Lands Patented.—Letters patent were issued during Nov., 1912, in respect of railway lands in Manitoba, Saskatchewan and Alberta, as follows:

	Acres.
Canadian Northern Ry.	800.00
Canadian Pacific Ry. roadbed and station grounds	3.06
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	1,782.72
Total	2,585.78

G.T.P.R. Winnipeg-Fort William Service.—It is said that the G.T. Pacific Ry. contemplates putting on a regular passenger service between Winnipeg and Fort William in the spring, but no definite announcement has been made. When this service is put on it is expected that the trains will be run into the new Union Station built by the C.P.R. at Fort William, and that the Superintendent's office will be moved from the present quarters to the Union Station.

Reduction of Steel Rails Duty.—The Minister of Customs stated in the House of Commons, Jan. 20, that orders in council had been passed during 1912 remitting $294,000 duty on 75,000 gross tons of steel rails imported into Canada, and supplied by the Algoma Steel Co., in fulfilment of contracts with the G.T. Pacific Ry. and the C.P.R. The amount remitted was one half of the duty authorized to be levied.

White Pass and Yukon Route Rates to Dawson.—In the case of the Humboldt Steamship Co. vs. White Pass and Yukon Route, consisting of Pacific and Arctic Ry. and Nav. Co., British Columbia-Yukon Ry. Co., British-Yukon Ry. Co., and British-Yukon Navigation Co., which was a petition for the establishment of through routes and joint rates from Seattle, Wash., to Dawson, and to other points in Canadian territory, the U.S. Interstate Commerce Commission held recently that it has no jurisdiction of railway and steamship lines located, owned and operated entirely in an adjacent foreign country; and that the wharf used by defendants at Skagway, Alaska, is an instrumentality of interstate commerce used by defendants.

The Dominion Government Railway to Hudson Bay.

An Ottawa dispatch Jan. 2, says H. T. Hazen, the engineer in charge of surveys, was expected in Ottawa at the end of January. His work has been the preparation of plans for terminals at Port Nelson, particularly the harbor terminals.

It was reported in Winnipeg Jan. 9, that the bridge over the Saskatchewan River at Pas, Man., for which Mackenzie, Mann and Co. are the contractors, was about half erected, and that good progress was being made with the grading by J. D. McArthur, the general contractor for the line.

An order in council has been issued withdrawing a half mile strip on either side of the line from Pas to Port Nelson from sale and reserving it for the railway's purposes. (Jan., pg. 30.)

Railway Equipment Requirements.—The Board of Railway Commissioners, at its sitting in Ottawa, Feb. 4, will consider the question of requiring railway companies, subject to its jurisdiction, to put into use truck and body bolster locking device which will hold the body of the car to the trucks, or passenger equipment, in case of derailment, head on or rear end collision. The Board will also consider the question of standardizing safety appliance equipment, similar to the requirements of the Interstate Commerce Commission.

Freight Rates on Potatoes, Etc.—In the matter of the investigation and suspension of advances in rates by carriers for the transportation of potatoes and other perishable freight in heater cars between points in Trunk Line Territory and Canada, the U.S. Interstate Commerce Commission held recently in the case of Boston Potato Receivers' Association vs. Bangor and Aroostook Rd. Co., that the proposed heater tariffs under suspension were just and reasonable and should be allowed to take effect when the reconsignment provisions therein have been modified in accordance with the views expressed by the Commission report, and subject to the limitation that no charge should be made for the use of a heater car unless ordered by the shipper, or unless the fires are lighted.

The Michigan Central Rd. has given a 99 year lease of a site in St. Thomas, Ont., conditional on a $50,000 building being erected thereon by the local Y.M.C.A.

The Quebec Legislature has passed an act creating the district of Ungava, recently granted to the Province by the Dominion, a territory to be called New Quebec.

The Department of Railways and Canals has under consideration tenders for the supply of 765,000 tons of bituminous coal for the Intercolonial Ry., and 15,500 tons for the Prince Edward Island Ry.

At the recent session of the Quebec Legislature some amendments were made in the course of procedure for the liquidation of railway companies. The law is not to become operative until 1914, and is not to be applied to any liquidation proceedings pending.

The Canadian Manufacturers' Association is considering the question of the adoption of special boxes and nails to prevent pilfering of goods in transit on railways. The executive committee of the Association has passed a resolution requesting the Board of Railway Commissioners to introduce a system of uniform penalties against railways for failure to receive, carry and deliver freight within a reasonable time, on a similar basis to that adopted under the car demurrage rules.

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central and Hudson Bay Ry., Algoma Eastern Ry.—H. J. HERROLD, heretofore General Agent, has been appointed General Freight and Passenger Agent. Office, Sault Ste. Marie, Ont. The position of General Agent has been abolished.

Algoma Central Steamship Line.—S. V. McLEOD has been appointed Superintendent, vice J. E. McLurg, reported to have been appointed Superintendent of Sales, Algoma Steel Corporation. Office, Sault Ste. Marie, Ont.

Canadian Northern Quebec Ry., Quebec and Lake St. John Ry.—A. S. BUCKLE, heretofore chief clerk, Claims Department has been appointed City Freight and Passenger Agent, Quebec, vice W. W. Johnston, resigned.

Canadian Northern Ry.—A. E. WARREN, heretofore General Superintendent, Central Division, Winnipeg, has been appointed Assistant to the General Manager. Office, Winnipeg.

A. WILCOX, heretofore General Superintendent, Western Division, Edmonton, Alta has been appointed General Superintendent, Central Division, vice A. E. Warren, promoted. Office, Winnipeg.

A. E. MACDONALD, heretofore Special Agent, has been appointed General Claim Agent. Office, Winnipeg.

B. T. CHAPPELL, heretofore Trainmaster, District 3, Western Division, North Battleford, Sask., has been appointed Superintendent, District 2, Western Division, vice J. G. Entwistle, transferred. Office, Saskatoon, Sask.

W. C. TURNER, heretofore Yardmaster, Saskatoon, Sask., has been appointed Trainmaster, District 2, Western Division, vice F. W. Ross, transferred. Office, Saskatoon, Sask.

W. A. BROWN, heretofore Superintendent, District 3, Western Division, Edmonton, Alta., has been appointed General Superintendent, Western Division, vice A. Wilcox, transferred. Office, Edmonton, Alta.

J. G. ENTWISTLE, heretofore Superintendent, District 2, Western Division, Saskatoon, Sask., has been appointed Superintendent, District 3, Western Division, vice W. A. Brown, promoted. Office, Edmonton, Alta.

F. W. ROSS, heretofore Trainmaster, District 2, Western Division, Saskatoon, Sask, has been appointed Trainmaster, District 3, Western Division, vice B. T. Chappell, promoted. Office, Edmonton, Alta.

Canadian Pacific Ry.—The President, Sir Thos. Shaughnessy, issued a circular, Jan. 15, as follows,—"It has been decided to create a Department of Investigation, in charge of HUGH G. CHAMBERLIN, whose title will be Chief of the Department of Investigation, with office at Windsor St. Station, Montreal. Hereafter all enquiries or investigations, excepting those involving the relations between officials and employes, and those which must necessarily be conducted through the Audit Department, will be under the control and supervision of the Chief of the Department of Investigation, who will report to the President. He will have such assistants on the different sections of the system as may be necessary to enable him to perform his work efficiently." Mr. Chamberlin was until recently Chief of Police at Vancouver, B.C.

W. A. COWAN, heretofore Assistant Engineer, Montreal, has been appointed acting Superintendent, Distric 1, Atlantic Division, vice H. C. Grout, Superintendent, promoted. Office, Brownville Jct., Me.

A. C. BRADY, heretofore Inspector of Montreal Terminals, has been appointed Assistant Superintendent Montreal Terminals, vice J. B. Smith, transferred to office of General Manager, Eastern Lines, Montreal.

M. A. FULLINGTON, heretofore Resident Engineer, Dominion Atlantic Ry., Kentville, N.S., has been appointed Assistant Division Engineer, Eastern Division, vice S. B. McConnell, promoted to Assistant Engineer. Office, Montreal.

N. E. GUTELIUS, heretofore senior transitman, London, Ont., has been appointed Resident Engineer, District 2, Eastern Division, vice C. C. Kirby, promoted to Assistant Chief Engineer's office. Office, Montreal.

T. COLLINS, Superintendent, L. L. ROSS, Bridge and Building Master, W. TANSLEY, Assistant Superintendent, and M. HUNT, Chief Dispatcher, District 1, Ontario Division, have had their jurisdiction extended over the Kingston and Pembroke Ry., which is being operated as part of that district. The offices of the first two are at Toronto, and those of the other two at Havelock.

A. Wilcox,
General Superintendent, Central Division, Canadian Northern Railway.

F. CONWAY, heretofore acting Superintendent and General Freight and Passenger Agent, Kingston and Pembroke Ry., Kingston, Ont., has been appointed City Freight and Passenger Agent, C.P.R., there.

J. ERWIN, heretofore Roadmaster, Kingston and Pembroke Ry., Kingston, Ont., has been appointed Roadmaster, Kingston Subdivision, C.P.R., at Kingston, Ont.

F. CLARK, heretofore dispatcher, Kingston and Pembroke Ry., Kingston, Ont., has been appointed dispatcher, Kingston Subdivision, C.P.R., at Kingston, Ont.

W. J. PICKRELL, heretofore District Master Mechanic, District 4, Ontario Division, Toronto, has been appointed District Master Mechanic, District 3, Ontario Division, vice J. R. Spragge, retired. Office, Toronto.

C. W. BURPEE, formerly Superintendent, District 1, Ontario Division, Toronto, who has been on sick leave for some time, has resigned.

The circular appointing GRANT HALL General Manager, Western Lines, as announced in our last issue, states that he will be in charge of maintenance and operation, with office at Winnipeg.

C. B. FOSTER, General Passenger Agent, Winnipeg, has had his territory rearranged, his jurisdiction now covering Manitoba, Saskachewan, and Alberta Divisions, and Field B.C., the territory west of Kootenay Landing and Field, and east of Revelstoke, heretofore under his jurisdiction, having been transferred to the British Columbia Division.

R. M. MITCHELL has been appointed Right of Way Agent. Office, Winnipeg.

C. PERRY, heretofore fitter at Winnipeg, has been appointed Shop Foreman at Brandon, Man., vice R. McPherson, promoted.

J. P. McANANY, heretofore District Master Mechanic, District 1, British Columbia Division, Revelstoke, has been appointed District Master Mechanic, District 2, Saskatchewan Division, vice G. Whiteley. Office, Moose Jaw.

R. McPHERSON, heretofore Shop Foreman at Brandon, Man, has been appointed Shop Foreman at Moose Jaw, Sask., vice W. J. Renix, promoted..

W. J. RENIX, heretofore Shop Foreman, Moose Jaw, Sask., has been appointed Locomotive Foreman, Sutherland, Sask., vice A. McArthur, promoted.

W. H. LEE has been appointed Locomotive Foreman, Weyburn, Sask., vice P. Walz, resigned.

R. C. HARRIS, heretofore Resident Engineer, District 1, Alberta Division, Medicine Hat, has been appointed Resident Engineer of Terminals at Calgary, Alta.

J. ROBERTSON, heretofore Resident Engineer, District 3, Alberta Division, Cranbrook, B.C., has been appointed Resident Engineer, District 2, Alberta Division, vice T. J. Brown, transferred to Cranbrook. Office, Calgary, Alta.

R. J. BETHUNE has been appointed Resident Engineer in charge of the high level bridge between Strathcona and Edmonton, and of terminal work at Edmonton. Office, Edmonton, Alta.

J. H. SOANS, heretofore transitman, has been appointed Resident Engineer, District 1, Alberta Division, vice R. C. Harris, transferred. Office, Medicine Hat.

J. ALEXANDER has been appointed Locomotive Foreman at Hardisty, Alta., vice E. B. Patterson, resigned.

M. J. SCOTT, heretofore District Master Mechanic, Nelson, B.C., has been appointed District Master Mechanic, District 1, British Columbia Division, vice J. P. McAnany, transferred. Office, Revelstoke.

A. McARTHUR, heretofore Locomotive Foreman, Sutherland, Sask., has been appointed General Foreman, Revelstoke, B.C., vice A. Mallinson, promoted.

J. HOPGOOD has been appointed Trainmaster, District 1, British Columbia Division, vice J. M. McKay, promoted. Office, Revelstoke.

A. W. CLARK has been appointed Locomotive Foreman at Kamloops, B.C.

A. E. BENNETT has been appointed Locomotive Foreman at Eholt, B.C.

T. J. BROWN, heretofore Resident Engineer, District 2, Alberta Division, Calgary, has been appointed Resident Engineer, District 3, Alberta Division, vice J. Robertson, transferred to Calgary. Office, Cranbrook, B.C.

A. MALLINSON, heretofore General Foreman, Revelstoke, B.C., has been appointed District Master Mechanic, Nelson, B.C., vice M. J. Scott, transferred.

H. W. BRODIE, General Passenger Agent, Vancouver, B.C., has had his territory extended to cover the British Columbia Division, with the exception of Field, the additional territory being the lines west of Kootenay Landing and Field.

Central Vermont Ry.—E. J. CHAMBERLIN, President, G.T.R., G.T. Pacific Ry., and subsidiary companies, and Chairman of the Board, C.V.R., has also been elected President, C.V.R., vice E. H. Fitzhugh, resigned.

Dominion Atlantic Ry. G. G. HARE, heretofore Engineer of Construction, has been appointed Engineer, vice M. A. Fullington, retransferred to C.P.R. service. The duties of the former position will be combined with those of the latter. Office, Kentville, N.S.

Fort Garry Union Station, Winnipeg.—P. J. FLYNN, heretofore Trainmaster, Buffalo Division, Lehigh Valley Rd., Buffalo, N.Y., has been appointed Manager of Terminals, Winnipeg Joint Terminals, Canadian Northern, G.T. Pacific and National Transcontinental Rys., vice J. A. Glassford, resigned.

Grand Trunk Pacific Ry. G. W. ROBB, Master Mechanic, has had his office removed from Rivers to Transcona, Man.

M. B. DUBE, heretofore General Foreman, Rivers, Man., has been appointed General Foreman, Transcona Shops. Office, Transcona, Man. ,

H. HULATT has been appointed Commercial and Traffic Superintendent with jurisdiction over operation of railway and commercial telegraphs and departmental accounts. Office, Winnipeg.

W. J. ROONEY has been appointed Superintendent of Plant, with jurisdiction over all matters pertaining to construction and maintenance of telegraph and telephone plant. Office, Winnipeg.

J. H. MITCHELL has been appointed Locomotive Foreman, Rivers, Man.

C. B. SMITH, heretofore Road Foreman of Locomotives, Wainwright, Alta., has been appointed a locomotive driver at Edmonton, Alta.

H. L. GURWELL has been appointed agent at Hinton, Alta.

S. J. COVEY, heretofore Roadmaster, has been appointed Trainmaster at Wainwright, Alta.

W. L. PINKSTONE, heretofore section foreman, has been appointed Roadmaster at Wainwright, Alta., vice S. J. Covey, promoted.

Grand Trunk Ry.—The Transportation Department has been reorganized and a number of new positions created. The office of General Transportation Manager, which was abolished on the resignation of W. G. Brownlee, has been partially revived, by the creation of the position of General Superintendent of Transportation. The system has been divided into three grand divisions, each in charge of a general superintendent. The various districts have also been grouped into divisions, instead of subdivisions as heretofore. A superintendent of freight service and a superintendent of passenger service have also been appointed.

D. CROMBIE, heretofore Assistant to the Vice President, Montreal, has been appointed General Superintendent of Transportation. Office, Montreal.

W. H. FARRELL, formerly Superintendent of Terminals, Toronto, and latterly on special service, has been appointed Superintendent of Freight Service. Office, Montreal.

F. PRICE, heretofore Superintendent of Car Service, Montreal, has been appointed Superintendent of Passenger Service, and his former position has been abolished. Office, Montreal.

C. J. McKEOUGH, heretofore conductor, has been appointed Trainmaster, District 15, Stratford Division, Ontario Lines. Office, Stratford.

WALTER WHITE has been appointed Trainmaster, Districts 22 and 23, Stratford Division, Ontario Lines. Office, Stratford.

W. CULLIGAN, heretofore dispatcher, has been appointed Chief Dispatcher, Stratford, Ont.

P. J. LYNCH, heretofore Superintendent, Northern Division, Allandale, Ont., has been appointed Superintendent, Barrie Division, Ontario Lines, comprising Districts 11, 12 and 14. Office, Allandale.

J. C. CROMBIE, heretofore Master of Transportation, London, Ont., has been appointed Superintendent at St. Thomas, Ont.

U. E. GILLEN, heretofore Superintendent Eastern Division, Montreal, has been appointed General Superintendent, Western Lines, including Districts 25, 26, 27, 28, 29 and Pontiac, Oxford and Northern Ry. Office, Chicago, Ill.

J. CALDWELL has been appointed Superintendent, Detroit Division, including Durand Terminals, Districts 27, 23, 29, and Pontiac, Oxford and Northern Ry., vice C. S. Cunningham, Superintendent, Western Division, resigned. Office, Detroit, Mich.

J. EHRKE, heretofore Assistant Superintendent, with territory covering Districts 25 (main line) and 26, Battle Creek, Mich., has been appointed Superintendent, Chicago Division, including Districts 25 and 26. Office, Battle Creek, Mich.

A. B. SMITH, heretofore Manager of Telegraphs, G.T. Pacific Ry., Winnipeg, has also been appointed Manager of Telegraphs, G.T.R System. Office, Montreal.

B. H. BROWN, Montreal, has been appointed one of the two auditors in Canada for the G.T.R. System. The other auditor is [illegible], Montreal.

With reference to the appointment of A. S. GOING as Engineer of Construction, as announced in our last issue, we are advised that matters of location will remain under his supervision, so no appointment to the position of Locating Engineer, formerly held by him, will be made.

W. H. SPICER, heretofore Commercial Agent, Detroit, Mich., has been appointed Division Freight Agent there, vice C. Clarke, whose appointment as Assistant Commissioner of Industries was announced in our last issue.

JAS. McPEAK has been appointed Commercial Agent at Detroit, Mich., vice W. H. Spicer, promoted.

G. W. NORMAN, heretofore Travelling Passenger Agent, Kansas City, Mo., has been appointed Travelling Passenger Agent, Chicago, Ill., reporting to Assistant General Passenger Agent, Chicago, vice M. J. Corcoran, resigned.

W. M. LEWIS has been appointed Travelling Passenger Agent, Kansas City, Mo., reporting to Assistant General Passenger Agent, Chicago, Ill., vice G. W. Norman, transferred.

The following agents have been appointed:—Dewittville, Que., W. J. Martin; Thousand Island Ry. Jct., Ont., F. J. Laughton; Novar, Ont., J. Mitchell; Wyebridge, Ont., W. J. Breathaur (relieving); Alliston, Ont., F. O. Moore; Burlington Jct., Ont., I. G. Heldman; Beamsville, Ont., D. O'Neill; Komoka, Ont., H. W. Sussex; Wyoming, Ont., T. M. Davis; Nelles Corners, Ont., O. W. Heath; Ekfrid, Ont., A. E. Beales; Elora, [illegible], Ont., S. [illegible]; Wingham, Ont., W. F. Burgman; St. Polycarpe Jct., Ont., A. Joli; Wilno, Ont., E. C. Childerhose (temporarily); Enterprise, Ont., outside, S. B. Wagar; Lachute, Que., [illegible] W. H. [illegible] Garratsee.

Intercolonial Ry.—H. JARDINE, heretofore Division Engineer, Truro, N.S., has been appointed Resident Engineer, with territory between Halifax, N.S., and St. John, N.B. Office, Truro, N.S.

J. C. FULMORE, heretofore Roadmaster at Pictou, N.S., has been appointed Roadmaster at Truro, N.S., vice C. W. Archibald, promoted.

C. W. ARCHIBALD, heretofore Roadmaster, Truro, N.S., has been appointed Resident engineer, with territory between Truro and Sydney, N.S.

H. SPINNEY has been appointed Roadmaster, Pictou, N.S., vice J. C. Fulmore, transferred.

U. E. Gillen,
General Superintendent, Western Lines, Grand Trunk Railway.

J. M. BOAK and V. H. WILLIAMS have been appointed Travelling Freight Agents, Western United States, reporting to Western U.S. Freight Agent, Chicago, Ill.

H. E. Whittenberger,
General Superintendent, Ontario Lines, Grand Trunk Railway.

Inverness Ry. and Coal Co.—J. McGILLIVRAY, heretofore Superintendent of the company's railway lines, has been appointed General Manager, vice W. D. Barclay, deceased. Office, Inverness, N.S.

Michigan Central Rd.—H. SHEARER, heretofore Assistant to General Manager, has been appointed Assistant General Superintendent, vice M. B. Snow, resigned. Office, Detroit, Mich.

F. W. COWLEY, heretofore acting Superintendent, Canada Division, St. Thomas, Ont., has resumed his former position as Trainmaster, St. Thomas, Ont., vice J. S. Graney, assigned to other duties.

W. E. HACKETT has been appointed Local Treasurer, M.C.R., Detroit River Tunnel Co., Detroit River Terminal Rd., and Toronto, Hamilton and Buffalo Ry., vice J. E. Griffiths, deceased. Office, Detroit, Mich.

D. J. HACKETT has been appointed Superintendent, Canada Division, vice F. W. Cowley, acting Superintendent, who resumes his former position. Office, St. Thomas, Ont.

W. E. HACKETT has been appointed Local Treasurer, T.H. and B.R., as well as of the Michigan Central Rd., vice J. E. Griffiths, deceased. Office, Detroit, Mich.

J. S. GRANEY, heretofore acting Trainmaster, St. Thomas, Ont., has resumed his former position there, as dispatcher.

Pere Marquette Rd.—J. J. WATERS has been appointed Superintendent of Motive Power, vice W. L. Kellogg, resigned. Office, Grand Rapids, Mich.

Quebec, Montreal and Southern Ry., Napierville Jct. Ry.—N. J. FERGUSON, heretofore Travelling Freight and Passenger Agent, Montreal, has been appointed General Freight and Passenger Agent, vice D. I. Roberts, resigned. Office, Montreal. We are officially advised that the position of General Manager also held by Mr. Roberts, will not be filled for the present, the duties heretofore performed by Mr. Roberts having been divided between N. J. Ferguson, General Freight and Passenger Agent, and J. E. Roberts, Superintendent.

Reid Newfoundland Co.—F. RIOUX, heretofore Superintendent, St. John's, Nfld., has been appointed Assistant to President. Office, St. John's, Nfld.

W. E. LADLEY, heretofore Shop Superintendent, Chicago and Alton Rd., Bloomington, Ill., has been appointed Superintendent of Motive Power, R.N. Co., vice A. C. Gray. Office St. John's, Nfld.

A. GRAHAM has been appointed Assistant to General Superintendent. Office, St. John's, Nfld.

G. COBB, heretofore Chief Dispatcher, St. John's, Nfld., has been appointed Superintendent, vice F. Rioux, promoted. Office, St. John's, Nfld.

W. CHARD has been appointed Claims Agent, dealing with baggage and freight claims, under supervision of General Passenger Agent. Office, St. John's, Nfld.

Dining car crews, sleeping car porters, stewards and cooks of steamers, and pursers, have been placed under the supervision of the General Passenger Agent, instead of the Superintendent, as heretofore.

Toronto, Hamilton and Buffalo Ry.—J. W. EBER, heretofore General Superintendent, has been appointed General Manager, vice H. H. Adams. Office, Hamilton, Ont.

C. H. BORE has been appointed chief clerk to the Secretary-Treasurer, Montreal Tramways Co., vice G. A. McNamee, resigned.

The Manitoba Public Utilities Commission, which has had under consideration for some time the matter of the utilization of the Winnipeg Electric Ry. poles by the municipality, has ordered that the company's poles be owned and used jointly with the city.

Railway Rolling Stock Orders in 1912.

—Railway Age Gazette

National Transcontinental Railway Construction.

The main line of the N.T.R., which has been operated for freight purposes by the G.T. Pacific Ry. for some time, under an agreement with the Commission, from Winnipeg to Lake Superior Jct., was connected up with Cochrane, Ont., Dec. 28. A train load of wheat was started from Winnipeg Dec. 27, and was run over the line to Cochrane, Ont., there transferred to the Timiskaming and Northern Ontario Ry., over which the G.T.R. has running powers, transferred to the G.T.R. at North Bay, and thence run over the G.T.R. to Port Colborne, Ont., where the wheat was milled. The flour was then carried over the G.T.R. and Intercolonial Ry. to St. John, N.B., where it was shipped to South Africa.

The shops at Transcona, Man., were taken over by the G.T.P. Ry. from the N.T.R. Commission Jan. 20. (Jan., pg. 29.)

Crand Trunk Pacific Railway Construction.

In the House of Commons Jan. 17, the Minister of Finance stated that it had been decided to devote part of the surplus revenues of the country to the purchase of G.T.P.R. bonds. The country had had to provide $4,944,000, the difference between the face value of bonds already sold, and the price realized for them on the market, under the "implementing" clause of the guarantee agreement. There remained to be sold bonds to the value of £6,800,000, and it was proposed that the Government have power to take these bonds, and raise the money necessary on the security of the Government. At present prices it would cost about $8,000,000 to carry out the provision of the "implementing" guarantee. It was possible to save something of this by borrowing directly on the credit of the country, but it was impossible to forecast what the saving would be. A bill to carry this decision into effect was subsequently passed by both houses.

The G.T. Pacific Ry. reports that at Dec. 31 there were 440 miles of main line and 205.8 miles of branch lines under construction, on which considerable work had been done. The general contract on the main line is held by Foley, Welch and Stewart; and the branch lines, with the contractors are: Harte-Brandon branch, 25 miles, Rigby Hyland and Plummer; Regina International Boundary, 19 miles, J. D. McArthur, Winnipeg; Talmage to Weyburn, 14.8 miles, J. Bradley; Regina to Moose Jaw, 3 miles, Rigby, Hyland and Plummer; Moose Jaw northwesterly, 50 miles, Rigby Hyland and Plummer; Young to Prince Albert, 44 miles, J. D. McArthur; Battleford to Wainwright, 46 miles, Lamoreaux and Peterson; Tofield to Calgary, 4 miles, J. D. McArthur, sublet to Sieurs and Carey. In each case the mileage under construction is the uncompleted portion of the lines.

In a general report as to construction, B. B. Kelliher, Chief Engineer, states that during 1912 563 miles of main line and 688 miles of branch lines were under construction. Track was laid during the year on 128 miles of main line and 459 miles of branch lines. Track laying was completed on the main line to mileage 1,124 west of Winnipeg, and trains are being operated to Tete Jaune Cache, 1,096 miles from Winnipeg. Grading is so far advanced that it will be possible to lay track to mileage 1,190 early in the spring. Easterly from Prince Rupert the line is in operation to New Hazleton, track being laid to mileage 189. Active grading work is going on from mileage 189 to mileage 341 from Prince Rupert, or mileage 1403 from Winnipeg.

Of the branch lines the report sets out as follows:—Harte-Brandon—There are 10.8 miles out of the 25 ready for track laying; Regina boundary branch—track has been laid for 106 miles, and there are 19 miles yet to be completed; Talmage to Weyburn—under contract, with 39% of the grading completed; Regina-Moose Jaw—nearly completed, and terminal layout in Moose Jaw in progress; Moose Jaw northwesterly—grading practically completed, but no track laid; Oban-Battleford branch—48.5 miles completed; Cutknife branch—grading completed and four miles of track laid; Young to Prince Albert—track laid to Wicklaw, 67 miles, and grading completed into Prince Albert; but line will not be completed until bridge is built across Saskatchewan river; Biggar towards Calgary—grading completed to Saskatchewan-Alberta boundary, and a few miles of grading has yet to be completed, track has been laid for 37 miles out of Biggar; Tofield-Calgary branch—grading practically completed on the 202 miles, track laid to mileage 165.3, and trains are operated to mileage 65, some steel bridges are to be built.

The Board of Railway Commissioners has authorized the opening for traffic of the Regina-Moose Jaw branch from mileage 0 to 34.[illegible].

The Saskatchewan Minister of Railways informed the Legislature recently that under an arrangement with the Government the company is building an extension of the Moose Jaw-Riverside branch into the Duck Lake country. It is expected to have it completed to the Saskatchewan river during this year, and arrangements are being made for carrying on construction west of the river so that track laying can be carried on throughout the whole length of the branch on completion of the bridge over the river.

The Saskatchewan Legislature has passed an act guaranteeing the bonds of the G.T.P. Branch Lines Co., and the G.T.P. Saskatchewan Ry., for building terminals as follows:—In Saskatoon, $1,200,000; in Regina, $850,000; in Moose Jaw, $850,000; in Prince Albert, $350,000; in Battleford, $100,000. It has also passed an act extending the time within which the branch lines being built under contract with the Government may be completed. The Minister of Railways stated in the Legislature Jan. 9, that the 105 miles of lines which had to be built under the 1908 contract have been completed, and are in operation, and of the 475 miles to be built under the 1909 contract about 300 miles had been completed.

Telegraph, Telephone and Cable Matters.

The Canadian Northern Telegraph Co. has opened an office at Leask, Sask.

It is reported that the Dominion Government has opened a wireless telegraph station at Alert Bay, on the north of Vancouver Island, thus making 10 stations along the coast, under Government control.

The Great North Western Telegraph Co. has opened an office at Donnacona, Que., and closed its offices at Burgessville, Foxboro, Grimsby Beach, Muskoka Wharf, Ont., Chaudiere Basin, Little Metis Lighthouse and Matane Lighthouse, Que.

P. T. Hawkins has been appointed Manager, Great North Western Telegraph Co., at Guelph, Ont., vice R. G. Davidson, resigned; J. L. Murphy, heretofore Manager at Ingersoll, Ont., has been appointed Manager at Peterboro, Ont., and I. Labrie has been appointed Manager at Ingersoll, Ont.

A telegraph machine has been invented in Spain, which is claimed to be a distinct advance on the Hughes machine in use at present, in that it will transmit 1,820 words a minute, a speed three times greater than that obtainable on the Hughes machine.

A press report states that communication took place recently, between two wireless telegraph stations, situated at Nauen, Germany, and New York, and it is said that this is the first time that direct wireless communication has been established between Germany and the U.S.

A. B. Smith, Manager of Telegraphs, G.T. Pacific Ry., Winnipeg, has had his jurisdiction extended over the whole G.T.R. System, with office at Montreal. We are officially advised that no change will be made in the position of Superintendent of Telegraph, Montreal, held by W. W. Ashald.

During the storms in the early part of January, considerable damage was done to telegraph lines east of Toronto, the Great North Western Telegraph Co. losing nearly 700 poles. Communication was interrupted in the Brighton and Belleville district, for some time, the repairs being quickly carried out under the supervision of W. J. Duckworth, Superintendent of Construction.

The Saskatchewan Legislature has fixed the taxes, under the amendments to the Corporation Tax Act, for every telegraph company owning, leasing and operating telegraph lines in the Province, and carrying on a general commercial business, as follows,—for every branch office in any incorporated city, $125; in any incorporated town, $50, and in any incorporated village, $20.

The Montreal Telegraph Co.'s report for 1912, being the 66th annual report, shows assets of $2,307,582. The property is maintained and operated by the Great North Western Telegraph Co., under lease, and dividends guaranteed by the Western Union Telegraph Co. The lease is for 97 years from July 1, 1881. The total distribution to shareholders, comprising the guaranteed dividend of 8%, and a bonus, amounted to $165,000.

The Great North Western Telegraph Co., at the adjourned annual meeting, Dec. 30, elected Z. A. Lash, K.C., a director of the Canadian Northern Ry., to be President, vice H. P. Dwight, deceased. The other directors and officers for the current year are: Vice President, Adam Brown; other directors, J. Hedley, Hon. J. K. Kerr, Aemilius Jarvis, F. B. Hayes, Toronto; J. B. VanEvery and N. Carlton, New York; General Manager, G. D. Perry; Secretary and Auditor, A. C. McConnell; Treasurer, D. E. Henry.

The Great North Western Telegraph Co. announces effective, Jan. 1, the rate on deferred cable messages between Canada and the United Kingdom, is reduced to 9c, subject to delivery within 24 hours of the time filed. The rate for cable letters is also reduced to 75c for 12 words and 5c for each additional word. These latter are to be delivered on the day following, and weekend letters on Mondays, in each case 24 hours earlier than at present. These charges include transmission to the cable terminal at Montreal, but if the messages are addressed to other places in the United Kingdom than London or Liverpool, an extra charge of 1c a word is made.

The Chicago, Burlington and Quincy Ry. is sending a medical examiner over its lines to inspect the water and ice used in passenger cars, dining cars and station restaurants, and to investigate the sanitary conditions along the line.

Railway Development.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Interurban Ry.—The route map of the second of the lines proposed to be built by this company has been approved by the Minister of Railways. The first line is projected easterly and northerly from Calgary to Carbon; the second one is westerly and northerly from Calgary to near Cochrane, on the Bow River. (Jan., pg. 20.)

Alma and Jonquieres Ry.—The Quebec Legislature has incorporated a company with this title to build the railway previously described. (Dec., 1912, pg. 604.)

Athabasca and Grande Prairie Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from the junction of the Solomon and Athabasca Rivers northwesterly to the junction of the Smokey and Muskeg Rivers, thence northwesterly to Dunvegan, passing through Grande Prairie west of Bear Lake, Alta. Pringle and Guthrie, Ottawa, are solicitors for applicants.

Calumet and Northern Ry.—The Quebec Legislature has incorporated a company with this title to build the railway previously mentioned. (Nov., 1912, pg. 557.)

Canada Western Ry.—Application is being made to the Dominion Parliament for an act extending the time for the building of the railway authorized by chap. 69 of the Dominion statutes, 1909, and varying the route as set out in sec. 7 by striking out the last four lines of sub sec. A and substituting the following:—"From near Coutts on the International boundary, Alta., in a northerly and westerly direction to Cardston, and thence northwesterly to Pincher Creek, Alta." Hough, Campbell and Ferguson, Winnipeg, Man., are the solicitors. (Jan., pg. 20.)

Canadian Central and Labrador Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from Cochrane, Ont., northeasterly to Cape St. Lewis, on the Atlantic Coast, with a branch line to Quebec and another to the Hamilton River. Smith and Johnston, Ottawa, are solicitors for applicants.

Chinook Ry.—Application is being made to the Alberta Legislature to incorporate a company with this title to build a line from the Chinook Coal Co.'s mines at sec. 12, tp. 10, range 22, west 4th meridian, to the C.P.R. Crowsnest Branch near Kipp, Alta. Shepherd and Dunlop, Lethbridge, Alta., are solicitors for applicants.

Coal Coulee Ry.—The Alberta Legislature is being asked to incorporate a company with this title to build a railway from Barnwell on the C.P.R. Crowsnest 10, tp. 10, range 17, west of 4th meridian, thence to branch out in several directions, with such branches and spurs as may be necessary to reach the coal properties being developed. Johnstone and Ritchie, Lethbridge, Alta., are solicitors for applicants.

Dominion Atlantic Ry.—Since the C.P.R obtained control of the D.A. Ry. a considerable amount of betterments has been put in hand. The bridge work proposed to be done was described on pg. 843 of our issue of Sept., 1911, and details of the work to be done on the Smiths Cove bridge was given on pg. 557 of our issue of Oct., 1912. This bridge work has either been completed or in process of completion. We are advised that a wharf, 518 ft. long, has been completed at Yarmouth, N.S., and 570 ft. of trestle work has been built in connection with it, so as to take the cars alongside the steamships. On the new wharf is a building, 150 by 50 ft., provided with slips, freight, customs and express offices. It is expected that considerable further work, which, with that done last year, will practically mean a rebuilding of the line, will be gone on with during this year. (Dec., 1912, pg. 604.)

Duluth and Northern Minnesota Ry.—Press reports state that this line, which now terminates at Cramer, Minn., is to be extended to the International boundary, and thence to Fort William, Ont. — Hare, Civil Engineer, is reported to have been in Fort William recently, completing arrangements for the making of surveys for the section of the line in Canada. (Jan., pg. 20.)

Edmonton, Dunvegan and British Columbia Ry.—In connection with the construction of this line, an issue of $3,500,000 of 4% bonds has been listed on the London, Eng., stock exchange.

The Board of Railway Commissioners has approved location plans from mileage 68.30 out of Edmonton to the east side of the Athabasca River, Alta., mileage 130.

The Minister of Railways has approved revised route map for the line in tps. 62-70, range 27 west of the 4th, and ranges one and two west of the 5th meridian, Alta., about 50 miles. (Jan., pg. 20.)

Gananoque, Perth and Lanark Ry.—The Ontario Legislature is being asked to incorporate a company with this title to build a railway from Gananoque to Lanark, with a branch from Morton northerly to Portland, and other branches as may be expedient. J. C. Judd, Ottawa, is solicitor for applicants. (See Gananoque to Elgin, Dec., 1912, pg. 604.)

Hudson Bay, Peace River and Pacific Ry.—Application is being made to the Dominion Parliament to extend the time within which the railway authorized by chap. 93 of the statutes of 1911 may be built. Lewis and Smellie, Ottawa, are solicitors for applicants.

The Minister of Railways has approved route map from near Winnipeg, at the crossing of the Winnipeg River, towards Port Nelson, Man., for 7.50 miles.

The route of this projected railway extends from Winnipeg to where the Winnipeg River flows into Lake Winnipeg, and thence to Port Nelson, Hudson Bay. The directors of the company are:—President, R. M. Simpson; directors—Hon. D. C. Cameron, F. W. Heubach, D. E. Sprague, R. C. MacDonald, F. W. Drewry, W. S. Evans, and R. D. Waugh, all of Winnipeg. (Mar., 1912, pg. 120.)

Huntingdon and Hemmingford Ry.—The Quebec Legislature has incorporated a company with this title, to build the line previously mentioned. (Nov., 1912, pg. 558.)

Intercolonial Ry.—We are officially advised that the following new structures were completed during 1912:—Freight shed, Halifax, N.S.; brick freight shed, Truro, N.S.; six stall engine house, Point Tupper, N.S.; passenger stations, Mulgrave, Sayabec and Nelson, Chatham, Fredericton; and an extension to the general office building at Moncton. The following works were started during the year, and are also under construction:—Concrete pile pier at Halifax, N.S.; passenger stations at Truro and Point Tupper, N.S. (Jan., pg. 20.)

Intermarine Ry. and Navigation Co.—Application is being made to the Manitoba Legislature to incorporate a company with this title. The notice, over the name of W. S. Boyd, Winnipeg, solicitor to the applicants, does not disclose any further particulars.

Kettle Valley Lines.—J. J. Warren, President, in a recent interview is reported as stating that everything is favorable to seeing the completion of the line to a junction with the C.P.R., near Hope, B.C., by the autumn of 1914. Track laying has been completed for 46 miles out of Midway, and a limited train service is being operated thereon. The 90 miles from track end to Penticton is under construction, while steel has been laid from Penticton to Trout Creek. At this point a large steel bridge is under construction. Grading has been completed on the 30 miles from Trout Creek to Osprey Lake, and another 30 miles from Otter Summit to Merritt has been completed, and a train service put in operation. The extension to Hope branches off some 26 miles south of Merritt and grading is being pushed forward on the first 13 miles.

J. J. Warren, President, K.V.L., and officers of the Great Northern Ry. have recently been in conference with reference to the construction and operation of what is known as the Hope Mountain division. It is said an agreement has been reached for the construction by the K.V. Ry. of the line and for its joint operation.

Press reports state that a contract has been let to G. Chew for the grading of 12 miles. (Jan., pg. 20.)

Kootenay River to Blue Joe Creek, B.C.—The British Columbia Legislature is being asked to incorporate a company to build a standard or narrow gauge railway to be operated by steam, electricity or any other motive power, from the International boundary about nine miles west of the Kootenay River, westerly along the river valley, to the International boundary, where it is crossed by Blue Joe Creek, B.C. F. A. McDiarmid, Victoria, B.C., is solicitor for applicants.

L'Avenir and Melbourne Ry.—The Quebec Legislature has extended the line within which the company may build its projected line. (Dec., 1912, pg. 605.)

Little Nation River Ry.—The Quebec Legislature has extended the time for the building of this line. (Jan., pg. 20.)

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Press reports state that a contract has been let to Foley, Welch and Stewart for the building of an extension from Ambrose, N.D., westerly for 75 miles. Ambrose is immediately south of the International boundary, and the line will run parallel to the C.P.R.'s Estevan and Weyburn-Lethbridge line. (Nov., 1912, pg. 558.)

Newfoundland.—Press reports state that the Newfoundland Government has entered into a contract for building railway from Green Bay on the east coast to Bay of Islands on the west coast of the island, 88 miles. The projected railway is said to be part of a project for the shortening of the time taken in making the trip from Great Britain to Canada. It is proposed to run a ferry service from Bay of Islands to Gaspe, Que., and negotiations are said to be in progress with various shipping companies for the inauguration of a steamship service between a British port and Green Bay. (Jan., pg. 28.)

North Ry.—The Dominion Parliament is being asked to declare the railway which this company has been authorized by the Quebec Legislature to build to be a work for the general advantage of Canada; to confirm so far as Dominion Parliament can do all the rights, powers and privileges granted by the Quebec Legislature, to build additional lines to Ottawa, from Montreal to Quebec; and from Montreal and Quebec to the International boundary in the states of Maine, New Hampshire and Vermont, and power to build a bridge across or a tunnel under the St. Lawrence River.

The Quebec Legislature has passed an act varying the subsidy voted last year in aid of the building of the line from Montreal to the mouth of the Nottaway River on Hudson Bay. The original grant was of 4,000 acres of land a mile for the line from Montreal to the junction with the National Transcontinental Ry. at mileage 837 west of Moncton, N.B., and 5,000 acres of land a mile for the remaining mileage, the total length of the line being 650 miles. The act recently passed doubles the land subsidy, provides that it may not be converted into money by the province, gives the company the right of the ownership of mines and minerals in one-fifth of the land, provided the selection is made within five years; gives the company power to apply to the government for the grant of any water power along the route of the line as may be necessary for its purposes, at a rental of 50 cents a year per horsepower developed, provided the application is made within 15 years. (Jan., pg. 21.)

Pacific and Peace River Ry.—The Dominion Parliament is being asked to extend the time within which the company may build the line authorized by chap. 127 of the statutes of 1911. J. A. Ritchie, Ottawa, is solicitor for applicants. (April, 1912, pg. 182.)

Pacific Great Eastern Ry.—The land held by the Howe Sound and Northern Development Co., at Newport, B.C., has been transferred to the P.G.E. Development Co. It is proposed to develop the property by the erection of docks and wharves for ocean going vessels, and extensive railway terminals. In a recent speech the Premier of British Columbia is reported to have said that the terminals of the line would be in North Vancouver, where it had been arranged to lay out $10,000,000 in providing terminal facilities. D'Arcy Tate, Vice President, is reported as stating that at present it is more advantageous to spend money on construction northerly from Newport, than between North Vancouver and Newport. The entire line, however, will be built within contract time, although the North Vancouver-Newport section of 45 miles will be the last piece to be built.

The Premier of British Columbia is reported as having stated, Jan. 2, that arrangements will probably be completed during the year with the P.G.E. Ry. for the extension of the line beyond Fort George into the Peace River country, and probably on to the Alaskan boundary. (Jan., pg. 21.)

Quebec and Northeastern Ry.—The Quebec Legislature has incorporated a company with this title to build the railway already mentioned. (Nov., 1912, pg. 558.)

Roberval and Saguenay Ry.—The Quebec Legislature has extended the time within which this projected railway may be built, and has changed its name to that of La Compagnie du Chemin de Fer Le Nord, and authorized to acquire the Ha Ha Bay Ry. line, charter, etc. (Dec., 1912, pg. 605.)

St. John and Quebec Ry.—A. R. Gould, President, is reported as having stated, Jan. 9, that construction on the line from near St. John to Grand Falls, N.B., is being proceeded with satisfactorily. Eleven steam shovels are at work on the Gagetown-Centreville section, where the principal work is in progress. Orders have been placed for 16,000 tons of 80 lb. rails for delivery in June and July. These with the orders previously placed will be sufficient to lay the 120 miles between Gagetown and Centreville.

A survey is being made by the Aroostook Valley Ry. for a line across the state of Maine and through the province of Quebec to the bridge now under construction across the St. Lawrence River, near Quebec city. This work was started two years ago, and Mr. Gould added, the work now in progress is merely a continuance. He is President of both companies. (Nov., 1912, pg. 558.)

Saskatoon Transfer Ry.—This projected line will commence on the C.P.R. just west of the city limits of Saskatoon, Sask., and run south, connecting with the main line of the G.T. Pacific and the Goose Lake Branch of the Canadian Northern Ry. where these two lines cross. It will also extend eastward parallel with he C.N.R. to where the C.N.R. and the C.P.R. run parallel, and there connect with the C.P.R. again. The total length of the line will be about four miles, and connections will be made with the other railways by means of 12 degree curves. The line running south from the C.P.R. to the diamond permits of easy gradients and follows closely the level of the ground. The land on both sides of the line is being laid out for factory sites, and the gradients are such as to render it easy for spurs to be laid to the proposed manufacturing plants to be established there. The Saskatoon Land and Investment Co. is largely interested in the project. Brown and Loucks, civil engineers, Saskatoon, are the company's engineers. (Nov., 1912, pg. 558.)

Southampton Ry.—The Dominion Parliament is being asked to declare this railway (built under an act of the Nova Scotia Legislature) to be a work for the general advantage of Canada, and to authorize the lease of the line and undertaking to the C.P.R. Pringle, Thompson and Burgess, Ottawa, are solicitors for applicants. (Sept., 1912, pg. 451.)

Timiskaming and Northern Ontario Ry.—The bridge over the Montreal River, on the Elk Lake Branch, has been completed, and it was expected that track laying on the remaining 6.50 miles of the branch into Elk Lake, Ont., would b completed by Jan. 27. Work trains are being operated over the line as far as the Montreal River, and it is expected to have a regular train service in operation by Feb. 3. (Jan., pg. 21.)

J. L. Englehart, Chairman of the T. and N.O. Ry. Commission, is reported as stating that it is proposed to lay sidings 4,000 or 5,000 ft. in length, about seven miles apart on the line. Several of these sidings have already been laid, and others will be laid during the current year.

A spur line of seven miles from Iroquois Falls, to the Abitibi River Falls, is to be built at an early date. This line will start about half a mile north of Iroquois Falls station and will terminate at the site of the mills of the Abitibi Pulp and Paper Co's. mills now being built.

Vancouver, B.C.—An offer was submitted to the Vancouver city council, Jan. 6, to lease the False Creek flats for 99 years, and to lay out terminals similar to those proposed by the Canadian Northern Ry. The C.N.R. is negotiating for a lease of the flats in perpetuity. The offer, press reports state, is being made on behalf of a company which proposes to lay out terminals which will be open to all railways entering Vancouver. (See also Canadian Northern Ry. Construction, etc.)

Vancouver Island-Mainland Bridge.—The project for the erection of a railway and general traffic bridge to connect Vancouver Island with the mainland of British Columbia is again to the front. The proposed site of the bridge is at Seymours Narrows, a point which was recommended as a probable site for a bridge during the early Government surveys for the C.P.R. The Minister of Public Works recently announced that he was making arrangements for the sending out of a survey party to investigate the matter as soon as possible in the spring.

Western Dominion Ry.—The Board of Railway Commissioners has approved of location plans of the line from sec. 34, tp. 6, range 1 west of the 5th meridian, at a junction with the located line of the projected Pincher Creek, Cardston and Montana Ry. to the Sarcee Indian Reserve, 130 miles. (Dec., 1912, pg. 605.)

Winnipeg to Hudson Bay.—At the opening of the current session of the Manitoba Legislature, Jan. 9, the Lieut.-Governor announced that it was the intention of the Government to secure connection with the main line of the Hudson Bay Ry., now being built by the Dominion Government, by the extension of one of the railway systems of the province, thereby providing most direct communication to Hudson Bay for the benefit of the people of the province.

Toronto Viaduct Proposals.

Representatives of the C.P.R. and G.T.R. waited on the Government at Ottawa, Jan. 13 to obtain a stay in the putting in operation of the Board of Railway Commissioners' order for the building of a viaduct along the Toronto water front from Bay St., east to the Don river. The object for which the stay was required was to have new plans considered for the work, and the companies promised to go ahead with the work immediately upon the decision of the Board whatever it might be. They abandoned their previous suggestion that a series of bridges be built, instead of a viaduct and suggested the building of a six track viaduct for the most part on filled land south of the present tracks, directly along the Sts., and thence across the Don river to a junction with the viaduct as originally proposed. The new plan does not contemplate any alteration in the viaduct plans west of Bay St., nor any material alteration as it affects the proposed new Union station. Counsel for the City of Toronto opposed the new proposals, on the ground that they would necessitate greatly increased damage for interference with properties, and ignore the wharves, etc., on the water front.

The Premier stated that a decision would be given at an early date. There had already been a delay of three and a half years in carrying out the original order. The present application should more properly have been directed to the Board of Railway Commissioners, who had power to reopen the question if they saw fit on the presentation of new objections or of an alternative plan, "but at the present moment," added Mr. Borden, "I would not be prepared to direct the Commissioners on such a matter."

C. P. R. Hotels.—In an interview in Winnipeg, Jan. 20, Hayter Reed, Manager in Chief C.P.R. Hotel, is quoted as stating that about 260 rooms with other necessary additions will be added to the Royal Alexandra Hotel there. Work will be started in the spring, and will be completed during the year. It is intended during the year to add to the hotels at Montreal, Banff, Glacier, and other places, but just exactly to what extent he could not state. The roof is being put on the new hotel at Calgary; and the extensions to the hotel at Vancouver and Victoria are in progress.

Electric Railway Department.

New Cars on the Winnipeg Electric Railway.

So successful has the type of car in use on the Winnipeg Electric Ry. proved during the past two years, that a considerable number have been and are being added to the equipment, 40 having been added in 1911, and the same number in 1912, all built in the company's Fort Rouge shops. The fact that the design has in no way been altered in the last two years is proof positive of their particular adaptability to the Winnipeg conditions of operation. The car and its details are shown in the accompanying five illustrations.

In general arrangement, figs. 1 and 2, these cars differ from those to be found under normal conditions of operation, but the severe winters to be considered in the operation of the Winnipeg line demand a modification of conventional designs if the comfort of the passengers is to be considered, and if the traffic is to be handled expeditiously. It will be noticed that the principal point of difference in construction demanded by this severe weather is the arrangement of entrance and exit both through the rear end. The front end is permanently closed to egress except by the motorman, and for his convenience there is a two step metal ladder dropping sheer from the side of the car from the front vestibule door.

A general impression gathered is that the car is rather higher set than conventional practice dictates elsewhere, but any inconvenience in entering or leaving, from the fact that the car body is high, is eliminated by the convenient arrangement of steps at the rear, these being so set into the rear vestibule as to make it possible to have two well proportioned steps, which, in addition to having the vestibule on a lower level than the car interior, makes entrance and egress very easy. The entrance and exit are separated by a pipe post and brass hand rail, the entrance being next the car body and the exit at the rear of the vestibule.

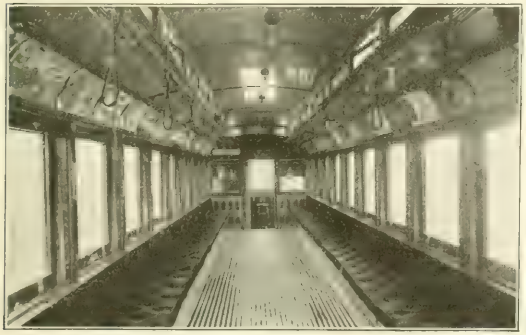

Fig. 2.—Interior of Winnipeg Electric Ry. New Car.

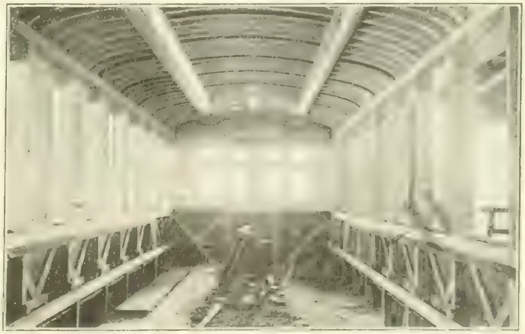

Fig. 3.—Unfinished Interior of New Car.

The interior arrangement is shown in fig. 2. The seats are arranged lengthwise of the car, permitting of easier internal movement of the passengers and conductor. From the rear, there is a central wide, double door entrance, whereas at the front there is only a single narrow door for the convenience of the motorman, passengers not having access to the front vestibule. The interior arrangement of the front vestibule is shown in fig. 2.

The seat cushions and backs are finished in green plush. The interior woodwork finish is in cherry and oak, the outside being finished in cherry sheathing, with the posts, etc., finished in yellow as fig. 1 shows. The deck sashes open by levers from the inside, the front ones opening to the front, and the rear ones to the rear, making ample provision for a good circulation of air through the car, from front to rear, when desired. The heating is from a hot air heater in the front vestibule, from which a pipe passes under the seats on the left side of the car, with outlets arranged at convenient intervals. The interior lighting arrangement consists of 6 lights down the centre of the car and 5 down each side under the deck.

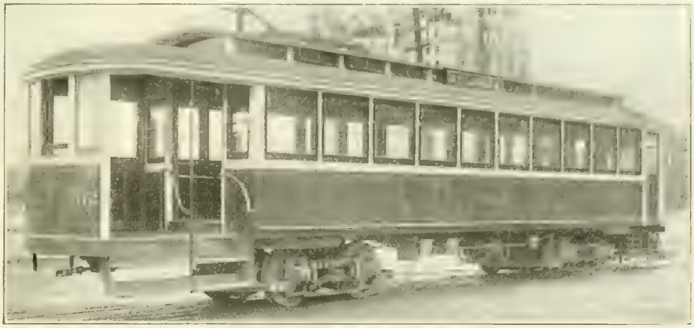

Fig. 1.—Latest Type of Car on Winnipeg Electric Railway.

The length of car body is 33 ft., and it is 45 ft. over bumpers, with an overall width of 8 ft. 4¾ ins., made possible by the wide devil strips used in Winnipeg. The car body frame is built up around two centre sills of 8 in. I beams, filled out with wood fillers in the channel recess on each side of the I beam, and on two 6 by 8 in. wooden side sills. Under the centre of the car, at 7 ft. centres, are two needle beams,—8 in. I beams—on the under side of which, below the sills, are queen posts 3 ins. high, up against which the truss rods bear. These truss rods 1¼ in. diameter, with centre turnbuckles, pass up through the end sills of the car along the line of the [illegible] [illegible] out through the end sill just above the vestibule floor level, where they may be easily got at. The ends of the side [illegible] are also trussed up by means of inside truss rods, shown in fig. 3. Each of these side truss rods is a single length of ½ by 2 in. flat iron, resting on the top of the side posts of the body, as will be noted on the sides in fig. 3, in the notches shown in fig. 4. This rod bends downward at the second post from each end, connecting to a 1¼ in. rod through a pin connection, the rod coming out through the end sills, just in front of the step side as shown in fig. 1, where the end is accessible for tightening up. The side construction of the car body is shown to advantage in fig. 5, where it will be noted that the frame is thoroughly braced, which with the trusses makes for a very solid construction.

The side posts are 5¼ by 2¼ ins., to top of each of which is connected a carline, formed of 1¾ by ½ in. bar stock. The roof is solidly supported thereby, and in addition, it is trussed under the sashes as shown in fig. 2.

The front vestibule is 3½ ft. deep, and the rear one 6½ ft. deep, both 6 ins. below the level of the car floor. Both vestibules are supported on 5 by 5 [illegible] four in each case, connecting to the sills of the car. The centre angles have a leg turned upward, this leg attached to the wood filler of the centre sill, and the outer angles with a leg downward, the other leg being attached to the lower face of the side sill. The angles on the step side are given an offset.

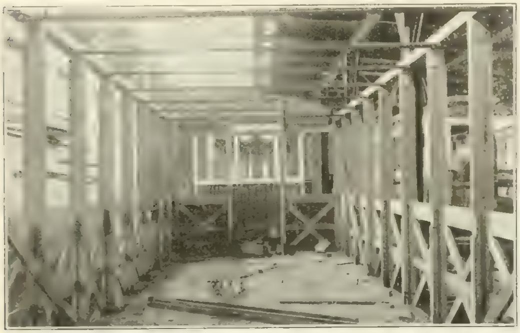

Fig. 4.—Skeleton Framework of Car Interior.

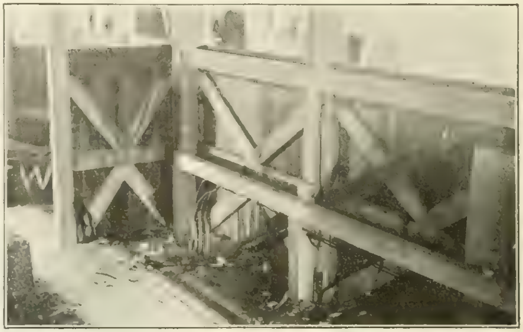

Fig. 5.—Detail View of Car Corner Framing.

The car is mounted on Brill trucks, on each of which there are two G80 motors, 40 h.p. each, operated by the motorman through a K6 controller. The car is equipped with air brakes, supplied from a motor driven air compressor unit under the car. In the front vestibule, to the left of the motorman, is located the hot air heater, above which is mounted a bell ringing transformer, connected to the push buttons in the window posts of the car, so that no batteries or dry cells are required to be carried, power being drawn from the line.

The foregoing information was obtained through the courtesy of Wilson Phillips, Superintendent, and G. Garrett, Master Mechanic, Winnipeg Electric Ry.

British Columbia Electric Railway Company's Equipment Orders.

The January issue of Canadian Railway and Marine World contained mention of rolling stock orders placed by the British Columbia Electric Ry., consequent on the increase of mileage put into operation, and the increased traffic generally. Following is a complete list of the rolling stock ordered in 1912, some items of which are for delivery in 1913, as mentioned in our last issue.

22 closed, 40 ft. body, interurban cars, 51 ft. long over all, multiple unit control; and 6 similar cars, with toilet room added, from St. Louis Car Co.

35 semi-convertible, p.a.y.e. city cars, 30 ft. body, 43 ft. long over all, single end trucks and bodies, one closed stepless car, 34 ft. body, 44 ft. long over all; one near side city car, from J. G. Brill Co.

4 interurban baggage and express cars, 54 ft. long over all, multiple unit control, from Niles Car Co.

70 freight box cars, 60,000 lbs. capacity, 40 ft. long over all; 45 flat cars, 60,000 lbs. capacity, 41 ft. long over all, from Seattle Car and Mfg. Co.

6 Hart-Otis dump cars, all steel, 60,000 lbs. capacity, 28 ft. long over all, from Hart-Otis Car Co., Montreal.

2 double broom snow sweepers, single truck, 28 ft. long over all, from Ottawa Car Co.

5 electric locomotives, 60 tons capacity, 1,000 h.p., 600-1200 volt, 36 ft. long over all, from Westinghouse Co.

30 Westinghouse 1,200 volt passenger equipments, 125 h.p. motors, multiple unit field control, for cars already in operation, from Canadian Westinghouse Co.

65 semi-convertible city p.a.y.e. cars, single ended, 30 ft. body, 44 ft. long over all, for 1913 delivery, from Preston Car and Coach Co.

The Toronto Suburban Railway.

During 1912 substantial progress was made in the construction of the extensions planned, but work was delayed considerably by the scarcity of labor, by the difficulty in getting delivery of materials, and by wet weather. The whole of the extensions have been surveyed, and are under contract to be constructed. Grading on the Woodbridge extension is nearly complete, and grading is progressing vigorously on the Toronto to Cooksville, Georgetown and Guelph lines.

The present terminus of the existing railway lines is situated well within the limits of Toronto at Bathurst St., where the company's lines connect with the Toronto Ry. From this terminus the company's line runs northwesterly to Weston and Lambton Mills, and it is being extended from Weston to Woodbridge, and from Lambton Mills to Guelph, serving and connecting Islington, Summerville, Dixie, Cooksville, Erindale, Streetsville, Meadowvale, Churchville, Huttonville, Norval, Georgetown, Glen Williams, Acton, Milton, Brampton and Guelph. These extensions will be constructed for the most part upon private right of way. When they are completed the company will own a fully equipped electric railway of approximately 90 miles.

In addition to the terminal of the present lines in the west end of Toronto, the company has, under its franchise rights, secured right of way from the present terminal easterly to a point in the central portion of the city near St. George St. It is proposed that a terminal will be provided adjoining the C.P.R.'s North Toronto station and the terminus of the Toronto and York Radial Ry., and one of the principal Canadian Northern Ry. stations. This right of way into the city will enable passengers to transfer from the company's line to six different lines of the Toronto Ry. running north and south, thus affording every facility to passengers entering Toronto on the company's lines to reach any part of the city within a few minutes.

The company has already in operation, or in course of erection, 30 miles of transmission lines in Toronto and surrounding districts. Electric current for light, heating and power purposes is obtained from one of the large Niagara water power companies. The company intends to utilize the right of way in connection with the railway for the purpose of extending its transmission lines and taking advantage of the large demand for electric current for lighting, heating and power purposes in the districts which will be served by the railway.

From their knowledge of the districts to be served, the directors anticipate a profitable revenue immediately on the opening of the new lines, which are expected to be completed this year. Although only a small portion of the total railway mileage mentioned above is yet in operation, the results are entirely satisfactory. For the year ended June 30, 1912, the number of passengers carried was 1,462,656, compared with 1,047,191 for the previous year, an increase of 39.67%, and the gross earnings per mile of railway were $6,389.64 a mile, compared with $5,484 for the previous year. It is anticipated that when the proposed lines are completed and the business fully developed, the gross earnings from the railway alone should amount to $500,000 a year, in addition to which a substantial revenue should be derived from the light, heat and power business. However, taking the figures on the basis of the results already obtained with only a small portion of the system in operation, the gross earnings would amount to $460,800 a year; the working expenses are estimated at $275,000, leaving estimated net earnings of $185,800.

The directors are Sir Wm. Mackenzie, President; A. H. Royce, Vice President; L. W. Mitchell, F. H. Phippen, G. C. Royce, Toronto; R. M. Horne-Payne, London, Eng.

Turnstiles on Prepayment Type of Street Cars have been prohibited in Dayton, Ohio, by the Ohio Public Service Commission. The Commission began, in May, an investigation of the safety and security of operation of the People's Ry., especially in the matter of the use of turnstiles at the points of car entrance. It was found that the turnstiles were wood and metal devices used for registering the number of persons entering the cars. These were attached to the vestibules of the cars so as to form a rigid obstacle and an impassable barrier in the way of passengers or persons seeking to enter or leave the car until the machinery was released, allowing the arms to turn or fall. It was found that this at times resulted in bruising or injuring passengers attempting to enter when passenger and conductor failed to act in exact unison. It was also found that the turnstiles created an additional element of danger in case of accident or other emergency necessitating prompt unloading of passengers.

Notes to Electric Railway Statistics.

(1) The B.S. Ry. is owned by the City of Berlin, Ont.; it has 0.78 mile of double track and 0.41 mile of sidings.

(2) The B. and H. Ry., the H. and D. Ry., the H.G. and B.E.R., the H.R.R., and the H.S.R. are owned by the Dominion Power and Transmission Co. The B. and H. Ry. freight car mileage was 29,538, and 4,978 tons of freight were carried. The H. and D. Ry. freight car mileage was 98, and 227 tons of freight were carried. The H. G. and B.E. Ry. freight car mileage was 48,878, and 64,160 tons of freight were carried. The H.R. Ry. has 8.69 miles of double track; its freight cars ran 21,819 miles and carried 11,951 tons of freight.

(3) The B.C.E. Ry. has 59.40 miles of double track lines, and 27.59 miles of sidings; it leases 140.66 miles of track, including the Vancouver and Lulu Island Ry. from the C.P.R., and the Vancouver, Fraser Valley and Southern Ry. Its freight cars ran 905,027 miles and carried 256,083 tons of freight.

(4) The C.M.R. is owned by the City of Calgary, Alta.; it has 10 miles of double track, and one mile of sidings.

(5) The C.B.E.R. is owned by the Cape Breton Electric Co., which operates an electric lighting, and power, service and a ferry service. It has 1.05 miles of sidings.

(6) The C.W. and L.E. Ry. has six miles of sidings. Its freight cars ran 39,270 miles and carried 71,347 tons of freight.

(7) The C.E. Ry. has 2.50 miles of sidings.

(8) The E.R.R. is owned by the City of Edmonton, Alta.

(9) The G.P. and H.E.R. is operated by the C.P.R., as also is the Hull E.R. The G.P. and H.E.R. has 1.36 miles of double track, and 2.25 miles of sidings. Its freight cars ran 39,565 miles, and carried 153,729 tons of freight. The H.E.R. has 10.60 miles of double track, and 1.12 miles of sidings, and it leases 1.82 miles of track. Its freight cars ran 26,864 miles and carried 5,719 tons.

(10) The G.V.R. owns also the Brantford E. Ry. and the Woodstock, Thames Valley and Ingersoll, and its mileage includes these three lines. There are 1.95 miles of double track on these lines. It carried 264 tons of freight.

(11) The G.R. Ry. is owned by the City of Guelph, Ont.; it has 0.33 mile of sidings. It carried 7,000 tons of freight, running 7,000 miles of freight car mileage.

(12) The I.T. Co. is owned by the Lake Superior Corporation, which also owns the Trans St. Mary E. Ry., in Sault Ste. Marie, Mich., with which the I.T. Co. is connected by a bridge. It has 0.22 mile of sidings.

(13) The L. and L.E. Ry. and T.C. reports freight car mileage. 42,454 miles, and 6.995 tons of freight carried.

(14) The Montreal Tramways Co. owns the M.P. and I. Ry., the M.S. Ry., and the M.T. Ry. The M.P. and I. Ry. has 16.03 miles of double track, and 4.68 miles of sidings. It carried 111.005 tons of freight, with 21.579 miles of freight car mileage. The M.S. Ry. has 60.10 miles of double track, and 17.59 miles of sidings; it also leases 8.64 miles of track. It operated freight cars over 171.217 miles, and carried 100.000 tons of freight. The M.T. Co. has 4.28 miles of double track, and 6.55 miles of sidings. It carried 91.302 tons of freight, its freight car mileage being 62.363.

All the figures given for these three companies are those for the year ended June 30, 1911, the companies not having reported for 1912.

(15) The M. and S.C. Ry. is controlled by the G.T.R.

(16) The N.S.R. leases 2.12 miles of track.

(17) The N.F.P and R. Ry. is owned by the International Ry., which also owns electric lines on the U.S. side of the Niagara frontier. It has 11.20 miles of double track, mile of sidings. It carried 261.390 tons of tons of freight.

(18) The N.C. Ry. is owned by the Ontario Government, through the Timiskaming and Northern Ontario Ry. Commission. It has 0.27 mile of double track, and 0.19 mile of sidings. It carried 261.090 tons of freight.

(19) The O. Ry. reports 26.254 miles of freight car mileage, 127.388 tons of freight being carried.

(20) The O.E. Ry. has 21.42 miles of double track, and 0.50 mile of sidings, and operates over 2.22 miles of branch lines.

(21) The P.A. and F.W.E.R. is owned by the cities of Port Arthur and Fort William, Ont., and is operated by a joint commission representing those cities. It carried 49.827 tons of freight.

(22) The Q. Ry., L. and P. Co. also operates a steam service over a portion of its lines, the statistics of which will be found under Steam Railway Statistics. There are 9.80 miles of double track, and three miles of sidings. It carried 4.500 tons of freight on the Citadel Division.

(23) The S.W. and A. Ry. owns the Windsor and Tecumseh E. Ry., and the figures given include those for the latter line. The S.W. and A. Ry. is controlled by the Detroit United Ry. Co.

(24) The St. J. Ry. has 6.50 miles of double track. The figures given are those for the year ended June 30, 1911, the company not having reported for 1912.

(25) The St. S. E. Ry. operates three miles of leased lines.

(26) The St. T.E. Ry. is owned by the city of St. Thomas, Ont.

(27) The Toronto Ry. owns the T. and Y.R. Ry., and interests allied with it; also owns the Toronto Suburban Ry. The T. Ry. has 55.39 miles of double track, and 7.07 miles of sidings. The T. and Y.R. Ry. has 9.57 miles of sidings. Its freight cars ran 88.317 miles and carried 60.490 tons.

(28) The W.E. and L.S.R. Ry. has 3.90 miles of sidings. Its freight cars ran 85,223 miles and carried 26.781 tons of freight.

(29) The Winnipeg Electric Ry. also owns the Suburban Transit Co., and the Winnipeg, Selkirk and Lake Winnipeg E.R. The latter company carried 4.556 tons of freight.

Advance in Fares on the Hull Electric Railway.

Canadian Railway and Marine World for December contained the award by a board of conciliation between the Hull Electric Co. and its employes, in which the board made the following recommendation:—"The members of the board are of the opinion that in view of the proposed increase of wages and considering the financial condition of the company, as shown by its annual statement, and the evidence given before the board, the company would be justified in increasing its charge for fares."

The company has since announced the following changes in its tariff. The fare to a section having an average distance of five miles from Ottawa has been increased from 5c. to 6¼c., e.g., 4 tickets for 25c. The fare to a section having an average distance of eight miles from Ottawa has been increased from 6¼c. to 8 1-3c., e.g., three tickets for 25c. The city fares remain unchanged.

The Electric Railway Statistics for the Year Ended June 30, 1912.

The statistical returns for the operation of electric railways for the year ended June 30, 1912, have been issued by the Department of Railways, having been compiled by the Comptroller of Railway Statistics, J. L. Payne. In the table given on another page, while figures are given for all the railways, it is to be noted that those for the three companies owned by the Montreal Tramways Co., and for the St. John Ry., are the figures for the previous year ended June 30, 1911, these companies not having reported for the recent operating year.

The total length of first main track is 1.308.17, while there have been 294.50 miles of second main track, and 120.84 miles of sidings. There was an increase of 84.44 miles of first main track, 34.76 miles of second main track, and 17.30 miles of sidings during the year.

The common stock liability of the several companies was $70.829.118, and the funded debt $52.018.828, a total of $122,841,946, an increase of $11.309.599 over the amount reported June 30, 1911.

The total earnings for the year were:—Passenger receipts, $22.007.750.15; freight receipts, $1.025.371.93; mail and express receipts, $78.818.66; other car earnings, $67,022.30; miscellaneous earnings, $320.287.27; gross earnings from operation, $23.499.250.31, against $20.356.952 for the previous year ended June 30, 1911. The operating expenses were $14.266.674.63, distributed as follows:—Maintenance of way and structures, $1,228.972.10; maintenance of equipment, $1.859.919.21; operation of power plants, $2.535.576.10; operation of cars, $6,770.560.47; general, $1.871.626.75. The net operating income was therefore $10.849,593.40, out of which was paid $1,581.802.81 for taxes; $1.570,202.02 for interest on funded debt; $193.068.26 interest on floating debt; $188.582.57 for other deductions, and "undistributed," $1.378.906.56, leaving net income for dividends to stockholders, etc., of $5.937.562.24. The "undistributed" amount refers to the British Columbia Electric Ry., which operates an electric lighting and power plant in addition to an electric railway.

The total number of fare passengers carried was 488.865,682, exclusive of 125.453.320 transfer passengers, showing an increase of 62.568,890, as compared with 1911. The total passenger car mileage was 80.402,089, and the freight and miscellaneous car mileage 1,667.975, an increase of 8.867.961 passenger car mileage, and of 583.297 in freight car mileage. The number of tons of freight handled was 1,435,525, compared with 1,228,362 for the previous year. The growth of freight business has steadily increased since 1901.

The total number of cars of all classes in service during the year was 4,478, against 4.325 in the previous year.

Following is a comparative table:—

	1910-11	1911-12
Mileage	1,224	1,308
Capital liability	$111,532,347	$122,841,946
Earnings	$20,356,952	$23,499,250
Operating expenses..	$12,096,134	$14,266,075
Fare passengers carried	426,296,792	488,865,682
Employes	13,671	14,760
Salaries and wages..	$8,550,215	$9,261,370
Tons of freight	1,228,362	1,435,525
Persons killed	102	110
Persons injured	2,670	3,128

Windsor, Essex and Lake Shore Rapid Railway.

The differences between the W.E. & L.S. Rapid Ry. and the town of Leamington, Ont., have been amicably settled. Under the franchise given the company by the town in 1907 the company was to build a spur line of 4,500 ft. to Lake Erie and to operate a car on it in June, July, August and September each year. The company did not build the spur, not being financially able to do so, and a bylaw was introduced in the town council recently to cancel the franchise unless the spur line was constructed and operated as required.

Finally the council accepted a proposition made by A. Eastman, General Manager, W.E. & L.S.R.R., to postpone the building of the spur for five years, the company in the meantime to operate a 20 passenger motor car between the town and the lake and to move into the centre of the street, at its own expense, a portion of the track that was built along the side of the street by order of the town.

Calgary Municipal Railway's New Equipment.

The commission operating the municipally owned electric railway in Calgary, Alta., has placed orders with the Ottawa Car Co. for cars and trailers, and with the Canadian Westinghouse Co. for motor and air brake equipment, as follows: 12 car bodies, each 46½ ft. long, at $3,165 each; 12 car bodies, each 41½ ft. long, at $3,420 each; 6 trailers, with side entrances, each 44 ft. long, at $3,467 each; 30 sets of complete trucks, type 22-G-1, $925 each; 24 complete quadruple motor equipments, $2,350 each; 24 complete air brake equipments, $236.90 each. Tenders were also considered at a recent meeting for a snow sweeper, and it was recommended that the tender of the Ottawa Car Co., at $1,500 f.o.b. Ottawa, be accepted, for immediate delivery, the amount to be paid out of the revenue chargeable against the amount to be raised by bylaw, as soon as the bylaw is passed. The cars just ordered, we are advised, are chiefly intended to be used between the city and the C.P.R. Ogden Shops, during rush hours.

The Victorian Legislative Council (Australia) has authorized the electrification of the Melbourne suburban lines. The plans provide for a 1,500 volt direct current.

The Gateshead and District Tramways Co. is reported to have decided to equip its entire service in the neighborhood of Gateshead, Eng., with pay as you enter cars. Several of these cars have been in use on the system for some time, and it is claimed that an increase of 7% in the receipts is attributable to their adoption.

Electric Railway Track Laid in 1912.

Below is a table showing track laid on electric railways in Canada during 1912 as officially reported to Canadian Railway and Marine World. The table is not published as a complete one, owing to the fact that some of the companies have not replied to the circular sent, but it is believed to be approximately correct. The total mileage of new tracks given in our last issue was 107.16, and the revised figure reduce this to 106.56, owing to second track work work having in some cases been reported as new mileage. In addition to the new mileage the British Columbia Electric Ry. laid 8.54 miles, the Halifax Electric Tramways Co., 3.42 miles, and the Winnipeg Electric Ry. about 8 miles of second track on previously existing lines.

Changes in International Ry.—The reorganization of the International Ry. Co., of Buffalo, N.Y., has been effected, the company having filed a mortgage of $60,000,000 given to the Bankers' Trust Company, of New York. Bonds to the amount of $8,176,000 will be issued to take up outstanding notes and other obligations of the International Ry. Co. and the Crosstown St. Ry. Co., which are merged in the reorganization. T. Penney, who has been president of the I.R. Co. for the past four years, has resigned, in order to attend to his own commercial interests, but remains a director. T. E. Millen continues as Chairman of the Board of Directors.

London Street Ry.—Gross earnings for Nov., $25,442.84; expenses, $18,371.43; net earnings, $7,071.41; deductions, $2,371.25; net income, $4,700.16. Aggregate gross earnings for 12 months ended Nov. 30, $278,217.98; expenses, $192,203.29; net earnings, $86,014.59; deductions, $26,461; net income, $59,553.69.

Montreal Tramway Co's. Betterments and New Rolling Stock.

In answer to press criticisms that the Montreal Tramways Co. is not spending the money it should on track improvements and in providing new cars, the following figures have been given out.

The Montreal St. Ry. and its subsidiaries made the following expenditures for new equipment, betterments, etc.: 1908, $842,884.60; 1909, $729,368.36; 1910, $755,950.51; 1911, $871,193.04. The Montreal Tramways Co., in the 11 months to Nov. 30, 1912, spent $1,238,240.38 for similar purposes.

New cars have been put in service as follows:—

	No.	Seating capacity.
1908	19	836
1909	nil	
1910	18	720
1911	41	[illegible]
1912-13	99	[illegible]

Cars have been scrapped as follows.

	Summer.		Winter.	
	No.	Seats.	No.	Seats.
1908	2	90	2	48
1909	3	135	8	192
1910	15	675	16	384
1911	7	315	11	264
1912	26	1,170	25	600
	53	2,385	62	1,488

In reference to these figures the company's statement says:—The cars scrapped were 53 summer cars with seating capacity of 2,385, and 62 winter cars with seating capacity of 1,488. As the summer cars never ran in winter and the winter cars never ran in summer, for the purpose of comparison with the statement showing cars put in service, the total number of cars scrapped, namely, 115, and the seating capacity of 3,873, should be divided in half, as that shows the net reduction in carrying capacity in cars scrapped for the period covered by statement. In other words the net result would be as follows:

	Cars.	Seating capacity.
New cars added since Jan. 1, 1911	140	5,667
Cars scrapped since Jan. 1, 1911	34½	1,175
Balance added in two years	105½	4,492
Average per year	52¾	2,246
New cars added in five years	177	7,223
Scrapped during same period	57½	1,937
Balance added	119½	5,286
Average per year	24	1,057

The company has on order 210 cars of the latest p.a.y.e. type, with a seating capacity of 40 per car, or a total seating capacity of 8,400. These cars, some of which are being delivered weekly, will afford 35% additional seating capacity, while Montreal's population is only growing at the rate of 10 or 15% a year.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Nov., 1912, $591,127; operating expenses, $371,051; net operating earnings, $220,076; renewal funds, $51,620; net earnings, $168,456; approximate income from investments, $35,000; net income, $203,456, against $488,699 gross earnings; $302,489 operating expenses; $186,210 net operating earnings; $37,935 renewal funds; $148,275 net earnings; $25,000 approximate income from investments; $173,275 net income for Nov., 1911. Aggregate gross earnings for five months ended Nov. 30, 1912, $2,822,812; net earnings, $982,461, against $2,278,391 aggregate gross earnings; $788,417 net earnings for same period, 1911.

Calgary Municipal Ry.—Gross earnings for October, $54,618.15; operating expenses, [illegible]; net operating earnings, $19,221.48; contingency, interest, etc., [illegible] net profit, [illegible] against [illegible] gross earnings; $18,[illegible] operating expenses; $17,[illegible] net operating earnings; $7,042.9[illegible] contingent, interest, etc.; $[illegible],521.62 net profit for Oct., 1911. Passengers carried, [illegible] against [illegible] in 1911.

Gross earnings for November, [illegible]; operating expenses, $37,802.09; net operating earnings, $17,431.25; contingent, sinking fund, etc., $9,975.14; net profit, $7,456.11, against $35,422.85 gross earnings; $21,401.15 operating expenses; $14,021.70 net operating earnings; $7,034.47 contingent, sinking fund, etc.; $6,987.23 net profit for Nov., 1911. Passengers carried, 1,339,428, against 853,144 in Nov., 1911.

Cape Breton Electric Co.—Gross earnings for October, $31,133.27; operating expenses and taxes, $16,339.61; net earnings, $14,793.66; interest charges, $4,412.50; balance, $10,381.16; sinking and improvement funds, $1,206.67; net balance for reserves, etc., $9,174.49; for Nov., gross earnings, $34,562.72; operating expenses and taxes, $15,809.76; net earnings, $18,752.96; interest charges, $4,475; balance, $14,277.96; sinking and improvement funds, $1,206.67; balance for reserves, etc., $13,071.29. The construction charges for 12 months ended Nov. 30, 1912, were $26,605.85.

Saskatoon Municipal Ry.—The report for the first week of operation of the electric railway in Saskatoon, Sask., shows that 37,543 passengers were carried. The total revenue was $1,877.15.

Toronto Ry., Toronto and York Radial Ry., and allied companies. Gross earnings for Nov., 1912, $742,156; operating expenses, maintenance, etc., $358,371; net earnings, $383,785, against $676,791 gross earnings; $507,252 operating expenses, Maintenance, etc.; $369,539 net earnings, for Nov., 1911. Aggregate gross earnings for 11 months ended Nov. 30, 1912, $7,717,303; net earnings, $3,951,504, against $6,888,788 aggregate gross earnings; $3,624,013 net earnings, for same period, 1911.

The gross receipts from passengers for 1912 are given in press reports as $5,373,784, an increase of $572,556 over 1911, the approximate number of passengers carried during the year being given as 132,000,000, compared with 120,997,844 in 1911. The percentage of earnings paid to the city during the year was $798,958.56, against $687,650, for 1911. In addition to the percentage on earnings, $90,950.40 was paid to the city for mileage, thus making $889,908.96 paid to the city during the year.

Winnipeg Electric Ry.—Gross earnings for Nov., 1912, $345,091; operating expenses, $181,051; net earnings, $164,000, against $355,825 gross earnings; $181,446 operating expenses; $174,379 net earnings, for Nov., 1911. Aggregate gross earnings for 11 months ended Nov. 30, 1912, $3,403,683; net earnings, $1,595,755, against $3,500,848 aggregate gross earnings; $1,778,002 net earnings, for same period, 1911.

Toronto and York Radial Railway.—In the two cases of Waddington vs. Toronto and York Radial Ry. Co. the town of North Toronto and the city of Toronto appealed recently from paragraphs one and two of the Ontario Railway and Municipal Board's order of Oct. 2, 1912, declaring that the railway company has the right under the agreement of April 6, 1894, between the county of York and the Metropolitan Ry. Co. to put in and maintain such switches and turnouts as may be necessary for operating the line, and that the Ontario Railway and Municipal Board has the right to make such an order. The Court of Appeal gave judgment Jan. 15, dismissing the appeal.

Electric Railway Projects, Construction, Betterments, Etc.

Brandon Municipal Ry.—The city engineer of Brandon, Man., reported, Jan. 2, that track had been laid on 7.2 miles of the civic railway. (Dec., 1912, pg. 622.)

The city council has entered into a contract with the Brandon Electric Light Co. for the supply of power to operate the municipal electric railway now being built.

Brandon Radial Ry.—Application is being made by the Brandon City Council to the Manitoba Legislature for authority to build a system of electric railways radiating from Brandon.

British Columbia Electric Ry.—We are officially advised that the company has under construction extensions of its lines on the mainland as follows: In South Vancouver, 1.34 miles; in Point Grey, 3.35 miles.

Plans have been submitted to the New Westminster City Council showing the lay out of the proposed new yard in the west end, between Fourth and Fifth Avenues and Fourteenth and Fifteenth Streets. The estimated cost is $200,000.

Judgment was given in the British Columbia High Court, Jan. 4, in favor of the B.C.E.R. Co., in the action in which the Burnaby Municipality sought to annul a 40 year franchise under which the Vancouver, Fraser Valley and Southern Ry. (a subsidiary of the B.C.E. Ry.) was built. The municipality will appeal. (Jan., pg. 39.)

Calgary Municipal Ry.—Tenders are being asked, we are officially advised, for the supply of materials for the building and equipment of 10 miles of new track and seven miles of second track on existing lines during the current year. Private interests are offering the council 10 miles of fully equipped line as a gift, with a guarantee of operating expenses for five years. When these lines are completed there will be a total of 85 miles of electric railway operated by the city. T. H. McCauley is Superintendent. (Jan., pg 39.)

Cape Breton Electric Co.—We are officially advised that the company has in contemplation the building of the following additional lines:—From Sydney to New Waterford, N.S., via Grand Lake, 8 miles; from Sydney to New Waterford, via Low Point, 14 miles; from Dominion to New Waterford, via Lurgan Beach, 5 miles. E. L. Milliken, Sydney, N.S., is Manager. (April, 1912, pg. 196.)

Fort Garry, Man.—R. A. C. Manning, Reeve of Fort Garry Municipality, Man., recently said that the whole question of the building of an electric railway by the municipality will be considered at an early meeting of the council. The project has been under consideration by the council's officials for some time, and the Manitoba Legislature will be asked to pass the necessary act. A spur track, connecting with the Canadian Northern Ry., has been built to facilitate the getting in of material for this and other civic works. (Jan., pg. 39.)

Grand Valley Ry.—A contract is reported to have been entered into by the Receiver for the company, which is in liquidation, for the supply of Niagara Hydro electric power from the City of Galt, Ont., for the operation of the Paris-Galt section of the line. (Jan., pg. 39.)

Halifax Electric Tramway Co.—The Halifax, N.S., City Council is being urged by local interests to take the necessary steps to obtain power to take over the property and rights of the H.E.T. Co. (Dec., 1912, pg. 622.)

Halifax Electric Tramway Co.—We are officially advised that the construction programme for the current year includes the laying of about a mile of single track. J. W. Crosby, Halifax, N.S., is Manager. (Dec., 1912, pg. 622.)

Hull Electric Ry.—We are officially advised that the company is building by its own staff an extension of 0.72 of a mile to the Connaught Park Jockey Club, Hull, Que. G. G. Gale, Hull, Que., is General Superintendent. (Jan., pg. 39.)

Hydro Electric Commission's Projected Electric Railway.—Press reports from St. Thomas, Ont., state than an engineering party in the employ of the Ontario Hydro Electric Commission started work, Jan. 2, near that city on a survey for an electric railway to Windsor, Ont. The line will, it is stated, run went to Dutton, West Lorne, Rodney, Ridgetown, Chatham and Kingsville, and on to the Detroit River.

Humber Valley Electric Ry.—When the act incorporating this company was passed, a section was inserted providing that it should not come into effect if the City of Toronto should file plans for the building of an electric line on the proposed Humber Boulevard, or should have obtained the consent of the taxpayers to the raising of money for the building of such a line by Jan. 14, 1913. The city having failed to do anything in the matter, the company has filed its plans with the Ontario Railway and Municipal Board, and is arranging to start construction immediately after the plans are approved. The route of the projected line is from Dundas street, near Islington, Ont., along the Humber river valley to the Lake Shore road, and then to Sunnyside, either by running rights over the Toronto and York Radial Ry. R. Home Smith, Toronto, is the principal man in the project. (June, 1912, pg. 308.)

The Lacombe and Blindman Valley Electric Ry. Co. proposes to build a line from Lacombe to Gull Lake, Alta., 10 miles, and thence to Rimbey, a total distance of 30 miles. Press reports state that some capital has been subscribed locally, and that it is expected to start construction early in the spring. E. R. Strathy, of Winnipeg, and J. C. Gibson, Toronto, are interested in this company, which also owns the charter of the Lacombe, Bullocksville and Alix Electric Ry. (June, 1912, pg. 308.)

Lake Erie and Northern Ry.—A trust deed dated Oct. 1, 1912, made between the company and the Montreal Trust Co., securing an issue of 30 year 5% gold bonds, was on Nov. 29, 1912, deposited with the Secretary of State at Ottawa.

A contract is reported to have been let to P. H. Secord and Sons, Brantford, Ont., for all the concrete work on the line. It is estimated that this work will involve the expenditure of about $150,000.

Moncton Tramways, Electricity and Gas Co.—We are officially advised that the company has under consideration the building of an extension of a mile along Church St. to Sunny Brae and another of nearly a mile from the overhead bridge to Main St., Moncton, N.B. H. N. Price, Moncton, N.B., is Superintendent. (Jan., pg. 39.)

Montreal and Southern Counties Ry.—The Board of Railway Commissioners has approved of location plans for the company's line in St. Antoine de Longueuil, Que., to a junction with the Central Vermont Ry., 2.25 miles.

The Montreal Board of Control decided, Jan. 10, to recommend the city council to refuse the company's application to extend the tracks to Youville Square. (Dec., 1912, pg. 622.)

Niagara, Welland and Lake Erie Ry.—We are officially advised that the company has in contemplation the immediate construction of the following lines:—From the G.T.R., Welland, Ont., to Rosedale, one mile, and from the Michigan Central Rd., Welland, to Dainvill's, about two miles. T. F. Swayze, Welland, Ont., is Superintendent. (Nov., 1912, pg. 574.)

The Board of Railway Commissioners has authorized the opening for traffic of the line between the Michigan Central Rd. and the G.T.R. stations in Welland, Ont., 1.52 miles.

Niagara, St. Catharines and Toronto Ry.—Press reports state that plans have been prepared for a new power house to be built in St. Catharines, Ont., at an early day. E. F. Seixas, St. Catharines, is General Manager. (Jan., pg. 39.)

The Northwestern Electric Ry. Co. has, according to press reports, applied to the Vancouver City Council for a franchise for electric railway lines on certain city streets.

Ontario West Shore Ry.—H. W. Middlemist, Toronto, recently informed the Goderich, Ont., Town Council that his report as to the cost of completing and putting in operation this partially built line would be ready for presentation Jan. 30. (Nov., 1912, pg. 574.)

Ottawa Electric Ry.—We are officially advised that the following extensions are projected:—From Somerset St. to Carling Ave., on Preston St., one mile, and from Wilton Crescent to Sunnyside Ave., on Bank St., one mile. F. D. Burpee, Ottawa, is Superintendent. (Jan., pg. 39.)

Port Arthur and Fort William Electric Ry.—On Jan. 6 the ratepayers of Port Arthur, Ont., voted in favor of the following bylaws:—To extend the electric railway along Algoma Street from Arthur Street to Cameron Street, at a cost of $6,550; to lay heavier steel rails on Cumberland Street from Van Horne Street to Current River, at a cost of $32,400. We were officially advised, Jan. 17, that this work has been completed. (Oct., 1912, pg. 521.)

Portage la Prairie, Man.—In connection with the project under consideration for the building of an electric railway from Winnipeg to Portage la Prairie, Man., a site of 10 acres is reported to have been purchased in the latter city on which to erect car barns, car shops, etc. (See Winnipeg to Portage la Prairie, Jan., pg. 40.)

Prince Albert, Sask.—The Stone and Webster Engineering Co., Boston, Mass., has submitted a proposition to Prince Albert, Sask., for the construction of eight miles of electric railway for $275,000. The company has just completed the building of a line in Saskatoon for the city council, financing construction as well as doing the work.

The city of Prince Albert is developing 15,000 h.p. on the Saskatchewan River, and the council has had under consideration the building of an electric railway as a public utility.

Regina-Moose Jaw Interurban Ry.—The Saskatchewan Legislature has incorporated a company with this title intending to build a railway to be operated by any other motive power than steam from the western limits of Regina to Moose Jaw, Sask. The act provides that while the city of Regina may extend its electric lines outside the city, it may not build a line from Regina to Moose Jaw, and that in the event of the boundaries of Regina or Moose Jaw being extended to bring any part of the railway within them, the cities shall have the right to purchase such portion of the trackage as comes within the limits. The provisional directors are J. Friedman, Saskatoon, Sask.; J. G. Boyd, J. R. Cathcart, Regina.

Saskatoon Municipal Ry.—The municipal street railway was opened for traffic Jan. 1. Cars are being operated over three routes, two cars of the pay-as-you-enter type being on each route. The line was built and financed for the city council by the Stone and Webster Engineering Corporation, Boston, Mass., and is being operated under the charge of Superintendent White. (Jan., pg. 39.)

Ratepayers of the south side, Jan. 11, endorsed a proposal to offer the city $50,000 to build a line east on 8th avenue, from Broadway, Saskatoon, out to Sutherland, Sask. The proposition is to be considered at the February meeting of the Saskatoon city council.

Stratford Ry.—The ratepayers of Stratford, Ont., on Jan. 6, passed by a very large majority a bylaw granting the S. Ry. Co. a 25 year franchise for the construction of an electric railway in the city. While the franchise is granted to the S. Ry. Co. the Canadian Northern Ry., or interests allied with it, are behind the project. Confirmation of the bylaw is being asked from the Ontario Legislature. Work is to be started on the line in July, provided the bylaw is ratified. (Jan., pg. 39.)

Toronto and York Radial Ry.—The Ontario Railway and Municipal Board declined, Dec. 16, to grant an order approving of certain modifications of the plans for the proposed diversion of the Metropolitan Ry. south of St. Clair avenue, Toronto. The Board's engineer will go over the plans, and if he approves of them the company may proceed with construction at its own risk, subject to the judgment of the Court of Appeal on the question of the company's right to make the diversion, which is opposed by the city.

Toronto and York Radial Ry.—The question of the price at which the section of the Lake Shore division of the line, from Sunnyside to the Humber river, is to be taken over by the city of Toronto is under consideration. The Ontario Railway and Municipal Board has directed the engineers representing the two interests to agree upon an inventory of the property to be taken over as far as possible, and to go to the Board on points of difference only.

Toronto Civic Car Lines.—We are officially advised that the City Council is having built a double track electric railway on Danforth Ave., from Leslie St. to Luttrell Ave., 2.35 miles. (Jan., pg. 39.)

Toronto Eastern Ry.—We are officially advised that in addition to the 19 mile section from Bowmanville to Pickering, Ont., under construction (Ewen Mackenzie having the contract), on which 0.36 mile of track has been laid at Bowmanville, the company has under survey an extension from Pickering westerly for a distance of 12 miles. E. W. Oliver, Toronto, is Chief Engineer. (Dec., 1912, pg. 623.)

The Toronto Suburban Ry. is being asked to build about two miles of new track in West Toronto, Ont., now known as Ward 7. It is proposed to build a single track a little on one side of the centre line of the street, so as to permit of the building of a second track when traffic warrants. (Dec., 1912, pg. 623.)

The Vancouver Island Hydro-Electric and Tramway Co. has been incorporated in British Columbia, with offices in Victoria, and an authorized capital of $500,000.

Windsor and Tecumseh Ry.—A franchise for the extension of the line from Tecumseh to Belle River, Ont., about 10 miles, is reported to have been granted to the company, which is a subsidiary of the Sandwich, Windsor and Amherstburg Ry., which in its turn is owned by the Detroit United Ry. It was stated that work on the new line is to be started at once. Jas. Anderson, Windsor, Ont., is General Manager. We are officially advised, Jan. 17, that there is no authority on the company's part for this report. (Mar., 1911, pg. 261.)

Windsor, Essex and Lake Shore Rapid Ry.—We are officially advised that there is no foundation in the daily press report that the company was about to extend its line from Kingsville to London, Ont. (July, 1912, pg. 368.)

Winnipeg Electric Ry.—Application is being made to the Manitoba Legislature to ratify an agreement made between the company and the St. Vital Council, granting a franchise for the building of an electric railway in the municipality. (Jan., pg. 40.)

In a report presented to the Winnipeg City Council, details are given of the extensions projected to the various lines in the city. There are only ten of these in all, and the report adds that the company has advised the city authorities that while all the extensions are planned, it is not likely that all of them will be built this year.

Joseph D. Evans, M.Can.Soc.C.E., who has resigned his position as Chief Engineer and Superintendent of Construction, Montreal Tramways Company.

Sunday Car Operation in Ontario.

The appellate division of the Ontario High Court, on Jan. 14, heard the appeal in the case of Kerley v. London & Lake Erie Ry. and Transportation Co., an appeal by defendants from the judgment of the Chancellor of June 25, 1912, in the action by W. Kerley, of St. Thomas, to recover $1,200 penalties from defendants for running electric cars upon their railway on Sundays, Dec. 11, 18 and 25, 1910. At the trial judgment was given for plaintiff for $1,200 as a penalty and costs of action, $600 of which was to be appropriated by plaintiff and $600 to go to the city of London. Judgment on the appeal was reserved.

The Toronto city council has had under consideration a proposition to engage J. W. Moyes at a fee of $1,000 and expenses to report upon the suburban service on the steam railways.

Personal Paragraphs.

R. H. SPERLING, General Manager British Columbia Electric Ry., returned to Vancouver, Dec. 29, after an extended visit to London, Eng.

N. P. BAKER, heretofore Superintendent Niagara Division International Railway, Niagara Falls, N.Y., has been appointed Treasurer of the company, at Buffalo, N.Y., a position he occupied once before.

E. M. HANNAFORD, M. Can. Soc. C.E., Assistant Chief Engineer, Montreal Tramways Co., is at present in charge of the engineering and construction department, consequent on the resignation of J. D. Evans.

A. H. DION, Superintendent, Moose Jaw Electric Ry., was married at Listowel, Ont., Jan. 16, to Miss R. Livingston. Mr. and Mrs. Dion have gone to Europe, expecting to return early in March and take up their residence in Moose Jaw, Sask.

E. A. ROBERT, President; F. H. Wilson, J. W. McConnell, M. Wilson, W. E. Finlay and G. McIntyre, directors of the Montreal Tramways Co., have taken action individually against the Montreal Herald Publishing Co., to recover $100,000 damages in each case, for libel on them in their capacity as directors of the company.

JOS. D. EVANS, M. Can. Soc. C.E., whose portrait appears in this issue, has resigned as Construction Engineer, Montreal Tramways Co., on his appointment as Construction Manager, Electric Bond and Share Co., New York, in charge of plants under construction in Utah and Idaho. He was born at Lowell, Mass., and graduated as a civil engineer from the Massachusetts Institute of Technology, and has been associated with engineering work on the Nicaraguan and Panama canals, and with railway construction in Ecuador, electric railway construction in Pennsylvania, Massachusetts and Connecticut; the Great Northern Power Co.'s plant at Duluth, Minn.; the construction of the Buffalo, Lockport and Rochester Ry. between Rochester and Lockport, N.Y., and the Canada Light and Power Co.'s plant at St. Timothee, Que.

Advance in Wages by Quebec Railway, Light and Power Company.

A board of conciliation was appointed recently to settle differences between the Quebec Ry., Light & Power Co. and its street railway conductors and motormen, which resulted in an agreement between the company and the men by which the wages were advanced 1½c. an hour from Nov. 1, 1912, and an additional 1c. an hour from Nov. 1, 1913. The new scales of wages per hour are as follows:—

	Nov. 1, 1912.	Nov. 1, 1913.
1st year employes	17½ cents	[illegible] cents
2nd year employes	18½ "	[illegible] "
3rd year employes	20½ "	[illegible] "
5th year employes	21½ "	[illegible] "
10th year employes	22½ "	[illegible] "

The company does not recognize the union (National Brotherhood of Street Railway Employes no. 1 of Quebec) but declares that it has no objection to its employes belonging to this union. The company has reinstated two employes who were dismissed on reports which, on enquiry, proved to be erroneous, but which had been accepted in good faith, and distinctly states that the dismissals were not made because the employes were members of a union.

The board of conciliation states that the greatest cordiality prevailed throughout the proceedings between the company's representatives and employes, and that both parties were evidently animated with the desire to adjust their differences amicably.

Electric Railway Notes.

The Hamilton St. Ry. has received 12 single truck cars from the Preston Car and Coach Co.

The Calgary Municipal Ry., Alta., has received 3 pay-as-you-enter cars, with 28 ft. bodies, from the Preston Car and Coach Co.

A vote will be taken in Saskatoon, Sask., Jan. 11 on the question of operating cars on the municipal electric railway on Sundays.

It is reported that during 1912 the British Columbia Electric Ry. carried 10,976,690 passengers, an increase of 2,746,482 over 1911.

The City of Toronto is promoting a bill in the Dominion Parliament to empower the operation of the civic street railway on Sundays.

The Montreal Tramways Co. has ordered 50 car bodies from the Canadian Car and Foundry Co. and has received six from the same company.

The Toronto City Commissioner of Works is negotiating for 20 electric railway cars for the civic lines on St. Clair and Danforth Avenues.

The Ontario Railway Act and the Ontario Railway and Municipal Board Act are to be revised at the Ontario Legislature's ensuing session.

A preliminary report on the electric railway traffic in Winnipeg has been prepared for the Public Utilities Commissioner by R. M. Fenstel, C.E., and was made public, Jan. 8.

The Ontario West Shore Ry. is being sued by the C.P.R. for $6,274, claimed to be due for material, labor and repairs supplied in the construction of a span bridge near Goderich, Ont.

The Mount McKay and Kakabeka Falls Ry. which has hitherto been closed down during the winter, is being operated this winter, mainly for the purpose of carrying sand and gravel for building purposes.

The Calgary, Alta., City Council is considering the question of adopting trackless trolley cars or motor busses in the residential districts where tracks are objectionable, as an adjunct to the municipal electric railway system.

The Board of Railway Commissioners has approved the Niagara, Welland and Lake Erie Ry. standard passenger tariff [illegible] railway.

The London St. Ry. recently complained to the City Council that its service is frequently blocked at crossings by G.T.R. [illegible] Ont., Jan. 16, at the instance of local citizens.

[illegible] pany was willing to enter into an entirely new contract.

The city of Calgary, Alta., has under consideration the adoption of a few trackless trolley cars, or motor busses, in the residential district, where there is objection to the use of tracks. We are officially advised [illegible]

[illegible] ended, pay-as-you-enter type, turtle back [illegible] from the Preston Car and Coach Co. Three of these cars will be equipped with Allis-Chalmers-Bullock 301 motors, ten with Canadian General Electric 80 motors, and 22 with Westinghouse 101 B2 motors.

The Montreal Tramways Co., in publishing a number of statistics relating to its development during 1912, states that $1,238,240 was spent in new equipment and improvements during 11 months of the year, against $871,193 for the whole of 1911. Since Jan. 1, 1911, the company has added 140 cars to its rolling stock, and has scrapped 34 cars. It has now 210 pay-as-you-enter cars in operation.

H. A. Robson, Manitoba Public Utilities Commissioner, issued an award Jan. 9, as to the terms of an agreement to be entered into between the Winnipeg Electric Ry. and the Winnipeg City Council for the joint use of poles in the city for the distribution of electrical energy. Arbitrators were appointed in July, 1912, but these failed to agree, and the matter was finally referred for settlement to the Commissioner.

The Montreal Tramways Co. was recently called upon by the Quebec Public Utilities Commission to submit reports and books as to traffic, etc., in order that the commission might decide upon the application of the City Council for an order directing the company to improve its service. The company filed a declinatory exception to the jurisdiction of the commission Jan. 9, and the matter was argued Jan. 17, judgment being reserved.

The city of Brandon, Man., has ordered for its municipal railway, from the Niles Car and Manufacturing Co., 10 cars, 34 ft. long over all, 21 ft. bodies, mounted on 21E trucks, full arch type roof equipped with electric ventilation, forced ventilation hot air heating, all steel underframes, and sheathed with steel and double wires. Five of these cars will be equipped with Westinghouse 101B motors, and five with General Electric 80A motors. The price of the cars is reported as $2,165 each.

The new regulations as to traffic on the street railways in British Columbia, issued by the Provincial Government are being put in force, by the British Columbia Electric Ry. The regulations provide that cars shall only carry a certain number of passengers, that when full they shall not stop except to let passengers off, and that only such number of new passengers can be taken on as have got off, that riding on the steps, etc., is forbidden, and that gates shall be provided on the platforms of all cars.

The Fort William city council recently passed a resolution urging the joint railway board operating the Port Arthur and Fort William Electric Ry. to establish a five minutes service between the two cities, but it is announced that at present the board is unable to give such service on account of lack of cars and power. Cars have been ordered, and a part of the extra power required will be available about April 1, but it is not anticipated that a five minutes service will be commenced until about July 1. The cars are now run between the two cities at intervals of 10 minutes.

Actions have been entered in the Supreme Court at Montreal by E. A. Robert, President; F. H. Wilson, J. W. McConnell, M. Wilson, W. C. Finlay and G. McIntosh, directors of the Montreal Tramways Co., against the Montreal Herald for libel in connection with comments in that paper on the affairs of the company, which, it is alleged, reflect on the directors. The Herald has for some time carried on a campaign against the company's service, and [illegible] of the proceeds of various stock issues, and the obtaining of increased legislative privileges by false pretences. Each of those taking action claims $100,000 as damages.

Mayor Hocken, in his recent inaugural address to the Toronto City Council, expressed his satisfaction at the successful operation of the Gerrard St. car line and the hope that it would form the nucleus of a complete system of public owned and operated street and radial railways. He stated that work was proceeding on the St. Clair and Danforth Ave. lines and that they might be in operation by July 1. He deplored the successful effort of the Toronto Suburban Railway Company for the construction of a single track line on Annette St. and Pacific Ave. and pointed out that it now rested with the city to build a line to serve the High Park district. The effort of the Metropolitan Ry. Co. to divert its line on Yonge St. was also commented upon and vigorous opposition was urged. He contended that 35% of the Toronto Ry. Co.'s tracks should be rebuilt, according to additional information given out in connection with the report of the traffic experts.

Automobiles to Stop When Electric Cars Are Standing.

An enquiry has been received from British Columbia as to the regulations in force requiring automobiles not to pass electric cars which are stopped to embark or disembark passengers.

The Motor Vehicles Act, Ontario Statutes, 1912, chap. 48, sec. 15, provides as follows:—"When a motor vehicle meets or overtakes a street car which is stationary, for the purpose of taking on or discharging passengers, the motor vehicle shall not pass the car on the side on which passengers get on or off, until the car has started, and any passengers who have alighted shall have gotten safely to the side of the street."

The Motor Vehicles Act, sec. 54, as amended by Manitoba Statutes, 1911, chap. 28, sec. 14, provides as follows: "In approaching or passing a car of a street railway which has stopped or is about to stop to allow passengers to get on or off, the operator of every motor vehicle shall low down, and, if necessary, he shall bring said motor vehicle to a stop and not proceed until the car has started and all passengers who have alighted shall have gotten safely clear of the motor vehicle."

As the question has been dealt with by the Ontario Legislature, apparently nearly all of the municipalities in that province have not thought it necessary also to pass bylaws on the subject, but the City of St. Catharines has a bylaw worded almost identically with the Ontario statutory provision given above. The City of London, Ont., has a bylaw requiring all vehicles to come to a full stop, rather than overtake and pass an electric railway car which has stopped for the reception or discharge of passengers.

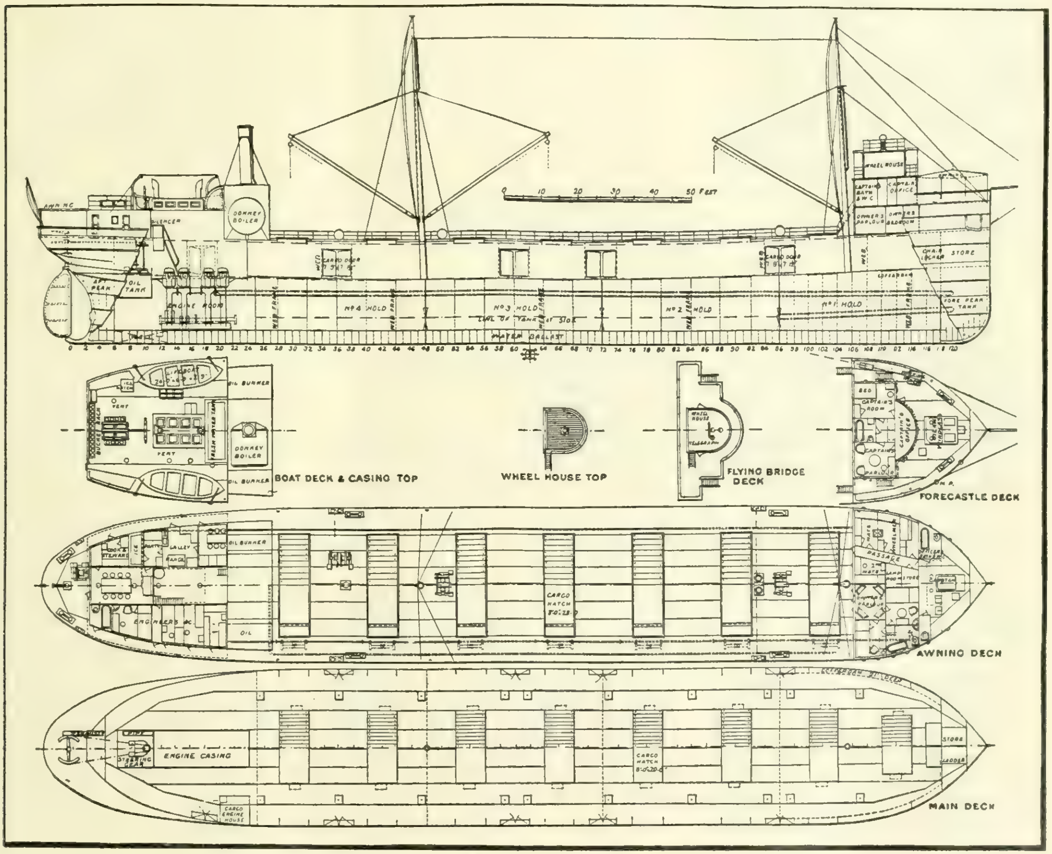
The Toronto City Board of Control had under discussion recently the passing of a bylaw to compel all vehicles to stop for electric cars embarking or discharging passengers, and the matter was referred to the City Solicitor for report.

The City of Montreal in its bylaw concerning street traffic, provides as follows:—"Every driver of a vehicle going in the same direction as a street car shall, when such car stops, also stop his vehicle at a distance of at least 10 ft. from said car, and shall keep such vehicle at a standstill until the said car has been again set in motion."

Steps are being taken to secure the passage by the Saskatchewan Legislature of provisions similar to those enacted by the Ontario and Manitoba Legislatures.

Marine Department.

The Oil Engined Vessel Fordonian.



Profile and Deck Plans of Oil Engined Vessel Fordonian, for the Canadian Lake Trade.

The trials of the Canadian lake type ship Fordonian, which was built at Port Glasgow, Scotland, for the Canada Interlake Line Ltd., of Toronto, have been described in a previous issue. Drawings of this ship and her Diesel machinery are given herewith. The Fordonian has the following leading dimensions:—250 ft. long, 42½ ft. beam, 16 ft. 10. in. moulded depth to the main deck, and 26½ ft. to the awning deck. She has a 2 ft. frame pitch, and a deadweight cargo carrying capacity of 3,300 tons on 16½ ft. draught. The draught on service is restricted to 14 ft., and the deadweight capacity is thus reduced to 2,200 tons. She is built to Lloyd's highest class for grain carrying on the Great Lakes, and conforms to the standards of Canadian lake practice in that she has a steering pole out forward to make quite handy the control from the forward bridge, a large number of hatches, and inward opening cargo doors on the port and starboard sides to facilitate the rapid removal of cargo. The cofferdam at the forward end of the fore hold is unusual in such vessels, and is intended to preserve the cargo from damage should the ship spring a leak as a result of coming in contact with any one of the many locks through which she passes in her regular trading. There are two independent controls from the bridge to the engine room telegraph, and the steam steering engine is operated by rods from the bridge. As with the sister ships, D. A. Gordon and A. E. McKinstry, there are two masts with derricks on each, and the chart house and navigating bridge are situated right forward. The rudder is balanced and is of large area. In the trials the vessel turned almost in her own length, and when the helm was put hard over she almost came to a dead stop.

The propeller is 11 ft. 9 in. in diameter by 9 ft. pitch.

The main propelling engine is a four-cylinder two-stroke cycle single acting Carels type of Diesel oil engine. The cylinders are 18.1 in. diameter by 32.25 in. stroke, and the engine runs normally at about 100 revolutions per minute. In the main features of the structure steam engine marine practice has been closely followed. The columns of the engine are of the box section, bolted rigidly together at the top, and are very thick, to withstand the tension stresses consequent upon the high pressures of the Diesel cycle. The cylinders have separate liners pressed in, and the liners have exhaust ports round the whole of their periphery, and communicate with an exhaust belt of large cross sectional area, running round the cylinder. The water spaces are large and ribs are cast on the inside of the cylinder to aid water circulation and to give to the cylinder wall strength to resist the direct pull passing through it. On each cylinder there are six bolted doors, of about 9 in. diameter, permitting of ready inspection and cleaning of the water cooling space. At the bottom of the cylinder there is a lantern ring, which serves to keep the joint between the cylinder and liner water tight, and, [illegible], to prevent the escape of cylinder gases into the engine room. Any leakage of gases goes into an annular chamber, which is connected to the scavenging pump suction, and is thus kept at a pressure below that of the atmosphere. The cylinder head is of cast steel, and has large cooling water spaces, with seven valve openings; one fuel, four scavenging, one starting air, and one safety. The piston of the Carels engine is in two pieces. The top piece is carried by a shoulder on the piston rod, and the bottom piece, or shroud, is carried at its bottom by another shoulder on the piston rod. Water cooling is adopted for the piston, and the water is circulated by the action of the plungers. The arrangement of the engine into two units of two cylinders each permits of a two piece crank shaft in interchangeable halves, of the vertical spiral drive for the valve gear being taken from the centre of the engine, and also of the scavenging pumps being driven from the two centre crossheads by links, as with the air pump of steam engines. The dimensions of the double acting scavenging air pumps are 27½ in. in diameter with a 23½ in. stroke, and give thus a ratio of free air compressed for scavenging to combustion air taken into the main cylinders of 1.65, which is higher than the usual practice. The pressure of the scavenging air is 3 lb. per sq. in. There are four valves in the cylinder head for the inlet of the scavenging air to cope with the large volume of low pressure air used in the engine. The scavenging pumps are controlled by two piston valves worked by slipping eccentrics driven from the aft part of the two piece interchangeable built up crank shaft, and the change of angular positon permitted by the slipping of the eccentric on the crank shaft automatically reverses the scavenging pump piston valves. The scavenging air is led by cast iron pipes from the valves to a built up 3-16 in. lap riveted steel plate reservoir running along the cylinder top and supplying the four scavenging valves on each cylinder. The exhaust is led down by bent cast iron pipes from the cylinders bent to the main exhaust pipe running along the engine to the cast iron silencer. These bends have internal water injection, and the silencer is also internally water cooled and is of the cascade design. The exhaust is led overboard under the counter. The funnel is for the uptakes from the donkey boiler. Separate leads are provided from the main sea water pumps worked off the links driving the scavenging pumps, and cocks are provided on all these leads to regulate independently the amount of cooling water supplied to each part. The temperature of this cooling water may be felt, as there are open discharges into funnels leading to the bilges. As regards lubrication, for the main bearings solidified oil is used, for the crank pin bearings the ordinary drip feed suffices, and the bearing pressures for the main and crank pin bearings are respectively about 300 and 650 lbs. per sq. in. For the lubrication of the cross head bearing, a small lubricating oil forcing pump is attached to each cross head, and worked by the swing of each connecting rod. This system of lubrication permits of an open crank case, and the bottom end bearings can always be easily felt by the engineer on watch. There are two guides for each. The piston is lubricated by four Mollerup lubricators, which force the oil between the piston and the cylinder; there are four inlets to the cylinder, and they are arranged to enter on the fore and aft and athwartship centre lines. There are seven valves and an indicator cock in the cylinder covers. These valves are operated in the usual way by cams and cam levers. The cam shaft is driven from the crank shaft by helical gearing through a vertical shaft, with cast iron helical wheels and pinions. For the reversing mechanism and its operation, there are two scavenging cams operating four scavenging valves, and these are reversed by turning the cam shaft through approximately 30 deg. by extending the driving vertical shaft by means of a compressed air servo-motor. The fuel pumps, of which there are four—one for each cylinder—are operated by eccentrics from the cam shaft. The control of the engine is by means of one wheel and two levers on the starting platform; one lever controls the compressed air engine, which gives the cam shaft its angular displacement by raising or lowering the vertical driving shaft, and also gives the manoeuvring shaft its fore and aft movement. The other lever controls the fuel. A wheel, operated by hand, gives the manoeuvring shaft its rotary motion. The cams upon the manoeuvring shaft act upon the suction valves of the fuel oil pump. Hand control is also provided by the handle on the column, which actuates a shaft running fore and aft on the engine, and so sets all the fuel pump suction valves. Although compressed air is used for actuating the vertical shaft, causing the angular rotation of the cam shaft and the rotation and displacement of the manoeuvring shaft, hand gear in emergency may be used. This vessel in her regular route trip from Montreal to Port Arthur must pass, each trip, through some 30 to 40 locks, and this demands manoeuvring qualities far above the average, and that the engines must be capable of being stopped, started and reversed in a very short time. Stopping from full speed ahead was on trial accomplished in two or three revolutions of the main engines, and reversals from full ahead to astern took six seconds. A trial of manoeuvring was then made, and reversals were carried out from the bridge to correspond with the actual conditions in service of this vessel; 63 reversals were accomplished in 42 minutes, with more than half of the high pressure compressed air still unused. The auxiliary steam driven compressor was, of course, in use for this trial. The system of having one fuel pump for each cylinder makes for easy regulation of the quantities of fuel oils supplied, and so permits of a very slow speed of revolution. On the trial trip 46 revolutions a minute was the minimum attained; but when the final tuning up has been accomplished, and all cylinders at all speeds are developing exactly the same power, a minimum speed of revolution of about 35 revolutions will no doubt be achieved. No governor is fitted, as rough weather is not normally encountered, and the heavy fly wheel, some 9 ft. in diameter and about 7 tons in weight, is relied upon. The compressed air for the injection of the fuel oil into the working cylinders, and also for the starting of the engine, is supplied by a reversible three stage compressor. The compressor is an integral part of the Diesel engine, and as such is driven from the main engine. The compressor is bolted on to the bed plate at the forward end, and is driven by a pin off the crank shaft. The stroke is 8 in. (7¾ in. net), allowing for the ¼ in. auxiliary ports; and the diameters are:—Two low pressure cylinders, 15 in.; one intermediate cylinder, 9½ in.; and one high pressure, 4¾ in. The volume of free air per minute dealt with by this compressor is 6,200 litres, and it was noted on trial that the air was supplied cool. This compressor has multitubular intercoolers. The cooling water and bilge pumps are driven off the scavenging air pump links in the same way that these pumps are driven off the links of the air pump with mercantile steam engines. The cooling water from the cylinders and cylinder covers is led to a trough placed high up in the engine room, at which trough all discharges are visible. From there the water goes overboard. The auxiliaries are steam driven from a cylindrical donkey boiler, situated aft on the awning deck in the fore part of the engine casing. The boiler uses exactly the same kind of fuel as the main engines. The auxiliaries are:—the dynamo, auxiliary compressor, ballast pump, oil fuel pumps, three winches, a windlass, and steering gear. The auxiliary steam driven compressor is of half the capacity of the main compressor, and runs normally at 300 revolutions a minute. Air storage for starting purposes is provided by four welded steel bottles, of 23⅝ ins. diameter by 8 ft. long, and that for trial fuel injection by one bottle, 1 ft. in diameter by 3 ft. long. The pressure of the fuel injection air and the starting air is 850 lb. per sq. in. The time taken by the auxiliary compressor to fill up the air storage provided is about one hour. The remainder of the auxiliaries are similar to steam practice. The weight of the main engine alone is about 100 tons, and if the auxiliaries are included, all ready for work, 150 tons is the weight of machinery aboard. There is fuel storage in two oil tanks placed on both sides of the oil fired donkey boiler, and two ready use tanks are placed aft of the engine room, and are provided

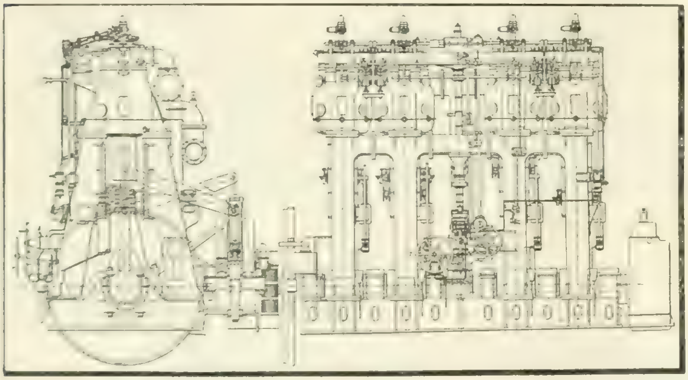


Diagram of Engines on Oil Engined Vessel Fordonian.

with steam heating coils, while the oil is filtered, on its way to the fuel pumps of the main engines, through 15 gallon filters in the engine room. In all 105 tons of oil fuel is carried, whereas with the sister steamships 250 tons of coal is required. The consumption per day for all purposes is 5 tons of oil fuel, against 14 tons of coal. The fuel consumption of this engine is 0.47 lb. per brake horse power per hour. On the trials, it was shown that the indicated horsepower at 102 revolutions per minute and 90 lb. per sq. in. is 970; 10 knots were achieved with the engines doing 128 revolutions per minute. The maximum revolutions were 140, the normal about 102, and the minimum 46. The results will undoubtedly be improved upon when the engines are finally tuned up, as prior to the trial trip they had only been run in dock trials for twelve hours in all. The general arrangement of the engines and auxiliaries is well thought out to give the greatest possible immunity from breakdown. This type of engine seems quite suited to the propulsion of cargo boats, and the saving in space consequent upon the adoption of the Diesel engine for this ship is five frame spaces, aggregating 10 ft., or about 33% of the machinery space.—Shipping Illustrated.

The Dominion Wreck Commissioner's Judgments Criticized.

Considerable comment is being made in Canadian and British newspapers respecting recent judgments by the Dominion Wreck Commissioner in regard to enquiries into marine casualties, and especially regarding a recent stranding on the St. Lawrence route.

The Journal of Commerce, Liverpool, Eng., says:—"A correspondent points out that much indignation has been aroused among navigators in the St. Lawrence trade by the extraordinary decisions and gross injustices of the Canadian Wreck Commissioners' Court in some recent cases of shipping casualties in the St. Lawrence. As these cases may be the subject of reinvestigation it would be wise to suspend comment, but nautical men consider that it is futile for the Canadian authorities to try to cover up the defects of their pilotage system and the lighting and marking of the river by making an onslaught upon the certificates of masters and officers."

Amongst some of the comments made, questions are raised as to the jurisdiction of the Dominion Wreck Commissioner, but there appears to be no doubt on that point. Sec. 21, chap. 35, 1 Ed. VII. (Shipping Casualties Act), provides that the certificate of a master, mate, or engineer may be cancelled or suspended by a court holding a formal investigation under the act, if the court finds that the loss or abandonment of, or damage to, a vessel has been caused by his wrongful act or default.

The question of what constitutes a wrongful act, or default, is clearly laid down in this and other acts, but an incorrect impression has seemed to prevail for some time as to the necessity for the presence of the master, or a competent officer, on the bridge when a licensed pilot is on board. The Dominion Wreck Commissioner has laid particular stress on this point during many of the recent investigations, and has commented very strongly on the growing practice of masters leaving the bridge as soon as the pilot takes charge. It is declared in sec. 57, chap. 80, R.S.C. (Pilotage Act), that "nothing in this act shall exempt any owner or master of any ship from liability for any loss or damage occasioned by his ship to any person or property, on the ground either of such ship being in the charge of a licensed pilot, or of such loss or damage being occasioned by the act or default of a licensed pilot, or any other ground." It would therefore appear that the master is not relieved of responsibility when a pilot takes charge, and in case of accident to the vessel, the question of the act or default of the master, as well as of the pilot, would come within the purview of those holding the enquiry into the casualty.

Those associated with the navigation interests in Canada hold strong views on this matter, and the rule that the master of a vessel shall be on the bridge the whole time when the vessel is navigating in narrow or dangerous waters is being strictly enforced on freight as well as passenger vessels.

Regarding the remarks made in connection with the pilotage, we have already announced what steps the Shipping Federation of Canada has taken in the matter, and the probability that the Dominion Government will shortly appoint a commission to enquire into pilotage generally, as well as aids to navigation. The statement alleging defects of the lighting and marking of the river, however, is so misleading that we are compelled to repeat what has frequently been stated by competent authorities, that the St. Lawrence ship canal is one of the best lighted and buoyed channels in the world, and is almost as easily navigable by night as by day.

Canada Interlake Line's Bond Issue.

In Canadian Railway and Marine World for January, considerable details were given as to the formation of this company, its vessels and finances. An issue of bonds has now been placed on the market, amounting to $200,000. They are 6% ten year serial gold bonds, dated Jan. 1, 1913, maturing in 10% amounts each year to Jan. 1, 1923, and are subject to redemption before maturity at 105 and accrued interest. They were offered at 98½ and accrued interest. These are the only bonds issued by the Canada Interlake Line, and are secured by first mortgage on the steel steamboats Regina, Kenora and Tagona, built and equipped at a cost of $442,242. The mortgage securing the bonds provides that insurance against all possible hazards to the extent of 125% of the amount of the bonds at any time outstanding shall be maintained continually, and that the policies shall be made payable to the National Trust Co., to protect the bondholders.

The Canadian Interlake Line Ltd. which has been taken over by the Canada Interlake Line Ltd. has outstanding bonds for $520,000 secured on the steamships Acadian, Canadian, A. E. McKinstry, Renvoyle, Indian, Hamiltonian and Calgarian.

The Canada Interlake Line's preferred and common stock have been listed on the Toronto Stock Exchange.

Prevention of Harbor Pollution.

The regulations for the government of public harbors in Canada have been amended by the addition of the following section:—

36a. No oil, tar or other like substance or any inflammable or otherwise dangerous substance shall be thrown or discharged or drained or allowed to fall, flow or leak into the waters of any harbor, and any person violating the provisions of this regulation or any person in charge of or owning any ship, vessel, manufactory, works, house or other premises violating the provisions of this regulation shall be liable to a penalty of $50, and in case of a continuing violation to a further penalty of $10 for every 12 hours during which such violation continues.

St. Lawrence and Chicago Steam Navigation Company, Limited.

The following report was presented at the annual meeting in Toronto, Jan. 17:—

The season of 1912 was a satisfactory one to vessel interests on the lakes. The active demand for coal and ore, coupled with an exceptionally large grain crop in the United States and good crops in Canada, established the highest rates of freight since the autumn of 1905.

Your directors continued the policy of insuring a proportion of the risks on vessels under a modified form of policy, crediting insurance fund with amount of premiums saved. The vessels met with no accidents during the season, and we now have at credit of that fund $109,290.47. It is the intention of your directors to continue this policy until insurance can be obtained at what they may consider reasonable rates and terms.

As the business of the country continues to grow, and it was necessary to secure additional tonnage to take care of the company's business, your directors took advantage of the low price of steel last spring to contract for a large modern, side tank, bulk freight steamer, which is promised to be ready for the opening of navigation, 1913. As our s.s. Algonquin was too small to supplement our larger vessels in upper lake trade, your directors decided to dispose of her, and this leaves our fleet now composed of steamers of modern construction, large carrying capacity, and all maintained in the highest state of efficiency.

The directors from the earnings of the season have paid a dividend of 8%, and, after providing for same and writing off $35,000 from vessels' account, have carried forward $17,169.24 to the credit of profit and loss, making a balance at credit of that account of $158,645.96.

ASSETS.

Four Vessels, viz.: Iroquois, W. D. Matthews, G. R. Crowe and E. B. Osler	$900,000 00
New Vessels, expended to date ...	142,839 60
Bills and accounts receivable	41,910 60
Balance in Dominion Bank	43,278 23
	$1,128,028 43

LIABILITIES.

Capital stock	$860,000 00
Accounts payable	92 00
Insurance fund	109,290 47
Balance of profit and loss	158,645 96
	$1,128,028 43

PROFIT AND LOSS ACCOUNT.

Balance, Jan 2, 1912		$141,476 72
Steamships' earnings ..	$134,031 69	
Interest	2,382 95	
		136,414 64
		$277,891 36
Cost of management, viz.: salaries, taxes, office rent, directors' and auditors' fees, etc		$15,445 40
Written off steamships' account ...		35,000 00
Dividend, 8 per cent., payable Jan. 2, 1913		68,[illegible]
Balance carried forward		158,645 96
		$277,8[illegible]

The directors who were re-elected for the current year are:—President, W. D. Matthews; Vice President and Secretary, J. H. G. Hagarty; Managing Director, A. A. Wright; other directors, Jas. Carruthers, Capt. S. Crangle, G. R. Crowe, C. S. Gzowski and Sir Edmund Osler.

J. and J. T. Mathews, Toronto, have placed on the Canadian register the steamship Masaba, acquired from the U.S. She was built in Chicago, Ill., in 1891, and is screw driven by engine of 156 n.h.p. Her dimensions are:—Length, 240 ft.; breadth, 40 ft.; depth, 25 ft.; tonnage, 1,913 gross, 1,267 register.

The Launching of the Steamship Calgarian.

The Canada Interlake Line's steamship Calgarian was launched at Port Arthur, Dec. 28. She is built of steel on the Isherwood system of longitudinal construction, which, while permitting of a lighter build, gives a greater cargo carrying capacity, by at least 5% over that obtained by the ordinary methods. Her dimensions are:—Length, 244 ft. between perpendiculars, and 257 ft. over all; beam, 42½ ft.; depth, moulded, 26½ ft. She is equipped with triple expansion engines with cylinders 18, 29 and 48 ins. diar., by 40 ins. stroke, supplied with steam by two Scotch boilers, 11½ ft. diar. by 11½ ft. long, at a pressure of 180 lbs., steam steering gear, etc.

The vessel has been built as a cargo carrier entirely, and the most up to date appliances have been installed for the expeditious handling of freight. It is anticipated that she will be handed over to the owners early in February.

Vessels Removed From the Register.

The following vessels were removed from the register during December, for the reasons assigned:—Steam,—Aloha, Vancouver, 11 tons, lost; Babine, Vancouver, 16 tons, burnt; Bessie Ardella, St. Andrews, N.B., 12 tons, sold to foreigners; Blandford, Quebec, Que., 27 tons, broken up; Cecilia L, Montreal, 115 tons, foundered. Sailing,—Aaron, Ottawa, 144 tons, broken up; Bessie G., Parrsboro, N.S., 69 tons, wrecked; Black Prince, Yarmouth, N.S.; Calumet, Ottawa, 154 tons, broken up; Clarke, Ottawa, 145 tons, broken up; E. Merriam, Parrsboro, N.S., 331 tons, wrecked; Garnet, Yarmouth, N.S., 27 tons, broken up; Grant, Ottawa, 146 tons, broken up; Grenville, Ottawa, 154 tons, broken up; Hustler, Charlottetown, P.E.I., 13 tons, broken up; Joy Folger, Sydney, N.S., 17 tons, transferred to Newfoundland; Laura, Port Hawkesbury, N.S., 13 tons, broken up; P. Girard, Ottawa, 142 tons, broken up; Phantom, Chatham, N.B., 17 tons, lost; Strathcona, Windsor, N.S., 251 tons, transferred to Bahama Islands.

Aid Asked for Shipbuilding in Canada.

A deputation of shipbuilders from various points of the Dominion waited on the Premier and other members of the Government at Ottawa Jan. 21 to urge the desirability of subsidizing the trade in some way as a protection against outside competition.

The deputation pointed out that some $20,000,000 is invested in the business in Canada, and urged that a subsidy, or tariff equivalent, to the extent of 20% of the cost of building iron and steel vessels should be granted by the Government, in order to prevent the practical disappearance of the trade. It was claimed that with the tariff of 25% for repairs against the U.S., conditions on the Great Lakes still allowed most of the repair business to go to U.S. ports, and against British competition there was no protection, though the cost there on account of lower wages and lower cost of a great part of the raw material was much cheaper. In order to meet competition, a bonus per gross ton and a subsidy on contract cost were suggested as the only means of developing the industry. It was also stated that Canadian shipbuilding companies on the Great Lakes had to confine themselves to the building of such vessels as could not be built in Great Britain and sent through the St. Lawrence canals, and that on a vessel costing $120,000 to build, Canadian companies were taxed about $12,000 in duties on fittings and raw material.

The Premier stated that when in Great Britain last year, he was told that the cost of shipbuilding was steadily increasing there, and he was under the impression that in the course of the next decade or so it might approximate to the Canadian prices. He said that he had never been able to obtain from Canadian shipbuilders a statement as to how long a bounty would have to be paid before the industry could be said to be on a self supporting basis, but he was impressed with the importance of the situation, and with his colleagues would take the matter under serious consideration.

Essential Feature of the Diesel Engine.—In the course of a paper recently read at Berlin, Dr. Diesel denied that the essential feature of the Diesel process was the autoignition of the fuel. He stated that motors in which the autoignition of the fuel took place were in use before the Diesel process came into being; indeed, he had never laid a claim to autoignition in any of his patents. What he was aiming at was a process in which heat was utilized to the highest possible extent, and autoignition became embodied in the process incidentally during the evolution of the design. "The height of compression," said Dr. Diesel, "was not determined by the ignition limits of the fuel, but solely by the endeavor to obtain the highest possible figure for economical fuel utilization."

It is authoritatively stated that the German navy is having a twin screw Diesel marine engine, which will consist of two sets of six cylinder, double acting engines, each set giving 12,000 horse power, or 2,000 h.p. per cylinder.

Atlantic and Pacific Ocean Marine.

The s.s. Zealandia, which left Victoria for Sydney, N.S.W., Dec. 26, was reported, Jan. 2, to have arrived at Honolulu with disabled engines. Repairs were to be made there.

The Cunard- Thomson Line is continuing the arrangement whereby its vessels will call at Plymouth, Eng., on their eastbound trips, sailing thence for London direct, as carried out during last summer.

In connection with the Titanic disaster of last year, claims are reported to have been filed in New York against the White Star Co. for over $10,000,000. It is claimed by the company that, under the U.S. laws, its liability is limited to approximately less than $100,000.

The Uranium Steamship Co.'s s.s. Uranium, when nearing Halifax harbor, Jan. 12, stranded on the shoals off Chebucto Head. It was reported that holes were punched in both port and starboard sides. She was floated Jan. 17, and entered Halifax under her own steam.

The Cunard-Thomson Line, which has been operating steamships Ascania, Ausonia and Ultonia between Canada and Great Britain during the past season, has decided to increase the fleet for next season by adding the Andania and Alaunia, each of 13,000 tons, and of the one class cabin type.

The Allan Line s.s. Carthaginian, which arrived at St. Johns, Nfld., Jan. 10, reported that three days out from Liverpool, Eng., fire was discovered amongst the cargo. This was extinguished after some hours work, but the damage to the vessel apart from the cargo, is said to amount to $10,000.

Ottawa dispatches of Jan. 2 state that arrangements are being made to secure such aids to navigation as will make Hudson Bay and Straits safe for navigation, and that the Government intends sending a party over the proposed route in the spring to arrange for the installation of lighthouses and beacons.

The Hamburg-American Line s.s. Abessinia arrived at Halifax, Jan. 15, in a damaged condition, having had her rudder broken during a storm in midocean. The Allan Line s.s. Armenian had had her in tow, but the cable parted, and in the fog the vessels lost each other. A temporary rudder was fixed, and she came to port under her own steam.

A Montreal press report of Jan. 16 states that it has been officially announced that the C.P.R. has decided to establish an Austro-Canadian service in the spring, with Montreal as the terminal summer port on this side, and St. John, N.B., in the winter, while Trieste will be the Austrian port. The steamships Lake Champlain and Lake Erie will, it is said, be utilized in the service.

The Canadian Northern Steamships' s.s. Royal George sailed from Halifax, N.S., Dec. 28, 1912, for Great Britain, for complete overhauling and repair. She has been docked at Birkenhead, Eng., where the repairs will be undertaken, the original arrangements for docking at Glasgow, Scotland having been changed. It is stated that the damage was less than anticipated, and that she will be able to resume service in the spring.

It is reported from Ottawa that the Government has decided to appoint a commission to investigate the method of appointing pilots for the St. Lawrence and other routes. As a result of enquiries by the Dominion Wreck Commissioner into recent marine disasters, in a number of which the blame was placed on the pilots, the Shipping Federation of Canada called upon the Government to enquire into the pilotage system, alleging, among other things, that it is a comparatively close corporation. It is stated that the commission will consist of two persons connected with the shipping interests and one of the Marine Department's officials.

Maritime Provinces and Newfoundland.

The British s.s. Evelyn, which ran ashore at St. Esprite, Jan. 8, and which was released, sank at the entrance to Louisburg Harbor, N.S., Jan. 9. The crew, numbering 33, were saved.

It is announced that the contract for the building of the new ferry terminals at Halifax, N.S., has been awarded to the Standard Construction Co., and that operations have been commenced on a temporary dock.

The Department of Railways and Canals has awarded the contract for the building of a car ferry steamship, to be operated between New Brunswick and Prince Edward Island, to Sir W. G. Armstrong, Whitworth and Co., Newcastle, Eng.

The Quoddy Coal Co. is applying for incorporation under the New Brunswick Companies Act, with $9,900, and office at St. Andrews, N.B., with power, among other things, to do a general towing, lightering, freighting and forwarding business.

A steel suction dredge is under construction at St. John, N.B., for Government use on the St. John River. It will be 110 ft. long, and will be equipped with triple expansion engine and 15 in. pump. It is anticipated that it will be completed and ready for operation by the reopening of navigation.

Province of Quebec Marine.

The Quebec Harbor Commission has ordered three six wheeled switching locomotives from the Montreal Locomotive Works, for delivery in April.

The Montreal Harbor Commission has awarded a contract for a 1,500,000 bush. addition to its elevator no. 1 to John S. Metcalf Co., Montreal. This will make the total capacity of this elevator 2,500,000 bush.; while the elevator no. 2, recently completed by the same firm, has capacity for 2,600,000 bush. The addition will be of reinforced concrete and steel, and will cost approximately $700,000.

Ontario and the Great Lakes.

At the Lake Carriers Association's annual meeting at Detroit, Mich., Jan. 16, W. Livingstone was re-elected President for the current year.

A proposal is being arranged in Fort William, to have cinematograph views taken of the loaded grain vessels leaving the harbor on the re-opening of navigation.

The Department of Public Works has awarded a contract for the building of the machinery for a dipper dredge, to Polson Iron Works, Toronto. The amount of the contract is $38,000.

The U.S. Government has ordered from the Safety Car Heating and Lighting Co. 16 type C spar buoys with mantle lanterns for lighting the Livingstone channel in the lower Detroit River.

The Peoples Line steamboat Frontier was offered for sale, by public auction, at Toronto, Jan. 25, on the order of the Marshal for the Toronto Admiralty District, to satisfy claims made by the captain, crew and others.

The Montreal Transportation Co.'s annual meeting was held at Montreal, Jan. 17. Following are the officers and directors for the current year:—President, B. McLennan; Managing Director, L. L. Henderson; other directors, A. E. Ogilvie, T. A. Crane, Farquhar Robertson.

The Farrar Transportation Co., operating the steamships Collingwood and Meaford in the bulk freight trade, has declared a dividend of 10% for the past year, with a bonus of 5%. The annual report shows gross earnings of $173,181, and net profits of $73,338. There is a paid up capital of $250,000.

The two bucket ladder dredges which are under construction at Collingwood, for the Marine Department, will be of the following dimensions:—Length, 218 ft. over all; keel, 210 ft.; beam, 37½ ft.; depth, 14 ft. They will be equipped with triple expansion engines with cylinders 15, 25 and 42 ins. diar. by 26 ins. stroke, supplied with steam by two Scotch boilers, 11½ by 10½ ft., at 180 lbs. pressure. A forced draught system is to be installed.

Capt. McInnes, for about 50 years prominent in navigation circles on the Upper Lakes and Lakes Couchiching and Simcoe, died at Orillia, Ont., Jan. 14. He sailed on Lake Simcoe as early as 1853, and built and ran the steamboat Islay, in connection with a summer resort at Strawberry Island, a number of years ago. Later he owned and operated the passenger steamboat Oneida between Collingwood and Chicago, and Chicago and Ogdensburg.

It is announced from Fort William, that the Chicago, Duluth and Georgian Bay Transit Co. will operate a passenger service beimportant ports en route, during the coming important ports enroute, during the coming season. The first trip is scheduled for June 21. The vessel which was launched in Jan., will have five decks with accommodation for 700 passengers in staterooms, and she will also have swimming pool, children's play rooms and other modern conveniences.

The U.S. Lake Survey reports the levels of the Great Lakes, in feet above tide water, for Dec., 1912, as follows:—Superior, 602.11; Michigan and Huron, 580.23; Erie, 571.47; Ontario, 246.11. Compared with the average December levels for the past ten years, Superior was 0.26 ft. below; Michigan and Huron, 0.07 ft. above; Erie, 0.25 ft. below; Ontario, 0.71 ft. above. It was anticipated that during January Superior would fall about 0.5 ft.; Michigan and Huron about 0.1 ft., and Erie and Ontario would remain stationary.

The St. Lawrence and Chicago Steam Navigation Co.'s steamship, which is under construction at Collingwood, will be, it is claimed, the largest cargo carrying boat on the Canadian Lakes. Her dimensions are as follows:—Length over all, 550 ft.; length between perpendiculars, 529 ft.; beam, 58 ft.; depth, moulded, 31 ft.; estimated carrying capacity, 10,000 tons. She will be equipped with triple expansion engines, with cylinders 24, 40 and 66 ins. diar., by 42 ins. stroke, supplied with steam by three Scotch boilers 13 ft. diar., by 11 ft. long, at 185 lbs. pressure. The furnaces, which will be equipped with forced draught, will have a grate area of 45 ft. to each boiler. She is being built with side tanks, six compartments, and there will be 31 hatches, spaced 12 ft. centres.

The ratepayers of Midland have voted in favor of a bylaw granting a bonus of $25,000 for the construction of a dry dock there. We are advised that a floating dry dock of steel is to be built in connection with the vessel repair plant operated there by Jas. Playfair and associates, and that it will be built in two sections, the first one being, approximately, 125 by 70 ft., additions being made as the business develops. The first portion of the bonus will be paid on the completion of the first section, and the balance on the completion of the dock, or the second section. The work will all be done locally by the company's own men, and if the dock, when completed, comes within the Government's requirements, a subsidy will be applied for under the Dry Dock Subsidy Act.

At the recent annual meeting of the Muskoka Lakes Navigation and Hotel Co. in Toronto, a dividend of 5% for the past year was declared. This is the first dividend paid for 13 years, though the company has been materially improving its financial position year by year. The report was considered satisfactory. W. F. Wasley, Traffic Manager, stated that though the season was notoriously a poor one, the company's traffic had been practically equal to the previous year. It was stated that though there would be no immediate additions to the fleet, two vessels would be added in 1914, if the forthcoming season's traffic appeared to warrant it. The officers and directors were re-elected for the current year as follows:—President, H. C. MacLean; Vice Presidents, G. T. Somers and W. K. George; other directors, R. S. Wilson, F. F. Brintnell and A. McL. Macdonnell. The Traffic Manager is W. F. Wasley, and the Manager of the Royal Muskoka Hotel is L. W. Maxson.

Manitoba, Saskatchewan and Alberta.

The statistics of shipping passing through the St. Andrews locks, on the Red River, during the 1912 season of navigation, show a tonnage of 95,549 against 47,135 for the previous year, an increase of 48,414 tons. There was considerable increase in general shipping in the neighborhood of Winnipeg during the year. The total tonnage of steam vessels plying up the river was 48,748, and of sailing vessels 55,437, a total of 104,385, while down the river the tonnage was 106,538. The tons of freight carried up to Winnipeg were 94,866, and 683 tons were carried down.

British Columbia and Pacific Coast Marine.

The C.P.R. s.s. Princess Maquinna, which is under construction at Esquimalt, was fitted with her boilers early in January. They were brought from Great Britain.

The contract for the construction of a breakwater at Victoria has been awarded by the Dominion Public Works Department to Sir John Jackson (Canada), Ltd., Montreal, of which company A. Brooks is the resident director.

The C.P.R. s.s. Princess Sophia was recently taken off her route for an overhauling, and at the same time to have complete oil burning equipment installed. Oil tanks had already been installed at the time of building the vessel. It was anticipated that she would be ready to relieve the s.s. Princess May on the Skagway run, Jan. 24.

The Continental Shipping and Trading Co., Ltd., has been incorporated under the British Columbia Companies Act, with $200,000 capital and office at Vancouver, to carry on the general business of merchant carrier by land and water, and in connection therewith to own and operate steam and other vessels, aeroplanes, airships, etc.

The work of surveying the harbors and making test borings, at Victoria and Vancouver, which has been undertaken by the Dominion Public Works department, and which is under the charge of H. M. Davy, engineer of the department, was completed Jan. 8, so far as Vancouver is concerned, that in connection with Victoria, it was announced, would probably be completed early in February, and that before leaving for the east the party would make a survey of Prince Rupert harbor.

An Ottawa dispatch of Jan. 7 states that the Dominion Government is to proceed at once with the construction of a public wharf at Vancouver. It is stated that instructions have been given for the expropriation of several lots in the vicinity of the sugar refinery, and as soon as this is effected, the building of the dock will be proceeded with. The cost is estimated at $500,000.

A press report from Vancouver states that an English syndicate, with Mexican connections, is making an investigation of the wharfage facilities at Vancouver, Puget Sound, Californian and Mexican ports, with a view to the establishment of a steamship line. It is stated that a report is to be made to the Mexican Government in the matter, and certain land grants are to be made there in connection with the project.

J. W. Troup, Manager, C.P.R. British Columbia Coast Service, who sailed for England Jan. 10, is reported to have stated in Montreal that two additional vessels are to be ordered in Great Britain for the Coast Service, to be placed on the routes now covered by the steamships Princess Charlotte and Princess Victoria, which will be transferred to other routes. It is reported that the new vessels will be driven by turbines.

The Union Steamship Co.'s s.s. Cheslakee sank, Jan. 7, at the wharf at Van Anda, Texada Island, and four lives were lost. It is stated that the accident was due to the leaving open of an ash chute. The Cheslakee was built at Dublin, Ireland, in 1910, her dimensions being:—Length, 126 ft.; breadth, 28.1 ft.; depth, 17 ft.; tonnage, 526 gross, 261 register. She is equipped with engine of 65 n.h.p., driving a screw. Arrangements are being made for salving the vessel.

The North Vancouver Ferries, Ltd., for 1912 showed earnings of $137,794.16, an increase of $13,318.55 over those of the previous year, notwithstanding that a lower tariff came into force in April, 1912. There was a surplus over transportation charges of $61,417.84. The general charges and office expenses were $36,522.64, and the net profit was $7,467.06. During the year the company installed new boilers in ferry no. 2, and made general improvements to ferries nos. 2 and 3, equipped the vessels for burning oil fuel, and made extensions to its wharf at Vancouver.

The Georgian Bay Canal Project.—The Dominion Parliament is being asked to extend the time within which this projected waterway from Montreal to the Georgian bay at the mouth of the French river may be built, and to authorize the company, in lieu of the provisions of sec. 22, chap. 103 of the statutes of 1894 to issue bonds for $175,000,000.

John F. Pierce has been appointed District Passenger Agent of the Richelieu and Ontario Navigation, Niagara Navigation Co., Thousand Island Steamboat Co., and R. & O.N. Co. of the United States, with territory covering the New England states and the maritime provinces. His office is at Boston, Mass.

The Canadian Marconi Wireless Telegraph Co. has announced that it has completed a new agreement with the Newfoundland government, whereby the number of stations operated by it there will be increased from five to ten, until 1926, under an annual subsidy of $1,500 and other considerations involving exclusive rights during that period.

White Pass and Yukon Railway's River Service.

In his report for the year ended June 30, 1912, President O. L. Dickeson gives the following particulars of the company's river division:—

The fleet in 1911 carried 4,912 passengers and 15,825 tons of revenue freight. Eight steamboats and 10 barges were in operation on the river and lakes during the season, the remaining steamboats and barges being held in reserve for emergencies. The first boat left Hootalinqua for Dawson May 19, and the first through boat left Whitehorse for Dawson June 8. The first boat for Atlin left Caribou June 10. The last boat from Dawson reached Whitehorse Oct. 30, which is considerably later than the River Division steamers have operated since this service was established. The last boat from Atlin reached Caribou Oct. 28.

Some special work was done at the Whitehorse shipyards to facilitate the placing of the fleet in winter quarters and to carry on the necessary repair work before the opening of navigation. A new lathe was installed in the shops to replace the old one.

The River Division was operated without any accidents and there were, therefore, no repairs or renewals out of the ordinary to any of the boats except the Whitehorse and Selkirk. The repairs to the latter consisted of new cylinder timbers and about 35 ft. of her after hull was rebuilt. New cutoffs were installed in the engine of the Whitehorse at a slight cost, which resulted in a saving of approximately $3,000 in her fuel consumption during the past season.

The construction of the new Casca was commenced late in the season of 1910 and completed in 1911. She was launched ~~Oct.~~ 15, making a trial trip Sept. 2 from Whitehorse to Lower LeBarge and return, which proved successful. Her maiden voyage was made Sept. 15, carrying 250 tons of freight and mail. Her draft leaving Whitehorse was 3 ft. 5 ins. aft, 3½ ft. amidship and 3 ft. 10 ins. forward. Other steamboats on the same draft could only carry approximately 150 tons, illustrating the economical value of changes applied in the construction of the new boat. On this trip no special effort was put forth to make fast time, it being necessary for the captain and pilot to become familiar with handling her, but the speed was very satisfactory. Subsequent performances prove the Casca the most economical and best steamboat in the fleet. Following are brief particulars:—Length, 161 ft.; beam, 37 ft.; depth of hold, 5½ ft.; draft, light, 24 ins.; rooms for officers and crew, 11; rooms for passengers, 34; berths, 64; table seats for 40 passengers; registered tonnage, 790.

In respect to passenger arrangement and appearance she is practically a duplicate of the Whitehorse, except that she shows more breadth. There is an extra foot of width on each side of her promenade deck, making her an attractive boat for tourists.

A saving in operation of $77,994.72 was effected, as compared with 1910.

The company's fleet consists of 19 steamboats, 14 barges and one launch.

Pressures of from 4 to 35 lbs. per sq. in. of surface on work being ground on a disc wheel have been determined by experiments to be the proper pressures for grinding. A less pressure than 4 lbs. per sq. in. results in polishing and burnishing the work. For this reason it is necessary, when grinding light pieces on a horizontal disc wheel, to load them with weights when the weight of the piece does not impose a pressure of more than 4 lbs. per sq. in.

Lake Grain Shipments.

Stranding of the s.s. Sindband.—The judgment in the enquiry into the stranding of the s.s. Sindbad at Cheticamp Harbor, N.S., Oct. 1, 1912, delivered recently by [illegible] Commissioner, and concurred in by Capts. [illegible] the master of the vessel from all blame for the casualty, which was due to the vessel striking on an unknown shoal, which was not marked on the charts and sailing directions used by him, although the shoal appears to have been pretty well known locally.

Grounding of the s.s. [illegible]

[illegible] We are of the opinion that this was the cause of the grounding, and therefore find [illegible] error of judgment, but on account of his good record, we feel that he should be exonerated from all blame, and we hand him back his certificate.

We are of the opinion that a more definite under-standing ought to exist between owner and master as to the very important question of sacrificing safety for time, and also would accentuate the necessity of masters keeping a night order book, in order that no misunder-standing may occur in the issuance of instructions having reference to the safe navigation of vessels. In view of the fact that the volume of passenger traffic has greatly increased on the coast during the last few years, it becomes of paramount importance that the owners should see that the rules and regulations issued by them appertaining to safe navigation be lived up to, and also every facility and support should be given masters in maintaining such discipline as will tend to minimize public criticism when accidents of this kind occur, and that masters themselves should see that the internal discipline and routine maintained on board their vessels should be such as to insure the utmost vigilance in order to contribute to safe navigation.

New Vessels for Canadian Pacific Railway Atlantic Service.

[illegible] Marine World for January, the C.P.R. has placed an order [illegible] Atlantic service. These vessels will be of [illegible] tons.

[illegible] Length, 500 ft.; breadth, 64 ft.; depth, moulded to shelter deck, 39 ft. The loaded draught will be about 28 ft., and the speed will be about 15 knots an hour. The machinery will consist of two sets of quadruple expansion engines, with cylinders 26, [illegible] ended boilers, 15¾ ft. diar., by 11 ft. long, [illegible]

The Lake Winnipeg Brick and Lumber Co. has been incorporated under the Manitoba Companies Act, with very extensive powers for the development of lands in the province, operating vessels, carrying on the business of a common carrier, the ownership of docks, wharves and terminal facilities, etc., but it is added:—"Nothing herein contained shall be construed as authorizing the company to operate a railway." The company's capital is fixed at $200,000, its chief offices are in Winnipeg, and the provisional directors are: T. F. Shannon, W. [illegible] Fletcher, Winnipeg.

The White Star Vessels Olympic and Britannic.

The White Star Line s.s. Olympic, which is being reconstructed at Belfast, Ireland, has been definitely scheduled to leave Southampton on April 2, sailing from New York on the return trip April 12, for Plymouth, Cherbourg and Southampton.

The chief object of the reconstruction work, which will entail an enormous expense, is the introduction of an inner skin of heavy steel plates, continuing, in effect, the present double bottom well above the water line and providing considerable additional protection throughout the hull. The recent published reports to the effect that oil fuel would be transported between the outer and inner plates of the Olympic is entirely unfounded. Coal will continue to be used as the only fuel.

Throughout the Olympic the builders are placing a number of additional water tight bulkheads of exceptional strength, several of them being carried through to the B deck which is 40 ft. above the water line. These new bulkheads and the new inner skin will largely increase the flotation capacity and enhance the margin of safety far beyond previously recognized standards.

Similar safeguards are being introduced into the new Britannic, the 50,000 ton triple screw steamer now in course of construction for the White Star Line.

The Proposed Enlargement of the Chicago Drainage Canal Refused.

The application of the Sanitary District of Chicago, Ill., to the U. S. War Department for permission to divert water from Lake Michigan, at the rate of 10,000 cub. ft. a second, instead of about 4,167 cub. ft. as at present, has been dismissed.

In the course of his judgment, the Secretary of the Department states that reports of commissions and engineers show that the withdrawal of such a quantity of water would substantially interfere with the navigation of the Great Lakes and connecting rivers, and that observations during the last 46 years show that the drain would reduce the lake levels from 4.8 ins. on the St. Lawrence River to 6.9 ins. in Lakes Huron and Michigan at mean lake levels, the lowering effect being much greater at low water periods, when the additional shortage would be most keenly felt. This reduction would substantially injure all the U. S. and Canadian harbors on the Great Lakes, and at Montreal the river level would probably be lowered by 12 ins. The U. S. Government has spent over $90,000,000 on its harbors in the district covered, and the Canadian Government has improved over 50 of its harbors, which would suffer. The reconstruction of the Sault Ste. Marie and other canals might even be necessary, owing to the reduction of the depth of water over the sills. The lowest estimate by engineers of the injury to U. S. vessels, by a reduction of their tonnage capacity, has been placed at $1,000,000 a year, while the International Waterways Commission places the loss at the interest on a capital of $37,500,000. The Secretary says that he can find nothing in the waterways treaty of 1909 bearing on the questions before him, for beyond the [illegible] of mutual rights of navigation, the question of the right of diversion at Chicago appears to have been carefully excluded [illegible] declares [illegible] Canadian view, that the granting of the application would [illegible] the national interests of their country [illegible] place it under the jurisdiction of the International Waterways Commission rather than that of an administrative officer.

This matter has been before the Department some time, and various representations have been made by Dominion interests. The opposition to the application was dealt with at a hearing at Washington, Mar. 27, 1912, when it was stated that the water level at Montreal would be lowered 10¼ ins., and that under the low water conditions then existing at Montreal two ocean going vessels sacrificed 8,340 tons of cargo. Other information was also given, showing the probable effects at Kingston, Toronto and other harbors. Amongst those representing Canada at the hearing were: F. King, Counsel, Dominion Marine Association, who also represented the Kingston Board of Trade; A. A. Allan, Allan Line Steamships; F. E. Meredith, Shipping Federation of Canada; D. Seath, Montreal Harbor Commission; R. W. Reford, Montreal Board of Trade; F. S. Spence, Toronto Harbor Commission; G. T. Blackstock, K.C., representing various Niagara interests, while the Minister of Marine had previously appointed John Kennedy, Consulting Engineer, Montreal Harbor Commission; J. Stewart, of the Hydrographic Department; and V. W. Forneret, St. Lawrence Ship Channel Engineer, in connection with the preparation of the case for the Dominion.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

319. Dec. 10. British Columbia, Strait of Georgia, Burrard inlet, Atkinson point, change in fog alarm.

320. Dec. 10. British Columbia, Queen Charlotte islands, Cape St. James, nonexistence of rock southeastward of.

321. Dec. 11. Nova Scotia, south coast, Owlshead bay, Owlshead, hand fog horn at lightstation.

322. Dec. 11. Nova Scotia, Cape Breton island, east coast, Sydney harbor, southeast bar, change in characteristic of light.

323. Dec. 11. Prince Edward Island, south coast, Hillsborough bay, St. Peters island, light improved.

324. Dec. 11. Quebec, Gulf of St. Lawrence, Ste. Anne des Monts, bearing of range lights.

325. Dec. 20. Canada, list of official government publications useful to mariners.

326. Dec. 23. British Columbia, Strait of Georgia—Sandheads of Fraser River, lightship removed from her station temporarily for repairs.

327. Dec. 23. British Columbia, Strait of Georgia—Fraser River mouth, change in color of beacon lights.

328. Dec. 23. British Columbia, Queen Charlotte Islands—Graham Island, chart of Masset Sound and Inlet issued.

329. Dec. 23. Alaska, Dixon Entrance—Barren Island, light to be established.

330. Dec. 26. Ontario, River St. Lawrence—Thousand Islands, color of day beacon southeastward of Jackstraw Shoal.

331. Dec. 26. Ontario, Lake Erie—Port Burwell, change in color of front light of outer range.

332. Dec. 26. Ontario, St. Clair River—south part of Stag Island, gas buoy to be established.

333. Dec. 26. Ontario, Lake Superior—Thunder Bay, Port Arthur gas buoy replaced by gas and bell buoy.

334. Dec. 26. Ontario, Lake Superior—Victoria Channel, Mink Island reef, beacon rebuilt.

335. Dec. 26. New Brunswick, south coast, Bay of Fundy, Passamaquoddy Bay, St. Aidrews Harbor, Tongue Shoal, light improved.

336. Dec. 26. New Brunswick, Bay of Fundy, Chignecto Channel, Grindstone Island, new lighthouse, change in character of light.

337. Dec. 26. Nova Scotia, south coast—Halifax approach, Chebucto Head, temporary light.

338. Dec. 26. Prince Edward Island, north coast, off entrance to Cascumpeque Harbor, color of bell buoy.

339. Dec. 26. Quebec, River St. Lawrence—Channel Patch, change in color of gas buoy light.

340. Dec. 26. Newfoundland, west coast—Gulf of St. Lawrence, Ferolle Point, fog alarm established, light to be established.

341. Dec. 28. Ontario, Winnipeg River, White Dog Island to Kenora, buoys established.

342. Dec. 31. British Columbia, Discovery Passage, Seymour Narrows, Maud Island, change in position of gas lighted beacon.

343. Dec. 31. British Columbia, Queen Charlotte Islands, Houston Stewart Chan-Stewart Channel, postponement of date of removal of beacon from Koya Point to Danger Rocks.

1. Jan. 7. Caution when approaching Canadian ports.

2. Jan. 3. British Columbia, Strait of Georgia, Galiano Island, Porlier Pass, Race Point, hand fog horn at light station.

3. Jan. 3. British Columbia, Burrard Inlet, Vancouver harbor, telephone cable laid across the harbor from Vancouver to North Vancouver, caution.

7. Jan. 16. British Columbia, Johnstone Strait, Cracroft Island, westward of Boat harbor, light to be established.

8. Jan. 16. British Columbia, Tolmie Channel, Swindle Island, Separation Point, gas lighted beacon established.

9. Jan. 16. British Columbia, Queen Charlotte Islnads, Houston Stewart Channel, Flat Rock, light discontinued, beacon removed.

10. Jan. 16. British Columbia. Queen Charlotte Islands, Hecate Strait, Skidegate Inlet, eastward of Deadtree Point, can buoy to be replaced by gas buoy.

11. Jan. 16. British Columbia, Queen Charlotte Islands, Hecate Strait, Skidegat Inlet, off Lawn Point, intended change in position of gas and bell buoy.

12. Jan. 22. Nova Scotia, south coast, Halifax harbor, eastern passage, buoys established.

13. Jan. 22. Nova Scotia, south coast, Halifax approach, Devil Island, easterly light improved.

14. Jan. 22. New Brunswick, Northumberland Strait, Tormentine Reefs, bell buoy re-established.

15. Jan. 22. Quebec, Chaleur Bay, Carleton, Tracadigash Point, change in character of light.

16. Jan. 22. Quebec, St. Lawrence River from Quebec to Father Point, first edition of the St. Lawrence Pilot (below Quebec) issued.

The appointment has been gazetted, of Capt. H. St. George Lindsay, Ottawa, to be Wreck Commissioner under the Department of Marine and Fisheries, from June 1, 1912, vice Capt. L. A. Demers, who resigned on his appointment as harbor master

The Colonial Secretary announced in the British House of Commons, Jan. 22, that in order to be in a position to cope with the demands of traffic on the opening of the Panama Canal, the Government of Jamaica was in negotiation with a Canadian syndicate for the provision of better facilities for coaling and docking. A site for a vessel repair plant is said to have been secured at Kingston, and harbor improvements are under way at Trinidad, Port of Spain and St. George, and oil bunkering stations at Barbadoes and St. Lucia.

Canadian Railway and Marine World.

March, 1913.

Rotary Snow Plows, Their History, Construction, Etc.

By H. H. Vaughan, M. Can. Soc. C. E., Assistant to Vice President, Canadian Pacific Ry.

The development of the rotary snow plow has been chiefly due to Canadians and Canadian railways. This might be invidiously explained by the amount of snow which is supposed to fall in Canada, although as a matter of fact the difficulties experienced in dealing with snow are just as great on most of the roads crossing the Rocky and Cascade Mountains in the United States as they are on those in Canada.

In both countries the rotary snow plow has been extensively used during the past 20 years, and it has proved so far to be the only effective appliance for dealing with deep drifts and snow slides that were beyond the capacity of the wedge or ordinary snow plough. The latter is still used extensively, and for drifts of moderate depth through which a reasonable speed can be maintained, it can be operated much more quickly than the rotary. When cuts are too deep, snow cannot be thrown out of them with a wedge plow, and in the case of slides the drift may contain rocks or trees, which would make the use of it exceedingly dangerous. The rotary plow can then be used to save the labor of shovelling out by hand, which would be the only resource, on account of its ability to encounter snow of any depth and throw it to a considerable distance on either side of the track.

The rotary snow plow was originally invented by J. W. Elliott, a Toronto dentist, who in 1869 took out a patent on a "compound revolving snow shovel." This invention employed a wheel having a number of flat arms supported on a shaft rotating in line with the track. The wheel was enclosed in a casing shaped at the forward end to collect the snow, and flaring backward to a cylindrical portion surrounding the wheel. This casing was open at the top to permit the snow being thrown out by the centrifugal force. The wheel was driven by a rotary engine, and while the design was obviously crude, it evidently included the principle elements of the modern plow. No practical use was, however, made of this invention, but the idea was later taken up by Jull, who improved the Elliott wheel by placing a knife or cutting wheel in front of it. This knife wheel was intended to cut the snow from the bank and pass it into the fan wheel behind it, by which it could be discharged through the top of the casing.

The Jull invention was taken up by Leslie Bros., of Orangeville, Ont., who proceeded to construct a full size working model. The fan wheel was mounted on a hollow shaft, the knife wheel being carried on a solid shaft which passed through it. Both shafts were reolved in opposite directions through a system of bevel gears driven by a two cylinder engine. This model was erected on the end of a flat car during the winter of 1883-84 at the C.P.R. shops at Parkdale, Toronto, but before its construction was completed the winter was practically over. In order to test the invention, a bank of snow and ice was shovelled into a cut through which the C.P.R. tracks ran between Queens Wharf and Parkdale. The quantity available was limited, but it was clearly demonstrated that the Elliott principle of a revolving wheel could throw the snow clear of the tracks as both snow and ice were thrown over 200 ft. This preliminary trial also showed that it was necessary for the plow to be so constructed that snow could be thrown on either side of the track, and that a flanger was required to prevent the plow being derailed in hard snow or ice and leave a satisfactory rail after it has passed through. With the Jull knife the direction in which the snow was thrown could not be changed, as the wheel could only operate in one direction, and the opening in the top of the casing was fixed in position. Leslie Bros. then developed a wheel with reversible knife or cutters, which could be changed in position to enable them to cut in either direction, and a movable hood on the cylindrical portion of the casing through which the snow could be discharged on either side of the track. They also devised a suitable flanger or ice cutter, which was attached to the front truck of the plow. A full sized complete plow of this design was constructed for them by the Cook Locomotive Works, of Patterson, N.J., and was operated on the Chicago and North Western Ry. in Northern Iowa in 1885-86. It was then found that the principle of employing two wheels revolving in opposite directions was impracticable, as the friction caused by the snow passing between the two wheels absorbed more power than that actually required to cut away and throw the snow. It consequently had to be abandoned, but Leslie Bros. then devised a single wheel having knives or cutters directly attached to it, which automatically reversed in position according to the direction in which the wheel revolved. The plow with this wheel applied (shown in fig. 1) was tested during the same winter, before the snow had entirely disappeared, and proved that the loss of power was overcome. It was then shipped back to Patterson and rebuilt with the improvements that had been suggested by the season's experience. During the winter 1886-87, the improved plow, then known as the rotary, was given its first trial on the Oregon Short Line Division of the Union Pacific, where it proved such a complete success that the railway company not only purchased it after its first trip, but placed orders for three more of the same pattern to be furnished in time for the following winter. The introduction of the rotary progressed rapidly from that date. It was adopted by the Northern Pacific; Chicago and North Western; Chicago, Milwaukee and St. Paul, and many other roads in the United States, while in Canada eight were constructed by the C.P.R. in 1888 at its Montreal shops through the Polson Iron Works Co. of Toronto. The first of these plows, no. 101, had a wheel 9 ft. 10½ ins. in diameter, a boiler having 1.259 sq. ft. of heating surface carrying 180 lbs. pressure, and a two cylinder engine 17 ins. diameter by 24 in. stroke. The cab was of wood, and the plow without tender weighed 125.000 lbs. in working order. The main shaft was 8½ ins. diameter and the bearing 34 ins. long. The bevel gear on the main shaft was driven by a bevel pinion keyed to the cross shaft of the engine. The joint between the casting and the one supporting the engine shaft bearings proved to be a point of weakness on account of the heavy bending strain to which it was subjected when the lower portion of the casing was forced into hard snow. The side frame was a heavy 12 in. channel running from end to end. It was tied together by the main bearing casting and engine shaft casting at the front end and from the latter two inner frames extended to the back end. These supported the cylinder saddle and the boiler carriers, and were connected to the side frames by gusset plates. The structure was fairly strong longitudinally, but as later experience proved it did not possess the necessary vertical strength for the work it was subjected to.

The wheel with which these plows were fitted was known as the square fan type, and is illustrated in figure 2. The back was a sheet of steel plate to which longitudinal gusset plates or partitions were attached, which in their turn supported the front rings and the trunnions for the knives or cutters. The action of these knives can be clearly seen from the illustration. In whichever direction the plow was turning the resistance of the snow would tend to force the knives into a position in which they would cut the snow and deliver it into the compartments. Then, on account of the centrifugal force due to the revolving wheel, it would be forced against the casing until the opening was reached, when it would fly out in a straight line. This wheel proved satisfactory when handling the dry snow found east of the Rockies, but in heavy work the partitions were not sufficiently strong to drive the knives. As the men on the plows put it—"The back ran away from the front." To overcome this and handle the damp snow found on the western slopes, Leslie Bros. introduced the scoop wheel shown in fig. 3. In this wheel the pockets or compartments are conical shaped scoops strongly secured to a cast iron or cast steel centre. The knives are carried on the edges of the scoops, and the knives on the adjacent edges of each pair of scoops are connected together by links so that as one knife is cutting the snow, the other is pressed down to afford the necessary clearances. This style of wheel entirely superseded the older square fan type and has since been used.

The construction of the plow as a whole has not changed radically, with the exception of the special plows which will be described later. The wheel has been increased in diameter, 11 ft. being now the usual size. The engine and boiler capacity have been increased, the engine to 18 ins. diameter by 26 ins. stroke, the boiler to 200 lbs. pressure, with 1,852 sq. ft. heating surface. The bevel gear drive was changed to employ two bevel pinions with independent engine shafts, the bevel gears and pinions being made of steel with cut teeth in place of the cast iron gears originally used. The knives, which were originally made of steel plates, were greatly increased in strength and [illegible] Cut wideners were added to the casing to enable the knives to be cut away and the strength of the casing greatly increased especially at the cutting edge. Fig. 4 shows a plow constructed for the C.P.R. in 1911, in which cut wideners were applied, which in this view are photographed in their working position. When not required they can be folded back against the sides of the casing, the rods which hold them in position being then removed.

operated on the C.P.R., and to a great extent this opinion is no doubt correct. On the other hand, the heaviest service a plow is subjected to is when cutting its way through snow slides, and unfortunately these are met with on every road that operates to the Pacific Coast. The snow in a slide is not only packed exceedingly hard, but it is liable to contain trees and rocks which are carried with it down the mountain side. No plow can, of course, remove such obstructions, and when they are discovered they are either pulled out or blasted away. There is, however, a very strong pressure on every railway to open up the line in the shortest possible time, and to effect this the usual method of operating a rotary was to put two heavy engines behind it, run the plow engine as fast as possible and drive it into the cut at 8 or 10 miles an hour. As the plow slowed down it was drawn back, [illegible] up again and the operation repeated. If [illegible] were frequently torn off or damaged, and their repair was an extremely difficult and tedious job. [illegible] the plow frame, were a constant source of trouble [illegible] George Bury, then General Manager, Western Lines, C.P.R., was engaged for a considerable time in operating rotary plows, and decided that a plow was required that practically could not break down and that would have sufficient power and strength to cut its way through any snow bank. His instructions were that he wanted a plow with knives of 2 in. armor plate and the rest in proportion. Authority was given the following spring for two plows to these specifications, and arrangements were made with the Montreal Locomotive Works for their construction. J. Player, Consulting Engineer of the American Locomotive Co., was engaged to prepare the design, in collaboration with the writer, and it was decided to modify the construction of the regular rotary plows considerably. The writer had for some years believed that better results could be obtained by driving the plow wheel direct, in marine engine style, than through the bevel gears previously used, and that the frame of the plow should resemble a bridge girder, to thoroughly support the casing or hood in place of the channel iron frame, which required bracing to prevent its bending. After some preliminary designs had been prepared it was decided to adopt these suggestions and as the work progressed a number of novel features of construction developed. One of the most important provisions was that of obtaining a wheel of greatly increased strength. The use of a knife blade 2 ins. thick with a corresponding construction behind it would have led to a weight that was impracticable, but the wheel as actually built is immensely strong and radically different from those previ

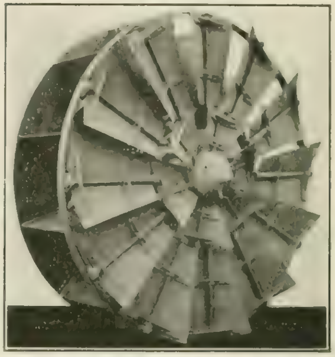

Fig. 2.—Square Fan Type of Early C. P. R. Snow Plow.

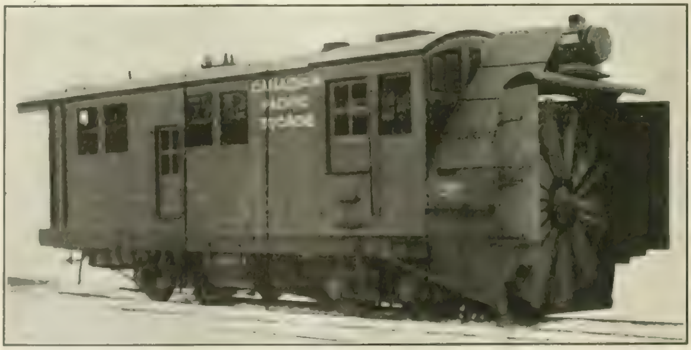

Fig. 4.—1911 Type of C.P.R. Snow Plow with Cut Wideners.

ously employed. The cone shaped scoops were formed from plates of ⅜ in. steel pressed into shape, and the hinges for the knife blades were riveted to their edges. To obtain the desired strength these plates would have to be increased to 1¼ in. or 1½ in., which would make them most difficult to form and necessitate the hinge castings being fitted to them individually as it could not be expected they would be absolutely uniform in shape. It was, therefore, decided to make the entire wheel out of cast steel, casting the hinges solid with the body of the wheel. As no machinery facilities or annealing furnaces were available for handling a casting of this size in one piece, the centre was made in octagon form, 80 ins. across the flats, with 8 segments bolted to it. Fig. 5 is a front view of the centre, which shows the cast steel hinges before machining. Fig. 6 shows one of the segments which are bolted to the faces of the centre. The hinges are 6 ins. in diameter at the largest part and the hinge pin 2½ ins. in diameter. The bottom holes in line with the hinge holes are for the 2¼ in. bolts which secured the segments to the centre. There are three of these bolts in each segment, one in line with each hinge hole and one central between the hinges. There are also 5 bolts, 2 ins. in diameter at the rear edge of the segments, and they are also bolted together through the flanges at their rear edges. It was necessary to make the fastenings between the segments and the centre of ample strength, not only to stand the shocks at the edge of the blade but the effect of centrifugal force, which at 400 revolutions a minute, the estimated maximum speed, was equal to about 275 times the weight on a diameter of 11 ft. The face of the segment bolts to the centre, each segment containing one pair of hinges and the halves of the two scoop shaped compartments. Fig. 7 is a view of the wheel assembled before the knives are attached. This view shows the band, 1¼ in. thick by 10 ins. wide, which further secures the segments in place. This band is made in sections with L shaped lugs on each end, which fit in grooves cut in the segments (see fig. 6), and is also securely bolted to them. It is increased in thickness to compensate for the holes for the hinge pins and bolts. This view also shows the bolts attaching the segments to the centre and the stops for the knife blades. Fig. 8 is a view of one of the blades from the inside, and shows their massive construction. There are three hinge pins, 1⅜, 1⅝ and 2¼ ins. in diameter respectively. The hinges on the wheel and on the knives are sufficiently strong to shear these pins, and it was calculated that to shear the outer pin, which is the one exposed to the greatest strain, would require 400 tons at the edge of the blade. The knives are ⅝ in. thick at the edge and heavily ribbed, while the stop extends from end to end and forms a strong backbone.

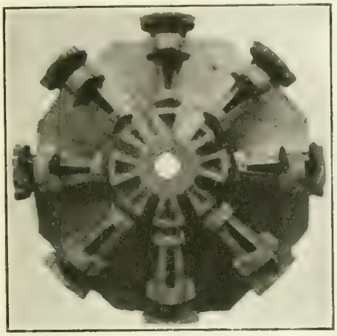

Fig. 5.—Centre Casting of New C.P.R. Snow Plow.

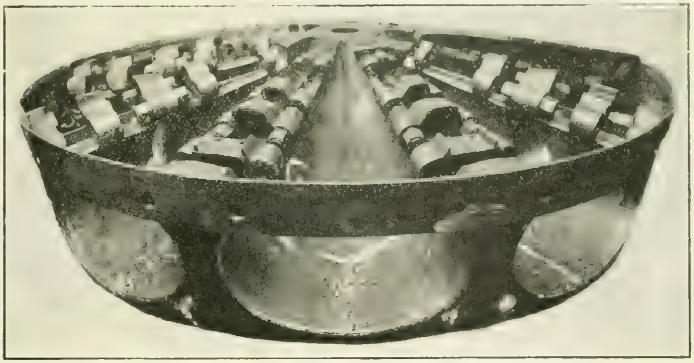

Fig. 7.—Assembled Cutter Head of New C.P.R. Snow Plow, Without Cutters.

Fig. 9 is the nose piece which completes the centre of the wheel. The completed wheel without the nose pieces, when being balanced in the shops, weighed 24,000 lbs., and on account of the high speed at which it was required to run it was necessary to balance it most accurately. This view also shows the links connecting each pair of knives to move the rear knife into the proper position. The machined surface near the link was to permit of the attachment of clips to hold the knives in their proper position, but these were not required when the proper length of link was obtained.

Fig. 10 is a view of the plow partly assembled, but before the wheel was applied, and shows the general construction of the casing. This was made of [illegible] plate in two tapered courses, the front one being tapered 1 in. [illegible] in 4. In place of making the front of the casing in a vertical plane, the taper course was cut away to bring its cross section to the shape required. By adopting this plan all flat surfaces which might lead to the formation of ice were avoided. The front casing is reinforced by a second thickness of ¾ in. plate along its lower front edge, and heavily braced with tee irons. The back of the casing is constructed of steel castings, having flanges for attachment to the gusset plates, which are securely riveted to the frame. This view also shows the taper wheel fit of the main shaft, which is 11⅛ in. diameter and 12 ft. 2 ins. long over all. The front bearing is 11⅛ ins. diameter by 28 ins. long. Behind this is a marine type thrust bearing having 10 collars and a rear bearing 10 ins. diameter by 16½ ins. long. The thrust bearing was introduced on account of the conviction that the arrangements for taking the thrust were inadequate on the older plows, and in their case the thrust was actually taken by the sheet of ice which formed between the plow wheel and the casing. This has been justified by the results as the plow running very freely on heavy cuts. On the rear end of the main shaft is a crank disc connected to the crank pin of the engine by a drag link coupling. This was used in case of any variation between the alignment of the main shaft and the engine crank shaft and to prevent any bending strains being transmitted from one to the other. On one plow there is actually a difference of ¼ in. which is easily taken care of in this way. The engine is of strong but light construction, the cylinders 20 ins. diameter, 24 in.

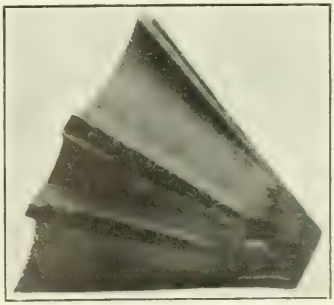

Fig. 9.—Cutter Head Nose Piece of New C.P.R. Snow Plow.

stroke, are of grey iron cast in one with the steam chest and bolted together. The columns are of cast steel and their shape was carefully worked out. On account of head room the length of connecting rod is very short in proportion to the stroke, only 1.87 to 1, which required ample bearing surface in the crossheads. This feature has, however, given no trouble. This view shows the reverse lever and throttle, which are in duplicate, so that the plow may be operated from either side. On the casing can be seen the steady block arrangement. This comprised a shoe on either side of the casing which can be forced down on the rail to steady the plow when taking heavy cuts. It is operated by an air cylinder, but this has not proved satisfactory and is to be changed to a hand lever.

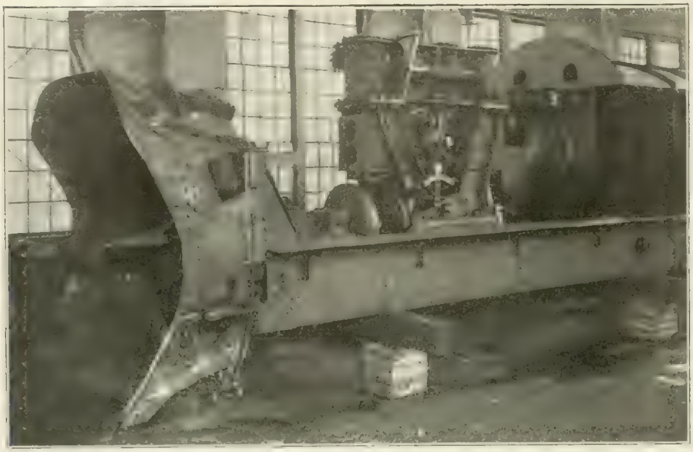

Fig. 10.—New C.P.R. Snow Plow, Partially Assembled, Showing Cut Widener and Driving Engine.

The frames are box girders 36 ins. deep at the front end, the outer plate being ⅜ in. thick, the inner ½ in. The top and bottom flanges are 13 in. ship channels, and the frame is carried back full depth to the boiler saddle where it tapers down to 18 ins. deep at the back end. This view also shows the heavy steel front casting the [illegible] in. plate which connects the frames together at the bottom and the shaft bearing and engine supporting angles.

There is a crank pin in front for the drag link. The pins are hollow and in many respects weight has been saved as much as possible. The valve in the centre of the operating platform is the engineer's valve of the Westinghouse air brakes, and the one above is the straight air brake valve. The other valves control the flanger, ice cutters and steadying blocks, all of which are operated by compressed air. The slides in the centre carry the bracket for the electric headlight, which can be lowered down into the cab when required.

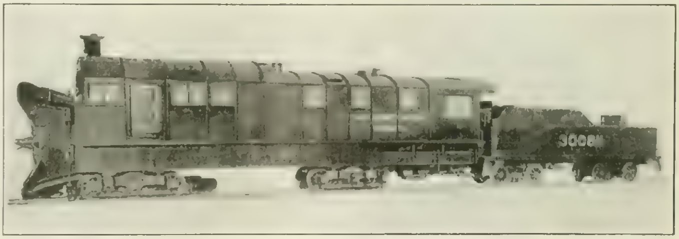

Fig. 11.—General View of New C.P.R. Snow Plow.

The boiler applied to these plows is similar to that on the C.P.R. class M. 4 consolidation locomotives, with the exception that the superheater was omitted. It was thought that as the plows would only be used a few times each year the economy resulting from superheating was important, while the possibility of the apparatus leaking or not being perfect order when required would be objectionable. The boiler contains 2,108 sq. ft. of heating surface and 44 sq. ft. of grate area, and carries 200 lbs. pressure. It is, therefore, of far greater capacity than any previously employed on this class of work. The trucks are of the six wheel type, but of special design, having cast steel frames. The axles are the M.C.B. 50,000 lbs. standard with 7 by 12 in. journals, and the wheels 34 in. diameter with steel tires. On account of the plow having no centre frames, but simply two main longitudinal girders, no weight is carried on the centre plates, which are used simply to guide the trucks, and the weight is carried on sliding surfaces located between the side frames of the trucks and the plow girders. On account of there not being sufficient room the usual type of truck equalizer could not be applied, and underhung equalizers are used which bear on pins in lugs cast on the boxes. To save weight the end pedestals are dispensed with and the frame is formed with guides, which engage with grooves on the journal boxes. This design of truck is exceedingly light for its strength, and with certain exceptions that will be referred to later, has proved satisfactory. The general appearance of the plows is shown in figs. 11 and 12. Their size may be judged from the frame being 48 ft. 4 in. long over all from the casing to the rear end. They weigh 260,000 lbs. in working order, the weight being practically equal on the two trucks. The cab or covering is of steel and is smooth inside, the angles and braces being on the outside to avoid injury to the men in case of derailment. The tender attached to the plow has a capacity of 7,000 gals. of water and 16 tons of coal. It was made specially long, 32 ft. over end frames, in order to separate the weight of the plow from the engines pushing it on account of bridge limitations. The tender trucks are inside bearing four-wheel equalizer pedestal trucks, this design being adopted to use engine truck wheels and axles of standard types.

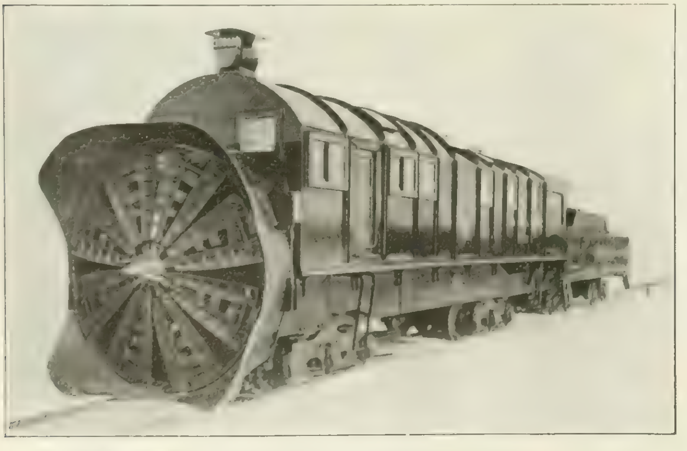

Fig. 12.—General View of New C.P.R. Snow Plow, Showing Arrangement of Cutter Head.

The design of these plows was commenced in July, 1910, and a considerable amount of preliminary work was required before it was possible to decide on the general plan that would be practicable. In addition it was desired to apply the new type of wheel and casing to several of the older plows in service, and in order to do this in time the design of the wheel had to be completed before the balance of the work was taken up. About Oct. 1 it was possible to prepare an estimate of the weight of the complete plow, when it was found that it would greatly exceed the limits that had been allowed by the Bridge Department. The wheels, which were constructed at the Argus Shops, were by that time partly completed, so that it was necessary to revise all the other drawings and practically redesign the entire plow. In fact, there was hardly a pattern or a drawing that did not require making up anew, with the exception that the only alteration of the boiler was to shorten the barrel. In spite of this delay, the first plow was completed by the Montreal Locomotive Works on Jan. 8, 1911, and the second one a few days later, a remarkably quick piece of work in view of its size and every part being entirely new in design.

It is difficult to say whether these plows have proved entirely satisfactory in service. From the time they arrived in the mountains there has been no trouble with snow that would test their capacity. They have been run through a drift of hard packed snow about 250 yards long without slowing down, and pushed by one engine in place of requiring two, as would have been the case with the old plows. This indicates that they have ample power and steaming capacity. One of the C.P.R. western officers states that they will cut trees 4 ins. diameter, but they have not been tried on anything heavier. Last season the man in charge, while going through a cut, felt a jar and saw a car coupler which had been left in the drift, thrown out to one side. The only damage is reported to have been a semicircular piece about 2 ins. in diameter broken out of one of the blades. With these exceptions, it has been difficult to obtain any definite reliable information. The plows do, however, work exceedingly well. There is an entire absence of the noise and vibration which makes the operation of a bevel gear driven rotary so unpleasant. The plows are so strongly constructed that it is difficult to see how any obstruction could injure them, and from what experience has been obtained, it is expected that they will be of great assistance in keeping the road open under any conditions.

The only trouble that has been experienced is through derailment. When the track is badly heaved, one spring on an equalizer may be compressed until practically solid and thus change the actual fulcrum of the equalizer. This has been overcome by placing a seat between the springs and the equalizer to ensure a constant point of application of the load and placing springs between the truck frame and the supporting plates. These were required on account of the small amount the plow frame can be twisted. When supported on one side only the opposite side was found to be ½ in. lower. This shows the stiffness of the frame construction and explains why additional spring movement was necessary to compensate for the irregularities of the track.

While during the past few years the tendency has been to depend on wedge plows rather than rotaries for the general work of clearing away snow, still the rotary is called on when the limit of the wedge plows is reached, and for work they cannot safely attempt. The energy and perseverance of the Leslies led to the practical development of the rotary snow plow, and they deserve a great deal of credit for furnishing the railways with a machine that has rendered winter operation possible.

The foregoing paper was read before the Canadian Society of Civil Engineers recently.

The Economics of Railway Location.

By W. F. Tye, M. Can. Soc. C.E.

When looking around for a subject my thoughts turn naturally to railway location on which a great part of my professional career has been spent.

Transportation is one of Canada's greatest problems: our country is of vast area, the distances are great, the population sparse, and the traffic light; making the mileage and cost of railways high per head of population. On the other hand the growth of the country is and will continue to be rapid. A great problem is thus presented: how to build our railways that they may not be too expensive for our present requirements, and yet be capable of improvement to fit our future needs. Economics of railway location is, therefore, of even more than usual importance to Canada. The subject is so vast that it is only possible in such an address to touch its outer fringe; but it is so important to us all that even a few rudimentary remarks may be interesting.

While railways are built to serve the traffic requirements of the country, the immediate object of the promoters and builders is to make a profit, either on the construction or operation. This is undoubtedly true when built by private parties. When built by a government, it is with the end in view that the people may make money either directly through the operation of the railway, or indirectly by the reduction of rates. It is, therefore, of prime importance that the engineer, whether he be working for private parties or for a government, locate and construct the most economic road. The most economic road is not necessarily either the cheapest or most expensive, neither is it necessarily the one which may be operated at the least cost—it is in reality the one which is the most effective commercially, or the one which will enable its owners to transport the largest amount of traffic at the lowest cost.

In order to ascertain that a railway is most effective commercially, the features which underlie its commercial effectiveness should be understood. There are:—Gross earnings, operating expenses, and fixed charges; and are of importance in the order named. Gross earnings, which depend on the amount of traffic handled, is undoubtedly first. It is never advisable to build a railway unless there is or will be sufficient traffic to pay the operating expenses and the fixed charges, no matter how cheaply or how well it can be built.

In new countries, such as most Canadian railways are built through, there is rarely sufficient traffic in sight to justify the construction of a road, so the promoters—whether they be a government or private parties—must have faith in the project and must be able to justify to themselves, and to the investing public, the possibilities of paying dividends.

Engineers are sometimes, though rarely, consulted in the early stages of the project to report on the traffic possibilities of the route. The usual way is for the promoters to decide for themselves that a road between certain terminals is commercially desirable, and that there is or will be sufficient traffic on such a route to justify its construction. Engineers are then employed to survey and construct the road. The question should at once arise with the engineer—how the railway can be so located as to make it the most effective commercially, or how to get for the promoters the most profitable traffic. No matter how this problem is stated, it finally resolves itself into this: if the promoters be private parties, how can the road be so located and built that the most interest can be earned on the money invested or, if a government, to transport the most traffic at the least cost? The answer in either case would be the same, for, if it is so located that it may handle the most traffic at the least cost, it will, if properly managed, make the most interest on the money invested.

The first problem the engineer has thus to face is how he can so locate the road between the given terminals as to get the most profitable traffic. The route which takes in the greatest number of towns, or which goes through the best land, if the country be unsettled, should be the first examined. A mistake frequently made is to locate the road within a mile or two of an important town in order to decrease distance or avoid expense. The cost of handling traffic is the total cost from the door of the consignor to the door of the consignee, and rates on that basis must be equal. The added charge for cartage is at times so large as to wholly destroy the business of the badly placed line and give it to a competitor more favorably situated, or if it be not wholly destroyed, the additional cartage and delivery charges eat up the profits.

Where traffic is light, and train loads less than the rated capacity of the locomotive, the cost of handling additional traffic is much less than is the ordinary train mile cost. It should be figured in equating the value of a change in location which increases traffic at 50% of the usual train mile cost. In this respect it should be remembered that deviations from the direct route do not always materially add to the length of the line.

In order to locate a railway so that it may be commercially effective it is first necessary to know what the volume of traffic is likely to be, whether it is immediately available, and at what rate it is likely to grow. The best way to ascertain this is by comparison with roads through the same or a similar country. A road through a country most nearly approximating that to be traversed should be selected for examination, and its traffic for previous years studied. If, for any reason business is likely to be materially greater or less than on the road under examination, due allowance should be made.

All railways are now required to make yearly reports to the government, and such statistics should be examined as well as those published in the railway companies annual reports. The average train load and the ruling grade should be studied, and finally the average number of trains per day should be ascertained. It must be remembered that though the traffic is rarely balanced, that is, that there is seldom as much tonnage moving one way as the other, the number of trains each way must within narrow limits be the same. It is not always easy for an outsider to ascertain the number of trains over any given railway, as railway statistics are not published in this form, but every effort should be made to arrive at it as closely as possible.

Having obtained this information, and having determined how the traffic on the proposed road will compare with that on the road under examination, some approximation of the ruling grades on the road in view should be arrived at. If different from those on the route with which comparison is being made, the number of trains per day each way on the proposed road should be increased or diminished accordingly.

While this method of ascertaining the number of trains per day is only approximate, it is certainly much more accurate than to attempt to make an independent estimate of the gross tonnage on the new road. The rate of growth of traffic should be similarly ascertained, as a railway should be built not only to take care of the present traffic but also that of the road in the reasonably near future.

Cost per train mile is the basis of all economic comparison, as the effect of the number of trains on the cost of operation is much more direct than is the actual tonnage handled. The cost per train mile should thus be ascertained with reasonable accuracy. The annual reports published by the railway companies usually give these figures: if not, the reports of the Inter-State Commerce Commission give this information for every railway in the United States. From this mass of statistics the train mile cost of the most nearly similar road should be taken and assumed as the train mile cost of the proposed road. It must also be remembered that these costs are increasing rapidly, the average for the whole United States for the year ended June 30, 1896, being 95c., while for the year ended June 30, 1910, it had increased to $1.49.

Equipped with this information as to the sources of traffic, the estimated average number of trains per day, and the probable cost per train mile, the engineer is ready to make a reconnaissance of the country to be traversed. The reconnaissance should always be of an area rather than a line. An area wide enough to take in any possible line should be examined. All combinations of probable lines should be studied. As the reconnaissance proceeds a map of the country should be made showing the details of the topography by contours 10 to 50 ft. apart: the elevations of controlling points should be shown with the greatest attainable accuracy. From such a map carefully prepared all lines and combinations of lines can be studied. Approximate condensed profiles can be drawn, and distances, grades and costs can be approximately ascertained. With such information, the choice of routes can usually be narrowed down to one or two, or in rare instances to three lines over which it is necessary to run surveys.

The value of a proper reconnaissance cannot be too strongly insisted upon. It is owing to the lack of it that the graver errors of location are usually due, such as the selection of an improper route or ruling grade, passing of traffic centres, etc. There [illegible] money can be so profitably spent. Great pains should be taken to secure the most expert engineer for this class of work. In engineering and economic importance, reconnaissance far outranks location or construction. It is not an exaggeration to say that for every dollar which an engineer can save on construction, he can save five on location, and ten on reconnaissance.

The really essential factor in a location made for freight traffic is the ruling grade. The maximum is not always the ruling or limiting grade, as it might be operated by the aid of a helper engine, in which case [illegible] grade of a lower rate may, by taxing the boiler capacity, become the ruling grade instead of [illegible] the economic value of any change in grade, or to compare two different grades, the number of round trips per day required to handle the estimated traffic should be ascertained. The difference will be the saving [illegible] train mile by twice the length of the division in miles and the number of days in the year, will give the annual saving. Capitalizing at the proper interest rate will give the capitalized value of the better grade. If the additional cost is not greater than the capitalized value when properly equated for distance, rise and fall, curvature, etc., then the lighter grade is an economic one, and should be adopted.

As many items of expense will not be affected by changes in the number of trains, the saving per train mile for a train eliminated is not as great as the cost per train mile for the entire traffic. The saving is in reality in the neighborhood of 50%, and this percentage of the ascertained total train mile cost should be used in estimating the economy due to a difference in ruling grade.

In figuring on the economics of a grade reduction on an old road where the traffic and the average number of trains per day are known, it is essential that the actual loads hauled by each locomotive be determined and compared with their rated capacities. This difference is due to the inability of the operating officials to get perfect results. This "personal equation" must be taken into consideration in figuring the number of trains per day with the new grades, as they will no more be able to get the best results under the new conditions than they were with the old. In making a reduction from a high rate to a low, for instance, from 1% to a 0.3% or 0.4%, it must not be forgotten that the proportion of the actual loads to the theoretical rating will be lower on the low grades than on the high. Time is an essential factor. On a 1% grade in good weather, the actual loading may usually be made 90% of the theoretical, while on 0.3% it is unlikely that more than 75% of the rating can be hauled if time is to be made.

The proportionate amount of ruling grade on the divisions has also an important bearing on the loading of trains, the greater the proportion its length bears to the length of the division the lighter the actual train loads must be, and this, too, must be taken into consideration in determining the average number of trains per day required to handle the traffic on the proposed new grade.

Serious error would undoubtedly arise if the theoretical number of trains required to handle the traffic on the proposed new grade were compared with the actual trains on the present one.

While fixed charges which are largely determined by the cost of construction—are of lesser consideration than operating expenses, they are still of prime importance. No road can pay dividends to stockholders, or afford to reduce freight rates until its fixed charges are met. So it is of the greatest importance that the engineer introduce no features that will increase the cost of construction without reducing the operating expenses by at least as great an amount as the interest on the added cost. The cost of moving a given tonnage being the sum of the operating expenses and the fixed charges, it follows that a reduction in the cost which does not increase the operating expenses is only of less importance than one which reduces the operating expenses without increasing the cost. Such [illegible] improvement to the standard of the road, as it [illegible] expenditures and so permits of an increase [illegible] dividends or has a tendency to permit of a reduction in freight rates, if that be the object aimed at.

[illegible] new construction is through districts which at the time of construction furnish but little traffic; much railway has been built on which the traffic did not justify even one daily freight train per day each way. It is a safe statement that 80% of the mileage constructed in Canada would not furnish at the date of completion traffic sufficient for two freight trains each way per day. Under such conditions, the receipts are low and the operating expenses high, and it is of the utmost importance that the construction cost be kept low. On the other hand, the country is growing fast, and traffic is increasing rapidly. It is thus necessary that the engineer keep always in view the almost certain necessity of a good road in the future. He should, therefore, so locate and construct his line that the first cost be low, and that the standard may be raised, when necessary, without unduly increasing the total expenditure. In order to get the very best results, the line giving best grades, alignment, etc., should always be first located. From this, as a standard, the engineer should work to the final or economic location. Working from a poor to a better is apt to lead to grave errors.

Where low construction costs are necessary, and it is probable that a high standard will be required in the future, it is much more effective and advisable to use short sections of temporary line with steep grades, sharp curves, etc., on the heavy or difficult sections, maintaining the higher standard for the light or easy portions of line, than it is to adopt a generally lower standard for the whole route. The first cost of the former will probably be less; it may be operated with helper engines as the traffic increases, and may be improved when advisable, while the cost of improving a generally poor road is frequently prohibitive.

The use of sharp curves with short tangents is often a very effective means of reducing cost without materially increasing the operating expenses.

The effect of moderately sharp curvature is essentially different from steep grades, inasmuch as it is not limiting in its effect. The use of one sharp curve does not justify the use of another just as sharp, whereas the use of one ruling grade on a division does justify another as steep.

The use of curves up to 14° does not increase the maintenance or operating expenses. A mile of road in which there are 100° of 10° curve, the balance being tangent, does not cost any more to maintain and operate than the same length of road with 100° of 2° curve—in fact, if there is any difference, it is in favor of the sharper curvature.

Unless the curvature is so sharp as to be limiting in its effect, there is no serious objection even on the best class of road to a few sharp curves where the amount saved by their use is sufficient to justify their introduction. The conditions which cause curves to be limiting are when they are so sharp as to prevent the use of the higher grades of modern equipment, and when they limit the haulage capacity of the locomotives, or their speed.

Modern equipment is so constructed as to traverse safely 14° curves, and much sharper with guard and hold up rails. The standard compensation for curvature on grades is 0.4 ft. per degree. A 10° curve is thus equivalent, as far as resistance is concerned, to a 0.4% grade; and a 15° curve to a 0.6% grade. On a 0.4% it is only necessary that the grade on a 10° curve be made level in order that the resistance be not increased. The same thing applies to a 15° curve on a 0.6% grade. It is, therefore, evident that on a road whose ruling grades are 0.4% 10° curves are not limiting to the haulage capacity of the locomotives, nor are 15° curves on a 0.6% grade.

The easy riding speed is dependent on the amount of the allowable elevation of the outer rail. If the maximum be set at 6 ins., this speed per hour would be:—

on a	3	degree curve	60	miles an hour
"	4	"	50	"
"	6	"	40	"
"	8	"	35	"
"	10	"	30	"

The safe or allowable speed would be 10 miles an hour greater.

With the track properly elevated, equipped with tie plates kept in good line and surface, and curves provided with proper easements, 10° curves are no more disagreeable to ride over at speed of 30 miles per hour than are 3° curves at 60 miles an hour.

The reduction in speed for one mile from 50 to 30 miles an hour only means the loss of 0.8 minutes. To take an extreme case — the Twentieth Century Limited runs from New York to Chicago, 980 miles, in 20 hours, or at an average of 49 miles an hour. The introduction of one hundred 10° curves, each one of which required a slacking of speed to 30 miles an hour for a distance of one mile would increase the running time of such a train by 80 minutes. Such an increase on a road 1,000 miles long would in nine cases out of ten have no ill effect. A 10° curve so long as to require the reduction of speed to an average of 30 miles an hour for a mile would in practice be a very rare occurrence.

It is evident the use of curves as sharp as 10° does not prohibit the employment of modern equipment or limit the haulage capacity of the locomotives. It has no effect on the speed of freight trains, or on passenger trains where the average speed including stops is not greater than 30 miles an hour. A few such curves only slightly affect the running time where speeds are high.

It is thus clear that a few curves not sharper than 10° are not objectionable on the very best roads where their use results in large savings. As they are not limiting, the use of one such curve is no justification for a second. The introduction of many of them, preventing the employment of high speeds for long distances, would certainly be objectionable, but an occasional one where large savings result is justifiable on even the highest class of road.

Wooden trestles to replace heavy rock borrow embankments should be used. Such trestles may be designed to safely carry the heaviest class of equipment. When protected by the installation of the best available water supply they are quite safe, and are good for ten years. Such temporary construction also gives time to ascertain the correct requirements for water ways in new countries where there is frequently a dearth of information as to rainfall, flow of streams, etc., and where unless unduly large water ways are left there is danger of washouts. This danger may be even greater than the danger from fire to wooden trestles. Their use instead of heavy rock borrow embankments is of great importance from an economic point of view. One dollar at 5% compound interest amounts in ten years to $1.63. If rock borrow costs on the original construction say $1.75 a cubic yard it will in ten years' time have amounted with interest to $2.85, while, under anything like ordinary conditions train hauled earth embankments on an operated road, made when the trestles require replacement, do not cost over 30c. per cubic yard, or less than one ninth of the total cost of a permanent rock embankment made during construction.

Momentum grades are a great source of saving in cost, without increasing the operating expenses. The use of momentum in overcrowding short stretches steeper than the ordinary ruling grade is almost always justifiable. The exception is where the traffic is so congested that the possibility of a delay due to the failure of an occasional train to surmount the grade is more important than the undoubted saving in interest charges which they insure. It will probably be many years before conditions prohibiting their use prevail on any portion of our Canadian railways.

The foregoing are a few of the more important considerations which the locating engineer should keep in view. He should always remember that railways are commercial enterprises, are built for profit, and that the investors are looking for and are entitled to satisfactory interest on their money; and so far as the returns on their investments depend on location they will for a given traffic be the greatest when the sum of the operating expenses and fixed charges is the least amount.

The foregoing formed the principal portion of Mr. Tye's address, as retiring President of the Canadian Society of Civil Engineers, at its annual meeting in Montreal recently.

Canadian Pacific Railway Elevator, Etc., at Port McNicoll.

Canadian Railway and Marine World for Jan., 1912, contained a very complete illustrated description of the C.P.R.'s new Georgian Bay terminal at Port McNicoll, Ont., including a 2,000,000 bush. elevator built in 1910. The business proved too large for the elevator by the time it had been in operation for only one year, and it was therefore decided to build an additional storage unit of the same capacity as the original elevator, making the total capacity 4,000,000 bush.

C.P.R. Elevator, Power House, etc., at Port McNicoll.

The new storage unit, which was completed in time to be entirely filled with the 1911 crop before the close of lake navigation, is a duplicate of the first. It is 179 ft. wide, and 226 ft. long, making the new length of the elevator 452 ft. Each unit contains 32 cylindrical bins 32 ft. 11 ins. in diameter, and 31 interspace bins; the bin walls are 80 ft. long. The entire structure is of steel and concrete. The two marine towers, which travel alongside the original elevator, fill the new storage in the same manner as they filled the first unit. The longitudinal conveyors receiving from the marine towers run the entire length of the two units. Grain for shipment from the new portion is conveyed through the basement of the first storage to the car shipping house. All machinery is electrically driven, power being generated in a steam plant built in connection with the original elevator.

The work was carried out under the direction of J. M. R. Fairbairn, Assistant Chief Engineer, C.P.R., and C. W. P. Ramsey, Engineer of Construction, C.P.R., the contractors being the John S. Metcalf Co., Ltd., Montreal, and Chicago, who also built the first storage unit of 2,000,000 bush., as well as the car shipping house with a capacity of 200 cars in 10 hours, and also the following:—1,500 h.p. power plant, about 1 1/2 miles of wharves, flour shed, 700 ft. long, freight shed, 700 ft. long, Customs house, carpenter shop, coal platform, sleeping house and eating house for freight porters, pump house, fire protection and general water supply system.

Emergency Valve Locat on

The Board of Railway Commissioners at its sittings in Ottawa, Jan. 7, considered the advisability of standardizing the position of the emergency valve on passenger cars. In the course of the hearing, the standards of the different lines were outlined.

On the C.P.R., the emergency valve is located in the lavatory, with the handle extending out through the bulkhead, where it is readily accessible from the body of the car, meeting the contention raised that the valve and handle are both frequently located in the lavatory. On all cars over 60 ft., there is a valve in both ends, and on the mail, express and baggage cars, a communicating cord passes from end to end of the car in case the car should be filled up.

On the G.T.R. only one valve is employed, located in the women's lavatory, with the handle projecting through into the body of the car. When the valve is closed, the handle is in a perpendicular position, avoiding trouble from anyone hanging parcels on it and setting the brakes.

The Michigan Central places the valve in the men's lavatory, with the handle projecting through into the body of the car, a cord running through the car so that the valve may be operated from any position. In the latest type of car on that line, the whole valve is encased in metal to prevent tampering.

The Canadian Northern legal representative expressed the opinion that no objection would be raised to an order if it provided that the valve be located in the proper place where it could not be tampered with, and the handle be left accessible.

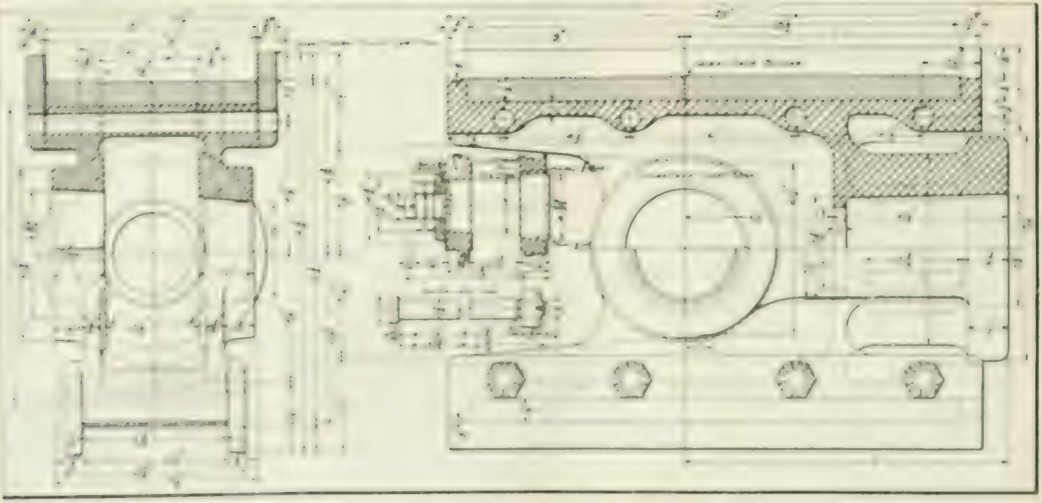
In view of the evidence submitted, the Chief Commissioner stated that there was no immediate necessity for action.

JOHN McCRAW, General Agent, Central Vermont Ry., New London, Conn., who was formerly in the Grand Trunk Railway service at Merritton, Ont., in remitting his renewal subscription, writes:—"To receive Canadian Railway and Marine World each month is just like getting a letter from home. I wish you continued success."

Improved Design of Canadian Northern Railway Locomotive Parts.

By [illegible]

[illegible]



[illegible]

[illegible]

tional box type grate, with about one-third of the area air opening. The grate is composed of a series of ribs ½ in. wide by 3 ins. deep and tapered to ¼ in. to facilitate moulding. The 2 in. diameter trunnions supporting grate are offset ⅜ in. from the centre. This prevents the tendency of the grate to cock up and burn should shaker rods become disconnected. The grate is symmetrical and has two shaker arms, one of which can be broken off, depending on whether the bar is in the front or back end of the firebox. The bars in the fire door end of the box have the shaker on left side so that casting two arms on the bar avoids having a front and back bar.

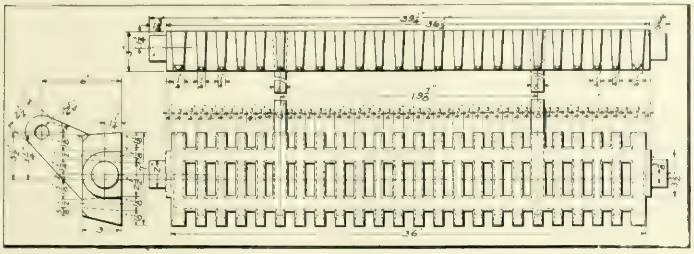


Fig. 2.—C.N.R. Standard Locomotive Grate Bars.

The side bearer bars are so designed that there is ⅜ in. play between the bearer and grate shoulders. The grates are arranged in the box, so that there is ½ in. clearance between the end sheet and back grate. The grate supports are 7½ in. centres, and any difference in length is thrown into the stationary grate at the tube sheet end of fire box. This end grate rests on bearer bars and is held in place by lugs and washers bolted to studs in the mud ring as shown in fig. 3. Experience in bad water districts has shown that a grate of this kind close up to the tube sheet prevents a flow of cold air up the front of the tube sheet and tends to prevent consequent tube leakage. The top edge of the end grate is tapered off and tends to prevent the lodgment of ashes and clinkers.

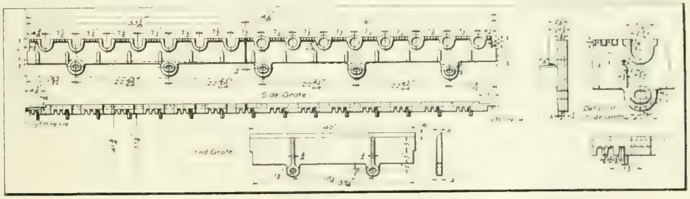

Fig. 3.—C.N.R. Standard Side and End Grates.

The bearers are made in four parts, and are supported by studs in the mud ring. The stud holes are slotted to facilitate fitting, and the bars are fitted snugly between the sheets by means of small fitting strips left in the ends, which can be easily chipped to suit. The trunnion supports are left open on the same side as the shaker arm on the grate (i.e. on the left side at the fire door end), and the small lugs adjacent to the grate support prevent the grate from falling out of line on account of the offset in the trunnion.

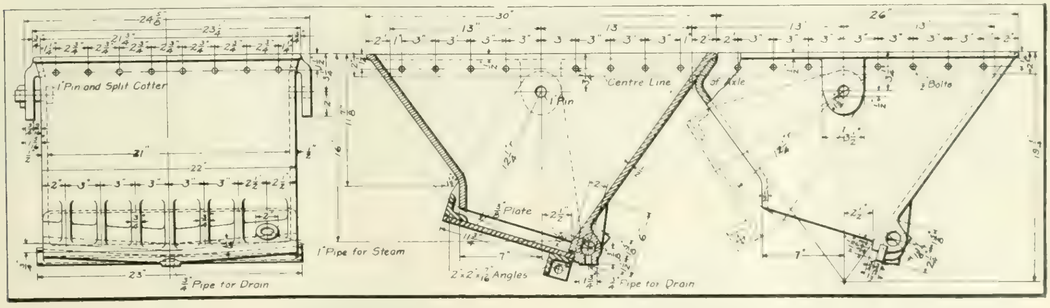

Fig. 4.—C.N.R. Standard Ashpan with Non Freezing Arrangement.

ASHPAN. The new C.N.R. ashpan, fig. 4, is quite a radical departure from existing practice, not only being inherently better in design, but also with the additional advantage of having a standard cast iron hopper, adaptable to all locomotives except the old standard types with shallow pans. The new law compelling railways to equip locomotives with some form of pan that would obviate the necessity of enginemen getting under the locomotive to clean the ashpans, led to the consideration of several designs and the final adoption of the design shown in fig. 4 as being the most suitable. The pan consists of one or more cast iron hoppers bolted to a superstructure of ¼ in. plate, which is fastened to the mud ring in the usual manner with studs and cotters. The necessary air vent, which should be one-seventh of the grate area, is provided by means of the C.N.R. standard air vent casting in the side and ends of the upper part of the pan. The whole arrangement is so constructed as to be readily removed when necessary. The hopper as shown in fig. 4 consists of two castings which differ only in the upper part of the back wall, which is arranged so that they may be bolted together as shown, when necessary. The bottom of the hopper is made from ⅜ in. plate bent up on each side, and suspended from lugs on side of casting. The front and back edges of the hopper bottom are reinforced by two angles, the back one forming a lip which sits up above outer back edge of hopper when in its closed position. The front edge of the swing bottom is the only part in contact with the casting, and in order to provide against freezing, a cored cavity has been run along the front of the hopper, through which steam may be fed from the pump exhaust or other supply, and condensation drained through ¾ in. opening at the centre.

The arrangement of lugs for the suspension of the hopper bottom with the centre of gravity of the bottom set out of the vertical line of the point of suspension, creates a tendency for the hopper bottom to remain closed, and this tendency is further augmented by the additional weight on the bottom, and the counterbalance on the operating shaft. The operating arrangement is quite simple, and is shown quite clearly in fig. 5. Cross rods through the front angle of the swing bottom, are fastened to rods which connect with arms on the operating shaft. Crank handles on each end of the shaft permit of ready manipulation by the crew, and the action of the counterbalance on the shaft, causes the bottom to close as soon as the operator releases the crank, which, it is hoped will overcome the occasional neglect of the crew in not closing the pan. An installation on an M-2-a consolidation locomotive is shown in fig. 5.

BLOW OFF VALVE. It frequently happens that the locomotive blow off valve is out of order from scale or other foreign substance blocking under the valve, causing the valve to leak more or less badly. With the ordinary type of blow off valve, it is necessary to drain the boiler in order to get at the valve for repair. In the type of valve in use on the C.N.R., such a procedure is unnecessary. Essentially, this valve is a double one, shown in fig. 6; one valve is a blow off and the other an emergency. The blow off valve itself is on a vertical spindle, and is similar in most particulars to the ordinary blow off valve, and is operated by a vertical rod from a fulcrumed lever under the valve. Between the blow off valve and the boiler, concentric with the boiler blow off hole, there is the other emergency valve, the blow off valve being offset from it in the same casting. This emergency valve is similar to the blow off, except that it is operated by a square threaded spindle, at the valve. Normally, this valve is set wide open, with the blow off controlled by the blow off valve. In the event of anything going wrong with the latter, the emergency valve can be closed, and the blow off removed and repaired, without the necessity of draining the boiler. When first applied, the valve was threaded into the side of the water leg, but since then, it has been found advisable to attach the valve by a flange, with a loose ball joint ring between, thereby forming a solid tight joint that will not turn in operation.

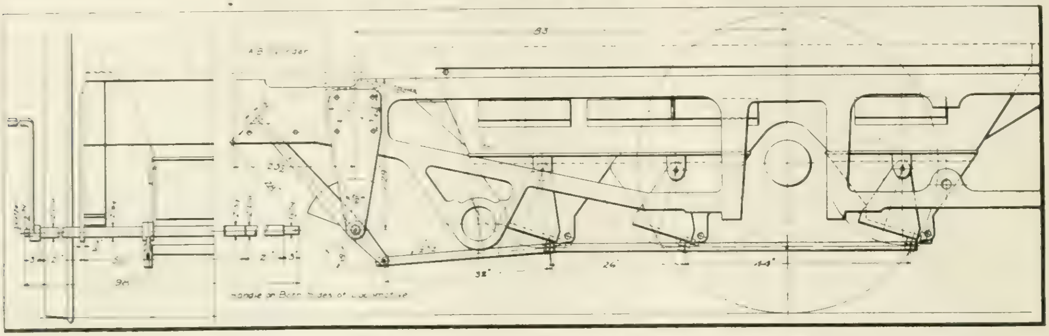

Fig. 5.—Installation of C.N.R. Standard Ashpan on an M-2-a Consolidation Locomotive.

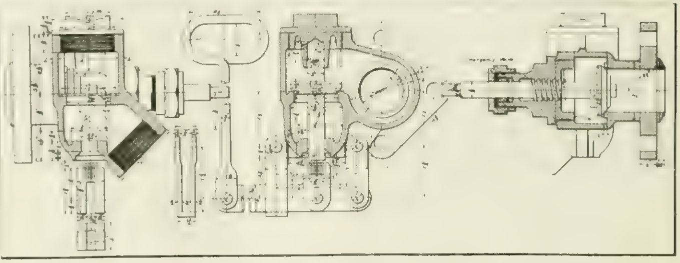

Fig. 6.—C.N.R. Standard Blow Off Valve.

GAUGE GLASS MOUNTINGS.—The design of gauge glass mounting used as shown in fig. 7 combines in a simple manner a convenient arrangement of fittings. The fittings to the boiler head are brass castings of almost identical design, except for interior coring of the glass space. In the body of each is a tapered packed valve, controlled in each case by a handle on the side. The end of the valve spindle has flat sides, on which a small clamp handle is fastened by a small bolt. The parts of the valve and handle are so constructed that the valve is open when the handle is in a vertical position. The gauge glass is held in the mountings at each end by packed glands. In the mountings, concentric with the hole into the boiler, are brass plugs, with a similar plug in the upper end of the top mounting. In the lower end of the lower mounting is a steel nipple for trying the gauge. It will be noted that the upper mounting is cored vertically slightly larger than the diameter of the gauge glass. In the event of the more or less frequent breakage of the glass, the procedure would be to turn off the valves, remove the top plug, and after drawing out the glass pieces, first removing the packing, a new length of glass is introduced from the top. After packing, replacing the top plug and turning on the valves, the glass is again complete for service.

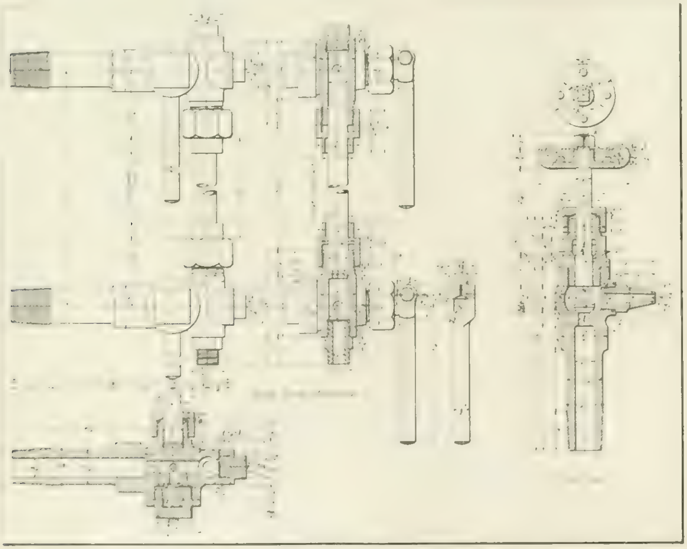

Fig. 7.—C.N.R. Standard Gauge Glass Mountings and Try Cock.

The C.N.R. standard try cock is also shown in fig. 7.

BELL STAND.—Forcing the feed water into the side of the boiler at the forward end has been the practice for such a long time that any departure from this plan seems unusual. So successful has the scheme worked out by Mr. Hungerford proved, that a number of other lines have adopted his plan in various modified designs. The feed water is injected into the boiler through the base of the bell stand, the latter being designed as in fig. 8. The feed enters the hollow sides of the bell stand through a vertical check valve, passing on through the hollow base into the boiler. Duplicate sets are arranged on each side. As with the blow off valve, if anything happens to the main valve, pressure must be drawn in order that the difficulty can be dealt with. Consequently, for similar reasons, an emergency valve is supplied on each side between the main valve and the boiler, both emergency valves being horizontal, alongside of the boiler connection. The bell stand is also provided with a plug in the top for washing out the boiler. Like the blow off valve, it is attached to the boiler top by a flange with a loose ball ring intervening.

The method of installing is shown in fig. 9, which graphically shows the principal reason for this method of boiler feeding. In the older method, with the injector in its usual location just above the boiler centre line, the feed pipe bends down, running along above the runboard, and then up to the check valve on the boiler centre line. In consequence, the feed pipe was always full of water, which in severe weather is a decided disadvantage, endangering the piping from freezing. With this new arrangement the feed pipe rises on a gentle slope to the bell stand, where there is an outside check valve in addition to the one in the casting. Immediately the injector is shut off, the pipe drains through the injector overflow, eliminating trouble from frozen piping.

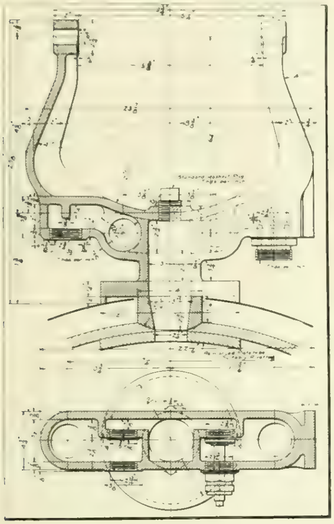

Fig. 8.—C.N.R. Bell Stand Feed Water Inlet.

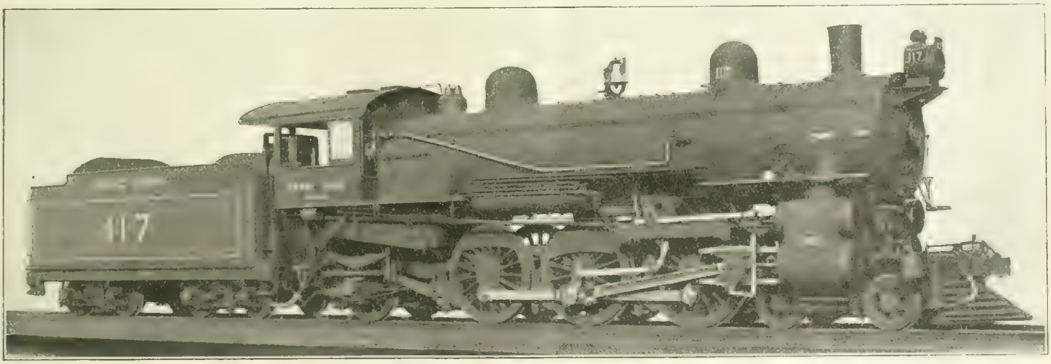
Trouble would be experienced were the cold feed water to be fed in on the hot dry pipe, so a plate shield is mounted over the dry pipe on the inside of the boiler, shedding the water to each side. The edges of this shedding plate are bent up slightly, causing the water to spread out still further.



Grand Trunk Railway Pacific Type Locomotive.

The foregoing examples of recent locomotive practice will give a conception of the progressive policy adopted by the C.N.R. mechanical department. They are but a few of the many examples of refinement in design, but will serve as an example of what is being done in that particular by the youngest of the great Canadian railway systems.

Grand Trunk Railway Pacific Type Locomotives.

The G.T.R. has recently received 19 Pacific type locomotives which exert a tractive force of 33,800 lbs., and with 146,700 lbs. on driving wheels the ratio of adhesion is 4.34. The driving wheels are 69 ins. in diameter. The proportions of the design are such as to fit the locomotives for either fast freight or heavy medium speed passenger service. The advantage of the Pacific type over the 10 wheeled for work of this character lies in the increased relative steaming capacity of the former, and in the fact that, with a given amount of grate area, a larger furnace volume can be provided. This feature is of special value in locomotives using high volatile coal as fuel.

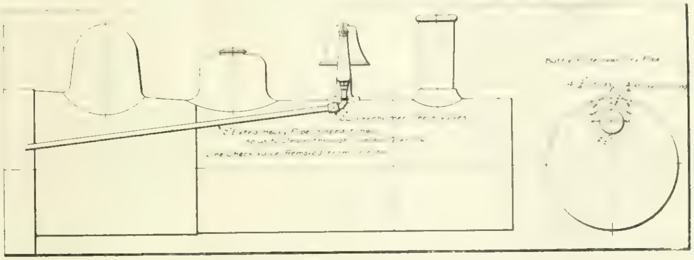


Fig. 9.—C.N.R. Standard Bell Stand Injector Arrangement.

These locomotives are equipped with a Schmidt fire tube superheater and also with a brick arch, which is supported on four water tubes. These features have fully proved their ability to raise the efficiency of the locomotive and increase its capacity per ton of weight; and the new locomotives, as far as their proportions and construction are concerned, represent the most approved practice for engines of their type.

The details have been worked out in accordance with G.T.R. practice, and except for the changes necessary because of the application of the superheater, they are closely similar to those of engines previously built for this line. The steam pipes pass out through the sides of the smoke box and the distribution is controlled by 14 in. piston valves. These are driven by Walschaerts gear and are set with a lead of 5-16 in The frames have single rails under the cylinder saddle, and separate rear sections which are arranged to accommodate a trailing truck with outside journals. All the driving springs are underhung, and every wheel under the locomotive and tender is braked.

The tender frame is composed of 10 in. steel channels, with oak bumpers. The trucks are of the arch bar type, with steel tired wheels, cast steel bolsters and triple elliptic springs. The fuel space is closed in front with metal coal gates.

The locomotives were built by the Baldwin Locomotive Works. Their principal dimensions are as follows:

Cylinders	[illegible] ins.
Valves	balanced piston.
Boiler type	straight.
" " length	667/8 ins.
" " width	751/4 ins.
" " depth, front	72¾ ins.
" " depth, back	56¼ ins.
" " thickness of sheets, sides	⅜ in.
" material	steel.
" diameter	70½ ins.

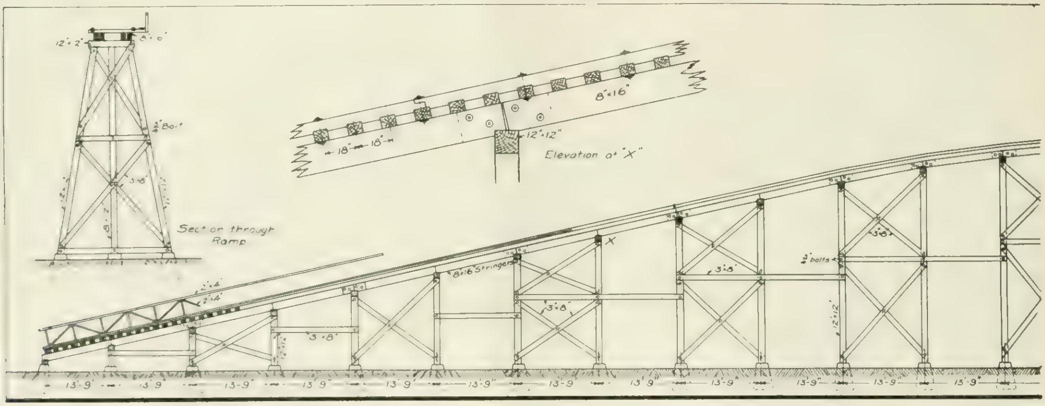
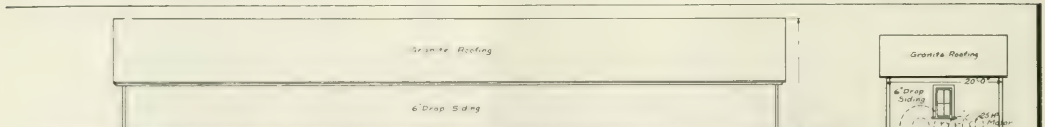
1,000 Ton Coaling Station on National Transcontinental Railway at Cochrane.

The National Transcontinental Ry.'s coaling station at Cochrane, Ont., is shown in elevation in the accompanying illustrations. It is typical of the coaling stations building and to be built on the eastern section of the transcontinental line, the type being built on the G.T.P.R. section having been described in Canadian Railway and Marine World last August. The two types differ essentially, the latter having a pusher ramp while the former operates by power. The N.T.R. one is roofed, and the G.T.P.R. one open. Other details of design differ, the principal difference being in the distribution of coal pockets.





1,000 Ton Coaling Station on National Transcontinental Ry. at Cochrane, Ont.

The Cochrane plant is 112 by 30 ft., with a total height above ground of 60 ft., the coal car rail level being 40 ft. above ground. The structure is of wood throughout, and is supported on 10 by 10 in. posts, in sets of 4, at 7 ft. intervals the length of the building. The inner columns, 26 ft. long, are 14 ft. apart on concrete pedestals, 4½ ft. square at the base, calculated to support 62,560 lbs., and the other columns, 18 ft. long, on concrete pedestals 3½ ft. square at base, calculated to support 44,000 lbs. All piers are sunk to a depth of 5 ft. below the ground level. The inner two rows of columns slope together at the top directly under the two rails, with the outer ones forming the perpendicular sides of the coal pockets. The sides and ends of the coal pockets are sheathed with 2 by 10 in. planking, and the covered over top has 6 in. drop siding. The height to the under side of the coal pockets at the edge is 18 ft., rising in the centre on a slope of 1¼ to 1. The chutes along both sides are located 14 ft. apart, with a clear height above the rails of the coaling tracks of 14½ ft., 7½ ft. beyond the outer columns. The coaling tracks are 50 ft. centres.

The trestle approach ramp is supported on three rows of 12 by 12 in. wooden columns, the sets of three being 13¾ ft. centres. At the top of the ramp the outer column bases are 20 ft. 10 ins. apart, and at the lower end 7 ft. apart. All the piers are 3½ ft. square at the base. The ramp approach is steeper than in usual practice, which is made possible by the power hoist at the rear end of the plant. In a small cabin at this end of the plant there is housed a hoist, driven through gearing by a 25 h.p. electric motor. The coal cars are elevated on the platform up the steep ramp by this means.

The plant was designed by W. J. Press, Mechanical Engineer, N.T.R., from whom this information has been obtained. He claims for the plant the following advantages over the conventional design:—1. Elimination of liability of pushing locomotives or a string of cars over the trestle. 2. The building being under cover permits of the unloading of cars in all sorts of weather. 3. Man in charge can get any cars of coal that are on the track without awaiting the arrival of the switching locomotive and crew, and at times thus avoid running out of coal in the pockets, with the consequent delays in train movements. 4. More years of service for the trestle because it is not necessary to run a locomotive on it. 5. Saving of time and expense of switching locomotive and crew. 6. By having a hoist to move car when needed, it is unnecessary to lengthen the pocket beyond the length required for storage capacity, as is necessary with the standard design of coaling trestle in order to place a number of cars for unloading at one time, or at one visit of the switching locomotive and crew. 7. Saving of ground space by reducing the length of building and trestle by about 400 ft.

Railway Lands Patented.—Letters patent were issued during December, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Railway Mechanical Methods and Devices.

Air Press at Grand Trunk Pacific Railway Shops

As mentioned on previous occasions, the G.T.P.R. shops at Rivers, Man., have been operating under peculiar conditions, from the fact that the work of a large system has been handled at a plant originally equipped for divisional work only. This has, however, been remedied, as the mechanical department of the railway has been removed from Rivers to the new shops at Transcona, near Winnipeg, which were described in Canadian Railway and Marine World for Feb., 1912.

The machine shop of the Rivers plant occupies the divisional machine and blacksmith shop space, crowding out all other departments. The blacksmith shop is housed in a temporary building alongside, of frame construction of the lightest and cheapest type compatible with accommodating the work with a fair degree of efficiency. As a result the interior arrangement is very cramped, requiring many makeshifts.

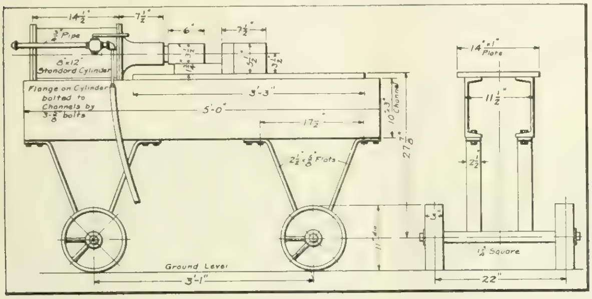

Fig. 1.—Portable Air Press for Light Bulldozer Work.

It was in consequence of this crowded condition that when it became necessary to build an air press as a substitute for a larger bulldozer, it was decided to make it portable, resulting in the press illustrated in fig. 1, which shows it mounted on a type of track. On two 5 ft. lengths of 10 x 3 in. channels is mounted a standard 8 x 12 in. air cylinder, bolted by its flanges to the flanges of the channels. On the other end of the channels is secured a flat plate, on the top of which are mounted the forging and bending dies or blocks. The air plunger is the actuating medium, controlled by a handle on the side of the cylinder. To the lower flanges of the channels are secured flat sections of forged bar stock, bolted to square stock, which form the axles of the carrying truck. The air press truck, when required, is drawn into position beside a vacant forge, and connected to the air by a hose length. When the work is completed the truck is drawn out into the yard and does not become an encumbrance. While particularly advantageous in these shops it is a suggestion that might well be taken up by many smaller shops, where the service of a bulldozer is only required part of the time.

Figs. 2, 3 and 4 show die blocks used in conjunction with the air press. Those in fig. 2 are for making hinges for Hart dump car aprons, the finished hinge being as shown on the right of the blocks. The stationary part of the mechanism is a cast iron block, in the centre of which is a vertical pin, the diameter of the hinge end loop. This stationary block is secured to the plate of the air press by two countersunk bolts. The movable block is of the collapsible type, comprising several parts that close together over the stock being worked. Two formed arms are pinned to the top of the stationary block, directly to the rear of the vertical pin in that block, with just sufficient intervening space to accommodate the stock when in position for bending. Two slotted links connect these arms to the body of the movable block, and as the latter moves forward, the pinned arms are forced in a circular direction, closing the stock around the vertical pin, completing the job in a single stroke.

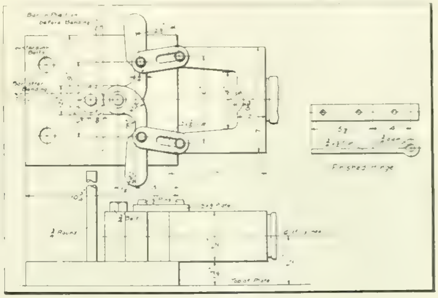

Fig. 2.—Hinge Forming Blocks for Dump Car Aprons.

Other forging jobs require more than one operation, as for example, the blocks for making hinges for end sill aprons on Hart box cars, as shown in fig. 3. The two operations are performed in the same blocks by moving from one position to another. The stationary block has a cutout in line with the direction of motion of the movable block, a tilt on the latter entering therein with the necessary stock clearance. The stock placed across the face of the stationary die is formed into a deep U, the diameter of which is slightly greater than that of the finished hinge pin. The U bent stock is then placed over a vertical pin in the stationary block, and the short end of the U flattened down on the other arm by properly formed recesses in the two blocks.

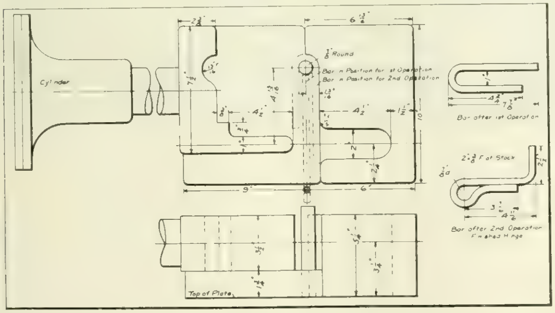

Fig. 3.—Hinge Forming Blocks for End Sill Aprons.

The operation of the blocks shown in fig. 4 is somewhat similar to the last example. The articles being made are corner brackets for box cars, and require two operations, both in the same pair of blocks. The bar stock, placed across the face of the movable die, is forced into a cutout in the latter by a correspondingly shaped triangular tit, leaving the bar with an initial double bend, approximately 90 and 180 degrees, with regard to the unbent end of the stock. This end is then placed in a groove in the movable block, and coming in contact with the face of the stationary block, becomes flattened to its final shape.

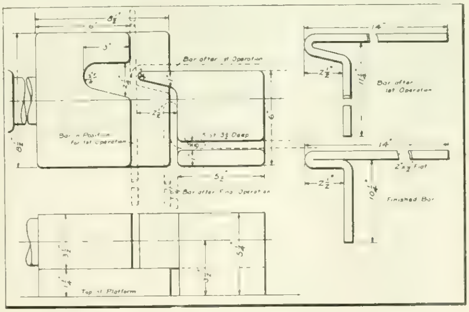

Fig. 4.—Box Car Corner Bracket Forming Blocks.

The Cost of Freight Car Maintenance on steam railways in the United States was reported at a meeting of the American Railway Association recently to have been 24.75 cents a car per day during 1911. This was divided between repairs, replacements and taxes, repairs costing 16.87c., replacements, including the charges which were made to renewals and depreciation, 6.78c., and taxes 1.10c.

Grinding in Dry Steam Pipe End at Grand Trunk Railway Stratford Shops.

In the G.T.R. shops at Stratford, Ont., there is a machine for grinding in the ends of locomotive dry pipes to the seat in the T head connection to the cylinders, which is the same in construction as one in use at the company's Battle Creek shops, from which it was copied.

The dry pipe to be ground in has a loop connection secured over the throttle end, as at the top of the illustration in fig. 1, by which the prone pipe is raised by block and tackle and suspended from the roof girder. From two vertical posts the pipe is held in position vertically by two bands near the lower end, the lower one of which is shown at the top of fig. 2. The grinding in machine is located directly below the suspended pipe, the details of the machine being as shown in fig. 2.

On a concrete foundation in the floor there is mounted a cylinder, with a vertical plunger displacement. The T head, into which the dry pipe is to be ground is mounted on a carriage on the upper end of the plunger, concentric with the dry pipe suspended from above. The upper end of the plunger rod has a flat surface, with groove for the securing thereto of two angle plates, one on each side to which the head is bolted.

To the right mounted on a casting, between the two posts, there is an air motor, the casting carrying a train of gears from the motor, reducing the motion at the crank which connects to the connecting rod leading to the left. Behind the cylinder and head in fig. 2 there is a vertical rod, with ball and socket connection both at top and bottom, the bottom connection being secured to the machine bed, and the top connection to the left end of the connecting rod leading from the crank on the end of the train of gears. A forked end on the far side of the table on which the head is mounted engages with this vertical ball joint rod. As the crank revolves an oscillating motion is given to the head and plunger in the cylinder.

On the near post, in the foreground of fig. 2, there is mounted an air valve of special design. On the forward end of this casting a combined ratchet wheel and cam wheel are mounted vertically in bearings. A short lever, with a dog playing on this ratchet wheel, oscillates on the same centre, actuated from a connecting rod driven from near the lower end of the ball and socket rod at the rear of the cylinder. Being near the stationary point of the rod, the motion is very greatly reduced.

The cam is the lower portion of the combined ratchet and cam, and in the side secured to the post there is a small plunger, part of an air valve. As the cam travels around from the motion imparted to it from the ratchet, the plunger is forced inward, and at a certain point on the circumference of the cam there is a drop, the plunger springing out by the aid of a spring in the base. This releases the air from the cylinder, allowing the plunger and head to drop into the position shown in fig. 2. The rise in the cam following this opens the air valve, permitting air to again enter the cylinder, raising plunger and head into contact with the dry pipe end, where it remains for a short interval, the oscillating motion, which continues concurrently, grinding the two together, oil and emery having been previously sprinkled on the mating surfaces in the usual manner. This action continues automatically without any attention on the part of the operator, the head rising into contact for a short interval, releasing for another short interval for the oil and emery to redistribute themselves, then into contact, continuing in this manner as long as the air motor is in operation.

The machine operates automatically, only requiring the occasional presence of an operator to feed in oil and emery.

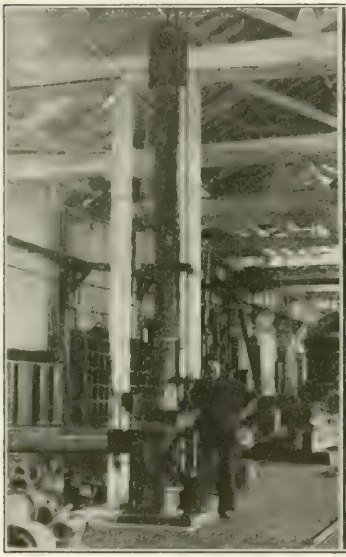

Fig. 1.—Dry Pipe Mounted for Grinding in.

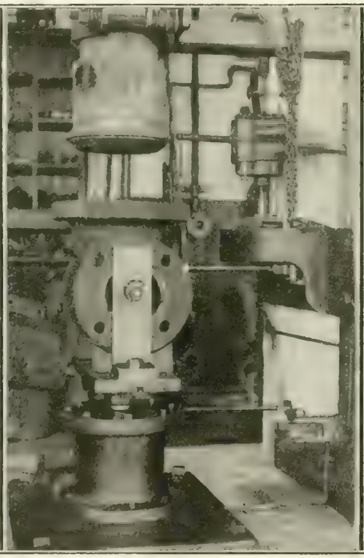

Fig. 2.—Mechanism for Grinding in the Dry Pipe.

The Board of Railway Commissioners will, on April 15, hear the application of the Montreal, Toronto, Winnipeg, and other boards of trade for reciprocal demurrage.

L. C. Fritch, Chicago, Great Western Rd., Chicago, read a paper on railway terminals before the Canadian Railway Club in Montreal, Jan. 14.

Pipe Bending Stand at Grand Trunk Railway Port Huron Shops.

In a car repair shop there is required considerable bent pipe, formed to the required shape. Some shops have pipe bending machines, but these are the exceptions. In other cases the pipe is bent to shape around pins located conveniently for the purpose, but such a practice has decided objections from the fact that if the bend is anyway abrupt a ruffled inner surface is the result. Applications of the method to be here outlined are to be found elsewhere, but rarely in so complete a form.

The method under consideration is used in the passenger car department of the G.T.R. shops at Port Huron, Mich., J. L. Hodgson, Master Car Builder. A 12 in. square oak post has been bedded vertically in a concrete foundation as shown in the illustration. To opposite sides of this post have been attached rolls of two different sizes, each of which will accommodate approximately different ranges of sizes, in the semi circular annular groove around the roll circumference.

The pipe to be bent is placed between the correct rolls, and bent to the required curvature. A sample of a piece of pipe bent to shape is to be seen in the pair of rolls on the nearer side.

In the background in this illustration there is shown a permanent scaffold, of a very convenient form. The scaffold posts carry projecting pins on each side, spaced about a foot apart. On one of these the scaffold plank rests, a bracket structure on the lower surface pressing back against the rung below. The scaffold can be raised or lowered on any pair of rungs for the work in hand.

Pipe Bending Stand.

The contracting firm of James Stewart and Co., New York, has been incorporated with a capital stock of $3,750,000. The firm of James Stewart and Co. was established in 1845 in Ottawa, Ont., by James Stewart, of Aberdeenshire, Scotland. In 1865 its headquarters were moved to St. Louis. The general office was changed in 1900 to New York.

Steam Railway Statistics for Year Ended June 30, 1912

The Table given in our last issue showed the financial results of the operations of steam railways for the year ended June 30, 1912. The following table gives the percentages and the principal statistical information compiled by the companies. The table published last issue and the one given below contain all the information given prior to 1910 in our compilation of these statistics, but the columns have been rearranged so as to combine in the first table the financial and in the second the statistical information.

Name of Railway	Proportion of total Passenger service train revenue to total earnings	Proportion of freight revenue plus switching revenue, &c., to total earnings	Revenue Train Mileage	Mileage of Non Revenue Trains	Earnings per Train Mile	Passengers Carried	Passengers Carried One Mile	Passenger Earnings per Train Mile	Tons of Freight Carried	Tons of Freight Carried One Mile	Freight Earnings per Train Mile

Orders by Board of Railway Commissioners.

[illegible] Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were issued. In many cases orders are not [illegible] assigned to them.

18459. Jan. 9.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across 2 highways in Brighton Tp., mileage 96.31 and 98.64, Ont.

[illegible] Jan. [illegible]—Authorizing C.P.R. to build additional tracks, north and south of existing main line, across Crescent Road, Saltcoats, Sask.

18461. Jan. 9.—Authorizing G.T. Pacific Ry. to build branch from its line in Block 15, across Fourth St., through Block 10, across Inkerman Ave., and southerly through Block 11, across Waterloo Ave., into Block 12, Beechmount Subdivision, Edmonton, Alta.

18462. Jan. 8.—Approving Niagara, Welland and Lake Erie Ry. standard passenger tariff C.R.C. 1, showing a cash fare of 5c. per passenger, or 6 tickets for 25c., to apply between any 2 points on its line.

18463. Jan. 9.—Authorizing G.T. Pacific Branch Lines Co. to build highway across its Prince Albert Branch at mileage 45.9, Rural Municipality 371, Saskatoon District, Sask.

18464. Jan. 10.—Suspending Wabash Rd. tariff, C.R.C. 656 and G.T.R. supplement 11 to C.R.C. w. 113, on coal from Detroit, Mich., to Windsor and Walkerville, Ont.

18465. Jan. 7.—Extending, to June 1, time within which Esquimalt and Nanaimo Ry. shall complete its Cowichan Lake Branch from its main line at Cowichan Lake, 18 2-3 miles.

18466. Jan. 9.—Approving clearances as shown on plan, of tracks and buildings of Edmonton Portland Cement Co., in sec. 5-53-19, w. 5 m., Alta., subject to condition that trainmen be prohibited from being on sides of cars when passing company's warehouse.

18467. Jan. 8.—Dismissing application of residents of Pas, Man., for order requiring Canadian Northern Ry. to provide through sleeping car service from Winnipeg to Pas.

18468. Nov. 27, 1912.—Approving location of C.N. Ontario Ry. station on north side of track, on lot 8, east of Little St., Beachburg, Ont.

18469. Jan. 9.—Authorizing C.P.R. to build diversions of road allowances between secs. 23 [illegible] and [illegible] sec. [illegible], at Carmangay, Alta.

18470. Jan. 3.—Authorizing C.P.R. to build spur for Saskatchewan Bridge and Iron Works, Moose Jaw, Sask.

18471. Jan. 9.—Authorizing C.P.R. to build di[illegible] east of Brandon, Man. [illegible] sec. [illegible] 18, to [illegible] p. m.; and [illegible] revised location [illegible] built at [illegible], Que.

[illegible] C.P.R. to build siding for Northern Electric and Mfg. Co., Calgary, Alta.

[illegible] C.N. Ontario Ry. to build bridge over Timagami River, Crerar Tp., [illegible] Ottawa.

18475. Jan. 10.—Authorizing C.P.R. to divert highway at mileage 101.98 on its Pheasant Hills Branch, Sask., to build across said diversion and to close existing crossing.

18476. Jan. 9.—Authorizing C.P.R. to build spur for City of Calgary, Alta., across road allowance on northerly limit of n. w. ¼ Sec. 34-23-1, [illegible]

[illegible] Jan. 9.—Approving location G.T. Pacific Ry. station in west half of Lot [illegible], Coast District, B.C.

18478. Jan. 10.—Approving revised location of G.T.R. siding for Pratt & Letchworth Co., Brantford, Ont.

18479. Jan. 10.—Approving proposed layout of G.T.R. tracks and station at Stoney Point, and crossing of side road between Lots 6 and 7, Con. 1, Tilbury North Tp., Ont.

18480. Jan. 10.—Authorizing C.P.R. to build three spurs for Montreal Ice Co., Hudson, Que.

18481. Jan. 10.—Authorizing C.P.R. to build spur on Gunns Packing Co.'s property, north of St. Clair Ave. and west of Gunns Road, Toronto.

18482 to 18484. Jan. 8, 9, 10.—Authorizing G.T.R. to build siding on Maisonville Ave., and across Sandwich, Windsor and Amherstburg Ry., for Ford Motor Co., Sandwich East Tp.; siding for British American Oil Co., Ashbridges Bay, Toronto; and two sidings for National Fireproofing Co., East Flamboro Tp., Ont.

18485. Jan. 4.—Authorizing Canadian Northern Ry. to build spur from Rue la Verandrye, westerly to Block 4, crossing Rue St. Jean Baptiste; and spur from station 1+88 westerly, crossing Rue St. Jean Baptiste to Block 4, St. Boniface, Man.

18486. Jan. 8.—Dismissing St. John and Quebec Ry. application for connection with C.P.R.

[illegible] Jan. 13.—Ordering Algoma Central and Hudson Bay Ry. to restore its switch from main line to Bromley Bros.' sawmill, Sault Ste. Marie, Ont., and to put it in condition for operation within two weeks from date.

18488. Jan. 8.—Dismissing application of Abbotsford Timber and Trading Co., Abbotsford, B.C., for leave to cross Vancouver, Victoria and Eastern Ry. with its logging track in Sec. 20, Tp. 16, e. c. m.; and authorizing it to cross overhead, 1,500 ft. nearer Abbotsford than crossing applied for.

18489. Jan. 7.—Defining, until further order, the express delivery limits in Megantic, Que.

18490. Jan. 14.—Approving regulations governing opening and closing of pivotal span of railway bridge over Fraser River at New Westminster, B.C.

18491. Jan. 14.—Approving Central Ry. of Canada revised location crossing South Nation River, between mileage 27 and 29, Prescott County, Ont.

18492. Jah. 13.—Authorizing C.N. Ontario Ry. to build Y between its main line and C.N. Montreal Tunnel and Terminal Co.'s line, across Vertu Road, between Lots 258 and 359, St. Laurent Parish.

18493. Jan. 11.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across Stanley St., to divert road allowance to connect Front and Stanley Sts., closing up portion of Ferdinand St., and to cross same with diverted road, Trenton, Ont.

18494. Jan. 14.—Authorizing G.T.R. to operate over crossing of Montreal Park and Island Ry. near Turcot, Que., between 10 a.m. and 4 p.m., and between 8 p.m. and 6 a.m.

18495. Jan. 14.—Approving proposed Supplements to Canadian Classification 15, and Supplements 1, 2, 3, and 4 thereto, to be known as Canadian Freight Classification 16, effective Mar. 1.

18496. Jan. 13.—Authorizing G.T.R. to build bridge 138, at mileage 238.02, District 2, Eastern Division, in Bagot County, Que.

18497. Jan. 14.—Authorizing G.T.R. to build siding for Cement Products, Ltd., Toronto.

18498. Jan. 14.—Approving location of C.P.R Touchwood Hills Branch from Sec. 15-29-14, at mileage 43.15, to Sec. 34-29-22, w. 2 m., at mileage 91.90; and authorizing it to build across 35 highways, mileage 43.82 to 91.31, Sask.

18499. Jan. 13.—Approving C.P.R. plan revising design of south abutment of bridge 17.0, Sudbury Division, to permit road diversion under the 40 ft. span.

18500. Jan. 10.—Authorizing C.N. Quebec Ry. to build siding for Canada Cement Co., Pointe aux Trembles Parish, Que., across Montreal Terminal Ry.

18501. Jan. 13.—Authorizing Canadian Northern Ry. to build spur at mileage 571.63, on lane between Industrial and Railway Aves., crossing Donald and James Sts., Battleford, Sask.

18502. Jan. 13.—Authorizing C.N. Ontario Ry to extend spur to Canada Chemical Co.'s smelter, Parry Sound, to Standard Chemical Iron and Lumber Co.'s ore bins and plant.

18503. Jan. 9.—Approving location of G.T. Pacific Ry. station at New Hazleton, mileage 181, Prince Rupert east, in Lot 882, Group 1, Cassiar District, B.C.; work to be completed within 60 days.

18504. Jan. 14.—Ordering G.T.R., within 60 days, to install improved type of illuminated automatic electric bell at highway crossing at Kerwood, Ont.

18505. Jan. 13.—Relieving C.P.R. from further protecting crossing between Cons. 4 and 5, mileage 105.7, London Subdivision, Ont.

18506. Jan. 14.—Authorizing C.P.R. to build additional track across highway in Provincial Government Lot 433, Tp. 14, R. 3, e. c. m., at mileage 95.8, Cascade Subdivision, B.C.

18507. Jan. 8.—Authorizing Niagara, Welland and Lake Erie Ry. to open for traffic its line from near M.C.R. station, north along South Main St., crossing G.T.R. spur at Lincoln St., then east along East Main St. to G.T.R. station, Welland, Ont., 1.52 miles.

18508. Jan. 14.—Ordering Great Northern Ry. to build spur for Delta Shingle Co., near Townsend station, B.C.

18509. Jan. 14.—Relieving G.T.R. from further protecting crossing just north of Varney station, Ont.

18510. Jan. 15.—Authorizing Imperial Bank of Canada, St. Catharines, Ont., to pay cheques drawn by A. D. Cartwright, Secretary of the Board, to G.T.R. for $1,812.96, and Clifton Sand, Gravel and Construction Co. for $1,058.04.

18511. Jan. 15.—Authorizing C.N. Ontario Ry. to build bridge across Amable du Fond River, Pentland Tp., at mileage 188.1 from Ottawa.

18512. Jan. 7.—Ordering C.P.R. to install gates, to be operated by a man in one tower, at North Vancouver Ferry, Columbia Ave., and G.T. Pacific Ry.'s team crossings.

18513. Jan. 14.—Authorizing C.P.R. to open for traffic its double track between Hedge and Port Arthur, mileage 124.6 to 127.8, Nipigon Subdivision, except portion over bridge between mileage 125.4 and 125.5; and its double track between Ramsay and Woman River, mileage 70.9 to 86.0, Chapleau Subdivision, Ont.

18514. Jan. 7.—Authorizing C.P.R. to change location of foot bridge over its tracks on George St., Smiths Falls, Ont.

18515. Jan 4.—Authorizing C.P.R. to build highway diversion to join road allowances on west and north boundaries of Sec. 12-11-10, w. 4 m., Alta; and rescinding order 18265, Dec. 9, 1912.

18516. Jan. 15.—Dismissing Federation of the Quebec Chambers of Commerce application for order directing South Eastern Ry. to reopen its line between Drummondville and Sorel, Que.

18517. Jan. 15.—Authorizing G.T.R. to build siding for Lumber and Construction Co., Montreal Parish, Que.

18518. Jan. 15.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across road allowance between Thurlow and Tyendinaga Tps., at mileage 69.08 from Glen Tay, Ont.

18519. Jan. 15.—Authorizing C.P.R. to build spur for Robinson and Black, Winnipeg.

18520. Dec. 28, 1912.—Authorizing G.T. Pacific Ry. to cross Oliver Road highway with its Lake Superior Branch, at mileage 9.8, McIntyre Tp., Ont.

[illegible] Jan. 15.—Authorizing C.N. Ontario Ry. to build across public road between Cons. A and 1, Nepean Tp., at station 873+00, by means of a trestle, and rescinding order [illegible], Apr. [illegible].

18522. Jan. 15.—Authorizing C.N. Ontario Ry. to build across Sturgeon River, east crossing, Pedley and Springer Tps., Nipissing District, mileage 249.9 from Ottawa.

18523. Jan. 16.—Authorizing C.P.R. to divert mill race from Carroll's pond, Ingersoll, and to take part of lot 18, Broken Front concession, West Oxford tp., Ont., 0.775 acre.

18524. Jan. 15.—Authorizing C.P.R. to build its Weyburn-Lethbridge branch across 44 highways from mileage 131.13 to 173.03.

18525. Jan. 15.—Amending order 17474, Sept. 13, 1912, re C.N. Ontario Ry. crossing near Pembroke, Ont.

18526. Jan. 16.—Authorizing C.P.R. to build extensions to two sidings for Oliver and Webster, on lot 3, r. 7, Sydenham tp., and lot 15, east side of Stavely street, Owen Sound, Ont., and to build new siding on lots 3 and 4, r. 7, Sydenham tp.

General order 100, Jan. 16.—Prescribing regulations for transportation of explosives, to come into force March 1, and rescinding order 7881, Aug. 27, 1909.

18527. Jan. 16.—Authorizing C.P.R. to build its Weyburn-Lethbridge branch across 29 highways from mileage 78.22 to 112.08.

18528. Jan. 16.—Authorizing C.P.R. to build siding or third track across public road allowance between Divisions F and C, lot 1, r. 3, Guelph tp., Ont.

18529. Jan. 16.—Ordering that interlocking plant be installed at crossing of C.P.R. Didsbury-Kininvie branch by C.N.R. Vegreville-Calgary branch in s.e. and s.w. ¼ sec. 28-25-24, w. 4 m., Alta., by June 1, and authorizing C.N.R. to operate over said crossing for construction purposes only, until interlocker is installed.

18530. Jan. 16.—Authorizing Kingston and Pembroke Ry. (C.P.R.) to use bridges 70.2 and 8[illegible].2, authorized by orders 12035 and 12034, Oct. 18, 1910.

18531. Jan. 15.—Authorizing G.T.R. to build two sidings for Canadian Crocker-Wheeler Co., St. Catharines, Ont.

18532. Jan. 15.—Authorizing G.T.R. to rebuild 3 bridges: 228, mileage 193.75; 236, mileage 2[illegible].05, and 242, mileage 216.36, District 1[illegible], Northern Division, Ont.

18533. Jan. 15.—Authorizing G.T.R. to build 3 additional tracks, at grade, across Lusignan street, Montreal.

18534. Jan. 16.—Ordering G.T.R. to build culverts under its line on lots 22 and 23, con. 1, Humberstone tp., Ont.

18535. Jan. 16.—Approving C.N. Ontario Ry. revised location through unsurveyed territory in Sudbury District, mileage 250.37 to 254.3 from Sudbury Jct.

18536. Jan. 16.—Authorizing Canadian Northern Ry. to build across public road between secs. 20 and 21, tp. 27-8, w. 3 m., Sask.

18537. Jan. 16.—Authorizing city of Montreal to lay sewer under G.T.R. West Broadway outlet, Notre Dame de Grace.

18538. Jan. 15.—Amending order 17250, Aug. 14, 1912, re building of subway by Canadian Northern Ry. at Victoria street, North Battleford, Sask., by ordering that it build said subway by Aug. 31, maintain watchman at crossing pending construction, and be liable to $100 a day penalty for default.

18539. Jan. 16.—Authorizing C.P.R., to open for traffic its double track between mileage 92.4 and 98.0, Man.

18540. Jan. 17.—Amending order 18356, Dec. 23, 1912, re C.P.R. crossing of Jacques Cartier Union Ry., Lachine parish, Que.

18541. Jan. 15.—Apportioning cost of installing gates at crossing of Scugog St. by Campbellford, Lake Ontario and Western Ry. (C.P.R.), in Bowmanville, Ont.

18542, 18543. Jan. 18.—Approving C.N. Onissing district, mileage 277.9 tb 281.2 from issing district, mielage 277.9 to 281.2 from Ottawa, and through unsurveyed territory in Sudbury district, mileage 189.1 to 192.2 from Sudbury Jct.

18544. Jan. 18.—Approving revised location of C.P.R. main line from mileage 27.051 from junction with British Columbia Southern Ry., in lot 8107, to lot 129, at mileage 32.89, Kootenay district.

18545. Jan. 17.—Extending, to Apr. 13, time within which C.P.R. shall build spur into water lots 8, 9, 10, 11 and 12, New Westminster, B.C.

18546. Jan. 15.—Ordering C.N. Ontario Ry. to build undercrossing for J. A. Brown, in Westmeath tp., Ont.

18547. Jan. 17.—Authorizing G.T. Pacific Ry. to build its Prince Albert branch across highway in n.w. ¼ sec. 34-47-26, w. 2 m., at mileage 103.2, East Saskatchewan district.

18548. Jan. 17.—Authorizing C.N. Ontario Ry. to build its branch connecting Toronto-Sudbury line with line from Ottawa to northern part of Toronto, across C.P.R., near Donlands station.

18549. Jan. 18.—Authorizing Canadian Northern Ry. to build spur from Union Supply Co.'s spur to north end of block 20, and a spur for International Harvester Co. of America at North Battleford, Sask., and to cross Railway Ave.

18550. Jan. 20.—Approving proposed location of C.P.R. station on lot 34, con. 10, Darlington tp., Ont., at mileage 58.17, Toronto subdivision.

18551. Jan. 18.—Authorizing G.T.R. to build siding, with spur for Ottawa Gas Co., Ottawa.

18552. Jan. 20.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge 11.4 over Mud Lake, near Maberley, Ont.

18553. Jan. 18.—Authorizing Saskatchewan Government to build highway crossing over C.N.R., between secs. 30 and 31, tp. 34, r. 4, w. 3 m.

18554. Jan. 20.—Authorizing C.P.R., to open for freight traffic Chinook Coal Co.'s spur on its Kipp-Aldersyde Branch, mileage [illegible] to 6[illegible], Alta.

18555. Jan. 22.—Authorizing C.P.R., to build its Moose Jaw South-westerly Branch across highway adjoining north boundary of sec. 32-11-29, w. 2 m., at mileage 39.09.

18556. Jan. 22.—Authorizing C.P.R., to open for traffic portion of its double track from Caron to Mortlach, mileage 16.2 to 25.6, Sask.

18557. Jan. 22.—Relieving C.P.R., from providing further protection at second public crossing west of Lachute station, Que.

18558. Jan. 22.—Authorizing Canadian Northern Ry., to build its Craven-Humboldt Branch across C.P.R. Regina-Bulyea Branch in n.w. ¼ sec. 13-20-21, w. 2 m., Sask.

18559. Jan. 22.—Amending order 18201, Dec. 2, 1912, re overhead crossing of C.N. Ontario Ry. by Campbellford, Lake Ontario and Western Ry. (C.P.R.) at mileage 95.1 from Glen Tay.

18560. Jan. 18.—Authorizing C.N.O.R., to cross C.P.R., and G.T.R., near St. Clair Ave., Toronto, Ont.; and rescinding order 14957, Oct. 9, 1911.

18561, 18562. Jan. 22.—Authorizing C.P.R., to build spurs for Whitmore Bros., and Regina Development Syndicate, Regina, Sask.

18563. Jan. 23.—Authorizing Canadian Northern Ry., to build its Bienfait-Estevan Branch across 7 highways, in Saskatchewan.

18564. Jan. 24.—Postponing from Feb. 10, modification of rule 7 G.T.R. Special Freight Tariff C.R.C. No. E 2374, in Supplement 5; also modification of rule 33 C.P.R. Local Freight Tariff C.R.C. No. E. 2141, in Supplement 9; and restricting application of stopover privileges with respect to international lumber shipments to such as are destined exclusively to U.S. points.

18565. Jan. 23.—Authorizing Kingston and Pembroke Ry. (C.P.R.), to build bridge 44.86, Ont.

18566. Jan. 23.—Authorizing C.P.R., to operate bridges 20.42, 39.11, 50.73, 73.93, 45.44, 33.2, and 62.4, Nipigon Subdivision.

18567. Jan. 23.—Approving Campbellford, Lake Ontario and Western Ry. (C.P.R.) plan of overhead crossing of highway at mileage 131.23, by a 20 ft. deck plate girder span on concrete abutments.

18568. Jan. 23.—Authorizing C.P.R., to build bridge 36.5, Farnham Subdivision, Eastern Division, Que.

18569. Jan. 24.—Approving Canadian Northern Ry. location through tps. 22-25, r. 19, w. 2 m., Sask., mileage 19.66 to 43.50.

18570. Jan. 24.—Authorizing C.P.R., to build its Swift Current Northwesterly Branch across 39 highways, mileage 35.95 to 77.[illegible]6, from Swift Current, Sask.

18571. Jan. 24.—Approving revised location of G.T. Pacific Branch Lines Co.'s Regina-Boundary Branch from sec. 6-1-2, w. 2 m., to International Boundary, from mileage 153.90 to 155; and authorizing building across highway at mileage 155.

18572. Jan. 23.—Authorizing Winnipeg and Northern Ry. to build across C.P.R. in lot 101, St. Pauls parish, Man.

18573. Jan. 24.—Extending to June 1, time for installing bell at Kerwood crossing, Ont., as provided by order 18504, Jan. 14.

18574. Jan. 23.—Authorizing Toronto, Hamilton and Buffalo Ry. to build spur for J. H. Bowman Lumber Co., Ancaster tp., Ont.

18575. Jan. 24.—Authorizing Vancouver, Victoria and Eastern Ry. and Navigation Co., to build transfer track connecting with C.P.R. near Hawks Ave., Vancouver, B.C.

18576. Jan. 23.—Authorizing C.P.R., to take, for building additional team delivery track, part of lot Cadastral 252, about 0.413 acre, St. Constant parish, Que.

18577. Jan. 27.—Suspending until March 1, the tariffs of C.P.R., G.T.R., C.N. Quebec, and Temiscouata Rys., increasing rates on pulpwood from Ontario, Quebec, New Brunswick, to eastern U.S. points.

18578. Jan. 23.—Confirming order 16394, Apr. 25, 1912; and ordering that railway mileage tariffs from trans-shipment points on exlake corn in carloads, for milling purposes, be revised to provide rates on corn that shall not, in any case, exceed mileage tariff charged from same points and same distances, on exlake wheat, oats, and barley in carloads, for milling purposes; to become effective not later than Feb. 10.

18579. Jan. 25.—Authorizing G.T. Pacific Branch Lines Co., to carry traffic over its Alberta Coal Branch, between mileage 36.6 and 56.4.

18580. Jan. 24.—Ordering Canadian Northern Ry. to protect crossing at Water Ave., Winnipeg, by watchman between 6 a.m. and 12 p.m.; his [illegible]

[illegible] to chemicals list, and also continued in oils list.

18582. Jan. 25.—Adding town of St. Lambert, Que., as a party to application of town of Greenfield Park for protection at G.T.R. crossing of Lapiniere road.

18583. Jan. 25.—Authorizing C.P.R., to take, without consent of owner, certain lands in connection with building of subway at Decarie Ave., Montreal.

[illegible] Jan. 27.—Approving Quebec, Montreal and Southern Ry. bylaw, cancelling authority to D. I. Roberts, formerly General Freight and Passenger Agent, and authorizing N. J. Ferguson, General Freight and Passenger Agent, to prepare and issue special freight competitive, and special passenger tariffs.

18585. Jan. 23.—Approving C.N. Ontario Ry. location from road between cons. 5 and 6, mileage 11.5, to lot 1, con. 7, mileage 13.47, South Orillia tp., and from latter point connecting with constructed line in lot 17, con. 13, North Orillia tp.

18586. Jan. 27.—Authorizing C.N. Ontario Ry. to build bridge over Dishnish Creek, Algoma district, mileage 257 from Sudbury Jct.

18587. Jan. 28.—Authorizing Algoma Central and Hudson Bay Ry. to open for traffic its main line extension to Bruce St., Sault Ste. Marie, Ont., from near West St., 7,000 ft.

18588. Jan. 28.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.), to build across road allowance between lots 22 and 23, broken front concession Darlington tp., Ont., mileage 152.06, from Glen Tay.

18589. Jan. 27.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.), to build across road allowance between lots 2 and 3, con. 1, Hope tp., Ont.; and rescinding order 17519, Sept. 18, 1912.

18590. Jan. 29.—Ordering C.P.R. to erect fences on each side of right of way on its Sirdar subdivision, B.C., from mileage 77 to Sirdar; work to be completed by May 31.

18591. Jan. 28.—Approving C.P.R. plans showing transfer track at Midale, Sask.

18592. Jan. 29.—Ordering G.T. Pacific Ry. to stop its trains for mail and passenger service at Haysport, B.C., until opening of navigation.

18593. Jan. 7.—Authorizing city of Vancouver, B.C., to build bridge or viaduct, as a public highway, from Georgia to Harris Sts, over Vancouver, Victoria and Eastern Ry. (G.N.R.).

18594. Jan. 30.—Extending for 3 months from date, time within which B.C. Electric Ry. be allowed to appeal to Supreme Court of Canada from order 17840, as extended by order 18253.

18595. Jan. 29.—Authorizing Canadian Northern Ry. to build bridge across Seine River, Rainy River district, Ont., to replace existing bridge.

18596. Jan. 30.—Approving Campbellford, Lake Ontario and Western Ry. (C.P.R.) plan, showing general layout of Port Hope viaduct, Port Hope, Ont.; and plan showing details of piers 8 and 9 of same.

18597. Jan. 29.—Authorizing C.P.R. to build additional track on northerly side of existing main line across 3 highways, Moose Jaw subdivision, Saskatchewan division, mileage 125.075 to 127.125

18598. Jan. 29.—Authorizing C.N. Ontario Ry. to build bridges over Beaver River (west branch), over Conklin River, over Goose River (second crossing), Algoma district, and across Macaming River (west crossing), Sudbury district.

18599. Jan. 30.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge over creek near Cobourg, Ont.

18600. Jan. 30.—Authorizing G. Shearer and C. Shiriff of Huntingdon, Que., to build joint crossing between their farms, over G.T.R..

18601. Jan. 30.—Approving proposed location of C.P.R. shelter station at Fesserton, Ont.

18602. Jan. 31.—Reporting, to Governor in Council for approval, Atlantic, Quebec and Western Ry. bylaws governing the operations at terminals and stations.

18603. Jan. 31.—Authorizing Canadian Northern Ry. to build across highways on its Delisle extension, Sask.

18604. Jan. 29.—Authorizing C.P.R. to build spur for St. John and Quebec Ry., on J. Palmer Co.'s property, Fredericton, N.B.

18605. Jan. 31.—Authorizing Canadian Northern Ry. to divert trail in south ½ sec. 3-21-20, w. 2 m., Sask.

18606. Jan. 30.—Authorizing Saskatchewan Government to build highway over C.P.R. on road allowance west of sec. 30-15-14, w. 3 m.

18607. Jan. 31.—Authorizing Hamilton Radial Ry. to replace present derailing switches where it crosses G.T.R., in Burlington, Ont.

18608. Jan. 31.—Authorizing T.H. & B. Ry. to build spur for Canadian Porcelain Co., in Barton tp., Ont.

18609. Jan. 31.—Authorizing C.P.R. to build spur for J. Palmer Co., Fredericton, N.B.

18610. Jan. 31.—Authorizing Canadian Northern Ry. to build across 22 highways on its Morris-Portage branch, Man.

Changes in Gradients, and Temporary Structures, on the National Transcontinental Railway.

There has been considerable discussion in the daily press and at political meetings in regard to changes said to have been made in the N.T.R. construction by the present commission. A return presented to the House of Commons recently, giving the official correspondence on the subject, will prove of general interest to engineers, contractors, etc.

The correspondence opened with the following letter from E. J. Chamberlin, President, Grand Trunk Pacific Ry., to R. W. Leonard, Commissioner, National Transcontinental Ry., July 16, 1912:—

"I learn from our engineers that the standard of work on the portion of the N.T.R. between Lake Superior Jct. and Cochrane, which was at the outset adopted and has so far been complied with, is being departed from, and that instead of 0.4 grades and permanent structures, you have authorized grades up to 1% and the erection of temporary wooden structures. In regard to this, I would call your attention to clause 7 of the agreement of July 29, 1903, which provides that the construction of the Eastern Division shall be done according to the specifications approved by the company and shall be subject to the joint supervision, inspection and acceptance of our Chief Engineer and the Chief Engineer of the Commission. I beg to say that if this work is done in accordance with what I understand to be your recent instructions, it will not be in compliance with the agreement, nor satisfactory to this company, and cannot be accepted."

The Commissioner of the N.T.R. replied to Mr. Chamberlin on July 19, 1912, as follows:—"I find, on going over the profiles, that there are many places where a large expenditure may be saved and the line actually improved for operating purposes, and the time of completion considerably shortened, without in the least affecting the hauling capacity of locomotives, by making certain modifications, and I have given instructions to make such modifications accordingly. I am quite satisfied that the interests of the G.T. Pacific and the Government are identical in this matter, and I noted on my recent trip west that the modifications referred to are in accord with the practice of the G.T.P.R. Co. on the portions of the National Transcontinental Ry. built by that company, namely, from Winnipeg west, and from Fort William to Lake Superior Jct.

"In regard to wooden trestles, I may say that your engineers must be aware that it is absolutely necessary to put in wooden structures in some cases where the foundations are such that heavier structures, or solid embankments, cannot be constructed at present. There are points along the line where much money has been uselessly expended in futile attempts to make solid embankments, only, finally, to have to put in wooden structures, and I notice that the construction of such wooden trestles has been the practice of the G.T.P.R. on the portions of the N.T.R. above mentioned.

"I have carefully perused clause 7 of the agreement of July 29, 1903, and I fail to notice in this, or in any other agreement or act relating to the construction of the Eastern Division of the N.T.R. any provision relating to the gradients to which the line shall be built, or the nature of the structures, but it may be of satisfaction to you to have your Chief Engineer, or Assistant Chief Engineer, discuss with our Chief Engineer any proposed changes, and report to you in regard to same. It is not necessary for me to state that this Commission welcomes any criticism or assistance from your able staff of engineers on any or all matters affecting the economical construction and operation of the road."

Mr. Chamberlin wrote again to Mr. Leonard on July 23, 1912:—"I have yours of July 19, regarding changes in grade on the N.T.R., and note the reasons you offer for the modifications contemplated. Aside altogether from this company's strict rights, to which I called attention in my letter of the 18th inst. to you, I would ask you to furnish me with profiles showing the changes proposed, so that I may consider their effect. You will, I think, agree that it would be in the interests of both the Commission and this company that no work in connection with any changes of grade should be proceeded with until our approval has been given, and I would ask you to issue instructions to this effect. On receipt of the profiles, I will let you have my views with as little delay as possible."

Mr. Leonard replied to Mr. Chamberlin on Aug. 2, 1912, as follows:—"I beg to acknowledge receipt of your letter of July 23, expressing your apprehensions regarding the modifications referred to in my letter of the 18th ult. I note you refer to your company's 'strict rights,' to which you also referred in yours of the 18th ult., for which reference I can find no authority in the various acts and agreements relating to the construction of the Eastern Division.

"You have apparently been misinformed in regard to the reported changes in grade, as no change whatever in any of the ruling grades has been contemplated, but merely such trifles as slight local sags in the grades across soft swamps, which will not in any way affect the hauling capacity of locomotives, and which, if found desirable to lift out in the future for any unforeseen reason, can be effected more cheaply than at present contract prices, and will make a more solid road bed than is being made under similar circumstances today by using the peat for embankments.

"I suggested in my letter of July 19 that your Chief Engineer, or Assistant Chief Engineer, discuss with our Chief Engineer any proposed changes and report to you in regard to same, because, you will see from the above, these are simply details too trifling to occupy either your attention or mine, and the suggestion in my letter of July 19 should be quite sufficient for your purposes, or perhaps it would be still simpler and quite as efficient for you to get your information through your district engineers, after consultation with the district engineers of the Commission, in the usual way."

On Nov. 21, 1912, Mr. Leonard wrote to the Minister of Railways as follows:—"In reference to the charges made in the newspapers that the gradients on the N.T.R. have been injuriously altered, I beg to point out, that the only change in gradients made by the Commission since Sept. 30, 1911, was to allow a few sags to remain, where there have been subsidences and across soft muskegs, which it would be inadvisable, from an engineering point of view, to fill at present, to be operated temporarily or permanently as velocity grades. The presence of such sags in the railway does not injuriously affect the economical operation of the road. The same trains, carrying the same loads, making the same time, with the same expense and the same degree of safety and comfort, can be handled over a road in which such sags, or velocity grades, exist as on a road of the same ruling gradient in which there are no such sags or velocity grades.

"By introducing these sags, all of which are well within velocity grade limitation, the Commission will: 1. Save a large amount of money in the construction of the railway; 2. Expedite the completion of the road; 3. Should it become advisable, for any unforeseen reason in the future, to eliminate these sags, it can be done at one half the cost that the present contract prices call for; 4. In one case it has been found necessary to raise the grade in a cutting, the material in which is so soft and wet that it is impracticable to construct a line on the original grades, and in this instance the grade has been kept well within the limits of velocity grade practice, and the gradient can be reduced at any time, if it should ever be found desirable, by filling in the lower portion with suitable material; 5. The concensus of opinion of the following engineers, who have been in the employ of the Commission for years, in their sworn testimony before the Commission investigating the construction of the N.T.R., is that velocity grades are not only unobjectionable, but might have been introduced permanently into the railway, and would have greatly reduced the cost of the road:—G. Grant, Chief Engineer; C. O. Foss, District Engineer, District A.; A. E. Doucet, District Engineer, District B.; A. G. Macfarlane, District Engineer, District F.; G. L. Mattice, Assistant District Engineer, District D.; J. W. Porter, Assistant District Engineer, DistrictB.; A. N. Molesworth, ex District Engineer, District C. & D.; H. L. Bucke, Division Engineer, District D. & F.

"I find that the gradients on which the original Quebec bridge was partially built were 1% on either side, and the new bridge will necessarily be built to the same grades. I also find that the gradient approaching the Quebec bridge from the east side, including the Chaudiere bridge, was 1%, which cannot be altered. In New Brunswick I find in the middle of a division a grade 13 miles long of 1.10% against east bound traffic, and in Quebec, in the middle of another division, 11 miles of 1.10% grade against west bound traffic, each of which will limit the hauling capacity of locomotives over these divisions to the same extent as if the whole division had been located on these grades.

"I am sending, herewith, for your information, five blue print profiles, showing all the changes in gradients which have been effected since Sept., 1911.

"Mr. Grant's evidence is not yet in type, but from conversation I have had with him, which is confirmed by Mr. Staunton, I know his views to be as above stated."

The return states that there have been no departures from original instructions, as regards curves and bridges or other permanent structures.

In connection with the foregoing it will be of interest to note what W. F. Tye said in his recent presidential address before the Canadian Society of Civil Engineers, and which is given in full in this issue. His remarks on momentum grades will be found on pg. 107.

It was reported at a meeting of the Public Accounts Committee of the Manitoba Legislature, Jan. 5, that the amount of taxes paid to the Province by the C.P.R. was $100,000, and by the Canadian Northern Ry. $40,000. The Railway Taxation Act provides that 2% on the gross earnings of railways be levied, and a resolution asking the government to enforce the act in the case of the C.P.R. and the C.N.R. was lost on the casting vote of the chairman.

Canadian Northern Railway, Construction, Betterments, Etc

Sir Donald Mann, Vice President, returned to Toronto Feb. 10, from the Pacific Coast. In an interview he is reported as stating that the line to Port Arthur will be completed this fall. Work on the Pacific section of the line is progressing satisfactorily; there are 17 bridges to be built on the section between the mountains and Kamloops, B.C. It is proposed to have two outlets on the Atlantic Coast, one at St. John, N.B., and the other at Halifax. It is hard to tell, he is reported as stating, at Vancouver, when trains will be running through into that city, but it is hoped to be able to start a freight and a passenger service by Aug., 1914. At Winnipeg, Sir Donald is reported as stating that he was quite satisfied with the progress of the lines in the west. It is not expected to do much in the way of new construction on branch lines this year; track will be laid on lines already graded, but the principal work will be centered on the completion of the main lines, on which construction is in progress in Ontario and British Columbia.

Montreal - Ottawa-Port Arthur Line.—Rapid progress is reported as being made with the construction of the two bridges on the Montreal-Hawkesbury section at the back of Montreal. The substructure work will be completed so as to enable the Dominion Bridge Co. to make a start with the superstructures early in the summer.

On the section between Ottawa and Pembroke, Ont., there are two large bridges under construction across the Ottawa River—one at Shaw Falls, 1,800 ft. long, the other at Portage du Fort, 1,300 ft. long.

The Board of Railway Commissioners has approved of location and revised location plans for the following sections of the line:—In Nepean Tp., mileage 5.53 to 14.3; through Jones Tp., mileage 277.9 to 281.2 from Ottawa; through North Bay, at mileage 344; and through unsurveyed territory, mileage 189.1 to 192.2 from Sudbury Jct.

Press reports, Feb. 11, stated that about 200 miles of track had been laid on the line between Sudbury and Port Arthur. Of this 70 miles are said to have been laid west of Sudbury, and 130 miles east of Port Arthur. About 60% of the grading is reported to have been completed, and it is expected to have the balance done by the end of the year, and track laid on the entire section of 450 miles.

Canadian Northern Ontario Ry.—The Board of Railway Commissioners has authorized the building of a line across the C.P.R. near Donlands station, York Tp., to connect the Toronto-Sudbury line with the Toronto-Ottawa line to the North Toronto Station at the head of Yonge St.

Sir Wm. Mackenzie, President, is reported as stating, Feb. 5, that it is expected to put a regular passenger service in operation between Toronto and Ottawa, in June or July.

Press reports state that arrangements are being made under which the C.N. Ry. interests and the G.T.R. will build a joint station and hotel in Hamilton, Ont.

An agreement was reached, Feb. 5, with the St. Catharines, Ont., City Council, under which the company will build its line between Toronto and Buffalo, through St. Catharines, erecting a general traffic bridge across the old Welland canal. The city is to grant a bonus of $100,000.

Surveys for lines in Western Ontario are in progress at various points between Hamilton and Windsor. —. Congdon has been in London for some time, and another engineer has been in St. Thomas. Mr. Congdon is quoted as stating that the pro [illegible] on the C.N.R. obtaining a lease of the London and Port Stanley Ry. St. Thomas papers are advocating the interests of the route through that city, and the taking over of the Pere Marquette Rd.'s Canadian lines.

Canadian Northern Ry.—Recent press reports quote Sir Wm. Mackenzie, President, as having stated that work will be started in the spring on the building of a second track between Port Arthur and Winnipeg, and the further enlargement of the terminal facilities at the head of the lakes.

The company graded 655.82 miles of track in Manitoba, Saskatchewan and Alberta, and laid 303.63 miles of track during 1912. Grading, but no tracklaying was done on the following lines:—MANITOBA—Winnipeg Northern Ry., 35.88 miles; Wroxton to Yorkton, 28.7 miles. SASKATCHEWAN—Extension of Grosse Isle line, 35.6 miles; Canora, northerly, 19.3 miles; Craven, northeasterly, 8.00 miles; Carlton, northerly, 10.1 miles; Alsask, southeasterly, 50 miles; Vonda, northerly, 15.00 miles; Prince Albert-Battleford line, 36.66 miles; Jackfish branch, 2.34 miles. ALBERTA—Strathcona-Calgary line, 11.1 miles; Red Deer-Lacombe line, 7.8 miles; Oliver, north, 14.7 miles; Peace River line, 53 miles; Bruderheim, east, 2.5 miles; Camrose, southeasterly, 10 miles; Calgary, south, and Macleod-Pincher line, 48.3 miles.

Tracklaying and grading was done on the following mileages, part of the grading having been done in 1911: SASKATCHEWAN—Swift Current line, grading 40.6 miles, tracklaying 9.62 miles; Melfort-Humbolt line, tracklaying 4.69 miles; Moose Jaw line, grading 1.20 miles, tracklaying 2.00 miles; Goose Lake line, grading 104.57 miles, tracklaying 100.02 miles; Delisle line, grading 4.3 miles, tracklaying 3.70 miles. ALBERTA—Brazeau line, grading 50 miles, tracklaying 45.26 miles; Canadian Northern Alberta Ry., grading 87.45 miles, tracklaying 50.42 miles; Morinville line, grading 1.90 miles, tracklaying 17 miles; Strathcona-Camrose line, grading 5.87 miles, tracklaying 46 miles; Vegreville-Calgary line, grading 0.85 mile, tracklaying 24.92 miles.

It was reported, Feb. 12, that construction work is to be started at once on the proposed cut off from near Portage la Prairie to Stuartburn, east of Morris, Man.

The Saskatchewan Minister of Railways informed the Legislature recently that the Canadian Northern Ry., under an agreement with the Government, is building an extension of the DeLisle branch from near MacRorie through the Duck Lake country, southerly and southwesterly. It is expected to complete this line this year.

The Saskatchewan Legislature has passed a measure granting the company an extension of time within which to build the lines under the contract with the Province. Under the legislation of 1908 the C.N.R. undertook to build 410 miles of line, and under the legislation of 1909 the company undertook to build a further 545 miles of branch lines, the Province in each case guaranteeing the company's bonds. Of the first mentioned mileage 310 miles are in operation, and the remaining mileage, with the exception of one branch which has been abandoned, is under construction; about 400 miles of the branches to be built under the 1909 contract are practically completed or in operation, and the remaining mileage, with the exception of the Hartney extension of 65 miles, is under contract.

Canadian Northern Western Ry.—Application is being made to the Alberta Legislature for the incorporation of a company with power to build the following lines:—[illegible] from Calgary southeasterly [illegible] an authorized line between Cochrane and [illegible] the western boundary of the province. Short, Woods, Biggar and Shawcross, Edmonton, are solicitors for applicants.

Canadian Northern Pacific Ry.—During 1912 track was laid from Sumas to Hope, 41.64 miles, making the total track laid on the line 78.25 miles. The line from Hope to Yellowhead Pass, 421.82 miles, is under construction. On the section from Hope to Stillwater Flats, 274.91 miles, the contractors are the Northern Construction Co., Vancouver; between Stillwater Flats and the Yellowhead Pass, 146.91 miles, the contractors are the Northern Construction and Foley, Welch and Stewart. Track is reported to have been laid practically to Yale, and to have been started above Yale, for the purpose of getting in bridge material.

It is reported that Engineer J. Barthen has been transferred from Kamloops to North Bend, B.C., on construction work, and that B. A. Savage has been transferred to section 1.

A branch line from Kamloops to Vernon, Lumley and Kelowna, 132 miles, is under construction.

A contract has been let to the Northern Construction Co. for the building of a branch line from Lulu Island Bridge to Steveston, 10.2 miles. The work, which is light, is to be completed within six months. The principal feature on the line will be a trestle about a mile and a half long over the muskeg near Woodward's Slough.

Plans have been filed with the Registrar at New Westminster, B.C., for this line, mileage 5 to 15; these already having been approved by the Minister of Railways. The contract let to the Northern Construction Co. covers the grading, wooden bridges, culverts, etc., from a crossing of the north arm of the Fraser River, just west of New Westmintser to Steveston, near the mouth of the Fraser River. There are no particular engineering features, the gradients being level, and no cuttings. The work is to be proceeded with at once, and finished early in the summer.

Port Mann Terminal.—J. Montgomery, Toronto, arrived in Vancouver, Feb. 7, to take charge of construction on the terminals at Port Mann. He is reported as stating that his instructions were to get all the preliminaries arranged so that construction could be started Mar. 1. He added:—"The buildings to be erected now are as follows: Fifteen stalls of what will later be enlarged to a 42 stall locomotive house, a repair shop, coaling station, oil storage, house and a general storehouse for train equipment. The buildings are to be of the most modern and permanent construction. The repair shop will be 150 by 300 ft., with room for doubling the length. With the repair shop will be a complete foundry, blacksmith shop—in fact, all the outfit needed for repair of locomotives, freight cars, and passenger coaches.

Vancouver Terminals.—Reports state that the British Columbia Government has approved plans for the entrance of the company's lines into Vancouver, the company agreeing to spend $4,000,000 in reclaiming False Creek during the next five years. The C.N.R. will build a sea wall on the False Creek water front, then pump out the water in the flats and fill in the 200 acre area. Entry to this area will be secured through a tunnel about half a mile long. Terminal facilities will be provided at a cost of about $4,000,-

Mainly About Transportation People.

SIR EDMUND OSLER has been elected a trustee of the Mackay Companies, in place of the late R. A. Smith.

G. YALE, for the past six years Mechanical Superintendent, Montreal Harbor, died in Montreal, Feb. 8, aged 60.

J. P. MULLARKEY, railway contractor, arrived in Montreal, Feb. 17, from a visit of several months to Europe.

Miss R. Hill, daughter of **J. J. HILL**, Great Northern Ry., was married at St. Paul, Minn., Jan. 30, to Dr. E. Boeckmann.

J. B. FAIRGRIEVE, vessel owner, etc., who died in Hamilton, Ont., recently, left an estate valued at $152,000, to be divided among relatives.

Dr. E. P. Bucke, who died at London, Ont., Feb. 15, was a brother of **H. L. BUCKE**, Division Engineer, G.T. Pacific Ry., Superior Jct., Ont.

C. R. HOSMER, director, C.P.R., has been elected Vice President of Canadian Cottons, Limited, succeeding the late Sir Edward Clouston.

C. O'DELL, formerly Roadmaster, G.T.R., Toronto, was presented with a fur coat, by the office staff, Feb. 1, on his transfer to Hamilton.

A. E. Macdonald, [illegible] Railway.

It is expected to complete the branches into Brandon, Man., Moose Jaw, Weyburn, Battleford, Sask., and Calgary, Alta. The line from Regina to the International Boundary will also be completed. These lines have all been under construction during the past [illegible]

Canadian Transfer Co.—The following officers and directors were re-elected for the current year at the recent annual meeting in Montreal: President, C. Cassils; Directors, H. Paton, G. R. Starke, Sir Montagu Allan, F. W. Molson; General Manager [illegible]

A deputation waited on the Ontario Government [illegible] over 7,000

C.P.R. Eastern Lines Appropriations.

The appropriations for the work to be carried out on the C.P.R. Eastern Lines during the year have been approved by the President, Sir Thomas Shaughnessy, and will involve an expenditure of about $16,000,000. This sum will not all be spent on new work, but at least $10,000,000 will be utilized in completing works which were commenced last summer, including a portion of the new lake shore line, from Glen Tay to Agincourt, Ont., which is expected to be completed this year, the extension from St. John to Farnham Junction, and the Forsythe St. branch at the east end of Montreal.

The majority of the new work for which appropriations have been made is principally double tracking on various parts of the eastern lines, and this will involve the expenditure of nearly $6,000,000. The main line from Islington to Guelph Junction, Ont., on the London Subdivision will be double tracked for 30 miles, which is necessitated by the increase of traffic and will prove a considerable relief to the depot congestion. It is contemplated to have the work finished by November. On this stretch there are a few small bridges to be built, but none of any great importance. Tenders have been called for, but contracts have not yet been let.

It is proposed to double track portions of the main line between Romford the junction between the main line and the Toronto-Sudbury Branch—and Port Arthur, covering about 135 miles. The total distance between these two points is 553 miles. Last summer 75 miles of this line were double tracked at the points which most facilitated operation of traffic. It is intended to eventually double track the whole of this stretch, and when completed it will be a great advantage to the haulage of grain after navigation on the Great Lakes is closed. The intention of the C.P.R. is to carry out the second tracking at various points, so as to facilitate operation of trains. The lightest work will be done first and the heavy work along the north shore of Lake Superior will be completed later on. Surveys are in progress and will be continued. The principal items of heavy work will be due to changes of alignment and grading revisions.

Another important work to be commenced this year is the double tracking of a small stretch of 15 miles between Agincourt and North Toronto. Apart from the work of erecting two steel viaducts over the Don Valley the work on this line is by no means heavy. The other work to be finished this year includes the Interprovincial and James Bay Ry. extension from from Kipawa northerly, grade revision on the Sault Ste. Marie branch from Algoma to Sudbury.

The G.T.R. Has Been Indicted at Buffalo, N.Y., for conspiracy to violate sec. 6 of the Interstate Commerce law, in connection with the transportation of theatrical companies from Detroit to Buffalo, and from Buffalo to Toronto. It is charged that by means of a contract which was ostensibly for advertising on theatre programmes, rates were unreasonably reduced. The contract for 1910-11 called for monthly payments by the G.T.R. of $300 a sum claimed to be grossly in excess of the true value, the amount of which was reached by deducting [illegible] from the regular published rate. Similar indictments were recently returned against the New York Central Lines, when a plea of guilty was entered and a fine of $10,000 paid.

Index to Canadian Railway and Marine World for 1912.

At the end of this issue is a very complete index to the contents of the volume for 1912, which, as in former years, will doubtless be fully appreciated by the large number of subscribers who bind Canadian Railway and Marine World for reference purposes.

Even a casual glance over the eight pages of closely printed matter will show the tremendous range of subjects covered and the thorough manner in which this paper represents the entire transportation interests of the whole Dominion, steam railway, electric railway and marine, as well as the subsidiary express and telegraph interests and railway and canal contracting work.

Each succeeding year sees an increase in the quantity of matter published, an improvement in its quality, and a rigid adherence to the policy of accuracy which the publishers consider as one of their most valuable assets.

During 1912 our business was most satisfactory. The receipts from advertising steadily increased and there was a marked advance in circulation. More new subscriptions were received than in any previous year in the paper's history, except the year of its establishment, 1898; the number of discontinuances was again very small indeed, and the present condition of the subscription list justifies the statement, after most careful enquiry as to the circulation of other publications, that there is no other transportation paper, published in any country, which has so large a circulation as Canadian Railway and Marine World, in proportion to the population of the country of publication. The evidence in support of this statement is at the disposal of our advertising customers.

Our circulation embraces all classes of transportation officials and reaches over 90% of all the officials who have any buying power. Advertisers who use our columns therefore know that they are covering the entire field and that no other advertising is necessary to reach any portion of it.

Our subscription lists are open for inspection by present and prospective advertisers at any time.

Passenger Association Meetings at Ottawa.

At the meetings held at Ottawa recently W. S. Cookson, Assistant General Passenger Agent, G.T.R., was elected Chairman of the Niagara Frontier Summer Rate Committee for 1913, and A. J. Collins, Manager and Secretary, Magnetawan River and Lakes Steamboat Co., was elected Chairman of the Great Lake and St. Lawrence River Rate Committee. Jas. Morrison, A.G.P.A., Canadian Northern Ry., Eastern Lines, is permanent Secretary of both committees.

The International Water Lines Passenger Association elected the following officers: President, G. C. Wells, Asst. to P.T.M., Canadian Pacific Ry. S.S. Lines, Montreal; Vice President, O. H. Taylor, P.T.M., Eastern S.S. Corporation, New York; Secretary, M. R. Nelson, C.C., P.D., Northern S.S. Co., New York; Executive Committee—J. C. Conley, G.P.A., Nor. Mich. Trans. Co., Chicago, 2 years; W. P. Hinton, G.P.A., Grand Trunk S.S. Lines, Winnipeg, 1 year; C. F. Bielman, T.M., White Star Line, Detroit, Mich, 1 year.

The next meetings of the three associations will be held at Buffalo, N.Y., in Jan., 1914.

Canadian Society of Civil Engineers' Officers, Etc.

Following are officers and members of council for 1913, as elected at the recent annual meeting:—

President—Phelps Johnson, Montreal.

Vice Presidents—F. C. Gamble, Victoria, B.C.; J. G. Sullivan, Winnipeg; H. H. Vaughan, Montreal.

Past Presidents—C. H. Rust, Victoria, B.C.; H. N. Ruttan, Winnipeg; W. F. Tye, Toronto.

Treasurer—E. Marceau, Montreal. Secretary—C. H. McLeod, Montreal.

Councillors—P. S. Archibald, Moncton, N.B.; W. D. Baillairge, Quebec; F. A. Bowman, Halifax; E. E. Brydone-Jack, Winnipeg; C. E. Cartwright, Vancouver; S. J. Chapleau, Ottawa; C. R. Coutlee, Ottawa; A. E. Doucet, Quebec; W. A. Duff, Winnipeg; G. H. Duggan, Montreal; R. J. Durley, Montreal; J. M. R. Fairbairn, Montreal; C. L. Fellowes, Toronto; Walter J. Francis, Montreal; H. E. T. Haultain, Toronto; J. A. Hesketh, Winnipeg; J. C. Kennedy, Montreal; W. B. MacKenzie, Moncton, N.B.; D. MacPherson, Ottawa; C. N. Monsarrat, Montreal; P. E. Parent, Quebec; A. F. Stewart, Toronto; T. H. White, Vancouver.

Railway Department of Saskatchewan.—Heretofore the railway, telegraph and telephone lines in Saskatchewan have been under the charge of the Department of Railways, Telegraphs and Telephones. The act constituting that department has now been amended by striking out the words "railways, telegraphs and" wherever they occur, and giving the Lieut.-Governor power to assign duties to the minister who shall be placed in charge of telephones. A second act has been passed creating a Department of Railways, authorizing the appointment of a separate Minister of Railways, and providing for the appointment of a Deputy Minister, engineers, and such other officials as may be necessary.

Alberta and Great Waterways Ry.—The Imperial Privy Council has given judgment in London, Eng., allowing the appeal of the Royal Bank against the decision of the courts in Alberta in the Alberta and Great Waterways Ry. case. The Bank holds the proceeds of the $6,000,000 bond issue of the railway, which had been guaranteed by the Province. The Legislature subsequently revoked the company's charter and directed the payment of the proceeds of the bond issue to the Provincial Treasurer. The Privy Council holds that although the Legislature had the right to revoke the charter, it could not appropriate the money, the lenders of which were entitled to claim to have it returned to them.

The G.T.R. and the Southern New England Ry.—A dispatch from Concord, N.H., Feb. 15, states that the G.T.R. has filed, in the Superior Courts of the State, a bill of equity to test the legality of the Southern New England Ry. The bill sets out that what purports to be the signature of the G.T.R. Co. by the late C. M. Hays, the President, is not the legal and binding signature of the G.T.R. Co., but was his unauthorized act and that it was beyond the power of the railway company to bind itself to the purchase of the shares of the capital stock of the alleged railway and that the act is therefore null and void.

Montreal Stock Yards Co.—The annual meeting was held at the G.T.R. offices, Montreal, Feb. 18. The following is the directorate for the current year:—W. Mann, President; W. B. Strachan, Vice President; M. M. Reynolds, J. Pullen, W. Wainwright, G. Bird, J. E. Dalrymple, A. McLaurin, J. W. Loud. F. H. Carlin is Manager, and E. D. Strachan, Secretary-Treasurer.

Canadian Pacific Railway, Construction, Betterments, Etc.

Atlantic Division.—[illegible] the C.P.R. [illegible] Montreal to Halifax, N.S. [illegible]

W. [illegible]

Eastern Division.—The Board of Railway Commissioners has authorized the opening for traffic of the second track for one mile from the G.T.R. diamond at St. Johns, to St. Johns Station, Que. This [illegible] Montreal terminal to St. Johns, on which 23.01 miles [illegible]

A second track has also been laid from Quebec Jct. to Ste Therese, Que., 7.33 miles.

The [illegible] a double track line, was opened for traffic Jan. 14. It is not finally completed, as the [illegible]

[illegible] from the main line 750 ft. south from Fosythe St., Montreal, to lot 396, Longue Pointe, [illegible]

Montreal Terminals, Etc.—Recent press reports state that a plan is being worked [illegible] West to a point northwest of the Mount [illegible] will be started early in the spring.

Campbellford, Lake Ontario and Western [illegible] Construction, is reported as stating, Feb. [illegible] parallel with the G.T.R. on the north side [illegible] shovels. There [illegible] n of the first 75 [illegible]

Ontario Division.—[illegible] h press re- [illegible] Ont., had been [illegible] from Islington, where the [illegible]

[illegible] with this project press reports state that [illegible] track line from Streetsville Jct. through Guelph, rejoining the main line at Galt.

The Board of Railway Commissioners has approved of location and plans for a new [illegible]

Lake Superior Division.—Six engineering [illegible] Sudbury and Port Arthur, Ont., completing [illegible] these points. The work is in charge of D. [illegible] Ont., Feb. 1.

Manitoba Division.—The Board of Railway Commissioners has authorized the opening for traffic of the second track between mileage 92.4 and 98, from Winnipeg. This is on the second track construction from Portage la Prairie into Brandon.

We are officially advised that the branch lines under construction Dec. 31, 1912, [illegible] Lauder to Boissevain, 37 miles; and a line from Virden to MacAuley, 22.5 miles.

Tenders are under consideration for the building of locomotive houses, frame sta- [illegible] on the Pembina section. J. C. Holden is Division Engineer at Winnipeg.

Saskatchewan Division.—A second track is being built east and west of Moose Jaw, which will give a complete second track from Regina to Chaplin. Of this 35.5 miles were reported under construction Dec. 31, 1912, with track laid on 14.2 miles. A second branch is also under construction on the Swift Current subdivision, of which 38 miles were reported as being under construction, Dec. 31, with 20.2 miles of track laid thereon.

The lines under construction on the division Dec. 31, were officially reported to [illegible] 95 [illegible] were laid during 1912; Estervan northwesterly, 55 miles, on which 20 miles o. track were laid during 1912; and Kerrobert northeasterly, 36 miles.

A Moose Jaw press report, Feb. 12 [illegible] 12 [illegible] of additional trackage in the yards, a new [illegible] About 40 miles of the branch line northwesterly is to be relaid with 85 lb. rails.

R. Armstrong, Superintendent, Saskatoon, is reported as stating, Feb. 4, that he expected a second track between that station and Sutherland would be built this year, and that a number of additional in- [illegible]

[illegible] the second track from Caron to Mortlach [illegible]

Alberta Division.—The branch lines and extensions officially reported to us as being [illegible] An extension of the Calgary and Edmonton Ry. Lacombe Branch, for 46.7 miles easterly, on which 32.8 miles of steel had been laid; a line from Sterling on the Alberta Ry. and Irrigation Co.'s line, easterly [illegible] easterly for 57.3 miles, on which 26.8 miles of track had been laid, and the Alberta Central Ry. for 65 miles west and north- [illegible]

Location plans have been approved by the Board of Railway Commissioners for the following mileages on the Alberta Central Ry., west of Red Deer:—Mileage 0 [illegible] 179.42. Although there has been some grading done on the line, we are officially advised that no track was laid during 1912.

The Board of Railway Commissioners has approved of revised location of the main line from mileage 27.05, the junction with the British Columbia Southern Ry., to mileage 32.89, Kootenay District, B.C.

British Columbia Division.—The Kootenay Valley Ry. was officially reported to [illegible] construction from Golden southerly for 60 miles, on which track had been laid for 41 miles, and from Colvalli northerly for 21.9 miles. The line will connect Golden on the British Columbia Division, with the Crowsnest branch at Colvalli, on the Alberta Division.

Track has been laid on the second track under construction east of Vancouver, from Vancouver to Pitt Meadows, 22.1 miles, and the traffic has been handled over the double track line since the end of 1912. This piece of line carries the second track as far as the head of the new yards which are being laid out at Coquitlam. The building of a second track is in progress as far east as Ruby Creek, 81 miles from Vancouver.

The excavation for the foundations of the new station at Vancouver are being made, the section of the work in progress being east of the present station on Granville St.

The following figures were given out in Vancouver, Feb. 7, as to the expenditures to be made during the current year on this division:—New terminals, etc., $2,488,700; enlarging steamship and river service, $360,700; bridge renewals and replacements, $265,000; roadbed and track improvements, $656,400; buildings, $30,000; miscellaneous items, $199,000.

Sir Thos. G. Shaughnessy, President, is reported as stating in New York, Feb. 5, that the new work to be undertaken on the western lines division includes the building of a four mile tunnel at the foot of the Selkirk Mountains.

On his way through Vancouver to Japan recently Vice President George Bury was reported as stating that large grain elevators would be built on the Pitt River, as a part of the development of the new yards at Coquitlam, but that the plans for this part of the development were still in the formative stage, both as regards the wharf accommodation and the elevators.

Track laying on the line on the north shore, known as the Port Moody and North Shore Ry. was reported completed Feb. 1. It is reported that it is intended to continue the line as far as the Bidwell Bay area, and then across the north arm of Burrard Inlet into North Vancouver.

Press reports state that tanks are to be built at Port Moody, Coquitlam, Mission Jct., Ruby Creek, and North Bend, for the storage of oil to be used in the engines running between Vancouver and North Bend.

The general programme for new lines, additions to existing lines, second track work, etc., on the western lines, to be undertaken during the current year were fully referred to in Canadian Railway and Marine World for February, pg. 76.

The Toronto, Hamilton and Buffalo Ry. is installing a telephone circuit for train dispatching, which is expected to be in operation in April. The dispatchers will be located at Hamilton as at present.

The Board of Railway Commissioners will take up the question of reciprocal demurrage, and its suggested application in Canada, at a sittings in Ottawa on April 15.

The Toronto, Hamilton and Buffalo Ry. is said to be arranging for telephone train dispatching.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued.

Approval of Supplement 5 to Canadian Classification.

18495. Jan. 14. The application of Canadian Freight Association on behalf of the railway companies, under sec. 321 of the Railway Act, for an order approving of Supplement, no. 5, to Canadian Classification 15, and of a supplemental to the said no. 5, both containing certain proposed increased, reduced, and additional ratings. Notice of the proposed increased ratings having been given in the Canada Gazette, and the Board having invited consideration thereof by the Canadian Manufacturers' Association, the Montreal Chamber of Commerce, the Ontario Wholesale Grocers' Guild, and the Boards of Trade of Montreal, Toronto, Winnipeg, and Vancouver; and the increased ratings objected to having been withdrawn or modified. It is ordered that the said Supplement and Supplemental, consolidated, revised and amended, and designated "Proposed Supplement 5," filed for approval by G. C. Ransom, Chairman, Canadian Freight Association, by his letter of Dec. 2nd, 1912, and amended by his letters of Dec. 23, 1912, and Jan. 10, 1913, in lieu of those first submitted, be, approved for consolidation with Canadian Classification 15, and Supplements 1, 2, 3 and 4 thereto: the new consolidated issue to be known as Canadian Freight Classification 16, and to become effective in Canada, March 1.

Export Dates on Pulpwood.

18577. Jan. 27. Re order 17286, Oct. 23, 1913, made upon the application of International Paper Co. and others, for an order disallowing tariffs of Canadian Pacific, Grand Trunk, Canadian Northern Quebec, and Temiscouata Railway Companies, increasing rates on pulpwood from Ontario, Quebec and New Brunswick to Eastern United States points, and suspending effective date of said tariffs until Feb. 4, 1913: it is ordered that the said tariffs be further suspended until March 1, 1913.

Rates on Ex-Lake Corn.

18578. Jan. 23. The application of Transportation Bureau of Montreal Board of Trade, for an order reducing the rate on ex lake corn for milling purposes from Georgian Bay ports to Montreal to the same basis as in effect on ex lake wheat, barley and oats, for milling purposes; and directing the C.P.R. to apply the mileage basis as in effect in Ontario and Quebec, as shown in its Tariff C.R.C. E1929, on corn meal shipped from Montreal to the company's points in New Brunswick. It is ordered:—1. That order 16394, dismissing the application for an order, as above stated, be confirmed. 2. That the mileage tariffs of the railway companies, from the ports of transhipment, on ex lake corn in carloads, for milling purposes, be revised so as to provide rates on the said corn that shall not, in any case, exceed the mileage tariff rates charged from the same ports of transhipment, and for the same distances, on ex lake wheat, oats, and barley in carloads, for milling purposes; the said revised tariffs to become effective not later than Feb. 10, 1913.

Classification of Paraffine Wax.

18581. Jan. 24. The application of E. A. Lesueur of Ottawa, for an order directing that paraffine wax, at present classified only under "Oils," be added also to the "Chemicals" list in Canadian Freight Classification. It is ordered that in the first supplement to Canadian Freight Classification 16 submitted for the Board's approval, paraffine wax be added to the Chemicals list of the said Classification and continued in the "Oils" list as at present.

Regulations For Transportation of Explosives.

General Order 100. Jan. 16. Re application of Canadian Freight Association, on behalf of railway companies operating in Canada, for approval of the "Regulations for the Transportation of Explosives." Upon its appearing to the Board that the general public safety demands that the receiving, forwarding, and delivering of explosives by railway companies be protected by special regulations; that it is desirable that such regulations, so far as possible, be uniform with respect to shipments from a foreign country into or through Canada, or from Canada to a foreign country, as well as within Canada; and that the regulations submitted for approval are the same as those adopted by the Interstate Commerce Commission, revised and modified to conform to the provisions of the Railway Act and the requirements in Canada; and in pursuance of the powers conferred upon it by secs. 26, 30, 286, and 287 of the Act, and of all other powers possessed by the Board in that behalf—it is ordered that the said regulations, attached hereto marked "A," certified by the Chief Commissioner of the Board, be prescribed for the observance of railway companies within the legislative authority of the Parliament of Canada which accept explosives for carriage; that the said regulations come into force on March 1; and that upon and after that date order 7881, Aug. 27, 1909, be rescinded.

[Owing to the length of the regulations it is impossible to find room to print them here. Editor.]

Heated Cars for Perishable Freight.

General Order 101. Feb. 1.—Re application of Sanitaris, Limited, of Arnprior, Ont., White & Co., of Toronto, the Board of Trade of Hamilton, and others, for an order directing railway companies to furnish during cold weather heated cars for the carriage of perishable freight: Whereas, by order 15819, Jan. 18, 1912, railway companies were directed forthwith to re-establish the system or systems in practice by them, during the winter of 1910-11, of carrying less than carload lots in heated cars, and to grant to shippers the rights and privileges of such shipping facilities in respect to such traffic as were in force upon their various lines during the said winter, until further order, or until the reasonableness of the withdrawal of such facilities could be passed upon by the Board; and whereas, by general order 98, Dec. 6, 1912, railway companies operating in Eastern Canada were required to furnish to any shipper a heated refrigerator car, or cars, for the carriage during cold weather of fruit, vegetables and eggs, in less than carload quantities, subject to certain conditions specified in the order; and whereas the C.P.R. Co. interprets the said general order as superseding order 15819, and has discontinued the heated car service in respect of freight shipments not specifically provided for in the general order, and notwithstanding the fact that it has been notified, under the direction of the Board, that the intention of the said general order was not in any way to cancel or supersede the provisions of the previous order, the company refuses to carry out the terms of order 15819; now therefore the Board orders that general order 98 shall not be taken or construed as in substitution for, or in cancellation of, order 15819, but as in addition thereto; and the C.P.R. is hereby directed forthwith to comply with and carry out the terms and requirements of order 15819.

Grand Trunk Pacific Railway Earnings.

The earnings for the portion of the line being operated by the company, viz., the Prairie Section and the Lake Superior Branch, with a mileage of 1,104 miles, for January produced a [illegible].

In issuing the statement the company calls attention to a recent statement of the Chairman, to the effect that the results published for the first few months are for local traffic.

Press reports state that arrangements are being made for the absorption of the Esquimalt and Nanaimo Ry. into the C.P.R. system, the transfer to take place June 30. The E. and N. Ry. is owned by the C.P.R., but has so far retained its separate organization.

Birthdays of Transportation Men in March.

Many happy returns of the day to:—

W. [illegible], General Passenger Agent, C.P.R. Atlantic Steamship Lines, Montreal, born at Ottawa, Mar. 3, 1875.

P. S. Archibald, M. Can. Soc. C.E., Commissioner New Brunswick Coal and Ry. Co.'s Railway, and General Manager, Elgin and Havelock Ry., Moncton, N.B., born at Truro, N.S., Mar. 21, 1848.

George Bury, Vice President, C.P.R., Winnipeg, born at Montreal, Mar. 6, 1866.

Allan Cameron, Superintendent, Land Branch, Department of Natural Resources, C.P.R., Calgary, Alta., born near Owen Sound, Ont., Mar. 14, 1864.

F. G. J. Comeau, General Freight Agent, Dominion Atlantic Ry., Halifax, N.S., born at Meteghan River, N.S., Mar. 10, 1859.

A. E. Cox, General Storekeeper, Canadian Northern Ry., Winnipeg, born at Huddersfield, Eng., Mar. 12, 1863.

Hon. N. Curry, President, Canadian Car and Foundry Co., Montreal, born in King's county, N.S., Mar. 26, 1851.

C. T. Delamere, Assistant District Engineer, C.N. Ontario Ry., Montreal-Port Arthur Line, Port Arthur District, Port Arthur, Ont., born at Brainerd, Minn., Mar. 18, 1881.

Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co., Montreal, and President Canadian Street Railway Association, born at Montreal, Mar. 4, 1876.

G. R. Fairhead, District Freight Agent, Canadian Northern Ry., Hamilton, Ont., born at Toronto, Mar. 6, 1882.

C. Forrester, Superintendent, Stratford Division, Ontario Lines, G.T.R., Stratford, born at Wanstead, Ont., Mar. 5, 1876.

C. O. Foss, M. Can. Soc. C.E., District Engineer, C.N. Ontario Ry. Montreal-Port John, N.B., born at Wentworth, N.H., Mar. 20, 1852.

H. M. Gain, Trainmaster, Districts 6 and 7, Belleville Division, Eastern Lines, G.T.R., Belleville, Ont., born at Lindsay, Ont., Mar 21, 1879.

R. A. Gamble, Assistant General Yardmaster, C.P.R., Winnipeg, born at Dublin, Ireland, Mar. 1, 1876.

H. W. Gays, General Manager, Ottawa and New York Ry., Ottawa, Ont., born at Brant, Erie Co., N.Y., Mar. 21, 1848.

E. P. Goodwin, Inspecting Engineer, National Transcontinental Ry., Ottawa, Ont., born at Baie Verte, N.B., Mar. 17, 1865.

J. Halstead, Division Freight Agent, C. P.R., Calgary, Alta., born at Bracebridge, Ont., Mar. 2, 1877.

R. M. Hannaford, M. Can. Soc. C.E., Assistant Chief Engineer, Montreal Tramways Co., Montreal, born there, Mar. 22, 1865.

C. A. Hayes, Freight Traffic Manager, G.T.R., Montreal, born at West Springfield, Mass., Mar. 10, 1865.

H. T. Hazen, M. Can. Soc. C.E., Department of Railways and Canals, Ottawa, Ont., born at Truro, N.S., Mar. 14, 1870.

Joseph Hobson, M. Can. Soc. C.E., Consulting Engineer, G.T.R., Hamilton, Ont., born at Guelph, Ont., Mar., 1834.

N. J. Holden, President, The Holden Co., Ltd., Montreal, born at Nobleton, Ont., Mar. 22, 1866.

A. F. [illegible], Master of Bridges and Buildings, Mountain Division, G.T.P.R., Prince Rupert, B.C., born at Rawdon, Que., Mar. 23, 1859.

Frank Lee, M. Can. Soc. C.E., Principal Assistant Engineer, C.P.R., Winnipeg, born at Chicago, Ill., Mar. 7, 1873.

R. W. Long, Division Freight Agent, G. T.R., Hamilton, Ont., born at Appin, Ont., Mar. 20, 1873.

F. W. [illegible], General Boiler Inspector, C.P.R. Western Lines, Winnipeg, born at Montreal, Mar. 30, 1858.

J. M. McKay, Superintendent, District 1, British Columbia Division, C.P.R., Revelstoke, born at Tiverton, Ont., Mar. 13, 1868.

Owen McKay, M. Can. Soc. C.E., Chief Engineer, Essex Terminal Ry., Walkerville, Ont., born in Ross tp., Renfrew co., Ont., Mar. 13, 1848.

H. H. McLean, K.C., M.P., Vice President, St. John Ry., St. John, N.B., born at Fredericton, N. B., Mar. 22, 1855.

Sir Donald D. Mann, Vice President, Mackenzie, Mann & Co., Ltd., and First Vice President Canadian Northern Ry., Toronto, born at Acton, Ont., Mar. 23, 1853.

D. J. Murphy, Jr., Superintendent of Transportation, Dominion Atlantic Ry., Kentville, N.S., born at Caledonia, Ont., Mar. 3, 1874.

C. B. Mutchler, Signal Engineer, G.T. Pacific Ry., Winnipeg, born at Pine Island, Minn., Mar. 8, 1879.

R. Patterson, Master Mechanic, G.T.R., Stratford, Ont., born at Brantford, Ont., Mar. 13, 1860.

F. W. Peters, General Superintendent British Columbia Division, C.P.R., Vancouver, born at St. John, N.B., Mar. 25, 1860.

E. H. Sewell, City Passenger Agent, C. P.R., Sherbrooke, Que., born at Quebec, Mar. 17, 1875.

C. J. Smith, General Manager, Richelieu and Ontario Navigation Co., Montreal, born at Hamilton, Ont., Mar. 10, 1862.

G. Somerville, agent, Canada Interlake Line, Toronto, born at Kingston, Ont., Mar. 21, 1855.

W. Y. Soper, Vice President, Ottawa Electric Ry. Co., Ottawa, Ont., born at Oldtown, Me., Mar. 9, 1854.

W. C. Starke, Travelling Car Service Agent, G.T.R., Montreal, born there, Mar. 9, 1867.

D. O. Wood, General Freight Agent for Ontario, Allan Line Steamship Co., Toronto, born at Kleinburg, Ont., Mar. 16, 1864.

Railway Finance, Meetings, Etc.

Canadian Pacific Ry.—A cable from Hamburg, Germany, states that $5,000,000 of C. P.R. stock has been listed on the Bourse there.

Detroit River Tunnel Co.—The Windsor, Ont., City Council is seeking to have an agreement fixing the assessment of this company's tunnel and line at $444,444.44, set aside. The agreement was only approved by the Ontario Railway and Municipal Board for one year. It was originally proposed to assess the value of the tunnel property to the water front at $2,500,000 and it is now proposed to assess the property right to the middle of the river, making $3,500,000 in all.

Duluth, South Shore and Atlantic Ry.—Equipment notes for $310,000 at 4½%, dated Dec. 1, 1912, due $31,000 half yearly from June 1, 1917, guaranteed by the C.P. R., have been placed on the New York market. These cover part cost of 400 ore cars, the total cost of which was $391,750, the balance being paid in cash.

Maritime Coal Co.—Application was made to the New Brunswick courts, Feb. 5, for an order for the winding up of this company. The hearing was adjourned to Mar. 5. The Von Hazen interests, controlling the company, are also interested in the North Shore Ry., running from Adamsville to Beersville, N.B., which gives an outlet for the produce of the M.C. Co.'s collieries to the Intercolonial Ry.

Minneapolis, St. Paul and Sault Ste. Marie Ry. Equipment notes, series E, for $3,180,000, with interest at 4½%, dated Jan. 1, and due $159,000 half yearly to Jan. 1, 1923, are being placed on the New York market at par. The equipment covered is all new and of large capacity, including 25 locomotives, 49 steel passenger and mail service cars, 1,500 steel frame box cars, 400 steel underframe ballast and flat cars, 300 ore cars and 20 cabooses.

Quebec Central Ry.—Holders of 7% income bonds, were required to surrender the same on or before Feb. 17, receiving in exchange their corresponding proportion of an issue of £338,000 of sterling 5% third mortgage bonds, redeemable in 50 years, issued under the provisions of chap 82, of the Quebec statutes of 1912. These bonds rank next after the 3½% second mortgage debentures, secured by the rental payable by the C.P.R., and principal and interest guaranteed by that company. In addition to the new bonds, the holders of the 7% income bonds, will receive a bonus of 10% of their face value in cash.

Holders of 3% second debenture stock were required to surrender the same on or before Feb. 17, receiving in exchange pound for pound, their proportion of an issue of £338,000 of 3½% second mortgage debenture stock, redeemable in 50 years. The new stock is a second charge on the company's property, and is secured by the rental payable by the C.P.R., and principal and interest is guaranteed by that company.

Toronto, Hamilton and Buffalo Ry. — There have recently been placed on the New York market, series A, 4½% equipment notes for $1,500,000, maturing in 20 half yearly payments of $75,000 each, to Feb. 1, 1923.

Victoria and Sidney Ry.—The Great Northern Ry. has increased its offer by $15,000 and the Victoria, B.C., City Council has accepted it as a settlement of the claims against the V. and S. Ry. The province and the city guaranteed the company's bonds to the amount of $300,000. The interest has been met by the province and the city for twenty years. The property was acquired by the Great Northern Ry., and negotiations have been going on as to betterments of the line. As a result of the bargain the G.N.R. will release the province and city from liability for the remaining years of the guarantee of interest, will pay the bonds on maturity, and will spend $200,000 on betterments on the line. The amount to be paid in respect of interest already paid by the province and city is $75,000. The agreement now only requires formal ratification.

White Pass and Yukon Route.—Gross earnings for 1912, $1,131,501, against $1,067,590 for 1911.

Wearing of Ear Mufflers by Trackmen.—The following circular has been issued by the General Manager of the Pennsylvania Rd. to all officers having in charge men working on tracks:—"The wearing of ear mufflers by trackmen renders their hearing less acute while being worn, and while it is not desirable to prohibit the practice of wearing mufflers, Foremen should be warned to pay particular attention to the men who wear them, in regard to warning the men of approaching trains, and all foremen should be advised of this at once."

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any omission or errors in the announcements will confer a favor by advising us.

Canadian Northern Ry.—JAS. H. CORMICK has been appointed Signal Engineer. Office, Winnipeg.

T. J. LOWE has been appointed Fuel Agent. Office, Winnipeg.

H. W. CULVER, heretofore locomotive driver, has been appointed Road Foreman of Locomotives, Winnipeg, vice J. A. Carroll, transferred to Winnipeg Joint Terminals' service.

J. M. BANNERMAN has been appointed Assistant to Chief Special Agent, General Claims Department, vice A. E. Macdonald, promoted. Office, Winnipeg.

P. K. MANAHAN, heretofore conductor, has been appointed Trainmaster, District 2, Western Division, vice F. W. Ross, transferred to North Battleford, Sask. Office, Saskatoon, Sask.

W. C. TURNER, heretofore Yardmaster, Saskatoon, Sask., has been appointed Assistant Trainmaster, District 2, Western Division, Saskatoon, and not Trainmaster, as mentioned in our last issue.

G. L. POUCHER has been appointed Yardmaster, Saskatoon, Sask., vice W. C. Turner, promoted.

F. W. ROSS, whose appointment as Trainmaster, District 3, Western Division, vice B. T. Chappell, was announced in our last issue, has his office at North Battleford, Sask., and not at Edmonton, Alta., as then mentioned.

F. CLARK, heretofore Assistant Locomotive Foreman, Dauphin, Man., has been appointed Locomotive Foreman at Radville, Sask., vice R. H. Mann, assigned to other duties.

R. H. MANN, heretofore Locomotive Foreman at Radville, Sask., has been appointed Night Foreman, there. This is a new position.

D. E. BROWN & McCAULEY, Ltd., have been appointed ticket agents, Vancouver, B.C.

J. B. COURTRIGHT has been appointed Travelling Freight and Passenger Agent, Vancouver, B.C.

G. W. VAUX, heretofore Passenger Agent, Toronto, has been appointed General Agent, Passenger Department, Chicago, Ill.

J. GOODSELL, heretofore Travelling Passenger Agent, Detroit, Mich., has been appointed City Passenger and Ticket Agent, Chicago, Ill.

Wabash Rd.—F. A. SULLIVAN, heretofore Local Freight Agent, Detroit, Mich., has been appointed Division Freight Agent, there, vice E. H. B. Cull, deceased.

Winnipeg Joint Terminals (Fort Garry Union Station), Winnipeg.—J. A. CARROLL, heretofore Road Foreman of Locomotives, C.N.R., Winnipeg, has been appointed Locomotive Foreman, C.N.R., G.T.P.R. and National Transcontinental Ry. Joint Terminals, Winnipeg.

Recent Saskatchewan Legislation.

The following acts affecting transportation interests have been passed by the Saskatchewan Legislature:

Canadian Northern Ry.—Amending previous acts guaranteeing certain securities for the construction of branch lines.

Grand Trunk Pacific Branch Lines Co.—Amending previous acts guaranteeing certain securities for building of branch lines. Also an act providing aid towards construction of terminals for G.T.P.B.L. Co. and G.T.P. Saskatchewan Ry. in Regina, Saskatoon and Prince Albert.

Railways.—Amending act respecting Department of Railways, Telegraphs and Telephones, and an act creating a separate Department of Railways.

Saskatchewan Co-operative Elevator Co.—Confirming agreement made Dec. 6, 1912, between the Government and the company.

S. S. Russell,
General Superintendent of Transportation, Central Vermont Railway.

Toronto, Hamilton and Buffalo Railway Earnings, Etc.

The following figures for the calendar year 1912 have been given out:—

	1912.	Increases.
Operating revenue	$[illegible]	$[illegible]
Operating expenses ...	[illegible]	[illegible]
Net earnings ..$	[illegible]	$[illegible]
Other income	[illegible]	9,679
Gross corporate income ..$	873,000	$303,443
Interest and equipment [illegible]	[illegible]	[illegible]
Surplus .. .. $	[illegible]	$[illegible]

Dominion Railway Subsidy Contracts.

[illegible]

CENTRAL RY. OF CANADA, Feb. 7.—From Ste. Agathe des Monts station toward Howard Tp., Argenteuil Co., Que., passing near Lake St. Joseph and St. Mary in a southerly direction, 15 miles.

DEPARTMENT OF RAILWAYS AND CANALS.

Car Ferry Terminal, Carleton Point, Prince Edward Island

SEALED TENDERS, addressed to the undersigned and marked "Tender for Car Ferry Terminal, Carleton Point," will be received at [illegible] 1913.

Plans, specifications and form of contract to [illegible] at the office of the Chief Engineer of the Intercolonial Railway at Moncton, N.B., and at the office of Horace McEwen, Superintendent of the Prince Edward Island Railway, Charlottetown, P.E.I.

Parties tendering will be required to accept the fair wages schedule prepared or to be prepared by the Department of Labour, which schedule will form part of the contract.

Contractors are requested to bear in mind, that tenders will not be considered, unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of $50,000.00, made payable to the order of the Minister of Railways and Canals, must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work, at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,
L. K. JONES,
Asst. Deputy Minister and Secretary.

Department of Railways and Canals,
Ottawa, 18th February, 1913.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.

CANADIAN PACIFIC RAILWAY COMPANY.

North Toronto Grade Separation.

NOTICE TO CONTRACTORS.

SEALED proposals will be received by the undersigned up to 12 o'clock noon on Thursday, March 20, for the construction of the substructures of subways at Davenport Road, Spadina Road, Howland Avenue, and Bathurst Street, at North Toronto.

Plans and specifications can be seen at the office of the Engineer of Grade Separation at No. 262 Avenue Road, where proposal forms can also be obtained.

The lowest, or any, tender, not necessarily accepted.

B. RIPLEY,
Engineer of Grade Separation.
Toronto, February 20th, 1913.

Electric Railway Department.

The Montreal Tramways Company's New Shops.

These shops have recently been opened for regular work, although the rolling stock department has been housed in its new offices in the shops for the last 18 months. The shops are situated near the village of Youville, a suburb of Montreal, near the Montreal Park and Island Ry's, Sault au Recollet line, about half a mile beyond the terminus of the St. Denis Street line of the city service.

The site, on Vervais Road, is about 30 acres in extent, with a frontage of 576 ft., and an average depth of about 2,000 ft. The shops are situated about half way back in this tract. The site being off the railway line, a special spur had to be built along Vervais Road from the St. Denis Street line.

The plant consists of a main building and several minor buildings at points around it, the majority having a direct connection, making an admirable arrangement for intercommunication in cold weather. The plant, looking at the south and north sides, is shown in figs. 1 and 2, respectively, and the plan of the shops and grounds, with approaches, in fig. 3.

The dimensions of the main building are approximately 425 ft. long by 269 ft. wide. Essentially, the main building consists of two units under the one roof, the two sections being separated by a transfer table down the centre between the two parts. In this particular, the shops are unique, the practice of covering in the transfer table not being usual. In the peculiar climatic conditions with which the rolling stock department is called upon to cope, an outside [illegible] a great deal of trouble from blocking up with snow in winter. The transfer table, fig. 4, 70 ft. 8 ins. wide, operates in a runway 346 ft. long, which contains four standard gauge tracks, laid with 80 lb. rails, on which the table operates. The motive power is a small, discarded electric railway motor, mounted on a projecting platform of the transfer table, and operated by a controller on a projecting platform adjoining. The runway has a cinder floor.

The building is built of brick throughout, on concrete foundations, with large window spaces on all sides. In consequence, the light penetrates into the centre of the shop at the transfer table. In addition, the skylights in the roof assist materially in making the interior light at all times during the day.

The transfer table runway is spanned by a 70 ft. truss, the nature of which is shown in figs. 1 and 2, and the interior view in fig. 4, the highest part of the building shown being the monitor that runs the full length of the runway. The sides of the monitor have swing sashes, operated from one end by a shaft.

The front section of the shop is what may be termed the motive power section, as all the repairs to the running gear and motors are attended to in it. This part of the shop is further subdivided into six sub sections—car hoists, overhauling section, wheel and axle shop, blacksmith shop, machine shop, and armature shop, all these several departments centering on the overhauling department, located down the centre of this half of the building.

Cars to be overhauled enter the building by the doors at either end, the principal entry being from the door to the south. Running on the transfer table, a car is quickly spotted on the required repair track, of which there are 14, laid with 80 lb. rails. Twelve of these repair tracks are equipped with car hoists, a construction that is rather novel in Canadian car shop practice. The construction and operating mechanism of the hoist is shown in figs. 5 and 6. The hoists are ranged in a row, just far enough over from the edge of the transfer table runway to give a clear passage way along that side.

On each side of the pit, at 10 ft. centres, is a 30 ft. length of 12 by 5 in. I beam, mounted on the upper ends of two 4 in., ¾ in. pitch, square threaded screws. This section of the shop, the length of the car hoist, is chambered out beneath at the same level as, and parallel to, the pit. The hoist screw passes through into this lower chamber, and is supported on a vertical thrust block nut in this chamber floor. On each of the screws, just above the chamber floor, is a worm gear, engaging with a worm on a shaft near the floor, parallel with the pit. The end of the parallel shaft on each side of the pit, mesh with bevel gears on the end of a cross shaft in the pit at the transfer table end. This shaft is an old 12A (30 h.p.) motor. Between each hoist, on the column next to the transfer table, there is an old K10 controller, above which is mounted a double throw switch, by which means either of the hoists can be operated at will.

In the use of the car hoists, it is the practice to place a section of I beam across the pit at the ends of the side I beams, under the ends of the cars, as shown in fig. 6, and by raising the screws by the motor the car body can be raised from its trucks and the latter run out, when the car body can again be lowered to a more convenient height for working, or if desired, lowered on shop trucks for removal to the paint or erecting shop, for further repairs, if the nature of the repairs is such that it would not be desirable to await the repair of the trucks before proceeding for final finishing. These car hoists have been found to be of great value in assembling new cars as received from the factory. The bodies, as received on the flat cars, can be raised, the flat car run out and the trucks run into position, and the body lowered thereon.

The pits, both under the car hoists and further back in the shop, are of concrete construction throughout. Under the car hoists, there is a supporting wall under the rail, but the balance is chambered along the hoist shaft as mentioned, with a concrete floor, and a reinforced concrete main floor over top. The extension of the pit in the overhauling department is similar in construction, with the absence of the side shaft tunnel chambers. At that end of the pit, there are also steps to the level of the shop floor. The total length of the pits, hoist and overhauling, is 87 ft. 10 ins., with a depth of 4½ ft. Between the hoist and overhauling sections of the pits, there is an uninterrupted passage under the tracks, where the track supporting wall is cut away, permitting access between pits. On the floor of the pit, and running the full length of each, is a 4 ft. gauge track for a small car, on which the motor and

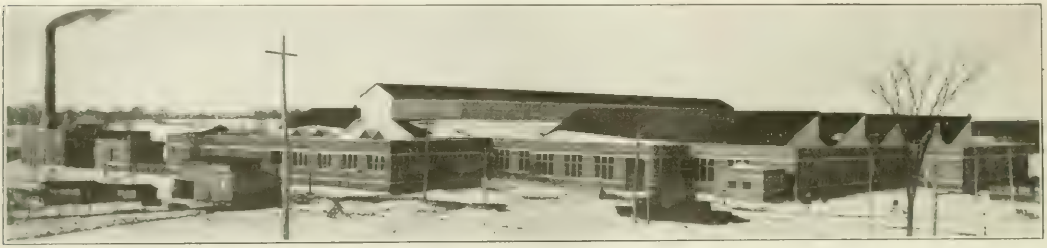

Fig. 1.—Montreal Tramways Co.'s New Plant viewed from the South.

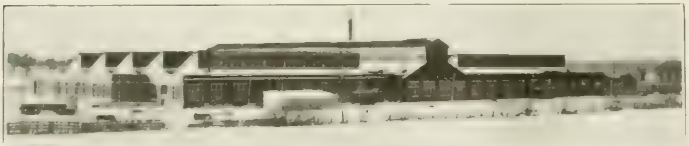

Fig. 2.—Montreal Tramways Co.'s New Plant looking at the North Side.

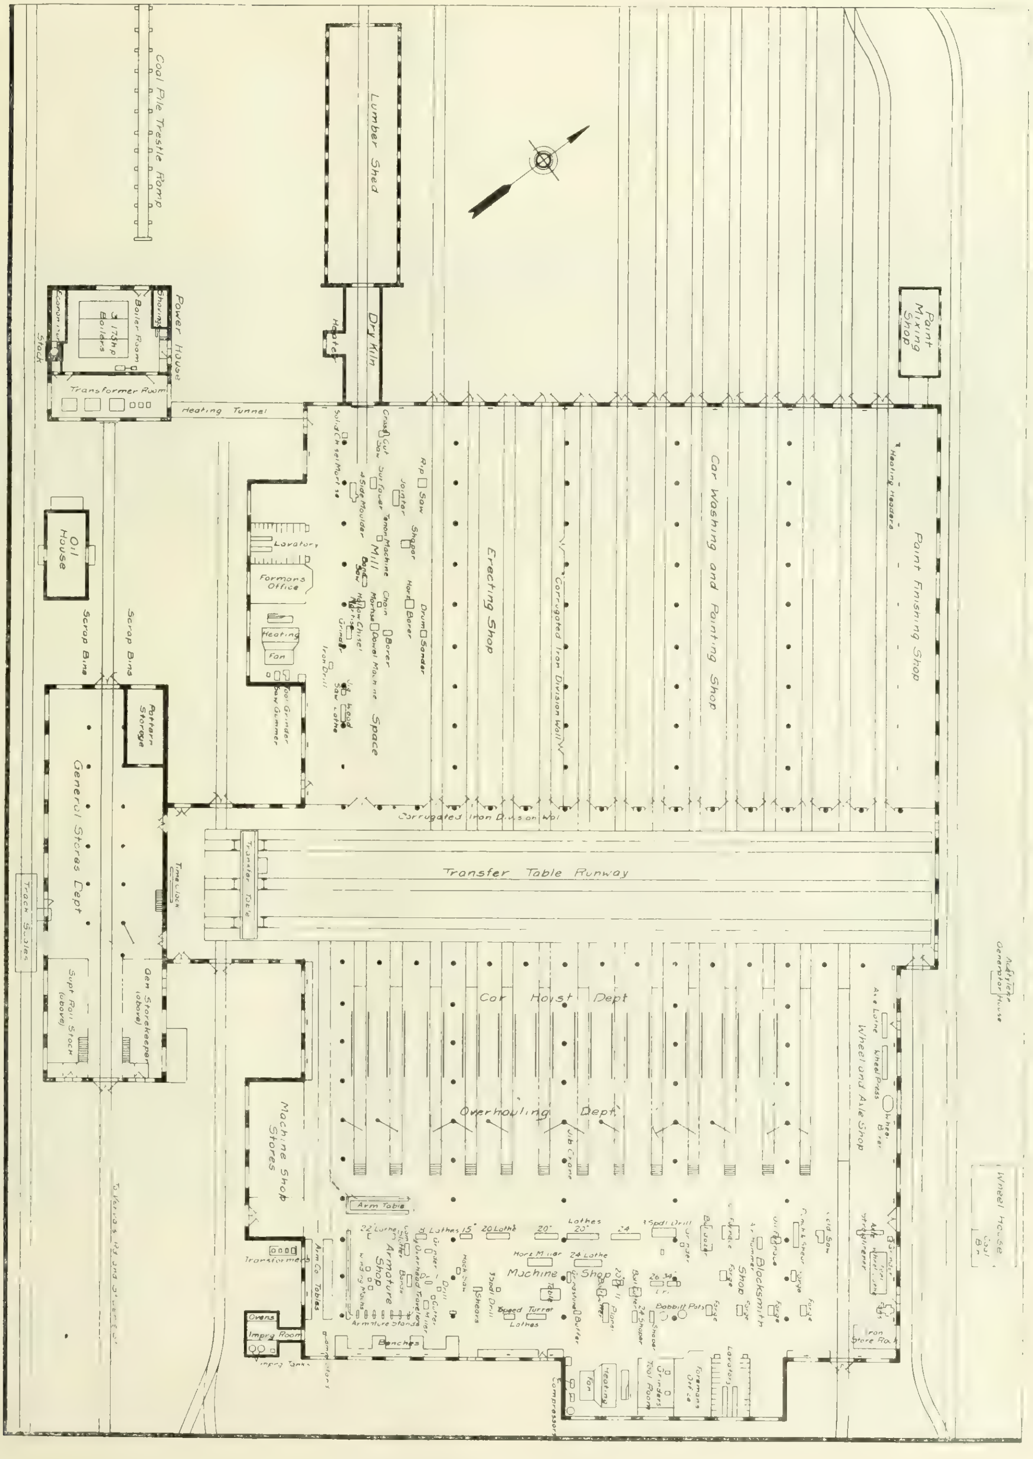

Fig. 3.—Plan of the Montreal Tramways Co.'s New Plant, showing layout of all Shops.

[illegible] there being a jib for each pit. The jibs and overhauling section are shown in the background in figs. 8 and 9. It will be noticed that the trucks as run out from under the cars at the hoists, are spotted over the pits in the overhauling section, shown at the far end of the pit, fig. 6, and there dismantled when required. On [illegible] and equipment as removed may be mounted and kept conveniently together while undergoing repair. The parts that require machine or forge work can be brought across into those sections in front of the overhauling department.

Along the north wall of the shop is located the wheel and axle department. The layout of this is shown in fig. 3, and the arrangement in fig. 7. Ranged along the wall in this department are all the machines, which include a steel wheel [illegible] axle straightener, wheel boring machine, wheel press and an axle lathe. These machines are all on a group drive, with overhead shafting along the wall. In front of the boring machine and axle lathe are air hoists, suspended on an I beam parallel to the line of the [illegible] I beams for the mounting of the work in the [illegible] pit, there is also an air hoist for the carrying [illegible] removed under the air hoist, run out on the transfer table and brought down the shop to this track, adjoining the wheel and axle department. Between the axle straightener and the wheel boring mill, there is a space used for the interior storage of wheels before and after machining, stacked in piles out from the wall as in the background in fig. 7. A stock of wheels for this department is maintained in a small frame building across the outside track from the side entrance.

The blacksmith shop occupies that portion of the shop in the immediate foreground in fig. 8, an area of 71 by 66 ft. The floor of this department is of the usual cinder form, in which it differs from that in the balance of the shop, which has a more solid construction. The original intention was to have a solid concrete floor, but this plan has been modified in the constructed building, the floor consisting of a layer of concrete on a cinder bed, the concrete being superimposed with a 2 in. layer of bitulithic pavement. This covering has the advantage of a longer life, and at the same time its plastic nature leaves it freer from breakage from parts falling on it, with consequent dire results to the falling parts. In the event of anything falling on the bitulithic floor, the resulting hole in the floor can be removed by the rolling over of the plastic material. A springy floor of this kind is also much easier on the operators who must stand on it all day, concrete floors being a fruitful cause of ailments, while the bitulithic, having less heat conductively, never becomes as chilled.

The blacksmith shop is equipped with a liberal supply of machines for the efficient handling of all classes of repair work. This equipment consists of the following: cold saw, punch and shear, 4 by 2 ft. oil furnace, air hammer, 6 ft. square oil furnace, bulldozer, dry grinder, and 6 down draft forges. The forced draft and exhaust fans for these six forges are located along the north wall, driven from the line shafting of the wheel and axle department. The exhaust from the forges is discharged through a pipe that rises to the roof directly over the exhaust fan. The blast and exhaust of the forges passes through pipes bedded in the concrete floor so that the whole blacksmith shop is remarkably free from overhead obstructions. The air hammer used in the department is an upright steam hammer using compressed air as the operating medium instead of steam, the exhaust discharging into the shop over top of the machine.

Something new in the manner of handling the bar iron stock in the blacksmith shop has been introduced here. In the corner of the shop adjoining the blacksmith department, there has been constructed a bar iron rack of sufficient size to handle all the stock required to be carried for the blacksmith department. The ends of the rack are provided with expanded metal doors, of which there are three, these doors being kept normally locked. When the blacksmith requires some stock, the stores department is advised, and the stores attendant comes over to the rack and delivers to the black-

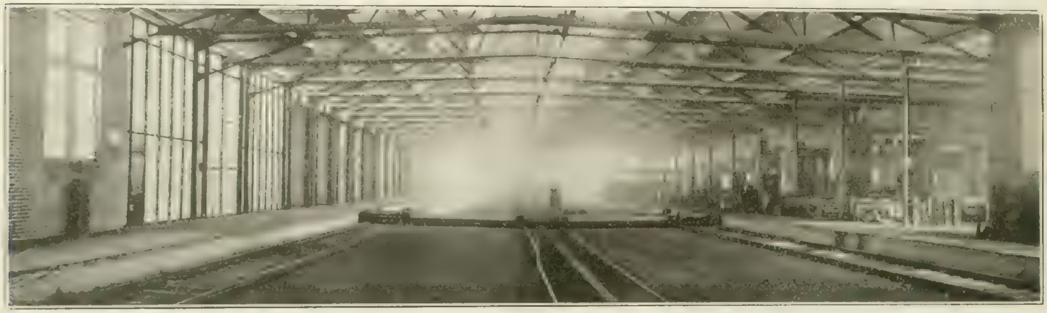

Fig. 4.—Covered in Transfer Table which centrally divides the Shops.

Fig. 5.—Details of One of the Twelve Car Hoists.

smiths the required stock, arranged in the usual manner. The object of this arrangement is to obviate the necessity of a couple of men making several trips back and forth between the blacksmith shop and the stores department to bring over a few bars of stock, the stock being now kept in the place where it is required. It is unloaded directly from the supply car onto the rack just as conveniently as in the stores building.

The machine shop adjoins the blacksmith department to the south, occupying the whole central portion of the east side of the shop, in an area 71 by 100 ft. The machine equipment consists of the following tools: 3 spindle drill, 24 in. lathe, three 20 in. lathes, 15 in. lathe, wet tool grinder, 24 in. lathe, horizontal boring and milling machine, grindstone, power hack saw, 34 in. drill, 26 in. drill, double head bolt cutter, 20 in. drill, single head bolt cutter, 3 spindle drill, shears, 2 babbit melting pots, two 24 in. shapers, planer, buffer, turret lathe, and speed lathe, all arranged as laid down in fig. 3. The drive for these several machines is from overhead shafting, the machines arranged in groups for group drive.

Fig. 6.—Car Hoist supporting Car Body.

Fig. 7.—Arrangement of Wheel and Axle Shop.

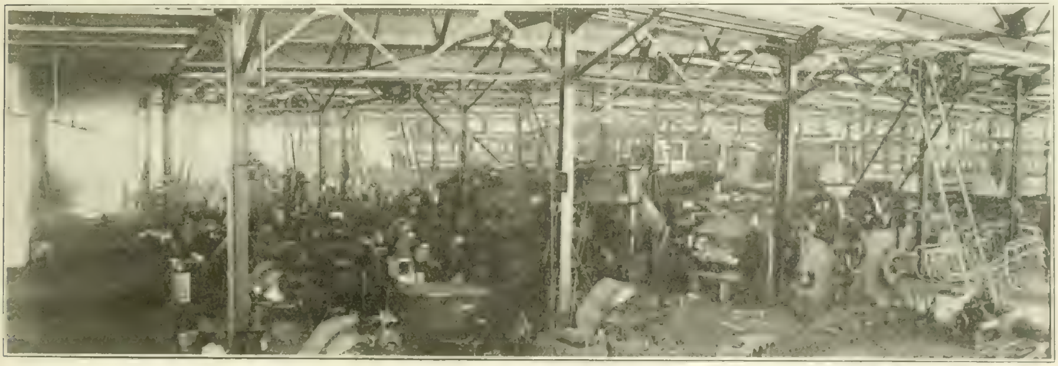

Fig. 8.—Interior View of Main Building, showing Blacksmith Shop, and Overhanging Stage in Background.

The armature department occupies the south easterly section of the shop, and is the portion shown in the immediate foreground in fig. 9. The tool layout in this shop is shown in fig. 3, and includes the following machines: 18 in. lathe, 22 in. lathe, wet tool grinder, commutator slotter, 2 spindle drill, 20 in. drill armature bander, printers' cutter, and universal miller. In addition there are seven of the usual armature stands shown to the right in fig. 9 and two armature tables, one of which is in the immediate foreground, and the others in the left background. Along the west wall are fitters' benches, and along the south wall, on two benches, are mounted the taping machines and other equipment for taping the armature and field coils. The end of one of these latter benches is shown in the left foreground of fig. 9.

Circling the armature department is an overhead I beam trolley, shown in fig. 9, which travels around over the armature tables and stands in the path shown in fig. 3. The armature to be repaired is brought in from the left in the direction indicated, from the track leading from the transfer table, and placed on the first armature table. The armatures from there are picked up as required, and placed on the stands, and when repaired, removed to the second armature stand, ready for removal to the point of entry, and thence to the awaiting trucks by way of the transfer table. The armatures thus make a complete belt line, with a constant forward movement.

Built out from the south east corner of the shop there is a small room containing two impregnating tanks and and oven for the treating of the armature and field coils.

About midway along the east wall, fig. 3 shows a projecting wing, which is divided off into rooms. The southerly room contains the heating equipment for the part of the shop east of the transfer table. This is made a local power room, for along the south wall of this room are located two compressors one of which is 10 x [illegible] [illegible] 37 ins. diameter and 12 ft. high, is located in the room. [illegible] ed water in the air, a cooler has been in[illegible] headers between which the air flows in small piping, the heat radiating, and the water distilling and collecting at the bottom [illegible] cooler is located in the connection between the compresors and the tank on the outer wall of the room. These compressors deliver at a pressure of 80 lbs. For rivetting, 100 lbs. is required, so the shop is provided with a car set for boosting the air from the line pressure of 80 lbs. to 100 lbs.

The room adjoining is the tool room, and in addition to carrying the usual assortment of small tools, etc., contains a tool room grinder and a drill grinder. The entrance is from the shop, and in that wall there is a delivery window for handing out the tools.

The foreman's office is housed in the room adjoining, which it will be noticed is bayed out into the shop, giving a more comprehensive view of the shop interior. Adjoining the foreman's room to the north, is the lavatory, which is a splendid example of shop accommodation. Down the centre, next to the windows, is a double row of washbasins, provided with hot and cold water, and along each wall is a row of urinals, with [illegible] [illegible] taken up by [illegible] closets. The end room contains lockers.

The projecting wing on the south side of the building is for the local stores, and the accommodation of the repaired material. It is a room 69 by 26½ ft., and is known locally as the machine shop store.

The shop is equipped for oxy-acetylene welding, handled at present at the northerly end of the transfer table. A small out building is under construction for this plant, where all the repair work for the plant will be handled. The range of work at present handled is quite extensive, all manner of repairs being made to motor casings and truck frames.

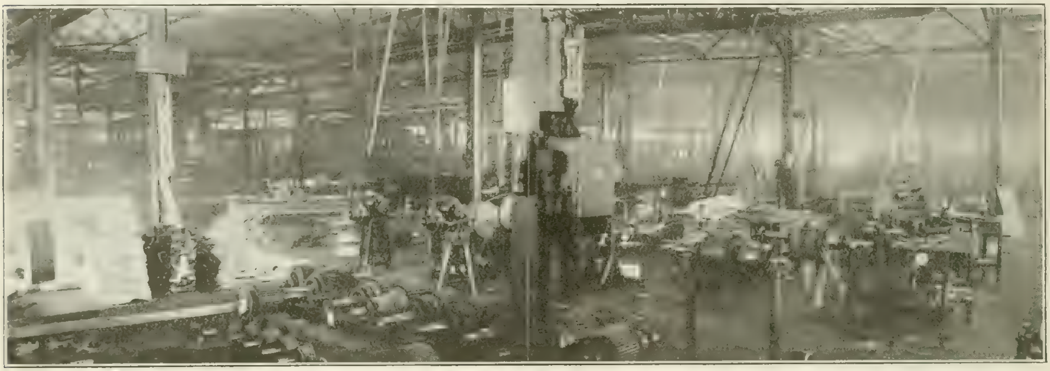

Fig. 9.—Interior View of Main Building, showing Armature Shop, with Machine Shop and Overhauling Space in Background.

The shops are more or less symmetrically arranged around the central transfer table, and in construction the halves are similar in nearly all details. At right angles to the transfer table, there run five bays of equal width, each spanned by a roof truss, the top members of the trusses being extended on the south side so as to form a saw tooth construction with the skylight opening to the north light. This construction is shown in the views, figs. 1 and 2. All these skylight windows have controllable sashes that can be opened in unison from below.

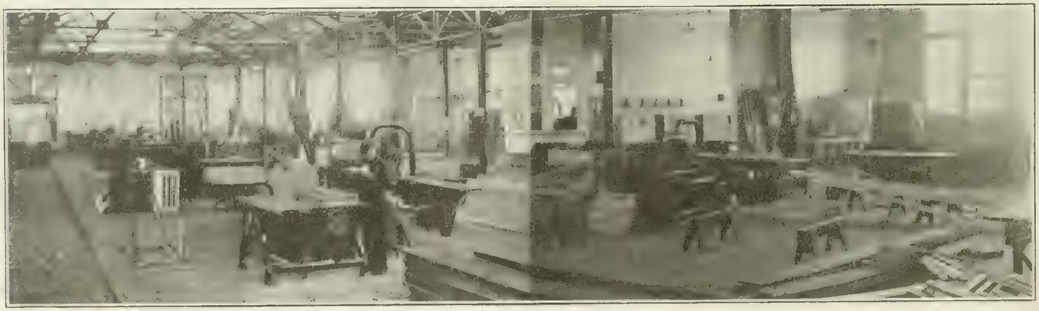

Fig. 10.—Interior View of Mill and Erecting Shop, showing Auxiliary rooms on the Right.

The section of the shop to the west of the transfer table is used entirely for car body work, and on account of the inflammable nature of the material contained, it is divided off from the rest of the shop at the transfer table edge by a corrugated iron wall, as shown on the left in fig. 4. Thirteen tracks are contained in this half of the shop, located directly opposite the corresponding tracks in the machine shop section. In the car section are housed three departments, car washing and painting, erecting shop and mill, the latter two in one section, and the first in a separate section, the two parts being separated by a corrugated iron wall for similar reasons to that stated for the other wall.

The mill space is shown in fig. 10, a view taking in nearly the whole department. This space contains the following machines, as noted in fig. 3: Jig saw, saw gummer, tool grinder, iron drill, single and triple drum sanders, dowel machine, horizontal boring machine, band saw, tenon machine, shaper, jointer, four side moulder, surfacer, rip saw, solid chisel mortise, cross cut saw, pattern makers' lathe, hollow mortise, chain mortise and exhaust blower. The requirements of a mill are such as to necessitate a very clear overhead space if rapid production is much desired. In consequence, this plant has introduced the underground drive, which is becoming so popular in wood working plants. In this underground scheme, practically the whole shop where the machines are located, is chambered out to form a shallow basement, in which are located the motors, shafting and belting, the latter coming up through the floor to the machine. In fig. 10, it will be noted that there is no belting visible, the driving equipment being all located under the floor in the shallow basement, approached by steps from the right.

All the auxiliary equipment for the shop is also housed in this shallow basement, including an exhaust blower. This underground scheme is particularly advantageous for this, as the shaving and saw dust exhaust pipes at the machines, pass down through the floor into this basement, connecting with a central pipe through the basement to the exhaust fan, which delivers the shavings through an inclined pipe to a hopper in the power house.

In the mill space, there are no tracks, but the erecting shop in the same room contains four, each of which has a pit of the same proportions and 66 ft. long, at the transfer table end. One of these is used as a local store for the rod stock used in the erection work.

The car washing and painting shop to the north of these last departments, contains 9 tracks, the southerly three of which contain similar pits to those in the erecting shop, making 7 pits in all in the car department. This department, with an area 176¼ by 150 ft., is the larger portion of the car department, and it is in this department that the major portion of the car overhauling, consisting for the most part of repainting and general brightening up, is performed. The north wall of this section, shown in fig. 11, is the sash and door finishing section, in which all the removable parts of the car body are finished; this includes painting, glazing and varnishing. Shop trucks will be noted in the foreground of fig. 11. These are taken to the car to be dismantled, loaded with the removable parts and taken on the dismantling truck to this department for finishing.

A paint mixing shop, 18 by 38 ft., is located to the west of the north west corner of the shop, and is separated from the main building by a covered in passage way for fire purposes.

The dry kiln and lumber shed are located to the rear of the mill space, in narrow buildings, as shown in fig. 3.

These two buildings communicate with each other and with the mill room by a track through the [illegible] end of the mill space, which is used for the storage [illegible] of lumber ready for the mill. The dry kiln is 52 by 16 ft., and has a projecting side wing on the south side, communicating at both ends by [illegible] tight sliding doors. In this projecting wing, on the [illegible] side, there is a heating unit consisting of a bank of pipe coils with a 4 ft. fan direct connected to a small engine, the steam being received from the power house near by. The lumber shed to the rear is 113 by 30 ft., provided with piling racks on each side for the select woods.

Along the south side of the car department section, there is a projecting wing containing lavatories, office and heating unit, all exactly the same as the arrangement in the machine shop section.

The general stores department is the long building at the southerly end of the transfer table, communicating with the main shop at that point. The east end of the stores building is two stories high at the sides, with the upper stories for offices. On the south side is the office of the Superintendent of Rolling Stock, and on the north, that of the General Storekeeper. To the rear of this point is the stores section, the south side of which is shown in fig. 12. That side consists of a series of 11 cross tiers of store bins, and on the north side, there are lower bins for heavier stores. The north side also has an upper gallery, along which is a tier of store drawers for light parts such as screws and other stores that are required in large quantities. This gallery communicates directly with the General Storekeeper's offices and also has a stair to the floor level. At the west end of the south side, there is a vault structure, 35 by 18 ft. which is used for the storage of patterns. The rooms under the offices are for springs, gears and pinions.

Through the centre of the stores building runs a track, by which the stores can be brought directly into the building, and loaded again directly on the stores car for distribution over the system. This track to the rear leads out through scrap bins that are now under construction. These bins are arranged along both sides of the track and are covered. The bins on the south side have a narrow gauge track along the front for the passage of the scrap into the desired bin and for sorting, and midway in this track is a track scale for weighing the material.

These scrap bins extend to the oil house, a one story and basement structure, 37 by 17 ft., to the west of the stores building. Like the other buildings it is of brick, with a concrete floor. Entrance to the main floor is through sliding doors from platforms on the track sides. The west end of this floor is to be used as [illegible] storage space, arranged with a frame work of iron to carry five double tiers of oil barrels, practically a carload of oil in all. The other end of the room is for a Bowser oil tank installation, the tanks for which will be located in the basement. The basement is entered by an outside stairway on the west side. In it in addition to the tanks, there will be a waste treating plant for impregnating the waste with oil and packing it in barrels for sending to the different divisional points. In the cellar entrance way, there is a hoist for lifting the barrels, with an overhead track running out in front of the building for transporting the barrels out on the stores car.

The power house is located to the west of the oil house, and is a brick structure, 52 by 58 ft., divided into boiler and transformer room by a brick partition. The boiler room contains three 175 h.p. boilers, carrying 100 lbs. of steam. To the rear of the boilers is a fuel economizer, the scraper for which is operated by a 3 by 2½ in. vertical engine. The boiler feed is provided for by a 10 by 6 by 10 in. feed pump, but under normal conditions, it is not required in service, as the city water pressure is 125 lbs.

The transformer room of the power house contains three 50 k.w., and one 30 k.w., transformers. The former receive power from the high tension lines to the shops at 13,200 volts, dropping it to 2,200 volts for transmission to the shops. At the shops, as shown alongside the impregnating room in fig. 1, there are transformers mounted on a bracket on the machine shop stores room wall, receiving power from the power house at 2,200 volts, and dropping it to 220 volts for shop use. The fourth transformer in the power house is for dropping the 2,200 volt power to 110 volts, for the shop lighting system.

To the west of the power house is the coaling plant, consisting of a trestle ramp., open below upon which the coal cars are run and dumped. Between the trestle piles below, it is the intention to lay a narrow gauge track for a short industrial line to carry the coal into the boiler room to replace the present wheelbarrow method. An ash handling plant is under construction at the upper end of the ramp. In front of the boilers, there will be a long worm in a channel, which will carry the ashes out to an elevator at the end of the ramp, raising them to a chute projecting over the car.

HEATING SYSTEM.—Hot air is used for the heating of the main building, with the heating plants located in the south and east sides of the buildings, in projecting wings. Steam for this purpose is brought through tunnels inside the walls from the [illegible] from the [illegible] [illegible] is a 5 by 6 ft. concrete tunnel, with 12 in. walls, and [illegible] reinforced concrete roof, the latter 18 in. below the level of the ground, and designed to carry a loading of 400 lbs. per sq. in. The steam and return pipes are carried on the walls of the tunnel on roller brackets secured to the walls by hooked bolts in the concrete, and located at 8 ft. centres. The tunnel along the walls of the shop through which the pipes pass is similar in design, and is the duct through which the hot air is led through the shop.

The steam from the boiler through the tunnel comes in an 8 in. main, continuing the same size to the first heating apparatus room, following the wall. From that point on along the south and east walls to a point near the second apparatus room the main is reduced to 6 ins., reducing still further to 4 ins. The return from heating the second apparatus is through a 2½ in. pipe, increasing to 3 ins. at the first apparatus room, passing through the tunnel in a 4 in. pipe. At the extreme end of this steam and return piping, i.e., at the second apparatus room, there is a 1¼ h.p. vacuum pump in a pit, for looking after the return of the condensation, sending it back to the boiler room through the return pipe.

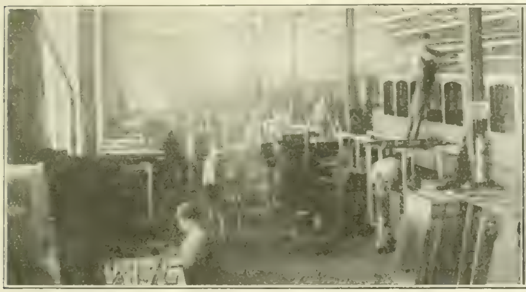

Fig. 11.—Arrangement of Paint Finishing Shop.

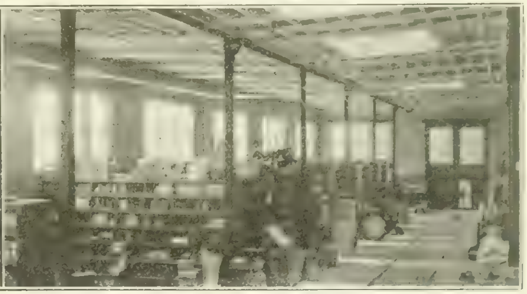

Fig. 12.—Arrangement of South Side of General Stores [illegible]

The heating of the general stores building is by coil radiation, the steam for which is drawn off from the main along the south wall in the wing of the main building at the south end of the transfer table by a 2 in. pipe. The return from this heating system is through a 2 in. pipe leading directly to the first apparatus room through the tunnel. The dry kiln is supplied from the 8 in. main as it emerges from the boiler room tunnel, a 2½ in. pipe leading to the heating set in that building, with a 2 in. return, joining the main return at the tunnel.

In the two heating apparatus rooms is a heating unit, consisting of a 9 by 5½ by 5 ft. box, filled with 1 in. pipe, open on one side to the shop, and on the other into a 12 ft. fan, driven by a 9 by 12 in. engine, by which the heated air is forced through the heating tunnels around the shop.

The second apparatus room heats the whole of the shop east of the transfer table, and the first apparatus room the balance of the shop west of the transfer table. The central location of the second in the east wall, makes the tunnel construction in both directions along the wall under the floor practically similar. The fan delivers the heated air under the floor through a 54 by 60 in. tunnel, a deflector in the centre dividing the flow. The southward flow tunnel from that point is 46 by 42 in., reducing to 24 by 24 in. at the [illegible] of the transfer table, and the northward tunnel is 42 ins. square, reducing to 24 ins. square at the other end of the transfer table. The southward tunnel is slightly larger, as from two points along the south wall tunnel, there are two 15 in. diameter pipes leading across the shop, under the southerly four pits at right angles to them, with outlets 10 ins. in diameter leading out into the sides of the pit, with a damper provided for each.

From the first apparatus room the major portion of the heat passes out to the north through a 54 in. square tunnel, gradually reducing in size along the west and north sides of the shop to 18 ins. square at the north end of the transfer table. The tunnel in the easterly direction from the apparatus room is 28 by 24 ins., reducing to 24 ins. square at the south end of the transfer table. Across the end of the transfer table, the two heating tunnels communicate through a 24 in. square tunnel for the passage of the steam and return mains, but have baffle plates at each end to interrupt the flow of air.

The local heating of the shop from the heating tunnel is by means of heating headers located at intervals along the wall, against which they lie flat. The majority of the headers are standard in size and construction, built of an 8 by 24 in. box of no. 12 iron, united at the corners with 1 by 1 by 1-8 in. angles, and rising to a height of 4 ft. above the floor, and projecting to the tunnel under the floor, the header being supported on the floor by a 2 by 2 by ¼ in. angle. Near the top of the header there is a double deflecting plate, directing the air outward through both sides, through heavy netting, the opening in which is half the depth of the header. From these the air is forced out into the shop. The majority of the headers are of the 8 by 24 in. size, but there are also 8 by 15 and 8 by 18 in. sizes, used along the walls between the windows where the headers are more closely spaced, while the larger sizes are used principally between the large doors. In the offices, smaller headers lead in from the tunnel.

The outlying buildings are all heated by direct radiation from steam coils. The only important system in the lot is that in the general stores building, where the local steam main from the main that passes along the east side of the shop, connects with a system of 1,760 ft. of 1¼ in. pipe, arranged in coils.

THE LIGHTING of the shops has been carefully attended to, with due consideration to the points where the maximum amount of light is required. For this purpose, the tungsten light is peculiarly adapted, having a wide range of sizes of illuminating units. In the section of the shop to the north of the transfer table, the lights are arranged in rows of 10 between the tracks. In the paint and erection shop portion of this end, the lights are all 250 watt, excepting the 9 at the transfer table end, which are all 150 watt. In the mill section the lights are nearly all 150 watt, [illegible] here and there over certain of the machines, these are increased to 250 watt. Over the transfer table is a row of five 100 watt lamps. Between each of the lifting hoists are six 100 watt lights, while down the machine shop section are four rows of 150 watt lamps, interspersed in which are [illegible] 250 watt [illegible]. In the general stores building [illegible] 150 watt [illegible] 100 watt lamps. All [illegible]

FIRE PROTECTION AND WATER SUPPLY.—The fire protection of the main building and general stores building is arranged by a system of thermopiles located under the roof. In the main shop there are two separate circuits, one for east of the transfer table, and the other for west of it, each containing 50 thermopiles, and the general store is on a circuit containing a fewer number of thermopiles. These three circuits connect to three galvanometers in a case on the wall at the west end of the transfer table which is the focal point of the shop, where the time clocks are located, and where the watchman is stationed. Normally, the galvanometer indicator shows a safe sign, but in the event of any abnormal heat, which would strike the roof first, the thermopiles would cause the galvanometer to deflect, the greater the heat, the greater the deflection, as the thermopiles are in series. Deflection beyond a certain point leaves the needle in the operating field of a strong magnet, which draws the needle still further out of its normal position, closing an electric circuit, and ringing an alarm bell.

In a separate case adjoining this thermopile alarm indicator, there is another alarm box for the smaller buildings, with a connection from the boiler room, oil house, lumber kiln, pattern storage and impregnating room. Local heat at any one of these points causes a hinge switch in the alarm box to trip, this action closing another switch, ringing the alarm bell.

At Youville, the city water pressure is in the neighborhood of 125 lbs. In consequence, this is ample for fire protection without further boosting through an auxiliary fire pump. The water supply enters the main building at the northeast corner, through an 8 in. water main to a water meter at that point. From there the main is divided into fire and water service pipes. All pipes are under the floor, with headers at intervals.

The fire service main, 8 in. pipe, divides near the corner, a 6 in. main running south along the second row of columns, and another 6 in. main west along the first row of columns. There is also a 4 in. main that runs back from the meter about 100 ft. from the entry corner of the building. The machine shop has six hydrant connections, three at the outer and central columns in the line of the main, and three in the line of columns centrally with the car hoists. Five of these are from the southerly main, this main also branching out to a hydrant about 100 ft. diagonally from the south east corner of the building, with another branch from a central point to a hydrant outside the centre of that side. This main terminates in two hydrants in the general stores building.

The westerly main from the entry corner contains one of the machine shop hydrants. The arrangement in the westerly half of the building is the same as in the easterly. There are six hydrants in that section with three hydrants outside to the west, at the corners and centrally. On the south there are also two outside hydrants between the general stores building and the main building, and on the north, a single hydrant centrally located on that side, making 23 in all.

Service water is piped all over the buildings in a similar manner, with connections attached to the columns at convenient points. The tiling of the building for sewage purposes is also very complete, the different interior systems all draining to a central westerly 15 in. sewer, to a large gully at the west end of the shops. On the south and west sides of the shops are five smaller gullies for draining the surrounding ground, these all connecting with the central sewer and draining into the west main gully. This passes off through an 18 in. vitrified tile sewer, sloping to the west on a 0.4 per cent. grade, connecting 1,000 ft. to the west with the Montreal St. Denis Street relieving sewer.

CONCLUSION.—This plant is said to have been designed on the same general lines as the Plank Road shops of the Public Service Co., of New Jersey.

The general design and construction were carried out under the direction of D. E. Blair, Superintendent of Rolling Stock, who is in charge of their operation, Remelius acting as consulting engineer. The designs of the buildings were developed by Marchand and Haskell, architects, Montreal, the engineering work being done in the Montreal Tramways Co's. engineering department, under J. D. Evans, Chief Engineer, and R. M. Hannaford, Assistant Chief Engineer.

Toronto Railway Company's Annual Report, Meeting, Etc.

Following are extracts from the report for the year 1912, which was presented at the annual meeting, Feb. 5:—

Gross earnings		$5,448,050.3[illegible]
Operating, maintenance, etc		2,866,550.12
Net earnings ...		$2,581,500.[illegible]
Dividends	$870,595.85	
Bond interest, etc ..	199,992.76	
	$1,070,588.61	
Payments to City:		
Percentage on earnings	$798,958.66	
Pavement charges .	90,953.00	
General taxes	52,137.30	
	$942,048.96	2,012,637.57
		$568,86[illegible]

The increase in gross passenger earnings, compared with the previous year, is $567,035.00; the earnings being $5,367,502.48, against $4,800,467.48 for 1911. Nothwithstanding the large increase in gross earnings the surplus was reduced largely by the operation of additional cars placed in service, a higher rate of wages paid to conductors, motormen and other employes, also the cost of material of all classes having advanced in price. The charges of the year were $2,866,550.12, compared with $2,653,361.86 the previous year. The percentage of operating cost was 53.4% of passenger earnings.

The payments made to the City of Toronto were $942,048.96, which was an increase of $119,815.72, or 14.6% over 1911.

In addition to entirely renewing the battery plant at Frederick and Front Streets, there was expended during the year on capital account, $591,484.70 in building additional rolling stock and procuring electrical equipment for same, the construction of new tracks and erection of overhead work in various sections of the city, additions to buildings, and other improvements.

On March 25 a fire occurred at the King St. East Division, completely destroying the car storage house in rear of the main building, together with about 150 cars, practically all of which were of the open, or summer type. The property was insured.

The company's agreement with its employes expired on June 15. After a number of conferences, all differences were amicably adjusted, an increase in wages was granted, and a new agreement entered into for three years.

The second drawing of the company's currency and sterling bond issues, under the terms of the mortgage deed dated Sept. 1, 1892, took place June 27, the company being obliged under the mortgage deed to redeem by drawing annually 5% of bonds issued, to be redeemed on Aug. 31 following the date of drawing, and from which date no interest is payable. The full number of bonds drawn in June, 1911, amounting to

$168,693.33, have been presented and paid, and of the bonds drawn during 1912 $159,500 have been presented and redeemed. The total of bonds so drawn for redemption is $339,386.66.

Careful attention has been paid to the maintenance of the plant, rolling stock equipment, and other proporties.

Your directors declared out of the accumulated surplus earnings four quarterly dividends of 2% each, all of which have been paid.

The Toronto and York Radial Ry. Co. reports that its earnings continue to show satisfactory increases. The gross earnings were $492,922.86, compared with $449,059.16 for the previous year, an increase of 9.76%.

INCOME ACCOUNT.

Gross earnings		$5,448,050.36

The officers and directors for the current year are: President, Sir Wm. Mackenzie; Vice President, F. Nicholls; other directors, Sir Henry M. Pellatt, Sir Rodolphe Forget, Hon. G. A. Cox, W. D. Matthews and Jas. Gunn.

London Street Railway Company's Report.

Following are extracts from the report for 1912, presented at the annual meeting at London, Ont., Feb. 5:—

	1911	1912
EARNINGS:		
Passengers	$274,887.95	$301,196.62
Miscellaneous	4,718.98	5,034.40
Gross earnings	$279,606.93	$306,231.02
EXPENSES:		
Maintenance:		
Way and structures	$ 22,325.91	$ 23,743.37
Equipment	30,337.48	28,516.55
Transportation:		
Power plant	$ 35,556.80	$ 40,015.09
Car service	74,985.98	86,367.60
General	29,530.59	31,635.58
Total operating expenses	$192,736.76	$210,278.19
Net earnings	$ 86,870.17	$ 95,952.83
DEDUCTIONS:		
Interest on bonds	$ 28,750.00	$ 28,911.00
Interest on overdraft	93.59	
Total deductions	$ 28,843.59	$ 28,911.00
Net income	$ 58,026.58	$ 67,041.83

During the year $29,735.61 was spent on improvements and additions. Negotiations with the city for extensions resulted in an agreement for the straightening of the Wellington St. line north of St. James St. by placing the track upon Richmond St., thus making the route direct and greatly improving the service. The negotiations also provided for the building of a new line on Cheapside from Richmond to William St., and then on William from Cheapside to Oxford St., approximately 6,000 ft.; a new line on Adelaide St. from Oxford St. to Central Ave., which will enable an additional two way belt service to be given in the north end of the city, direct to both the central and east ends and also forming a cross town line in the eastern part. The agreement made last year further provides for double tracking of congested portions on Horton St. between Wellington and Richmond, on the Hamilton Road between Mamalon and Rectory, and on York St. between Ridout St. and the river, all of which is to be credited against mileage requirements by the city. Of the above work the removal of the line from Wellington St. to Richmond was accomplished last year, as well as the construction of the line on Cheapside and William Sts. This latter line opens up a fine large section for residential purposes. Ties were renewed under several large sections of track in different parts of the city during the season, so that the maintenance of the track and roadway has been kept up in good order. Six new cars will be added to equipment during 1913, including modern trucks, motors, etc. After more than three years of negotiations with the Ontario Hydro Electric Power Commission for the use of power from Niagara Falls, it was found impossible to make any arrangement for such power that would be satisfactory, and so it was decided late in the fall to install a 500 kilowatt Corliss compound engine set. This work is now in progress and will be finished in the course of a few weeks. The addition to the shop and stores department was completed during the year, and has greatly facilitated in the work. A large lathe and wheel press were also installed, which enable the company to do its own wheel work.

Late in Dec., 1912, it was decided by the Ontario Railway and Municipal Board that a certain large section of the township east of the city limits should be added to the city. It is claimed the population thus added will undoubtedly make the population over the 50,000 required by statute before cars can be operated on Sunday, and so it may be anticipated that there will soon be a demand for this service, although we do not anticipate much profit, if any, from it.

The expected increases in gross earnings and surplus during the past year have been exceeded, and as general business prospects in the city are unusually good, our anticipations for the coming year are that it will be by far the best year in our history.

Our relations with the public continue very satisfactory, and that no litigation of very satisfactory, and no litigation of any consequence appears against the company.

STATISTICAL STATEMENT.

	1912	1911
Gross earnings	$306,231.02	$279,606.93
Operating expenses	210,278.19	192,736.76
Expenses, % of earnings	68.5	68.9
Net earnings	95,952.83	86,870.17
Net income, % of capital	12.[illegible]	10.51
Passengers carried	8,353,230	7,582,120
Car earnings, per revenue passenger	3.64	3.67
Transfers	1,292,705	1,178,885
Total passengers	9,645,935	8,761,005
Car earnings, per passenger	3.12	3.13
Car mileage	1,470,738	1,44[illegible]
Gross earnings, per car mile	20.40	19.10
Operating expenses, per car mile	14.24	13.37
Net earnings, per car mile	6.50	6.03
Number of miles of track	33.25	33.25
Gross earnings per mile of track	9,209.95	$8,409.23

The company's property consists of 33.25 miles of single track, covering about 26 miles of territory, 20.8 miles in the city, and 5.2 miles outside; a power house capable of generating 1,150 h.p.; storage battery plant of 320 amp. capacity; 2 car houses; car shop and machinery; office building, and the following rolling stock:—Single truck motor cars, 34 closed, 5 open; double truck motor cars, 5 closed, 5 open; single truck trailers, 4 open; sweepers, 2; work car and snow plough, 1; emergency car, 1; line wagon, 1.

The officers and directors for the current year are:—President, H. A. Everett, Cleveland, Ohio; Vice President, T. H. Smallman, London, Ont.; other directors, P. W. D. Broderick, Toronto; H. S. Holt, Montreal; W. M. Spencer, C. H. Ivey, London, Ont.; F. W. Moore, Cleveland, Ohio.

Niagara, St. Catharines and Toronto Railway Construction, Betterments, Etc.

Work on the extension from St. Catharines, Ont., to Niagara-on-the-Lake, is progressing rapidly, rails being laid and the trestles well under way.

The new station in Thorold is rapidly nearing completion and will be opened about March 1. Increased siding facilities have been arranged for in Merritton, Port Dalhousie and Thorold.

The Company also has in contemplation a rearrangement of track used at Niagara Falls, Ont. An effort will be made to construct a line down Bridge St. from the N.St.C. & T. junction to the G.T.R. station, thereby doing away with the use of local line tracks in Niagara Falls by main line cars.

The company has ordered in the United States four convertible double truck 4 motor cars for use on local lines at an expenditure of $30,000, and an increased service will be put into effect on the St. Catharines, Merritton and Thorold local line in the spring.

The company has received a 750 k.w. rotary converter and transformers for the Niagara-on-the-Lake extension, which are being placed in temporary quarters near the car barn on Welland Ave., for the purpose of increasing the power supply in and about St. Catharines.

An order has also been given the Canadian General Electric Co. for two 500 k.w. rotary converters and transformers for a new power station in St. Catharines. When these machines are installed ready for operation the 750 k.w. machine now being erected will be moved to the Niagara-on-the-Lake end of the new extension. The 300 k.w. machine now in operation at the St. Catharines sub station will be moved to the Niagara Falls sub station, increasing the power capacity at that point. The expenditure involved will amount to over $50,000. The power distribution of the system will then be as follows:

St. Catharines	1,000	k.w. capacity.
Thorold	1,000	" "
Niagara Falls, Ont.	600	" "
Welland	500	" "
Niagara-on-the-Lake	750	" "

The New York, New Haven and Hartford Rd.'s electrified zone, extending from Woodlawn to Stamford, Conn., has been in successful operation for several years. The company is now extending the zone as far as New Haven, and it is expected that this section will be open by July 1. The new work will embody such improvements as have been suggested by the experience gained in operating the existing stretch of track. One of these will be a rearrangement which will eliminate the effects of electro magnetic induction on adjacent telegraph and telephone systems, which heretofore caused much trouble and interruptions in service. The overhead line carries a pressure of 11,000 volts.

Dominion Power and Transmission Company's Annual Meeting.

The company's annual meeting was held in Hamilton, Ont., Feb. 17. The following are the only references in the report to the street railway portion of the business:

"The physical condition of the properties is excellent and continues to improve, large sums having been expended to that end, particularly on the power house and the street railway. A third transmission line has been built from Hamilton to the power house on our own right of way. Application has been made to Parliament for an extension of the Brantford and Hamilton charter to enable us to extend that railway to Galt."

In the financial statement the earnings, expenses, etc., of the electric railways, power and lighting departments are lumped together and no separate information is given as to the railways. Particulars of the railway earnings, etc., for the year ended June 30, 1912, were given in our February and March issues under "Electric Railway Statistics."

The company's gross earnings were $2,563,371.38; operating expenses, $1,359,459.34; bond interest and interest, $352,152.75; surplus earnings, $851,759.29. Dividends of $362,301.24 were paid. All deferred dividends on preferred stock have now been paid.

The officers and directors for the current year are:—President, J. R. Moodie; Vice President, Jas. Dixon; Treasurer, J. Knox; Secretary, W. C. Hawkins; directors, Sir John M. Gibson, J. W. Sutherland, Lloyd Harris and W. Southam.

Ottawa Electric Railway Company's Annual Report, Meeting, Etc.

Following are extracts from the report for 1912, as presented at the annual meeting, Feb. 3:—

The gross earnings were $934,397.77, compared with $840,680.52 in 1911; 21,815,798 passengers were carried, compared with 19,270,521 in 1911; the net earnings were $400,059.07, and have been disposed of as follows:—

[illegible]	[illegible]
[illegible]	[illegible]
Mileage payable	[illegible]
Taxes	9,463.16
[illegible] contingent account to be applied to reduc[illegible]	[illegible]
Transferred to credit of profit and loss account	30,998.00
	[illegible]

The balance at credit of profit and loss account is now $138,261.83, and of rest account $200,000.00.

During the year a new 1,000 h.p. substation was installed on Albert St., and land has been purchased to instail two more of the same capacity, one in Lower Town, and the other in the southern part of the city. A large addition to the Cobourg St. car barns was completed and the erection of a steam turbo generator of 4,200 h.p. on [illegible] under way. With these improvements and the delivery of 20 double truck p.a.y.e cars, now under construction by the Ottawa Car Co., our earning capacity and facilities for handling the increasing traffic will be greatly increased. Instead of erecting a new building for office accommodation, as proposed in last year's report, your directors purchased the building, 248 Albert St., which has been occupied by the headquarters and receiving office staffs. The tracks along Sparks St. and the Plaza have been renewed with a 93 lb. rail, and a small portion of the new tracks on Queen St. from Elgin St. to Bank St., authorized by the city, completed. The remainder of the latter work will be finished early in the spring. The new bridge over the canal on Bank St. is now approaching completion, when we will be in a position to carry out the extension of our tracks to Ottawa South.

STATISTICS.

	1912	1911
Gross receipts	$934,397.77	$840,680.52
Total expenses, including mileage payments,, taxes, etc...	578,540.96	545,128.87
Net income	355,856.81	295,551.65
Passengers carried	21,815,798	19,270,521
Percentage of operating expenses to receipts	[illegible]	[illegible]

The past year, from a street railway standpoint, was one of difficulty in Ottawa owing to the typhoid epidemic, the cold and wet summer, and the disturbance of traffic due to new construction on Sparks St., the Plaza, etc. The expectations are that the present year's receipts will exceed $1,000,000, compared with $71,000 in the company's first year of operations in 1891-2.

Only one change was made in the directorate, Jas. D. Fraser, who has been Secretary-Treasurer for many years, being elected to succeed Hon. G. A. Cox, resigned. The board, as now constituted, is:—President, T. Ahearn; Vice President, W. Y. Soper; directors, G. P. Brophy, T. Workman, T. F. Ahearn, E. N. Soper, and J. D. Fraser.

Halifax Electric Tramway Company's Annual Meeting.

The report presented at the adjourned annual meeting in Halifax, N.S., Feb. 12, shows increased gross and net earnings over previous years. The surplus account for 1912 shows a balance of $704,119, the gain for the year being $104,934.

Total passenger receipts were $250,263, electric light and power earnings $228,654, gas and product earnings $61,035, operating expenses $286,560; net bond interest $30,000, net earnings $223,393; dividends paid $112,000, passengers carried 5,688,414, or 476,157 more than in 1911; per cent. operating expenses to income, 54.06; car mileage 984,943. The assets are $2,827,351.

During the year the belt line was double tracked, track extended a mile on Gottingen street, new car house erected, steam turbine installed and other improvements made. A further reduction was made in electric light rates and employes' wages were increased.

Substantial progress has marked the operations for the year, resulting in increased gross and net earnings over previous years.

The construction work outlined in the last report was successfully carried to completion, including the double tracking of the Belt Line, the purchase of four closed cars, the construction of a concrete and brick car house, with accommodation for 16 cars, and the installation of a 2,000 k.w. steam turbine, this latter about doubling the capacity of the electric generating plant. Various other important additions were made to the property, including the extension of the track on Gottingen St. from Cunard St. to Young St., about a mile, the purchase of an additional sweeper, the installation of a new incandescent circuit, additions to car equipment, etc. In addition to the capital expenditure referred to above and distinct from ordinary repairs included in operating expenses, there was expended on renewals and betterments $3,559.22.

A further reduction was made in rates for electric lighting, and the rates of wages to employes were substantially increased, thus continuing the practice followed in the previous year of having the employes and consumers of electric current participate in the general prosperity of the company.

PROFIT AND LOSS ACCOUNT.

Passenger receipts	$250,263.47
Electric light and power gross earnings	217,444.83
Gas department, gross earnings	61,035.34
Miscellaneous earnings (less provision for bad debts, 1912)	11,210.09
	$539,953.73
Operating expenses	$286,560.16
Interest on mortgage bonds	30,000.00
Dividends	112,000.00
Renewals and betterments	3,559.22
Dalhousie College fund	3,000.00
Balance to surplus account	104,834.35
	$539,953.73

Consequent on the change of control, which has passed to Montreal people, an almost entirely new directorate was elected, O. E. Smith, of Halifax, being the only old director re-elected. The new board is as follows:—President, E. A. Robert, Montreal; 1st Vice President, J. W. McConnell, Montreal; 2nd Vice President, O. E. Smith, Halifax; other directors, J. A. Neville, H. H. Smith, W. M. P. Webster, J. E. Wood, Halifax; Sir Frederick Borden, Ottawa; P. J. McIntosh, New York; W. G. Ross and F. H. Wilson, Montreal.

Ontario Hydro Electric Commission's Projected Electric Railway.

A deputation representing the Electrical Power Union, which was formed in Toronto recently, and declared in favor of a system of municipally owned electric railways operated by hydro-electric power, waited on the Dominion Government in Ottawa, Feb. 6. The delegation asked that government aid be voted in aid of a line from Toronto to serve Markham, Uxbridge, Locust Hill, Ashburn and Port Perry, in East York, and Ontario County. Consideration was promised. We are officially advised that the proposition referred to is that of the projected Toronto, Markham, Port Perry and Uxbridge Radial Ry. It is proposed to build a line from Toronto to Markham, passing through Wexford, Ellesmere and Unionville, with a branch from Markham through Green River, Brougham, Greenwood, Brooklyn, Ashburn and Myrtle to Port Perry, and a second from Markham through Ringwood, Stouffville, Altona, Glasgow and Goodwood to Uxbridge. The line, it is proposed, shall be managed by the Ontario Hydro Electric Commission, its powers being extended for this purpose; and that the building of the line shall be financed upon bonds guaranteed proportionately by the different municipalities. The H. E. Commission has already under consideration the extension of its power lines into the district, and it would provide the power lines, sub stations and right of way, securing in return a material and permanent customer. A. F. Wilson, Markham, Ont., is the secretary in connection with the promotion of the line. (Feb., pg. 90.)

The Edmonton (Alta.) Municipal Ry. was operated at a loss of $26,495 during 1912, and W. T. Woodroofe, Superintendent, has made a number of suggestions in regard to changes in operation to increase the revenue during the coming year. Tentative proposals have been made by him to charge a uniform rate of 5 cents, with transfer privileges, do away with the present yellow labor tickets, do away with the dollar blue book of tickets, do away with the transfer privileges, do away with the red and blue tickets and establish the price of children's tickets at 10 for 25 cents.

Electric Railway Projects, Construction, Betterments, Etc.

Battleford - North Battleford, Sask.—A project for the building of an electric railway to connect Battleford and North Battleford, Sask., has been submitted to the people of these two towns. F. P. Alywin, Ottawa, is the representative of the syndicate making the proposal, and the proposition he submitted is on the lines of the contract made between the Moose Jaw Electric Ry. Co. and the City of Moose Jaw, Sask. Mr. Aylwin stated that the capital is ready for the building of the line as soon as an agreement may be entered into.

British Columbia Electric Ry.—Plans have been prepared for the building of a line along 10th Ave. to the site of the University buildings.

It is proposed to build a large car barn and a central station for the distribution of power near Hastings townsite on the Burnaby Lake line.

A site has been acquired on Douglas St. and Pandora Ave., Victoria, on which a 10 story building will be erected. The ground floor will be used as a central station for the company's suburban lines. The new branch line to the Uplands was opened for traffic, Feb. 3, and it is expected that the Saanich Peninsula line will be opened April 1. (Feb., pg. 90.)

Buffalo and Fort Erie Ferry Ry.—The Ontario Legislature is being asked to authorize an increase of capital stock, and a further issue of first mortgage and refunding sinking fund bonds for the purpose of electrifying the railway. Bicknell, Bain, Strathy and Mackelcan, Toronto, are the solicitors. (Feb., 1911, pg. 282.)

Burrard-Westminster Boundary Ry. and Navigation Co.—W. McNeill, Chairman of the Company, is quoted as having stated that 20 miles of this projected railway will be built during the current year. It is proposed to start work on the line between the Stave River Falls and Pitt River in May. The question of the building of a bridge across the Pitt River at Coquitlam was discussed by Mr. McNeill and the Provincial Government, and it is said that an arrangement is about to be submitted to the Legislature providing for its construction. This bridge will form a connection between the Stave River Falls-Pitt River section of the line, and the Vancouver-Pitt River section. It is expected that the entire line will be completed within two years. Steam will be used as the motive power on the Stave River Falls-Pitt River section, until the power plant of the Western Canada Power Co., which owns the charter, has been completed. (Jan., pg. 39.)

Chestermere and Calgary Suburban Ry.—Application is being made to the Alberta Legislature for authority to increase the company's capital stock to $750,000; to increase the bonding powers from $12,000 to $20,000 a mile; and to extend the time within which the lines authorized in 1910, may be built. Ryan and Wright, Calgary, are solicitors for applicants. (Jan., 1912, pg. 38.)

Eastern Ontario Electric Ry.—The Ontario Legislature is considering a bill granting an extension of time for the building of the lines authorized by chap. 134 of the statutes of 1909. The provisional directors named in the original statute are struck out and the following substituted: E. C. Rendell, H. Hastings, C. S. Foss, G. T. Taylor and G. E. Smith. (May, 1909, pg. 367.)

Edmonton Radial Ry.—We are officially advised that the city has decided not to extend the line to St. Albert, Alta., at present. The extension may possibly be built next year, but nothing has been decided.

The Alberta Legislature has passed an act affecting the City of Edmonton, providing, among other things, for an extension of time for the building of the lines owned by the city. (Jan., pg. 39.)

Forest Hill Electric Ry.—The Ontario Legislature is being asked to incorporate a company with this title to build an electric railway from Forest Hill Road, at the northerly limit of Toronto, along Forest Hill Road and Bathurst St., to 2.5 miles north of Eglinton Ave.; from Forest Hill Road along Eglinton Ave.; to one mile west of Dufferin Ave.; and northerly along Dufferin Ave. for 2.5 miles, with branch lines or extensions as may be necessary. Mills, Raney, Lucas and Hales, Toronto, are solicitors for applicants. (May, 1912, pg. 251.)

Guelph Radial Ry.—A number of men, interested in the building of electric railways, were in Guelph, Ont., Feb. 6, looking into a project for the building of a line from Guelph to Puslinch Lake. The charter for the building of this line is held by the G.R. Ry., which is owned by the city. It is said that a desire has been expressed to take over the franchise for this line, and to extend it to Hespeler, where connection would be made with the Galt, Preston and Hespeler St. Ry., which is owned by the C.P.R. One of the party is quoted as stating that if the project goes through a large summer hotel will be built at Puslinch Lake, and other developments made there. (May, 1912, pg. 451.)

Lacombe and Blindman Valley Electric Ry.—Press reports from Lacombe, Alta., state that the right of way for this projected electric railway has been bought. The financing of the company is, it is said, being done by a British syndicate, conditionally upon the people of the locality subscribing a proportionate amount. This amount is reported to have been obtained by means of a public subscription, the company being represented in the canvass by G. R. Strathy, Toronto, one of the directors, and W. Young, the company's engineer. (Feb., pg. 90.)

Manitoba Radial Ry.—Application is being made to the Dominion Parliament to extend the time for the building of the line authorized by chap. 105 of the statutes of 1907. (June, 1911, pg. 555.)

Montreal and Southern Counties Ry.—An alternative proposal for an extension of the company's lines in Montreal, was taken under consideration by the Board of Control, Feb. 7, and was referred to the legal department and a special committee. The line at present terminates on lower McGill St., and the company desires to have an entrance to Youville Square. (Feb., pg. 90.)

Montreal Tramways Co.—E. A. Robert, President, is quoted as stating, Feb. 5, that the suggested building of underground lines is not the solution of the present congested condition in the city. What is required is that the city should consent to such extension of lines as would enable the company to work the existing lines to the maximum of their capacity. Immediate relief could be given if the city would cooperate with the company. An immediate measure of relief is necessary, and an underground system would take some years to build.

H. B. Harris, of Harris & Co., Boston and New York, who are looking after the company's financing, is quoted as stating in Montreal, Jan. 31, that his firm was prepared to advance from $75,000,000 to $100,000,000 to the company for development work to be spread over 30 years, as soon as the plans were arranged. (Dec., 1912, pg. 622.)

Morrisburg and Ottawa Electric Ry.—The shareholders have been called upon to pay four calls of 10% each upon the capital stock subscribed, payable Mar. 3, May 5, July 7 and Sept. 8. R. A. Bishop, Morrisburg, Ont., is Secretary. (Jan., pg. 39.)

Niagara, St. Catharines and Toronto Ry.—The Board of Railway Commissioners has approved revised location of the line in St. Catharines, mileage 0 to 1.8. (Feb., pg. 90.)

Ottawa and St. Lawrence Electric Ry.—The Ontario Legislature is being asked to pass an act amalgamating the North Lanark Ry. Co. with the O. and St. L.E.R. Co., increasing its capital stock from $1,000,000 to $5,000,000, authorizing it to issue bonds for $30,000 a mile, and extending the time for the building of the authorized railways. (Nov., 1912, pg. 574.)

Port Arthur and Fort William Electric Ry.—The Ontario Legislature is being asked to confirm bylaws sanctioning the following expenditure by the City of Port Arthur, Ont., on the portion of the railway within its bounds:—Siding to the fair grounds, $5,600; double track on Arthur St., $11,000; extension on Hill St., $6,500; double track, Bay and Algoma St., $58,500; heavier steel rails on Cumberland St., $55,400; iron poles within certain limits, $1,400; belt line, $82,000; extension to Hedge siding, $34,000; extension to Queen St., $4,300; extension along Algoma St., $6,550.

The Fort William City Council has decided to build a second track on Frederica St., between Edward and Young Streets, and a Y at the end of the Mission extension. (Feb., pg. 90.)

Saskatoon Municipal Ry.—The Mayor of Saskatoon, Sask., in his recent inaugural address, stated it would be necessary to spend about $100,000 upon extensions of the city's electric railway, and in building a second track on certain streets. The engineer is preparing a report as to what is necessary to do. (Feb., pg. 91.)

Toronto and York Radial Ry.—The Ontario Legislature is being asked to pass an act giving the company the right to enter into an agreement with the city of Toronto for the building of a double track line on Yonge St. from the present southerly terminus to York mills; the right an run cars on the Metropolitan Division on Sundays; the right to build a line to connect the Metropolitan Division with the Scarboro Division on the east, and the Mimico Division on the west; power to increase the bond issue from $20,000 to $30,000 a mile of single track, and for an extension of line for the building of previously authorized lines. (Feb., pg. 91.)

The appeal of the City of Toronto against an order of the Ontario Railway and Municipal Board, authorizing the company to build a double track line, on a new route, off Yonge St., has been allowed by the Court of Appeal, and the City Council has taken steps to stop the construction work, which has been about half completed. It is said that the company will carry the matter to a higher court.

The city has been asked to confer with the company with respect to the plans for joining the Scarboro and the Mimico sections of the line with the Metropolitan division.

It is reported that plans are being prepared for the building of a line from Langstaff on the Metropolitan Division easterly [illegible] pg. 91.)

Toronto Eastern Ry.—[illegible] trolley system on this line. The overhead wire will carry 1,200 volts direct current. [illegible] pg. 91.)

The Vancouver Island Hydro-Electric [illegible] under the British Columbia Companies Act. The Provincial Minister of Railways has issued the company's certificate under sec. 16 of the B. C. Railway Act, 1911, approving of the route map of a projected electric railway in Nanaimo.

A bylaw has been favorably voted upon by the electors of Vancouver, granting a franchise, and the details of this are now being finally arranged between the company and the City Council. (Feb., pg. 91.)

Winnipeg Electric Ry.—The City Board of Control has passed a resolution suggesting the building of about 20 miles of extension of lines in the city, not necessarily for immediate construction, but as indicating a general policy in regard to future extensions. It was also decided to apply to the Public Utilities Board for an order for the immediate building of a second track on Arlington St., from William St. [illegible] Ave. from Arlington St. to McGregor St.

The Manitoba Legislature is being asked [illegible] company and the municipality of St. Vital, for [illegible]

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for December, $613,654; operating [illegible] $224,574; renewal funds, $51,620; net earnings, $172,954; approximate income from investments, $35,000; net income, $207,954, against $523,003 gross earnings; $319,298 operating expenses; $203,705 net operating earnings; $37,935 renewal funds; $165,770 net earnings; $25,000 approximate income [illegible] December, 1911. Aggregate gross earnings for six months ended December 31, $3,436,466; net earnings, $1,190,415, against [illegible] same period 1911.

Cape Breton Electric Co.—Gross earnings for Dec., $34,387.35; operating expenses and taxes, $16,123.65; net earnings, $18,263.70; interest charges, $4,375; balance, $13,-[illegible] funds, $1,206.66; net income, $12,582.04, against $31,417.93 gross earnings; $15,798.21 operating expenses and taxes; $15,619.72 net earnings; $4,512.50 interest charges; $11,107.22 balance; $1,140 sinking and improvement funds; $9,967.22 net income for Dec., 1911. Aggregate gross earnings for 12 months ended Dec. 31, 1912, $360,176.84; [illegible] gross earnings; $181,763.76 operating expenses and taxes; $155,791.12 net earnings; [illegible] period 1911. The construction charges for [illegible] 609.26; and amounts at credit of sinking and improvement funds, of $128,309.29, of replacement reserve, $1,486, and of reserves and surplus, $307,033.18.

Detroit United Ry.—[illegible] directors for the current year:—F. W. Brooks, J. C. Donnolly, J. C. Hutchins, A. Peck, G. H. Russell, J. M. Wilson, C. M. Swift, Detroit, Mich.; A. J. Ferguson, Montreal; G. W. Moore, Cleveland, Ohio; A. Potter, New York City. The company con[illegible] Windsor and Amherstburg Ry. Co. in Canada, which owns [illegible] St. Ry., [illegible] Ry., and the Windsor and Tecumseh Ry.

Grand Valley Ry.—At a meeting of bondholders of the G. V. Ry. and the Brantford St. Ry. in Toronto, Jan. 30, it was reported [illegible] bonds amounted to [illegible]; beside which $26,000 was due on account of taxes, $50,000 on local improvements in Brantford. The net income of the company after meeting operating expenses is at present $1,000 a month. Three holders of the first mortgage bonds, and three holders of second mortgage bonds, were appointed to act with Receiver Stockdale in administering the property to the best advantage.

Halifax Electric Tramway Co.—E. A. Robert, President, is reported as stating, Feb. 12, that the company will not consider any proposition to sell out to the city at 170 a share, and will resist expropriation. A proposition to sell to the city might be made, but it had not been considered by the directors.

Hamilton St. Ry.—The stock of the H. S. Ry. Co. heretofore amounted to $205,000. Press reports state that an additional $700,000 has recently been sold to provide funds for betterments and extensions, and that it is proposed to put a further $500,000 of stock on the market at an early date, for further improvement .

Gross receipts for 1912, $548,259.10; city percentage, mileage, etc., $51,380.56, against $454,010.52 gross receipts, and $43,840.68 city percentage, mileage, etc., for 1911.

International Ry.—Originals of the refunding and improvement 5% gold mortgage made between the I. Ry. Co. and Bankers' Trust Co., Nov. 1, 1912, have been deposited with the Ontario Railway and Municipal Board and the Secretary of State at Ottawa.

A Boston, Mass., dispatch, Feb. 11, states that N. W. Harris & Co. have arranged to place a $12,000,000 loan to enable the company to carry out plans for the improvement of the service and the betterment of its lines.

Mount McKay and Kakabeka Falls Ry.—At [illegible] annual meeting at Fort William, Ont., W. F. Hogarth, President, stated that the company had had a successful year, and predicted a considerable increase in traffic for the current year. During last season, 2,500 cars of sand and gravel were hauled to the city over the company's lines. The extension of the line to Kakabeka Falls is contemplated. H. James, Fort William, is Secretary.

St. John Ry.—Press reports, Feb. 13, state that A. R. Gould, President, St. John and Quebec Ry., and C. C. Poirce, Boston, Mass., have made an inspection of the St. J. Ry., with a view of acquiring it, in connection with the St. J. and Q. Ry. and the allied electric railway line in Maine.

St. Thomas St. Ry.—The receipts of this municipally owned electric railway for January were $416.11, against $380.03 for Jan., 1912. Passengers carried, 42,000, [illegible] Jan., 1912.

Saskatoon Municipal Ry.—Total receipts [illegible] month -wages $6,900, stores $750, interest on capital expenditure $2,083, sinking fund $743, current used $3,910, total $14,386. The 10 cars covered 38,808 miles, an average of 1,437 miles a day. During the month two cars were chartered, producing $14.50. No schedule of rates for chartering cars has been fixed, but the following rates are awaiting approval,—for one continuous trip before midnight, $5, and $2.50 for the return trip; after midnight, $7.50, and $2.50 for the return trip.

Toronto Ry., Toronto and York Radial Ry., and allied companies.—Gross earnings for December, $845,297; expenses, maintenance, etc., $369,821; net earnings, $475,476, against $727,130 gross earnings; [illegible] expenses, maintenance, etc.; $167,355 net earnings for Dec., 1911. Aggregate gross earnings for 12 months ended Dec. 31, 1912, $8,562,600; net earnings, $4,426,980, against $7,615,918 aggregate gross earnings; $3,791,368 net earnings for same period 1911.

Winnipeg Electric Ry.—Gross earnings for December, $361,700; operating expenses, $196,220; net earnings, $165,480, against $319,900 gross earnings; $169,121 operating expenses; $150,779 net earnings for Dec., 1911. Aggregate gross earnings for 12 months ended Dec. 31, 1912, $3,765,384; net earnings, $1,701,236, against $3,829,749 aggregate gross earnings; $1,928,782 net earnings for same period 1911.

Berlin and Waterloo Street Railway Report.

The Berlin and Waterloo St. Ry., which is municipally owned, operates 3.20 miles of line in and between Berlin and Waterloo, Ont. Following is the financial statement for the year ended Nov. 30, 1912:—

EARNINGS.

Cash fares	$19,544 75		
Tickets	20,630 50		
Parcels .. .	335 70		
		$40,510 95	
Berlin & Bridgeport Street Ry ..		[illegible]

Salaries		[illegible]		
Less Berlin [illegible]				
Less Waterloo [illegible]			[illegible]	
Depreciation			[illegible]	$4[illegible]
Balance				$ 910 58

The balance at credit Nov. 30, 1911, was $2,823.33, which added to the 1912 balance of $910.58 makes $3,733.91, from which is deductable $705.83 due the town of Waterloo, leaving a net balance of $3,026.08. The total assets are given as $148,080.73, and the liabilities as $145,052.65, the latter including a bank overdraft of $669.73.

During the year passengers were carried as follows:—Tickets, 560,370; cash fares, 398,380; transfers, 24,000; total, 982,750.

Electric Railway Notes.

The Mount McKay and Kakabeka Falls Ry. intends adding another steam shovel to its sand and gravel plant, to double its present output.

The Reid Newfoundland Co., St. John's, Nfld., has ordered a double equipment of Westinghouse No. 323 A. motors and 200 D 2 type control.

The London St. Ry. is in the market for six single truck, single ended, pay-as-you-enter cars, without bulkheads, but with enclosed vestibules.

R. J. Fleming, General Manager, Toronto Ry., is reported to have stated that the company will add 75 cars to its rolling stock during the current year.

The Montreal Tramways Co. has ordered 50 car bodies, in addition to the 50 mentioned in our last issue, and 100 pairs of trucks, from the Canadian Car and Foundry Co.

The Dominion Power and Transmission Co., according to press reports, has declined to quote a price to the Hamilton City Council for a sale of the Hamilton Street Railway.

The Calgary City Council has under consideration tenders for four side dump cars, 6 yards capacity, and one 42 in. double end wheel turning lathe, to bore two steel wheels at a time on axles.

The Windsor, Essex and Lake Shore Rapid Ry. has ordered 2 steel frame single sheath box cars, and 4 steel underframe flat cars, each of 40 tons capacity, from the Canadian Car and Foundry Co.

The Port Arthur City Council is asking the Ontario Legislature to confirm bylaws authorizing the purchase of three cars and two trailers for the Port Arthur and Fort William Electric Ry. within that city.

The Berlin and Waterloo Street Ry. has received 2 single ended pay-as-you-enter cars, mounted on 27 G.E. 1 trucks with Westinghouse 101B2 quadruple equipment, single end control, bodies finished in cherry, longitudinal seats upholstered in rattan, from the Preston Car and Coach Co.

The car bodies for the electric railway in Brandon, Man., are being built in the United States and the motors in Canada. Engineer Greenway reports that 10 car bodies will be delivered early in March and that the motors will be fitted in Winnipeg or Brandon. The cars are expected to be ready in April.

The question of heating the street cars is being much discussed in Calgary, Alta. It is the intention to adopt electric heaters as the permanent method, but at present there is not sufficient power available. Pending the provision of the power, the cars have been fitted with storm windows and oil heaters are being installed.

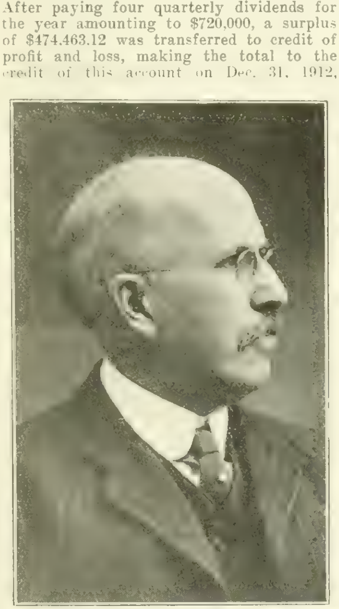
The ratepayers of the former town of North Toronto, which has been taken into Toronto, have passed a resolution calling upon the Board of Control to consider the claims of that portion of the city for a Sunday car service. The Metropolitan Ry., owned by the Toronto and York Radial Ry., at present operating there, has no power to operate on Sundays.

The Regina Municipal Ry. has received 8 double truck, single ended, pay-as-you-enter cars, mounted on 27 G.E.1 trucks, 4½ ft. wheel base, 4 of the cars being equipped with Westinghouse 101B.2 motors, and 4 with G. E. 80 single end controllers, from the Preston Car and Coach Co. The bodies are finished in cherry, both outside and inside, natural finish, cross seats upholstered in rattan, P.C. & C. Co.'s sand boxes, Consolidated Car Heating Co.'s buzzer system and automatic ventilators.

The Dominion Traction and Lighting Co has been incorporated under the Dominion Companies Act with a capital of $12,500,000 and office at Toronto, for the purpose of producing and distributing natural and artificial gas, electricity, hydraulic, pneumatic or other power, for any and all purposes. The general powers are very wide, and include permission to promote the incorporation of, or the acquiring of any company, or an interest in any company using power. The provisional directors are:—W. A. J. Case, J. B. Taylor, C. J. Lynch, H. E. Wallace, L. W. Ward, Toronto.

Winnipeg Electric Railway Company's Annual Meeting.

The report for the year 1912 presented at the annual meeting in Winnipeg, Feb. 12, showed that the gross earnings were $3,765,384.06, against $3,829,749.67 in 1911. After paying four quarterly dividends for the year amounting to $720,000, a surplus of $474,463.12 was transferred to credit of profit and loss, making the total to the credit of this account on Dec. 31, 1912, $2,091,236.37. The railway receipts for the year were $2,114,974.



J. D. Fraser,
Director and Secretary-Treasurer, Ottawa Electric Railway.

The board for the current year is constituted as follows, all the old directors having been re-elected:—President, Sir Wm. Mackenzie; Vice President, Sir Wm. Whyte; Secretary-Treasurer, F. Morton Morse; other directors, Sir Donald Mann, Sir Wm. C. Van Horne, A. M. Nanton, D. B. Hanna, Hugh Sutherland, R. J. Mackenzie.

Electric Railway Signalling in Indiana.—The Indianapolis & Cincinnati Traction Co., Indianapolis, Ind., has completed and put in operation the Simmen signal system on the remaining 22 mile section of its Greensburg division. This makes a total of 40 miles protected in this manner. The work just completed included, in addition to the cab signals, open switch protection and safeguards for east and west bound train movements. Work will be started at once on the Connersville Division which will add 55 miles more of Simmen signal protection to this road.

Personal Paragraphs.

JAS. ANDERSON, General Manager Sandwich, Windsor and Amherstburg Ry., who is in Europe, is expected to return in April.

G. T. HOLDING, formerly of Toledo, Ohio, has been appointed Secretary-Treasurer, London St. Ry., London, Ont., vice J. W. Williams, resigned.

E. A. GRAHAM is reported to have been appointed Electrical Engineer, Winnipeg Electric Ry., vice C. R. Ross, resigned, to go into private business.

R. M. HANNAFORD, acting Chief Engineer, Montreal Tramways Co., read a paper on electric railway track construction before the Canadian Railway Club in Montreal recently.

W. WAINWRIGHT, Vice President, G.T.R. and G.T. Pacific Ry., Montreal, has also been elected President, Montreal and Southern Counties Ry., vice E. H. Fitzhugh, resigned.

T. W. WILSON, formerly General Manager, International Railway Company, Buffalo, N.Y., has been elected Vice President and General Manager, Wilmington and Philadelphia Traction Co., Wilmington, Del.

F. L. HUBBARD, heretofore secretary to the General Manager, Toronto Ry., has been appointed Assistant to the General Manager. L. Smith, heretofore assistant secretary, has been appointed secretary to the General Manager.

JOHN PATTERSON, promoter of the projected Hamilton, Waterloo and Guelph Ry., whose death was announced in our last issue, left his widow an estate valued at $465,621, consisting chiefly of Dominion Power and Transmission Co.'s stock.

DUNCAN McDONALD, ex-General Manager, Montreal Tramways Co., is preparing a report on the street transportation question in Montreal, with a view to suggest temporary remedies for alleged congestion and for permanent improvements. This appears to be the outcome of the persistent attacks which a Montreal paper has been making on the Tramway Co.'s management for months past. The directors entered suits for libel recently and now the paper is paying the expenses of the investigation and report which Mr. McDonald is to make.

JAMES DEWAR FRASER, who has recently been elected a director of the Ottawa Electric Ry. to succeed the Hon. G. A. Cox, resigned, is a son of the late Andrew Fraser of Martintown, Glengarry. He spent his boyhood days in Glengarry, going to Ottawa in 1871, and entering the employ of W. McClymont & Co., lumber manufacturers, as accountant and telegraph operator, where he remained till 1882. He was then appointed Secretary-Treasurer of The Ottawa City Passenger Ry. Co., the old horse road, and occupied this position until 1891, when the company was merged with The Ottawa Electric St. Ry. Co, forming The Ottawa Electric Ry. Co. He has been Secretary-Treasurer of the last named company ever since. He is also a director and Secretary-Treasurer of the Ottawa Car Co., Ltd., Vice President and Secretary-Treasurer of The Wallace Realty Co., Ltd., and a member of the Canadian Street Railway Association's executive committee.

Hamilton Street Ry.—The committee of the Hamilton, Ont., city council dealing with street railway extensions in the city was informed by the company in a letter, Dec. 16, as to the conditions under which, and the time within which such extensions would be built. The city asks for extensions amounting to 50% of the present mileage. The matter is being considered.

Marine Department.

The Dominion Marine Association's Annual Meeting.

The Association's annual meeting was held in Ottawa, Feb. 6, the President, James Playfair, of Midland, Ont., in the chair. The executive committee's report showed that the total tonnage enrolled steadily increases, although the barge or sailing tonnage is becoming less, and although the figures quoted do not show the actual increase in tonnage owned by members, because vessels bought or built and placed in commission during the past season have not all been included in the tonnage statements upon which assessments were paid. The tonnage actually enrolled is .155.523 net registered tons of steam and 35.607 tons of barge or sailing vessels, making a total of 191.130 net registered tons. Adding [illegible] vessels which will be in commission in 1913 the total should approximate 200.000 net registered tons. The report dealt in full detail with the past year's work, including the following subjects:—Chicago drainage canal, pilotage, St. Lawrence River Commission and power development schemes, the Grain Commission, Lake Shippers' Clearance Association, coasting laws, reciprocal arrangements regarding inspection of [illegible] and U. S. steam vessels, immigration officers, radiotelegraphy, U. S. bill regarding seamen, conference of steamboat inspectors, rules of the road, ships articles, examinations for masters and mates, lower grade certificates for masters of tow barges, carrying passengers on tugs and wrecking steamboats, wage schedule and shipping offices, importation of bituminous coal, screening in bond, legislation at last session of Dominion Parliament, extension of period of navigation, a Canadian Lloyd's, statistics regarding water borne freight, statistics regarding interprovincial trade, wreck reports, the canals, including continuous operation, early opening, bridge tenders, ignorance of English language on part of canal employes, safety device for lock gates, protecting lock entrances, handling lines at canal entrances, widening of Lachine Canal between Cote St. Paul and bridge above lock, Lachine Canal upper entrance, [illegible] for Cedar Rapids Manufacturing and Power Co., Murray Canal available draught in 1912, Welland Canal, G.T.R. Air Line bridge, channel at lower entrance Canadian lock at Sault Ste. Marie; Montreal Harbor, traffic regulations, elevator storage charges, extra charges for Sunday work, additional elevator capacity, jurisdiction of Commission; Livingstone channel, Detroit River, channel east of Fighting Island, Detroit River, north channel Georgian Bay to St. Mary's River, Niagara River, Kingston Harbor, [illegible]

During the consideration of the report [illegible] was taken on a number of the [illegible] as follows:

CHICAGO DRAINAGE CANAL.—Resolved, that the Association ask the Minister of Marine and Fisheries for action by way of protest against the continued withdrawal of an excessive amount of water by the Sanitary District of Chicago in contravention of the recent decision of the Secretary of War, and that continued efforts should be made by the Dominion Government [illegible] authorities in protecting the waters of the [illegible] authority other than that derived from the legislature of one state in the Union.

PILOTAGE.—Resolved, that a committee of the Association attend the sessions of the Pilotage Commission and present the standing complaints against the present system, asking also for amendment of the law to provide the identical treatment for vessels from Ontario that is provided by statute for vessels trading with the other provinces; the committee to consist of the Montreal members of the Association and Messrs. Playfair, Norcross, Mathews and King.

GRAIN COMMISSION.—Resolved, that an interview be sought with the Grain Commission, while the members of that body are in Ottawa, and that the whole question of loading and dispatch be discussed, the Chairman of the Commission having intimated a desire to hear the Association's views in verbal discussion.

In this connection, Mr. W. W. Jones, of Port Arthur, addressed the meeting and presented a written argument in favor of the appointment of a single vessel agent at Fort William and Port Arthur. This document was referred to the Association's grain section, and Mr. Jones was asked to join the deputation to the Grain Commission.

LAKE SHIPPERS' CLEARANCE ASsociation.—The continued failure of the Clearance Association to furnish any financial statement or particulars of its business was reported, and it was resolved to insist on the presentation of the full information to which vessel owners are entitled. It was resolved also that the following committee should attend a conference to arrange a new agreement and schedule of rates, namely:—Messrs. Henderson, Playfair, Norcross, Richardson, Murphy, McLelland and King; and that the committee should endeavor to eliminate free storage, to make dispatch of vessels the basis of settlement, and to obtain [illegible] based upon actual cost.

COASTING LAWS.—Resolved, that a deputation of those members able to remain in Ottawa should interview the Minister of Customs on the following day and discuss with him the regulations necessary to enforce strict compliance with the exact terms of the limited privileges granted United States vessels on Nov. 29, 1912.

SEAMEN'S UNION BILL IN UNITED States.—Resolved, on a report of the action taken by British interests through the British Embassy at Washington, to ask that a protest on behalf of Canadian vessels be presented in like manner, with special reference to the section of the bill rendering foreign vessels in a U. S. port subject to the laws of that country to enable a seaman to collect on demand half his wages earned up to that time.

RULES OF THE ROAD.—Resolved, to press for amendment to bring the rules on the Lakes and Upper St. Lawrence into strict conformity with the American Pilot Rules in force on these waters.

SHIPS ARTICLES.—J. A. O'Donahoe, Richelieu and Ontario Navigation Co., presented the [illegible] referred to in the report, and after some discussion it was referred to the executive committee and Messrs. O'Donahoe and Gildersleeve.

LOWER GRADE CERTIFICATES FOR Masters of Tow Barges, Carrying Passengers on Tugs and Wrecking Steamers.—Resolved to continue to press for amendment of the law in both these matters and to accept the amendment regarding passengers suggested in the annual report as a reasonable one in accord with the Merchant Shipping Act.

WAGE SCHEDULE.—W. L. Reed, T. Marks & Co., submitted the report of the special committee appointed to consider this question, recommending what the committee considered a fair schedule of wages, and it was adopted, on the understanding that the wages set out were minimum rates, and might be increased in any instance if members so desired. The report was ordered printed and circulated among members.

STATISTICS.—In this connection J. L. Payne, Comptroller of Railway and Canal Statistics, addressed the meeting asking the co-operation of members in his work.

LIVINGSTONE CHANNEL. — Resolved, that the the Association's counsel, F. King, attend the session of the International Joint Commission in Detroit on Feb. 17, to represent the Association and present the views already expressed to him by members who have consulted their captains; and also that members endeavor to send navigators to give evidence in support of these opinions.

CANALS.—Resolved, that members able to remain in Ottawa on Feb. 7 wait upon the Minister of Railways and Canals and urge that the canals be opened at the earliest possible date this year on account of the various reasons rendering that desirable.

On the recommendation of S. V. McLeod, of the Algoma Central Steamship Line, instructions were given to ask for the continued dredging required on the Canadian side of the channel below the Canadian lock at Sault Ste. Marie; and also to ask for action to return to its old channel the current deflected by accumulations of material dumped on the U. S. side by the contractors working on the new Davis lock.

THE COMMITTEE ON AIDS TO NAVIgation was reappointed, the members being S. C. Calvin, J. Donnelly, W. H. Featherstonhaugh, R. Fraser, J. B. Foote, H. H. Gildersleeve, D. Noonan, C. J. Smith and A. A. Wright.

ELECTION OF OFFICERS.—The meeting then proceeded to the election of the executive committee for 1913, and on the report that L. Henderson, H. W. Richardson, W. J. Wasley and A. A. Wright were the four retiring members, of whom Messrs. Henderson and Wright had been appointed only in 1912 to fill two vacancies caused respectively by death and resignation, it was resolved to reappoint Messrs. Henderson and Richardson and to appoint H. H. Gildersleeve and G. E. Fair, these four to hold office until 1916. J. E. McLurg, having resigned office in the Algoma Central Steamship Line, and having been succeeded by S. V. McLeod, the meeting appointed Mr. McLeod a member of the executive committee in Mr. McLurg's place to hold office for the unexpired period of the term, namely, until 1914.

The executive committee elected the folowing officers for 1913: J. Henderson, President; A. J. [illegible] Vice-President, and H. W. Richardson, 2nd Vice-President.

Deputation to Marine and Fisheries Committee.

The various representatives of steamship companies attending the Association's meeting appeared before the House of Commons Committee on Marine and Fisheries to discuss the bill respecting radiotelegraphy now before the House. The Minister of Marine and Fisheries, Hon. J. D. Hazen, explained that it was proposed to amend section 1 of the bill to read as follows:—

"1. From and after July 1st, 1913, a passenger steamer, whether registered in Canada or not,

"(a) Licensed to carry 50 or more persons, including passengers and crew, and plying between ports or places more than two hundred nautical miles apart, or

"(b) Licensed to carry 250 or more persons, including passengers and crew, and plying between ports or places more than 90 nautical miles apart, or

"(c) Licensed to carry 500 or more persons, including passengers and crew, and plying between ports or places more than 20 nautical miles apart

"shall leave or attempt to leave any Canadian port unless such steamer is equipped with an efficient radiotelegraph apparatus, in good working order, capable of transmitting and receiving messages over a distance of at least 100 nautical miles by night and by day, in charge of a person fully qualified to take charge of and operate such apparatus.

"2. The owner, master or other person in charge of any passenger steamer which leaves or attempts to leave any Canadian port contrary to the provisions of this section, shall, on summary conviction, be liable to a fine not exceeding $1,000 and costs, and such fine and costs shall constitute a lien upon such passenger steamer.

"3. This section shall not apply to passenger steamers while plying on the rivers of Canada, including the River St. Lawrence as far seaward as a line drawn from Father Point to Point Orient, or on the lakes of Canada other than Lakes Ontario, Erie, Huron (including the Georgian Bay), and Superior."

The Minister having explained the bill, F. King, the Association's Counsel, said that the bill as originally introduced, which exempted passenger steamboats plying between ports not more than 200 miles apart, was satisfactory, but the proposed changes would impose a great burden on the Niagara River line and the Toronto-Hamilton Line, where were really ferries. C. J. Smith, General Manager, Richelieu and Ontario Navigation Co., supported Mr King's contention and urged that the lines between Toronto and Niagara and Toronto and Hamilton should be exempted. H. H. Gildersleeve, Manager, Northern Navigation Co., asked exemption for vessels on Georgian Bay. J. H. Lauer, Manager Canadian Marconi Wireless Telegraph Co., explained the terms on which that company equips vessels with wireless apparatus and operates the same. After a short discussion the committee decided to amend the suggested amendments to the bill so as to exempt from its operation vessels running on the Bay of Quinte, between Toronto and Hamilton and on Georgian Bay and the north channel thereof.

Dinner at the Ottawa Golf Club.

In the evening the representatives attending the meetings, accompanied by a number of guests, went by special cars on the Hull Electric Ry., to the Ottawa Golf Club, where they enjoyed a most excellent dinner. J. Playfair, the Association's retiring President, occupied the chair. The [illegible] Hon. [illegible] Minister of Railways and Canals, [illegible] will be made this year on the construction of the new Welland Canal, [illegible] depth at the gates will be 30 ft. though the whole canal will not be dredged to that depth at first. The Sault Ste. Marie Canal is 24½ ft. deep; Hon. J. D. Hazen, Minister of Marine and Fisheries, who dealt with a large number of matters affecting his department and who announced in connection with the deepening of the Quebec-Montreal channel to 35 ft., that should it be found necessary to do so, compensating works would be constructed to prevent any lowering of water in Montreal Harbor and further up stream; and the Hon. S. Hughes, Minister of Militia. Among the other speakers were H. W. Richardson, Kingston, Ont.; A. A. Wright, Toronto; F. King, the Association's Counsel; F. Cook, ex-mayor of Ottawa; G. A. Tomlinson, Duluth, Minn.; W. E. Campbell, Detroit River Steamers; C. A. Magrath, International Waterways Commissioner; F. F. Pardee, M.P.; W. P. Anderson, Chief Engineer Marine and Fisheries Department; G. J. Desbarats, Deputy Minister Naval Service; J. B. Hunter, Deputy Minister Public Works; F. C. T. O'Hara, Deputy Minister Trade and Commerce; J. A. Currie, M.P., and Acton Burrows, Managing Director, Canadian Railway and Marine World.

The Farrar Transportation Company, Limited.

Following are extracts from the report for the year 1912 of this company, which has its headquarters at Collingwood, Ont., and operates the steamships Collingwood and Meaford on the upper lakes.

A dividend of 10% has been paid for the year, and a bonus of 5% from the amount received in settlement of claim against the Craig Steamship Co., Cleveland, Ohio.

The bonded indebtedness on the s.s. Collingwood has been reduced from $108,000 to $94,000, $14,000 having been paid on the principal maturing in 1912 and $5,050 interest on bond issue. These two items aggregating $19,050, were provided for out of earnings and equal approximately 7¾% on the capital stock.

The net profits for 1912 show an increase of 112% over 1911 and an increase of 147% over 1910.

The assets over liabilities have reached $140,067.40, which makes the intrinsic value of the stock $156 a share.

The s.s. Meaford went into commission May 1 and was kept steadily engaged until Dec. 3, when she went into winter quarters at Collingwood, after concluding the most successful season in her history. She carried 25,000 tons of iron ore, 3,000 tons of coal, 12,000 tons of pig iron and 1,800,000 bushels of grain, netting slightly over 20% on her cost.

The s.s. Collingwood started running May 1, and she concluded her banner year and went into winter quarters at Port Colborne, Dec. 12. She carried 145,000 tons of iron ore, 12,000 tons of coal, 2,200,000 bushels of grain, netting approximately 20% on her cost.

Prindiville and Co.	4,945.67
[illegible]	[illegible]
Assets over liabilities	[illegible]
	[illegible]

[illegible]

The [illegible] for the [illegible] year are: President, T. I. Thomson, Owen Sound, Ont.; Vice President, E. R. Wayland, Fort William, Ont.; Secretary-Treasurer, G. E. Fair, Collingwood, Ont.; other directors, E. Stubbs, Sault Ste. Marie; D. D. Lewis, Lorain, Ohio; W. E. Allen, Toronto; W. T. Toner, G. R. Pearsall, Collingwood; M. Snetsinger, Thornbury, Ont.; J. Shultis, Port Colborne, Ont.

Launching of the Reid Newfoundland Company's Steamship Lintrose.

The passenger and freight steamship Lintrose, which is being built at Newcastle-on-Tyne, Eng., for the Reid Newfoundland Co., to run between Port aux Basques, Nfld., and North Sydney, N.S., was launched Jan. 21 by Miss Lois Reid, daughter of W. D. Reid, President of the R.N. Co., who was also present with his wife.

The Lintrose is 255 ft. long by 37 ft. beam. She is finely modelled, and is exceptionally strongly constructed for running through ice, which she will frequently encounter on her service. She will be fitted with single screw triple expansion engines supplied with steam by three large boilers, and the machinery is expected to propel her at a speed of 15½ knots an hour. She will be fitted with electric light, steam heating and wireless telegraph apparatus, and she is to have accommodation for over 80 first class passengers, including three special rooms for one passenger each and a ladies' room holding ten. There will be a smoking room on the promenade deck, and a dining saloon and ladies' room on the shelter deck, all amidships. In the after part there will be accommodation for 150 second class passengers. Both the promenade deck and the shelter deck will form spacious promenades for passengers.

Prince Edward Island Car Ferry.

The Minister of Railways and Canals stated in the House of Commons recently that an order in council had been passed awarding a contract to Sir W. G. Armstrong Whitworth & Co., Newcastle-on-Tyne, Eng., for the construction of a car ferry to run between New Brunswick and Prince Edward Island, the same to have 7,000 indicated horse power.

Four tenders were received as follows:—Sir W. G. Armstrong Whitworth & Co., Newcastle-on-Tyne, Eng., £138,000; Canadian Vickers, Ltd., London, Eng., two tenders, no. 1, £112,480; no. 2, £110,700; Swan, Hunter & Wigham Richardson, Wallsend-on-Tyne, Eng., £140,000.

It is expected the vessel will be completed and the service commenced some time during 1914. Plans, specifications and estimates for the necessary piers are being prepared.

In reference to the horse power above mentioned, we are officially advised as follows:—"This car ferry, being designed for use under the worst possible ice conditions to be met with in the Straits, is provided with the above mentioned high power to cope with these conditions. Under less trying conditions and in open water much less power is required. To meet these varying conditions the power is derived from three sets of engines, furnished with steam from six boilers."

Richelieu and Ontario Navigation Company's Annual Meeting

[illegible]

The C.P.R. Austrian Steamship Service

[illegible]

Atlantic and Pacific Ocean Marine.

The C.P.R. s.s. Montford, while bound from London, Eng., to St. John, N.B., damaged one of her propellers during heavy seas, and had to complete the balance of her voyage, from Cape Race, with one screw.

The Dominion-White Star Line's s.s. Laurentic, having been utilized for an additional cruise to the West Indies, her place on the Halifax-Liverpool route, scheduled for Mar. 30, will be taken by the s.s. Arabic for one round trip.

It is reported that berthing accommodation has been arranged alongside shed 16 at the Victoria Pier, Montreal, for the forthcoming season, for the Compagnie Generale Transatlantique, for its service between French ports and Montreal.

The Austro-Americana Line, which has arranged sailings from Trieste, Austria, to Canada, for the forthcoming immigration season, is reported to have acquired the Italian s.s. Bologna, and to have chartered the s.s. Arabiana from Furness, Withy and Co. for the season. The first sailing from Trieste is scheduled for Mar. 15. Jas. Thom has been appointed agent at Montreal.

The Uranium Steamship Co.'s s.s. Uranium was recently libelled by the British s.s. Rappahannock, and the Canadian s.s. Bridgewater, for $50,000 and $30,000, respectively, for services in floating her off the rocks at Chebucto Head, N.S.; the Admiralty Court, however, fixed the amount of salvage in favor of the s.s. Rappahannock, at $40,000, and on a bond being furnished for this amount, the Uranium was allowed to leave for New York.

Capt. Roberts, of the Canadian Northern Steamships' s.s. Royal Edward, has been appointed Dock Superintendent at Avonmouth, Eng., and Chief Officer Wootton of the same vessel has been promoted to the command. Capt. F. Thompson, heretofore Marine Superintendent for the company at Montreal and Halifax, who took command of the s.s. Royal George, on the suspension of Capt. Harrison, by the Dominion Wreck Commissioner, has been confirmed in that appointment.

A report from New York recently stated that the C.P.R. had been awarded the contract by the Dominion Government for a steamship service between Canada and the West Indies, and that it would receive a subsidy of $400,000 a year. No official announcement as to the awarding of the contract had been made up to the time of going to press, and G. M. Bosworth, Vice President, C.P.R., is reported to have stated that the statement was incorrect, and that the C.P.R. had not even tendered for the service.

Details of the trip around the world by the two new C.P.R. Empress trans-Pacific steamships, the Empress of Russia and the Empress of Asia, have been completed. The Empress of Russia, which will be ready first, will take the Mediterranean route, while the Empress of Asia, will go round the Cape of Good Hope, making calls at some of the principal South African ports. The Empress of Russia will leave Liverpool April 1, calling at Gibraltar, Villefranche, Port Said, Colombo, Singapore, Hong Kong, Shanghai, Nagasaki, Kobe and Yokohama, and thence to Vancouver, arriving at the latter port June 7.

Maritime Provinces and Newfoundland.

A passenger steamboat is under construction at Chatham, N.B., for Cape Breton owners, and which it is intended to have ready for operation by May. The dimensions will be, length 60 ft., beam 14 ft.

The s.s. St. Pierre Miquelon, owned by the Societe Anonyme la Morue Francaise, Paris, France, and which was formerly operated in the mail service between St. Pierre, Miquelon, Nova Scotia and Newfoundland, has been sold for £13,000.

The Nova Scotia Registrar of Joint Stock Companies has revoked the certificates of registration issued to the Steamship City of Ghent Co., and the Halifax and West India Steamship Co., at their request, under part 2 of the Foreign Companies Act.

The Reid Newfoundland Co. has under extensive repair at its dry dock and repair plant at St. John's, Nfld., the steamships Wilhelmina, Cynthiana, Nevada and Adventure. When these repairs are completed, the company's other vessels will be overhauled in preparation for the summer's business.

The dry dock at St. John, N.B., which was originally planned to be 900 ft. long, will probably be extended to 1,150 ft. Norton Griffiths and Co., the contractors, have submitted a rough draft of such an extension to the St. John City Council, and asked for a guarantee of $65,000 a year for 35 years, for a sinking fund for the bond issue, and offer 25% of the common stock of the company and to establish a shipbuilding plant in return.

A press report states that the C.P.R. is considering the question of putting a new steamship, which is to be built in Scotland, on the route between St. John, N.B., and Digby, N.S., in connection with the improvement of the Dominion Atlantic Ry. service. It is stated that the new vessel will run in conjunction with the s.s. Prince Rupert, the latter taking the morning service, while the new vessel will take the place of the s.s. Yarmouth, on the afternoon run. We are officially advised that it is not the intention to build a vessel for this service, but to acquire one ready for immediate operation.

The Department of Marine has erected a new lighthouse on Grindstone Island, in the Chignecto Channel of the Bay of Fundy. It is a hexagonal tower with six buttresses, of reinforced concrete, 59 ft. from base to top of ventilator on lantern. The tower is white, and the lantern, which is octagonal, is red. The light is occulting white of the fourth dioptric order, visible 12 seconds and eclipsed 3 seconds, alternately, burning petroleum vapor under incandescent mantle, and can be seen 15 miles from all points of approach by water. It will be put in operation on the reopening of navigation, when the temporary light will be discontinued.

Province of Quebec Marine.

A. F. Dion, heretofore Freight Agent, Canadian Northern Ry., Montreal, has been appointed Traffic Manager, Quebec Harbor Commission.

In a recent action by the C.P.R. against the Quebec Harbor Commission for $2,478, which the C.P.R. claims was paid by it in excess of the amount due to the Commission as rental and other dues, judgment was given against the Commission.

The Marine Department has announced that the lighthouse on the south end of Ash Island, Richelieu River, has been rebuilt. It is a steel skeleton frame, 45 ft. from base to top of lantern, with fixed white catoptric light at an elevation of 44 ft.

The Dominion Department of Public Works is reported to have ordered six steel scows, to be built at G. T. Davie and Sons' plant at Levis. The steel screw hopper dredge which is under construction there for the Marine Department is nearing completion.

The Quebec Harbor Commission has awarded the contract for the dredging of the St. Charles River, from the east end of the breakwater extension to the west end of the north embankment of the Princess Louise dock, to the Dominion Dredging Co. The work will extend to 45 ft. below low water.

Plans for development work in the Quebec harbor are in the hands of the Dominion Government for approval. The work proposed covers improvements in connection with the Princess Louise dock, the building of a bulkhead pier, grain elevator, etc., and a general development from Lampson's Cove to Point a Pizeau. The Commission has acquired Indian Cove for $109,000, and it is the intention to use it for the building of the crib work, etc., for the general improvements, and later it may possibly be used as a site for a ship yard.

Ontario and the Great Lakes.

The name of the steamboat Charles Lemcke, no. 126058, registered at Owen Sound, has been changed by order in council to Henry Pedwell.

The Pere Marquette car ferry International, running between Port Huron and Sarnia, broke a propeller while forcing through the ice, Feb. 11.

It is announced that the Rainy River steamboat service will be resumed about June 1, two boats plying weekly between Kenora and Rainy River. The service was not operated last year, owing to low water and lack of proper dredging.

J. B. Fairgrieve, who died recently at Hamilton, aged 80, was connected with marine life for many years, and at one time controlled a number of grain carrying vessels on the Great Lakes. He retired from active connection with transportation about five years ago.

It is reported that the C.P.R. has arranged for a further addition of 2,650,000 bush. capacity to its elevator D at Fort William, which will bring the total capacity of this elevator up to 7,500,000 bush. The capacity was increased, during 1912, from 2,850,000 to 4,850,000 bush.

The Dominion Transportation Co.'s steamboat Manitou took fire at her winter berth at Owen Sound, Feb. 1, and sank. She was built at Goderich in 1903, and was screw driven with engine of 42 n.h.p. Her dimensions were, length 137.2 ft., breadth 24.2 ft., depth 9.1 ft.; tonnage, 470 gross, 297 register.

The steamboat Victoria, owned by the Pembroke Navigation Co., which has been wound up recently, has been sold to W. L. Hunter, Pembroke, Ont. She is a paddle wheel vessel with engine of 60 n.h.p., and was built at Pembroke in 1897. Her dimensions are,—length 128.7 ft., breadth 21 ft., depth $5\frac{1}{2}$ ft.

The Town of Midland is applying to the Ontario Legislature for confirmation of bylaw passed by the taxpayers to grant a bonus of $25,000 to the Midland Dry Dock Co. for the construction of a floating dry dock and building berth there. Some details of this proposed construction were given in our last issue.

The Pelee and Lake Erie Navigation Co. is having a freight and passenger steamboat built at Collingwood. The dimensions will be as follows:—Length, 145 ft.; beam, 24 ft.; moulded depth, $18\frac{1}{4}$ ft. She will be equipped with triple expansion, jet condensing engines, supplied with steam from a Scotch boiler. It is anticipated that she will be completed by July 15.

It is reported that work on the construction of the projected dry dock at Sault Ste. Marie, Ont., will be commenced Apr. 30, and that it must be completed by Oct. 1, 1914. It is stated that the financing of the enterprise has been completed in England, and that Pethick Bros., Plymouth, Eng., have undertaken the work, the cost [illegible]

The U. S. Circuit Court at Cincinnati, Ohio, has decided that the Great Lakes Towing Co. has had a monopoly of the towing business at the 14 principal ports on the Great Lakes for the past 13 years, and that it is driving out of business the formerly numerous independent tug companies, and, having violated the anti-trust laws, must be dissolved.

During 1912, the Government elevator at Port Colborne handled 12,100,000 bush. of grain, this being the largest quantity handled by any elevator on the lakes, except the G.T.R. elevator at Tiffin, which dealt with 13,680,000 bush. The capacity of the Port Colborne elevator is 750,000 bush., and it has decided to increase it to 2,000,000 bush.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tide water, for January, as follows:—Superior 601.84; Michigan and Huron 580.08; Erie 572.27; Ontario 246.[illegible]. As compared with the average January levels for the past ten years, Superior was 0.24 ft. below; Michigan and Huron, 0.06 ft. above; Erie, 0.58 ft. above; and Ontario, 1.08 ft. above. It was anticipated that Superior would fall 0.2 ft., Michigan and Huron remain stationary, Erie fall 0.1 ft., and Ontario rise 0.1 ft., during February.

The storage capacity of grain elevators at Fort William is 24,000,000 bush., and with 57 vessels in the harbor, capable of storing another 12,000,000 bush., the available storage capacity at present is 36,000,000 bush. From information supplied, there is approximately 19,000,000 bush., now stored in the elevators and vessels, leaving available storage for a further 17,000,000 bush. We are advised that with the continuing movement of grain to the seaboard by rail, it is unlikely that any grain blockade will occur at Fort William before the reopening of navigation.

The Great Waterways Union, which was inaugurated last year, with the object of keeping the claims of the St. Lawrence-Welland canal route before the Government, held its annual meeting at Berlin, Ont., Feb. 14. A resolution was adopted that in view of the early completion of the Erie [illegible] Panama canal [illegible]ing time of great importance, the Dominion Government be urged to make larger appropriations to secure the earliest possible completion of the improved Welland canal, and to appoint a commission to report on the improvement of the St. Lawrence River to a depth of not less than 30 ft. for the passage of ocean vessels by the St. Lawrence and through canals to the head of the lakes, and the development of waterways from Lake Superior to the western provinces, and asking that no money for construction be spent on the French River, or proposed Georgian Bay canal, until the route can be shown to be commercially practicable.

The Upper Ontario Steamboat Co. at its annual meeting at Liskeard, Feb. 9, decided that the line will not be operated during the forthcoming season, and that all the assets are to be sold immediately, and the company wound up. The report states that the 1912 season might have been one that showed a profit had it not been for a series of serious accidents, which culminated in the sinking of the vessel S. & Y. just below Flat Rapids, in November. The result was that the revenue just about paid expenses. The advent of the Timiskaming and Northern Ontario Ry. in the Elk Lake and Montreal River territory, where the company operated, is taken to mean that navigation on the river would result in a loss to the company were it to operate for another season. The vessels are Adrelexia, Agnes, Gypsy, Geisha, S. & Y., and St. Antoine. The officers and directors who were re-elected for the current year are: President, W. J. Blair; Vice President, C. H. Fullerton; Secretary-Treasurer, F. Hardman; other directors, F. S. Brickenden and T. McCamus.

The commissioner who was appointed to enquire into the causes of the wreck of the steamboat Mayflower, near Barrys Bay, Nov. 12, 1912, when one of the owners and 8 others lost their lives, reports gross negligence on the part of the owners, Hudson Bros., Combermere, and infringement of the Canada Shipping Act. The cause of the wreck was the parting of the seams due to heavy strain from the machinery. The timbers were sound, but alterations had weakened her. The vessel was sailed for a whole season without a certificate, and in face of repeated warnings by the Inspector of Hulls at Kingston, who had refused a certificate because there was no qualified captain aboard. The commissioner considers that the Inspector should have seized and detained the vessel, but the latter holds that that was the duty of the Customs Department, but states that the department had not been informed of the violation of the law. The remaining owner was censured for sailing without a lifeboat, which had been damaged the day before the accident and left behind, as with the lifeboat, all on board might have been saved. The crew was found to be competent, and the commissioner recommends that the Department of Marine should appoint a special official to see that no vessel not complying with the regulations shall ply Canadian waters.

Manitoba, Saskatchewan and Alberta.

The Department of Marine has established 20 spar buoys at various points on the Winnipeg River, between White Dog Island and Kenora.

British Columbia and Pacific Coast Marine.

The North Vancouver Ferry Co. is about to invite tenders for a fourth ferry steamboat, for its service between Vancouver and North Vancouver.

The Union Steamship Co. has come to an arrangement with the underwriters in connection with its wrecked steamship Vadso, by which it receives part of the insurance money, and takes over the damaged vessel.

The Union Steamship Co.'s s.s. Cheslakee, which sank at Van Anda, Texada Island, ary, and has been taken to Esquimalt for overhauling and repairs. The sinking of the vessel caused the death of seven persons.

During January, the inward and outward bound traffic of Victoria consisted of, foreign, 295 vessels, 352,908 tons; coastwise, 484 vessels, 366,359 tons, both showing considerable increases over the figures for the same period in 1911.

The West Vancouver Ferry Board had under discussion recently, the purchase of another ferry steamboat. A report was read on the vessel Falcon, which had been inspected and recommended for the service, but no decision was arrived at.

Capt. B. L. Johnson, who has been appointed the G.T. Pacific Coast Steamship Co.'s pilot at Vancouver, was formerly master of the company's s.s. Prince Rupert. He was recently presented with a silver service by Prince Rupert citizens.

An order in council has been passed establishing a permanent harbor headline beyond which, breakwaters, wharves, piers and other structures shall not in future be built at Prince Rupert, B.C., plan and description of which have been deposited with the Department of Public Works, Ottawa, and with the District Engineer of the Department, at Prince Rupert.

The Inland Transportation Co. has commenced a steamship service between Bellingham, Wash., and Victoria, with the s.s. San Juan II., making three trips a week. The vessel is 65 ft. long, with 14 ft. beam, equipped with engine of 100 h.p., and with a speed of about 15 knots, with accommodation for 80 passengers. Should the venture prove successful, it is the intention to put larger and additional vessels on the service.

The Department of Marine has replied to the memorial of the Vancouver Ship-Masters' Association respecting aids to navigation on the coast, that consideration would be given to the request for a modern fog signal at the outer lighthouse in Porlier Pass, Strait of Georgia, and that there was good reason to hope that a lighthouse would be placed in Brown Passage, in the near future, probably on Triple Island.

The Fraser River Ferry and Navigation Co., Ltd., has been incorporated under the B.C. Companies Act, with $100,000 capital and office at New Westminster, to acquire a license to operate a ferry on the Fraser River between New Westminster, Annacis Island, Port Mann and Coquitlam, which was granted by the B. C. Government to C. F. Macaulay, and in connection therewith to own and operate steam and other vessels, and carry on a general ferry and navigation business.

Capt. Jas. Gaudin, agent, Department of Marine, Victoria, and who frequently conducted enquiries into marine casualties, on behalf of the department, died there recently, aged 75, after a long illness. He was born in the Channel Islands, and was for several years in Hudson's Bay Co.'s service.

An estimate furnished to the Provincial Government for the establishment of direct communication between Vancouver and the Delta country, includes, approaches, waiting rooms, etc., at Ladner and Woodwards Landing, $19,700; ferry boat, 70 ft. long, 28 ft. beam, 4 ft. draught, capable of carrying a deck load of 70 tons, and 50 passengers, $19,000; total cost between banks, $38,700, and work on widening dyke from Ladner to proposed ferry approach, $1,200. If the proposed service is decided on, work will probably be started early in April.

Cost of Concrete at Panama.—The cost per cubic yard of concrete on the Panama Canal during the past fiscal year, varies from $4.77 at the Miraflores Locks, to $7.75 at the Gatun Locks, a total of 1,443,570 cu. yds. having been laid in that period. The labor cost per yard varied from 84 cents to $1.54. The big difference in cost of the concrete lies in the greater accessibility to the stores on the Pacific side, the stone and sand being only a third as costly there as on the other side. 83,760 cu. ft. of concrete piling at Gatun cost $1.57 a foot.

Canadian Notices to Mariners.

Notice 331, Dec. 26, 1912, announcing change in color of front range light of outer range at Port Burwell, Lake Erie, has been cancelled.

Notice 11, published in our last issue, has been cancelled, and the following numbers, then given, 12 to 16, have been changed to 11 to 15.

The Department of Marine has issued the following:—

16. Jan. 23. British Columbia, Fraser River, New Westminster, railway swing bridge, regulations governing opening and closing of swing span.

17. Jan. 25. British Columbia, Strait of Georgia, Discovery Passage, Cape Mudge, fog alarm established.

18. Jan. 25. British Columbia, Arthur Passage, Herbert Reef, light to be established on beacon.

19. Jan. 25. British Columbia, Chatham Sound, Holland Island, new lighthouse, change in character of light.

20. Jan. 27. Nova Scotia, Bay of Fundy, Blackrock, light improved.

21. Jan. 27. Nova Scotia, south coast. East Ironbound Island, light improved.

22. Jan. 27. Nova Scotia, south coast, Jeddore Rock, hand fog horn at light station.

23. Jan. 27. New Brunswick, Miramichi River, Grant Beach back range light, character of illuminating apparatus.

24. Jan. 29. Quebec, River St. Lawrence, Cap de la Madeleine upper range, new front lighthouse.

25. Jan. 29. Quebec, Richelieu River, Ash Island, lighthouse rebuilt.

26. Feb. 3. Quebec, Ottawa River, north shore, Way Shoal Traverse, range lights established.

27. Feb. 3. Ontario, Lake Huron, Saugeen River, change in color of range lights

28. Feb. 8. New Brunswick, Bay of Fundy, Machias Seal Island, characteristic of light, correction.

29. Feb. 8. Nova Scotia, Cape Breton Island, south coast, Louisburg harbor entrance, wreck marked by buoy.

30. Feb. 8. Prince Edward Island, north coast, Rustico harbor, channels to be marked by bushes.

31. Feb. 11. New Brunswick, south coast, Bay of Fundy, off Chance Harbor, bell buoy established.

32. Feb. 11. Nova Scotia, south coast, Cuckold Rock, buoy established.

33. Feb. 11. Nova Scotia, south coast, approach to Halifax, inner gas and whistling buoy, erratum in List of Lights.

34. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Citrouville Point, lighthouse pier encased in concrete.

35. Feb. 14. British Columbia, Burrard Inlet, Vancouver harbor, Parthia Shoal, dredging in progress, temporary light.

36. Feb. 14, Alaska, Stephens Passage, Grave Point, light established, Stockade Point, light discontinued.

Early Opening of Canals.

A deputation from the Dominion Marine Association, which waited on the Minister of Railway and Canals, in Ottawa, Feb. 7, was told by him that he had issued instructions for all the St. Lawrence and the Great Lakes canals to open on April 15, or the earliest possible date thereafter. He is fully aware of the various reasons rendering an early opening desirable and has undertaken to see that repairs and other work shall not cause any undue delay.

Changes in Richelieu and Ontario Navigation Company's Service.

Announcement is made that, commencing with the opening of the 1913 tourist season, it has been decided to discontinue the service by the R. & O.N. Co. of the U.S., to and from Youngstown, N.Y., and Charlotte, N.Y., will be the western terminus hereafter.

The steamboats Toronto and Kingston will discontinue calling at Charlotte, N.Y., and will run direct from Toronto to Kingston, thence to Thousand Island ports and Prescott, connecting there with the company's Rapids vessels for Montreal and Quebec. Westbound vessels will follow the same route, running direct to Toronto after leaving Kingston. The vessels will leave Toronto at 6 p.m., instead of 2.30, thus affording passengers arriving at Toronto by afternoon trains and vessels, an opportunity of making connection with the vessels for Montreal. Westbound vessels will leave Kingston at 6.30 p.m. and reach Toronto early the following morning.

The Allan Line Steamships Alsatian and Calgarian.

The two steamships Alsatian and Calgarian, which are under construction at two points on the Clyde, Scotland, will, it is announced, be launched, the first about Mar. 8, and the second during April. These vessels are being built with cruiser sterns, somewhat similar to those now being completed for the C.P.R. Pacific service. They will be equipped with quadruple screw, triple expansion arrangement of turbines, of a larger type, and capable of a higher speed than the C.P.R. vessels.

The fittings and furnishings of each vessel will be of a distinctive type throughout, those of the Alsatian being of the Jacobean period, and those of the Calgarian of the Georgian period. The dimensions of the vessels will be, length 600 ft., breadth 72 ft., moulded depth 54 ft.; gross tonnage, 18,500 tons; speed, 19 knots an hour. Passenger accommodation will be arranged for 220 first class, 500 second class and 1,000 third class, and quarters for a crew of 470. Lifeboat accommodation is to be provided for all on board.

Muskoka Lakes Navigation and Hotel Co.—Some brief particulars in regard to this company's annual meeting, which was held in Toronto, Jan. 8, were given in Canadian Railway and Marine World for February. The company does not make its annual report public, but it is stated that last year's operations resulted in a profit of about $20,000. As before stated, the company paid a 5 per cent. dividend for 1912, which is the first that has been paid for a number of years, but it is believed that the books show a credit to profit and loss of about $250,000. The capital stock is said to be slightly under $200,000.

Large Dipper Dredges.—The excavation of the Atlantic entrance to the Panama Canal called into service dipper dredges of unusual size and capacity. The Mindi and Chagres, which are cutting the entrance channel to a minimum depth of 42 ft. at mean tide, are working entirely in rock which has been previously broken up, and they bring the material to the surface in 5-yard dippers. The dipper handles are 62 ft. in length, and the boom supporting the shipper shaft is 50 ft. long. To facilitate the work the dredges have been equipped with steam dipper trips which have shown good results during six months of work.

Collision of s.s. Dufferin and Schooner Lavengro.

Judgment has recently been delivered by Commander H. St. G. Lindsay, Dominion Wreck Commissioner, and assented to by Capts. N. Hall and J. W. Harrison, as nautical assessors, respecting the collision of the s.s. Dufferin, owned in Sherbrooke, N.S., and the schooner Lavengro, owned in Shelburne, N.S., which occurred in Halifax harbor, N.S., June 6, 1912.

The court found that the master of the s.s. Dufferin, W. J. Murdoch, acted to the best of his judgment in trying to avoid the collision, for if he had attempted to stop, or go astern, a more serious accident would have occurred, therefore he is exonerated from all blame. The court is also of opinion that no blame for the accident can be attached to the master or crew of the schooner, who could not do anything to avoid the accident during the short time elapsing between the sighting of the steamship and the collision.

Investigation of the St. Lawrence Pilotage System.

The following is the report of a committee of the Privy Council, which was approved by the Governor-General, Jan. 23:—On a memorandum from the Minister of Marine and Fisheries, submitting that he has had under consideration the pilotage system of the River St. Lawrence with a view to taking measures for its improvement. The recent strandings of the steamships Royal George, Bellona and Gladstone in the river below Quebec have been the subject of very thorough investigations by the Wreck Commissioner. The finding of the court in each of these cases has censured the pilots who were in charge of the respective ships. Public opinion has been greatly aroused as the result of these strandings, following in rapid succession. Criticism of the pilotage system, more especially of that obtaining in the pilotage district of Quebec, has been frequent of late. The Shipping Federation of Canada recently presented to the Minister a memorial suggesting that the time was opportune for a systematic enquiry into the question of pilotage and recommending the appointment of a Royal Commission for that purpose. The Minister is of opinion that the present state of the pilotage system in the pilotage districts of Montreal and Quebec and its administration should be investigated at the earliest possible date, and he, therefore, recommends that he be authorized to appoint, under part II. of the Inquiries Act, chapter 104, Revised Statutes of Canada, three commissioners, one of whom shall be an officer of the Department of Marine and Fisheries, to enquire into and report upon the law respecting pilotage and its administration in the pilotage districts of Montreal and Quebec, and what changes, if any, are desirable therein. The Minister recommends that an honorarium of $20 a day, while actually engaged in the investigation, be paid, in addition to reasonable living and travelling expenses, to each of the commissioners except the departmental officer, and that the said officer be allowed $10 a day for living expenses, in addition to the reasonable travelling expenses, while absent from Ottawa on such investigation, but no honorarium.

Under the authority above given, the Minister appointed as commissioners, Commander H. St. G. Lindsay, Dominion Wreck Commissioner, chairman; Thos. Robb, Manager and Secretary, Shipping Federation; and A. Lachance, Chairman of the Corporation of Pilots of Quebec.

Canadian Railway and Marine World.

April, 1913.

The Transportation Situation at the Head of the Great Lakes.

By Frederick H. Moody, B.A.Sc.

The twin cities of Port Arthur and Fort William occupy a unique position in the transportation of this country, being the focal point for all traffic both east and west, whether by rail or water. This might be qualified by the statement that the opening of the new National Transcontinental Ry. across the open country to the north of these two cities will, in a degree, deprive them of the unique position of requiring all traffic to pass through them. That is not to say the volume of traffic handled at these ports will in any degree diminish, as such will not be the case, as the grain crop is growing by such leaps and bounds, that several other outlets to that vast field are required, and would be unfelt at the head of lake navigation.

These twin cities occupy a decidedly novel position. On the one side is the vast manufacturing east; on the other the vast grain producing west, each producing that which the other lacks. Added to that is the fact that the middle west is devoid of coal, and requires to bring in its supplies from the coal fields of the eastern United States. The greater part of this bulk freight, such as coal and grain, is transhipped at the head of the lakes, using water transportation on the eastern part of the journey, and rail, westerly. As an idea of the volume of traffic that passes through these two towns, the grain returns during the navigation season of 1912 are striking. Grain of all kinds, but principally wheat, was shipped out of the twin ports in Canadian and United States vessels to Canadian and United States ports, to the extent of 113,257,676 bushels. This shows the amount of elevator space required to accommodate even a portion of this vast production. Elevator accommodation seems to be the vital problem with which the twin cities have at present to contend.

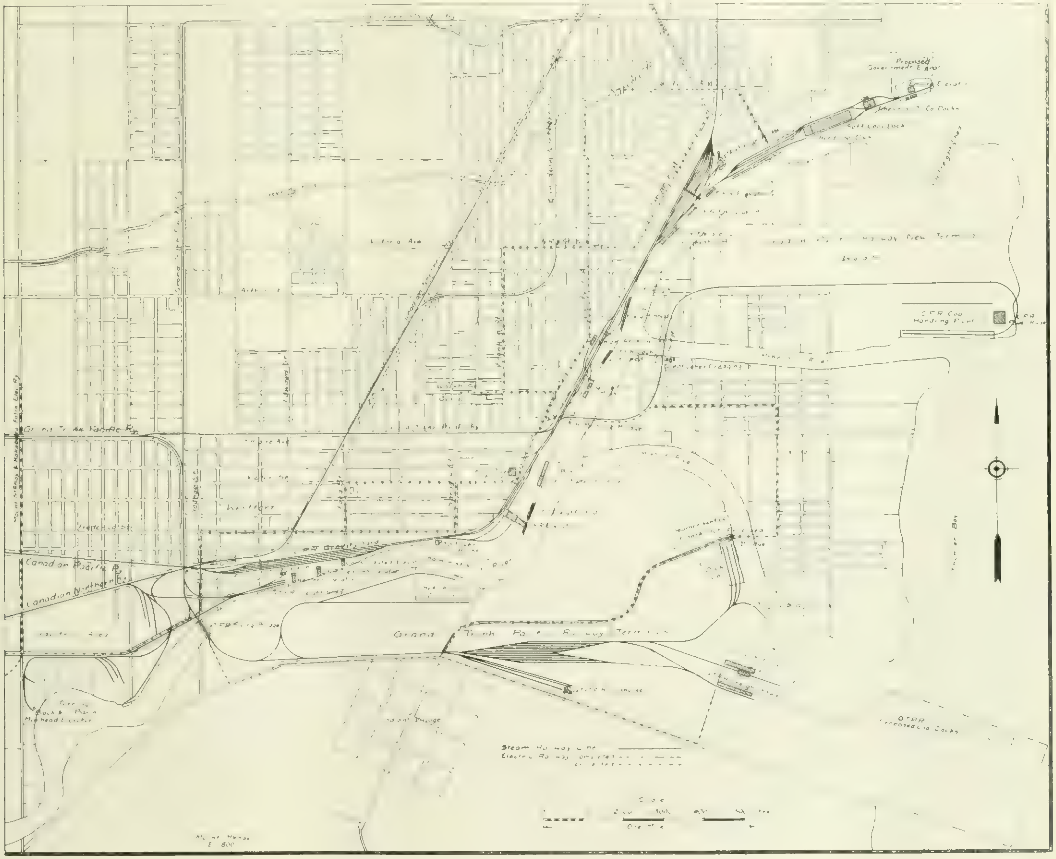

Fig. 1.—Plan Showing Railway Connections Around Fort William.

Fort William.

Fort William is most admirably situated with one of the finest natural harbors in the world. Originally founded as a fur trading post of the old Northwest Co., it clustered about the mouth of the Kaministikwia River, which at this point empties into Thunder Bay. The settlement grew up around the original fort, gradually forming the present city. The selection of this point for the original fort was ideal, as the Kaministikwia River with its tributaries opened up an extensive territory to the fur trader, making the focal point of all the expeditions at a place favorably situated for the sending of furs and bringing in of supplies. Much the same conditions exist today, only the nature of the commerce conducted has changed, and with it the old style of transportation.

Reference to the map of Fort William, fig. 1, will give an idea of the layout of the port. The river, as it approaches the lake from the west, divides, forming three mouths, the two minor streams being called the Mission and McKellar Rivers. These three mouths form two islands—Island no. 1 and Island no. 2. Including the shore of the rivers along the islands, and on both shores of the mainland, Fort William has a harbor frontage of nearly 28 miles, a condition which is probably without peer on this continent for a city of similar size.

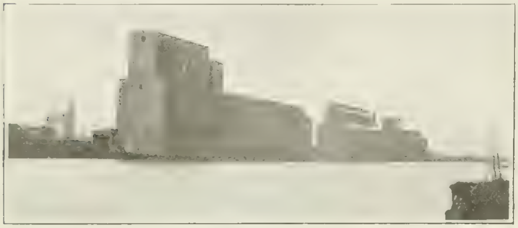

Fig. 2.—Several C.P.R. Elevators at Fort William.

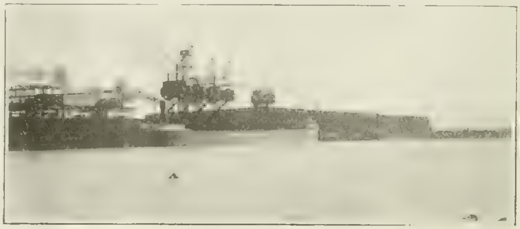

Fig. 3.—Old C.P.R. Coaling Plant at Fort William.

THE CANADIAN PACIFIC RY. was the first railway to enter the town, the first through train between Montreal and Winnipeg passing through in 1886. At that time it was nothing more than a straggling settlement, fringing the river near its mouth. In consequence, the C.P.R. was enabled to easily secure what property it needed for contemplated future expansion, gathering in all the property along the whole length of the river as far west as Westfort, the westerly suburb of Fort William. The C.P.R. has thus had a stretch of river front of upwards of four miles, which to the officials at that early day, seemed more than sufficient to meet the requirements for all future expansions. How short their vision has fallen has recently been witnessed by the cramped condition of the C.P.R. terminals, necessitating the purchase by the company of a large stretch of ground on Island no. 1.

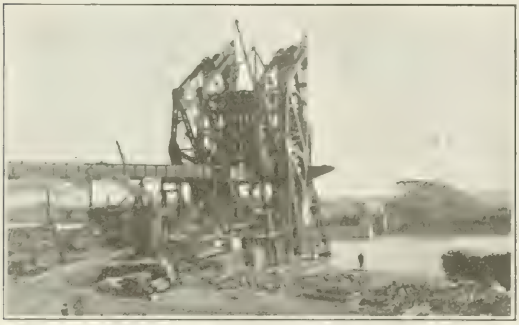

Fig. 4.—Bridge Leading Across to New C.P.R. Terminals, Fort William.

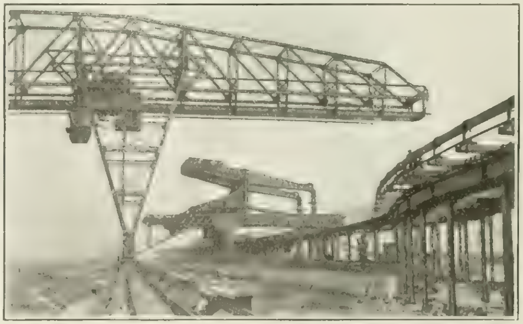

Fig. 5.—New C.P.R. Coal Handling Plant on Island no. 1

The C.P.R. coming in from the west, strikes the river front near the western city limit, from that point following the river, leaving the latter near the northern city limit. The original ramifications of the company were near the mouth of the river, near the location of the present locomotive house. Here were located the original yards, station, etc., but the latter development has taken the major portion of the development along the line to the west.

For the handling of the incoming grain traffic from the west, a large yard was constructed in Westfort. About two years ago, this becoming congested, additions were required, and in view of the success of the hump yard in operation at Winnipeg, this old poling yard was converted into a hump yard, a description of which appeared in Canadian Railway and Marine World, Nov., 1911. The conversion of the yard was simply carried out, all that was required being a single hump at the centre of the yard, in line with the yard cross over track, a similar cross over in the opposite direction being also put in, and the tracks outside the built up hump removed. This yard is only for eastbound traffic, its principal employment being that of breaking up incoming trains from the west, separating the various cars that are to go to each elevator along the river front. Reference to fig 1 will show that the yard is so located that there is not a single retrógrade movement, all but two of the elevators being further along the river. The cars running over the hump descend into the outgoing yard, and are taken along to the different elevators.

The C.P.R. has five elevators, located at points along the river from Westfort to the river mouth, as shown in fig 1. A has a capacity of 1,250,000 bush.; B, 500,000; C, 1,250,000; D, 3,750,000; and E, 2,000,000. In addition, a privately owned cleaning elevator at Westfort, is in process of construction. Four of these elevators are in pairs, C is an annex to A, which is the unloader, and similarly B is the unloader for its annex E, both of which are shown in fig 2.

Along the river front are other elevators, all served by C.P.R. tracks. From Westfort easterly, there are: Western Elevator, 1,250,000 bushels; Consolidated Elevator, 2,250,000; Ogilvie Flour Mill Elevator, 1,000,000; and Empire Elevator, 2,250,000. In addition, the Dominion Government has in prospect another elevator along the Thunder Bay frontage towards Port Arthur, to have a capacity of 3,500,000 bush. Other smaller elevators are located about town near the C.P.R. tracks.

Near the river mouth is located the old C.P.R. coaling plant, shown in fig 3, formerly employed for all kinds of coal, but in future to be used for coal not belonging to the company, the new plant on Island no. 1 handling the company's coal.

Near the point where the main line leaves the river are the old yards and roundhouse. The divisional shops adjoining are well equipped to handle motive power east and west of Fort William. To the west of these yards was the former location of the C.P.R. station. The trend of the town being in a southwesterly direction, the company about two years ago built a station further southwest, in the location shown in fig 1. It is built as a union station, to be used conjointly with the Grand Trunk Pacific Ry., which is inaugurating a passenger service on the Lake Superior Division this spring. Formerly, the terminal docks of the C.P.R. Upper Lakes Steamship Service were located near the former site of the station. At the same time that the station was removed to its present position, a new wharf and shed were built immediately to the east of the station, with which it is in easy communication through a subway under the tracks. This new freight shed and passenger terminal is 960 by 60 ft., and is one of the most complete terminal freight and passenger wharves in existence.

The mainland facilities becoming too crowded, and possibilities of further development in that direction becoming prohibitive on account of the high cost of the land, arrangements were completed whereby the C.P.R. obtained control of practically the whole of Island no. 1, on which it is the intention to construct large terminals to relieve the terminals on the mainland. To make possible the use of these two islands for railway and industrial purposes, the city was instrumental in having the Dominion Government dredge the McKellar and Mission Rivers to the standard requirements adopted for the Fort William terminals, viz., 500 ft. channel, with a clear depth all over of 22 ft.

For the C.P.R. to make use of the islands, it was necessary to bridge the channels of the rivers. The way of approach was to first cross to Island no. 2, and then across to Island no. 1. The first bridge is of the bascule type, double tracked and double decked, a full description of which appeared in Canadian Railway and Marine World for Sept., 1912. The bridge under construction is shown in fig. 4. An idea of its size may be gathered from the fact that it has a clear span of 186 ft., which, on account of its being set at an angle, gives a clear channel at the bridge of 125 ft. It is made double decked to carry street car and vehicular traffic on the upper deck, the method of approach at each end being as shown in fig 4. The crossing of the McKellar River is by means of a rolling lift bridge, giving a clear channel in that river for passing vessels.

The plans for the C.P.R. terminals on the island have not been completed, but a coaling plant and a freight shed and pier have already been built. In the centre of the island, it is the intention to lay out yards, but along the river front, except at the outer end of the island, the land is to be laid out into industrial sites, which will be convenient for both rail and water connections. The freight shed plans along the north side of the island contemplate 5 sheds, of which only one has as yet been completed. Much of the transhipment of package freight will be removed from the mainland when these are completed.

The coaling plant that has been constructed on the island, bordering on the McKellar River, is said to be the largest in the world. A description of it appeared in Canadian Railway and Marine World for Feb., 1912. It is for the exclusive use of the company's coal, and will ultimately have a storage capacity of over 2,000,000 tons. The old plant on the mainland will be used for all other coal that is taken up the lakes. An idea of the size of the plant can be gained from fig. 5. It extends nearly as far in the other direction as can be seen in that view, and the bridge on the left extends some 500 ft. On the extreme right is the McKellar River. From the hold of the boat, the coal is lifted by the large fulcrumed arms, deposited in the space between the walls shown, where it is picked up by the large crane on the left, carried and dropped in the vast storage space to the left. The loading of the cars is accomplished in a reverse order. On the elevated track to the right are scale cars that are loaded with coal from the travelling crane on the left, and which run along to loading machines under the elevated track, into which the coal is dropped, the exact loading of the car being thus accomplished without further trimming. In the western coal trade, box cars are used exclusively, grain travelling east in them, the same cars going west loaded with coal, thus maintaining a balance in the traffic, with a minimum of lights. The trackage has been so arranged that there is a continuous movement of the cars through the coaling plant, it being expected that a switch will be constantly employed bringing in and removing the cars, the local movement in the plant being obtained through an electrical winch. The whole plant is electrically operated, a substation at the far end supplying the electricity for local use. The plant was put in operation last October, and about 100,000 tons of coal unloaded from vessels before the close of navigation. It will be stored there pending the completion of the two bridges across the channels to the two islands.

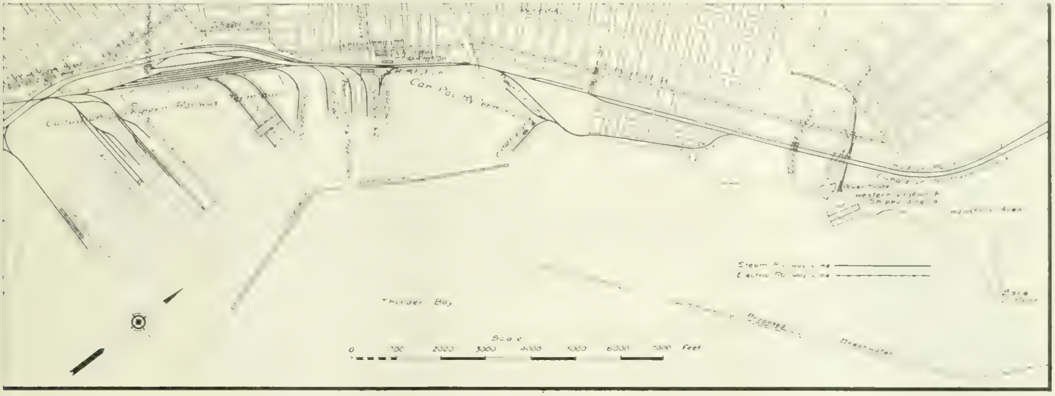

Fig. 6.—Plan Showing Railway Connections Around Port Arthur.

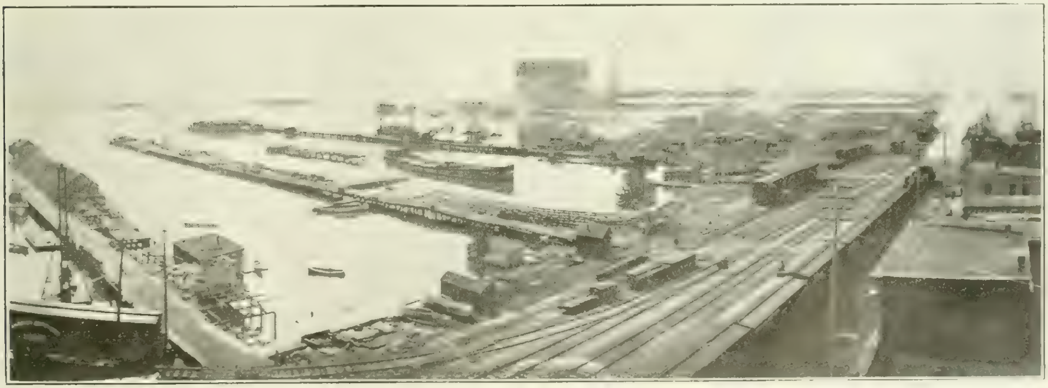

Fig. 7.—Panoramic View of Canadian Northern Ry. Terminals at Port Arthur.

GRAND TRUNK PACIFIC RY.—The late advent of the G.T.P.R. into the western transportation field made it necessary for it to exercise considerable ingenuity in obtaining access to the different large terminal points reached by competitive lines. At the head of the lakes, considerable time was spent in determining the merits and determining circumstances that would influence it in going into Fort William or Port Arthur. The inducements, both natural and those offered by the town proving most attractive, Fort William was decided upon as the lake terminal point. The city was instrumental in securing for the company a 1,600 acre tract of land to the south of the city, on what was known as the Mission property, a piece of land years ago set aside as an Indian reservation. This was the only available outlet to terminal water, as all the waterfront on the north side of the river and on Island no. 1 was already taken up or contracted for, and it has proved to be an ideal site for railway terminals in view of its 7 miles of waterfront.

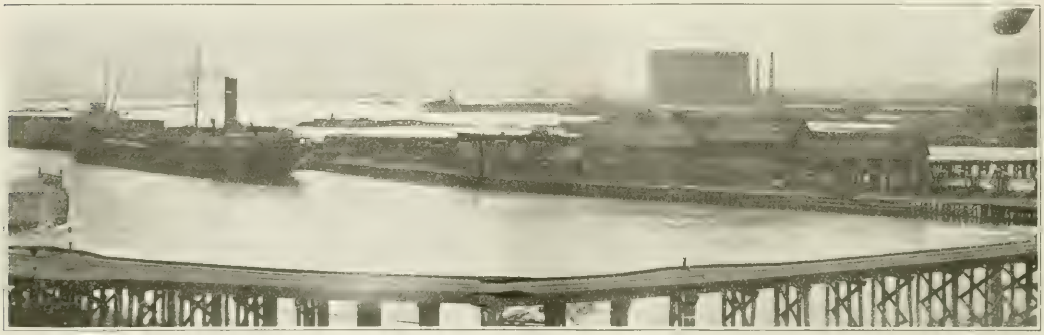

Fig. 8.—Piers to the Rear of Canadian Northern Ry. Station at Port Arthur.

The G.T.P.R. line from Superior Jct. enters Fort William from the west over Empire Ave., turning due south near the western city limits and crossing over the Kaministikwia River on a swing bridge. From that point, lying in an east and west direction, are the company's terminal yards, which include a 12 stall locomotive house, which it is intended to enlarge from time to time as occasion demands. The terminal wharves are to be at the east end of this projection of land, at the mouth of the Mission River, which, as mentioned earlier, has recently been dredged to standard conditions. The whole arrangement is as shown in fig. 1.

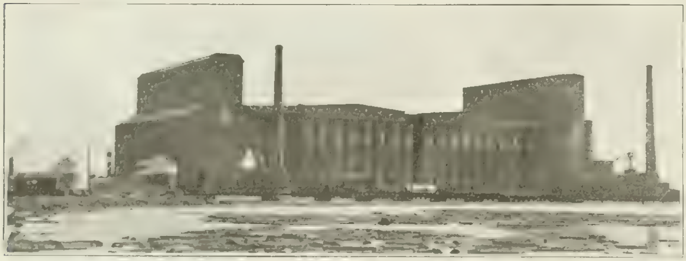

Fig. 9.—Canadian Northern Railway Grain Elevators.

In the position indicated, what is said to be the largest grain elevator in the world is in course of construction. The initial portion of the elevator, completed two years ago, had a capacity of 3,250,000 bush., and this has been added to during the last year, making a total storage capacity of 6,000,000 bush. The ultimate capacity of the first large unit will be 10,000,000 bush., with five more like it to follow as the grain traffic demands. In front of the elevator, there has been dredged out a turning basin, the dredgings from which have been used to form the land to the east of this point. On this made land, it is proposed to construct large coal docks for the handling of company as well as private coal. The nature of the coal dock construction and plant has not yet been decided upon.

On the south side of the turning basin are to be three freight sheds, 900 by 60 ft. each, two of which have been built. To the north of the elevator site is a rail dock 600 by 60 ft. The whole frontage of the freight sheds and elevators in the dredged slip has a cribbed wharf with concrete top. The property on the Mission reserve north of the G.T.P.R. along the Mission River has all been set aside as industrial sites, in the same manner as that reserved by the C.P.R. on Island no. 1, and there are already several large concerns established as indicated.

One of the big problems that confronted the G.T.P.R. was the entrance into the city for passenger trains. At present, the line that runs down over the Kaministikwia River to the Mission yards, has a branch leading down alongside the river, immediately to the south of the C.P.R. hump yard in Westfort. This comprises the present passenger and freight terminal for the line, a freight shed and pier having been completed at this point for temporary accommodation. Entrance to the union station is now being completed, the trains instead of turning south and over the river will continue along Empire Ave., joining the C.P.R. line a short distance south of the union station. By this means entrance to the heart of the city is obtained, the use of the street being under agreement with the municipality. Opposite the union station on the river front, the company has acquired a 600 ft. frontage on which a 600 ft. wharf and 400 by 60 ft. freight shed have been constructed, so that passengers from the boats may be landed conveniently to the station, there being a subway nearing completion under the railway yards to provide for access between the station and water front.

THE CANADIAN NORTHERN RY. enters the town near the same point as the other two lines, in the suburb of Westfort. From just north of the C.P.R. gravity yard, the line swings off in a northeasterly direction, continuing on a tangent nearly 3 miles long into the heart of Port Arthur, where its terminals are located. Other than the station, the C.N.R. has practically no connections in Fort William. The station is now located on the long tangent mentioned. A line branches off from this siding at Albert St., turning north 3 blocks west of Syndicate Ave., the station being located where this section crosses Victoria Ave. This section again connects with the tangent near the northerly city limits.

THE PORT ARTHUR AND FORT WILLIAM Electric Ry. is owned and operated by the corporations of the two cities. The lines in Fort William are quite extensive, reaching from the north city limits, through Westfort, and on to the G.T.P.R. Mission terminals, following the main thoroughfares through the older section of the city to the bridge across the Kaministikwia River, from which point, through the Mission, it has blazed out a new road to the new terminals. At the north end of the town, there is a branch line running across to the old C.P.R. coal dock. Another branch leaves the main track near the river bridge, running along Montreal St. through the industrial section at the extreme west end of the town to the city limits. A contemplated line, that it is expected will shortly be built, will leave the present line in the Mission yards, cutting across to the Mission River, which it is proposed to bridge, up through Island no. 2, and then back to the main line over the upper deck of the bascule bridge shown in fig. 4. A very large section of the city is now well served, and with the opening of the new line, considerable property that is now inaccessible will be opened for development.

Port Arthur.

Considered from a transportation standpoint, Port Arthur is essentially a Canadian Northern town, as the present eastern terminus of the company's western lines is there, and in consequence, the C.N.R. has many activities in and around the city. The layout of the city is shown in fig. 6, a plan of the water front portion of the town, including all the railway connections into Port Arthur from both directions.

The harbor facilities have not been as well planned by nature as those at Fort William, as the whole harbor front is exposed to Thunder Bay, except in the small portion of the centre of the waterfront protected by a breakwater. Laboring under this disadvantage of limited harbor advantages, the most has been made of the situation with this limited breakwater, and in the near future, it is expected that a breakwater will be completed from end to end of the city as indicated in the plan, fully compensating for the drawbacks given the harbor by nature. The ultimate plans will provide for a well equipped and commodious harbor.

CANADIAN NORTHERN RY.—The portion of the town occupied almost exclusively by the C.N.R. is the whole waterfront from Arthur St., the centre of the town, to the extreme southern border of the city where it connects to Fort William. This section of the city is called the C.N.R. terminals. The C.N.R. station, which until recently was the end of steel and the terminal point for all traffic from the west, is at the foot of Arthur St., adjoining the shore end of a wharf. The station is in addition the headquarters of the division from Port Arthur to Winnipeg. At the corner of Cumberland and Arthur Sts., the main corner of the town, the C.N.R. built the first of a series of large hotels, the Prince Arthur occupying nearly a whole block, and looking down over the bay. This was completed and put in service about 3 years ago, and the impetus given to tourist traffic thereby has been considerable. The summer traffic coming up the lakes on the lines of steamships that make Port Arthur their port of call, mostly lands on the piers to the rear of the C.N.R. station, within a convenient distance of this large hotel, which has the characteristics of the large city hotels of the better class.

To the south of the station are the various bulk freight wharves. Figs. 7 and 8 give a panoramic view of these terminal facilities as seen from the station. In the immediate foreground are the various C.N.R. package freight piers. Further along the harbor is the huge C.N.R. grain elevator, for many years the largest in the world, still holding that position, but there are larger ones under way. The capacity, 12,000,000 bush., has already been taxed to its limit and a considerable addition is being made, the unit construction of the elevator to be seen in fig. 9 making this possible. The location of the elevator is out in the harbor on a pile foundation, both sides of it being approached from the shore by a trestle.

Further along are the joint piers of the Canadian Northern Coal and Ore Dock Co. and the Atikokan Iron Co. The former plant is quite large, as shown in fig. 10, extending out into the harbor a considerable distance. The storage capacity of this plant is 500,000 tons of coal, handled by a system of belt conveyors, capable of discharging a 12,000 ton cargo in 12 hours.

Further along the harbor on the C.N.R. terminal property is the Thunder Bay Elevator Co.'s elevator.

The C.N.R. line entering Port Arthur from Fort William on the long tangent before referred to, runs into the terminal yards of the line, which are situated to the west of the C.N.R. elevators. Adjoining is the terminal locomotive house. Proceeding through the town, the line, after passing through the station, connects with the C.P.R. line, again following its own parallel right of way beyond Stephen St., to near the north city limit, where the two lines separate, the C.N.R. following the lake shore more closely from there to Nipigon, where the lines finally separate. This section, from the station northeast, is a portion of the new line the C.N.R. is opening through the clay belt of New Ontario.

THE CANADIAN PACIFIC RY. terminals at Port Arthur are not very extensive, with its vast terminals so close at hand in Fort William. All the waterfront property for some little distance north of the C.N.R. station, is C.P.R. terminal property. The station is located diagonally opposite the C.N.R. station, between the C.N.R. hotel and the waterfront. Practically all the terminal water facility possessed by the C.P.R. in Port Arthur is a grain elevator about half a mile north of the station. The C.P.R. main line follows that of the C.N.R. in a general way to the centre of the town, coinciding with or paralleling it from that point to the north city limits.

PORT ARTHUR AND FORT WILLIAM Electric Ry.—The head office of this municipal enterprise is in Port Arthur, where are also located the shops. The line from Fort William, entering on the Fort William Road, finally strikes Cumberland St., which it follows to the north side of Current River, beyond which is located the large industrial tract of land owned by the municipality. A branch of the electric railway runs up Arthur St., branching off to the south when it reaches the top of the high ground back from the shore, this line being about 1½ miles long. Between Fort William and Port Arthur, there is another branch line running out to the country club, along a road running due west. This line is upwards of a mile long.

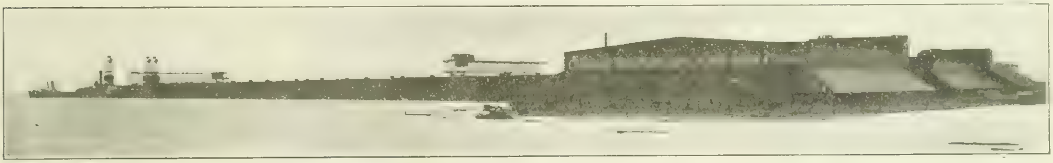

Fig. 10.—Plant of Canadian Northern Coal and Ore Dock Co., with Atikokan Iron Co., Beyond.

Change in Intercolonial Railway's Accounting System.

In connection with the reorganization of the Government Railways operating and maintenance staff, which appears on another page of this issue, a change has been made in the system of accounting on the Intercolonial Ry., the system in use on the Canadian Pacific and many other lines having been adopted.

The system heretofore in use on the I.R.C. was one under which everything was assembled in Moncton, and the accounts kept in the general offices.

Under the new system which is being put into effect, the accounting will be done by divisions. An accounting staff is being placed in the four superintendents' offices, and these offices will report to Moncton, where the total accounts for the system will be assembled.

Under the new system it will be possible to hold each superintendent responsible for the expenses in connection with the operation of his division, and the management will be enabled to make comparisons, so as to ascertain which superintendent is carrying on the work in the most economical manner, and will be in a position to more quickly check any waste in construction or operation.

Tracing Carload and L. C. L. Traffic on the C. P. R.

W. E. McInnes, Freight Traffic Manager, C.P.R., issued recently a circular dealing with the tracing of carload and less than carload traffic. The circular says that the indiscriminate and extensive commercial tracing now handled in the company's various offices, and originating directly or indirectly with shippers or consignees, has assumed such proportions that is it defeating the purpose sought by the shipping public, overloading the wires, and consuming the time of many clerks to no purpose. The tracing of either carload or less than carload shipments before they have had ample time to reach destination does not hurry the movement of shipments, but prevents prompt attention to legitimate tracing.

This matter came under the consideration of the Association of Transportation and Car Accounting Officers, which made a report to the American Railway Association. In the course of the enquiries it developed that shippers and consignees did not hesitate to start a tracer immediately their shipments were forwarded. As the result of the discussion the American Railway Association passed a resolution deprecating the practice of tracing from initial point to destination immediately the freight is offered for shipment, and advising delivery or furnishing passing reports to shippers or consignees, and recommending that the tracing of shipments should be confined to show unusual delay in transit, and that no tracing be done until, in the usual handling of freight, shipments should have reached destination.

The C.P.R. took up the matter as affecting its own lines, and after full discussion among the freight and car officials at Montreal and Winnipeg, the circular was issued. The rules set out in the circular are as follows:—Tracers must not be started, or requests made to trace freight, until the shipment has had a reasonable time in which to reach destination, and then only at the request of shipper or consignee. When tracing a shipment give the initials and number of car, point of origin, route, date forwarded, commodity, and destination. Tracers in connection with carload freight should be addressed to F. A. Gascoigne, Superintendent of Car Service, Montreal, for Eastern Lines; and A. Hatton, Superintendent of Car Service, Winnipeg, for Western Lines. In the case of less than carload shipments, the necessary information should be obtained through agent at shipping point or destination.

On account of the increased price of fuel oil the Australian government will change its oil-burning locomotives back to coal burning.

An ample supply of draft timber bolts should always be kept on hand at car repair points, as the time required to straighten and rethread old bolts may cause serious delay to important lading. If new bolts are always available, old ones can be fixed up at a more convenient time.

Canadian Northern Railway New Boiler Tools and Methods.

The common practice of rivetting over the heads of staybolts, with a low crowned head on the flat surface of the inner and outer sheets of the firebox, has been the cause of a great deal of trouble in maintenance. On the inner side of the firebox, or for that matter any part of the boiler against which the direct heat of the fire impinges, the thickness of metal should be as slight as practicable, in order that the difference in temperature between the two sides of the sheet may be small, as the greater the thickness, the slower the heat flows, and the greater must be the heat potential, so to speak. Projections of metal are also undesirable, catching the direct heat and absorbing it more rapidly than the smooth surface. The slight projection of the flattened rivet head in the old construction, as shown at the top in fig 1, catches the heat, and it is a no uncommon thing to frequently have trouble from burnt out staybolts on heavy runs, creating a fruitful source of expense.

The method adopted by the C.N.R. is that shown at the bottom of fig. 1, the plate being so depressed on the fire side that the top of the rivetted staybolt head is flush with the sheet, creating no projections for the gathering of heat. An added advantage is the ease with which the staybolt head can be efficiently caulked, the head resting in a depression presenting an excellent caulking edge around the rim of the depression. The staybolt as actually installed in a sheet is shown in fig. 3. It will be noted that the outer sheet is still treated in the usual manner.

The method of preparing the plate required the development of special tools. The plate is first perforated with a 7-16 in. [illegible] reamer. The sheet is then annealed, prior to the depressing process. A punch and die of the form shown to the right in fig. 1 is employed for the depressing, the nose of the punch forcing itself through the ½ in. hole, drawing out the plate to the form shown below the punch. The sheet as actually drawn in practice is shown in fig. 3, the drawing out conforming very closely to the designed shape. It will be noted that the staybolt bearing is lengthened, a desirable factor. In inserting the rivet, a 4 thread length is projected through for rivetting over, which is a larger amount than would be possible with the flush plate. The heading snap is also shown in fig. 3, centering on the centre safety hole. The holding power thus obtained is considerably increased.

Patchbolts usually create trouble from their inability to be properly tightened down to hold the patch to the sheet, due to the roughness of the mating surfaces. The C.N.R. method is illustrated in fig. 2. The patchbolt is of the usual construction, partially severed under the square head for ease in cutting off. A special air hammer tool fits over top, the lower face of the tool being cupped to a radius slightly smaller than that of the top of the patchbolt head. The head of the tool is hexagonal. After tightening up as much as possible in the usual manner, with a wrench on the square head of the patchbolt, the tool is put on, and, under the vibration created by the hammer, the bolt is tightened down still further by a wrench on the hexagon of the tool. The hammering tends to draw the plates tighter together, creating a tight joint. The smaller radius cupping on the end of the tool bears on the patch around the rim of the patchbolt head, raising a seam all round the bolt. A perfectly tight joint is assured.

The method of rivetting and the rivetting snaps employed are shown in fig. 5. On the right is a tightening up snap. The lower head of the rivet is held securely by the holder on. This hollow snap is slipped over the top of the red hot rivet, forcing the plates tightly together. The rivet head is then ready for forming. This would seem to be a much preferable method of tightening the plates than that of hammering all around the rivet on the plate as is the usual practice.

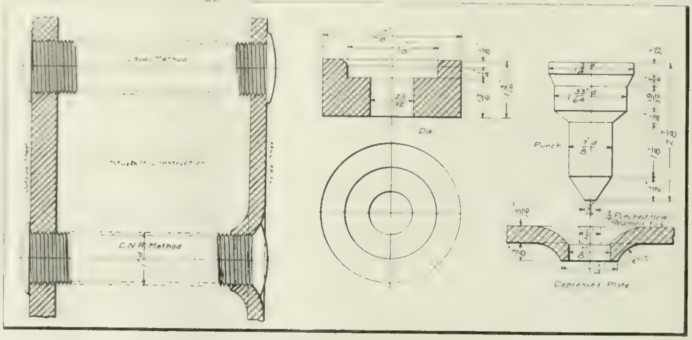

Fig. 1.—Punch and Die for Depressed Staybolt Holes.

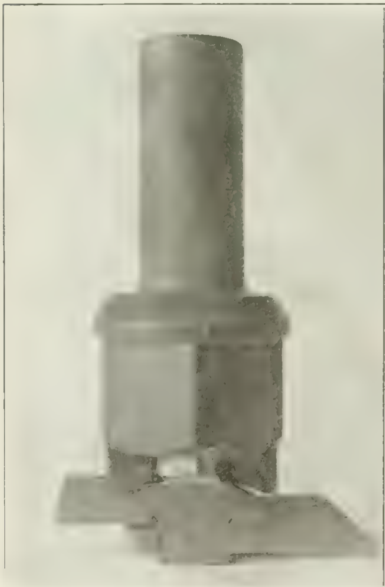

Fig. 2.—C.N.R. Patchbolt Practice.

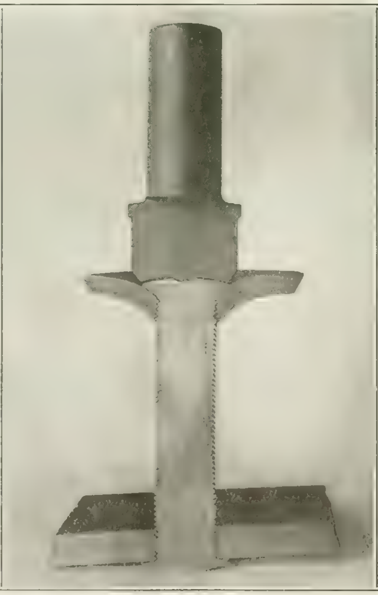

Fig. 3.—C.N.R. Staybolt Practice.

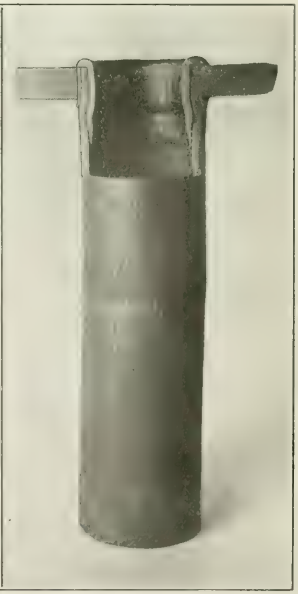

Fig. 4.—C.N.R. Tube End Strengthening Practice.

The snap on the left is that used for ordinary cone headed rivets, which of course centre themselves naturally. In the case of flat headed rivets, trouble is usually experienced with the rivet running over unless more than usual care is exercised by the boilermaker. The snap shown in the centre of the group overcomes this running over tendency in a very simple manner. In the centre of the snap, a ⅛ in. hole is drilled to a depth of about ¼ in. The first blow of the hammer on the head causes a small amount of the metal to flow up this hole, forming a small tit that automatically centres the snap on the rivet, a good rivet resulting.

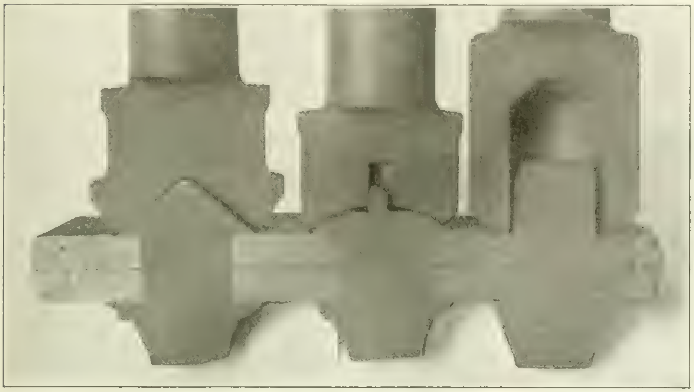

Fig. 5.—C.N.R. Practice in Expanding Tubes.

Hand operated flue expanders, as almost universally used, are an ever fruitful cause of trouble. In the first place, they are far too slow in action, and the very fact that their action is a rotary one makes their use rather difficult in cramped places, such as the side tubes in the fire or smokebox. The C.N.R. practice is shown in fig. 6. An expanding member, made up of six segmental pieces of the form indicated, and held together by a stiff rubber band, are forced out against the tube wall by a tapered pin driven in by an air hammer. The annular recess around the expander, with rims around each side of the recess, forces the tube out in rings at each face of the tube plate. Between the tube and plate, there is the usual copper ring. The action of the expander is to so expand the tube in and around the plate opening as to form a solid joint. To finish, the outer edge is beaded over with a beading tool in the customary manner. The ends of tubes that have been thinned down by repeated expandings, to such a degree as are deemed unsafe, are reinforced by means of the same tool, inserting a short piece of smaller tubing in the end, after first cutting off the inner beading, the reinforcing piece being beaded over in its place, all as in fig. 4.

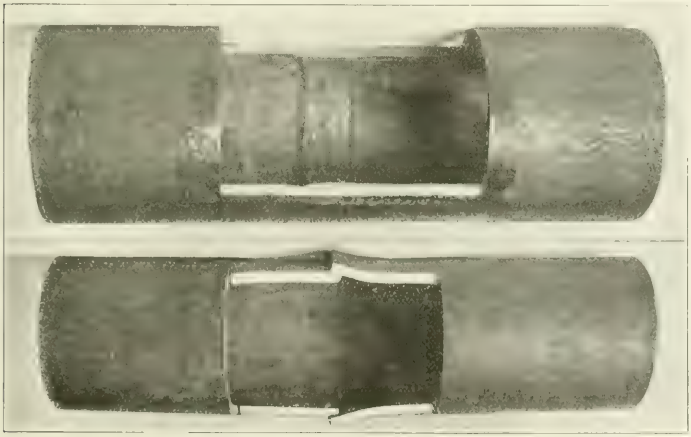

Fig. 7.—C.N.R. Practice of Safe Ending Tubes.

The method of safe ending tubes is shown in fig. 7. The C.N.R. practice in this respect resembles that of many other lines. The safe end is flared, and slipped over the heated end of the tube, neither part being bevelled, a practice that is used with a considerable degree of success in some shops. After heating both parts, they are welded together in a rotary swedging machine, producing a joint like that shown in the lower part of the illustration. All the weld seam is on the inner surface.

The views that illustrate this article are from a set of photographs made up by the C.N.R. mechanical department for distribution to all the locomotive houses on the system. It is the intention to make them all up on a large card, which will be framed and hung up in a conspicuous place in the locomotive house, so that all will know the proper use of the tools, resulting in a more uniform method of handling running and general repairs at all points.

Grand Trunk Pacific Railway Terminal Facilities at Edson, Alta.

For an outlying point on the G.T.P.R., Edson has been developed to a considerable extent in the short time the line has been running in there. The yards are fairly extensive, and the shops are equipped to handle repairs of a more or less heavy nature.

The car shop is 260 by 40 ft., and 24 ft. high, containing two through tracks, each of which can take 6 cars. Adjoining is a building 102 by 15 ft., 12 ft. high, for offices, store room and paint shop. Both buildings are of wood. All classes of cars are handled here, including passenger equipment, as many as 900 cars a month undergoing repairs either in the shops or yards.

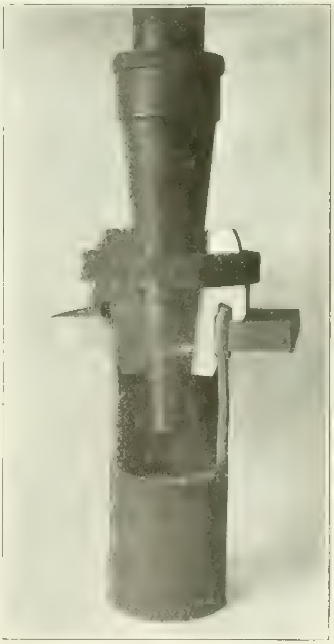

Fig. 6.—C.N.R. Practice of Expanding Tubes.

The car shop pay roll contains from 35 to 40 names.

There is also a 12 stall roundhouse, with a large divisional machine shop adjoining. This shop is equipped with both metal and woodworking machinery, the former for locomotive running repairs, and the latter for planing the lumber used over the system, being shipped east and west from Edson. Both roundhouse and machine shop are brick structure, employing about 75 men. The 1,000 ton coaling station was described in some detail in Canadian Railway and Marine World for July, 1912.

A blacksmith shop employs 3 blacksmiths. The equipment includes a steam hammer, steam shears and heavy punch. The yards contain in addition to the through main line track, 17 yard tracks.

We are indebted to J. Flynn, Car Foreman, Edson, for the foregoing information concerning the shops and yards.

Railway Mechanical Methods and Devices.

Forging Machine Work at the Canadian Northern Railway Shops.

Typical examples of the intricate kinds of work that can be handled on the forging machine in the C.N.R. Winnipeg blacksmith shop, J. Kiebler, Foreman, are shown in the two accompanying illustrations. Fig. 1 shows a finished eye bolt and the dies used in its production. F and R indicate the front and rear faces of the dies respectively. The initial step is that of forming the collar on the eye end of the bolt. This is performed by gripping the body of the bolt in the roughened lower recess in the dies; the die shown at the lower left hand corner of the two parts, mounted on the ram, upsets the collar into the annular recess around the die head, leaving enough stock in the hollow die for the eye.

The first step in forming the eye is that of upsetting the end, performed in the position a. The collar is set in the fitting recess, and after the cross slide closes the dies, a plunger comes in from the rear, upsetting the end into the form of a round ball in the chamber a. The next step is that of placing the upset ball end in the recess b, with the collar in the locating recess, the cross movement of the dies flattening the round head. Following this, the flattened head is placed in the cavity c, behind the projecting lug, the bolt being vertical. The closing of the dies holds the flattened head, a plunger on the ram then coming through the guiding hole in the lug at c, punching through the eye hole. The final operation is that of shaping the punched eye head at d, the cross slides on closing forming the eye into its final shape as shown supported between the dies.

The grab iron shown with its forming dies in fig. 2 is slightly more complicated in construction. The bar stock is placed in the groove a, from the front, placing the end against the rear stop. The cross movement of the dies gives the bar end an offset. This offset is next placed in the recess b, and held against the front of this chamber. The closing of the cross slide holds the stock, while a die on the end of the ram entering the chamber b upsets the end to the shape of the end of the chamber, which is the shape of the completed end of the grab iron. Following, the stock is carried to c, the upset end being placed therein, with the upset downward as in the upsetting operation. A punch on the end of the ram, coming through the guiding hole in the plate attached to the rear face of the stationary die at c, punches the bolt hole through the upset stock. All that is now required is that of bending the stock through a right angle, accomplished at d. The stock is placed in the groove in the top of the block attached to the top of the stationary die, with the upset end vertical, bearing out against the attached stop on the rear end. The lug on the top of the movable die on the cross movement of the die, bends the upset end into the cross channel in the rear face of the attached die, finishing the grab iron. The other end of the grab iron is finished in the same manner.

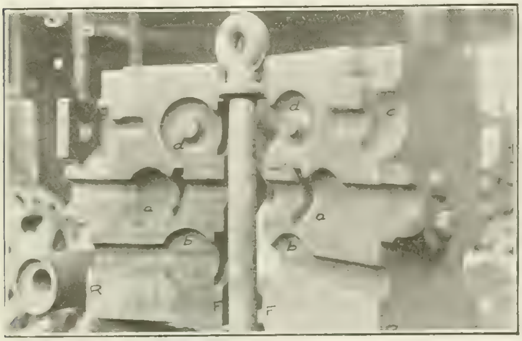

Fig. 1.—Dies for Forging Eyebolt in Forging Machine.

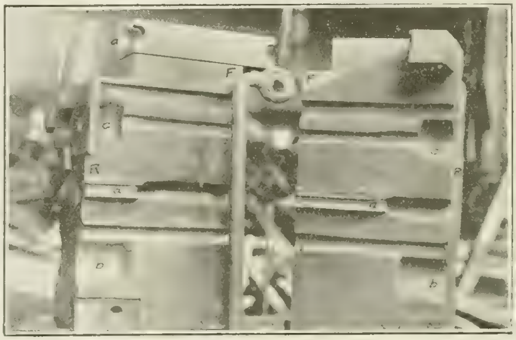

Fig. 2.—Dies for Forging Grab Iron in Forging Machine.

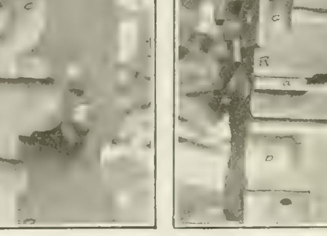
Plating Headlight Mirrors at Grand Trunk Railway Port Huron Shops.

The customary practice in plating the interior of the parabolic headlight mirrors used on locomotives is to solder pieces of sheet metal over the two electric carbon openings, and after making a tight job, to fill the interior with the electrolytic fluid for the plating, making the headlight itself one electrode, and the suspended article in the bath, the other electrode.



Plating Headlight Mirrors.

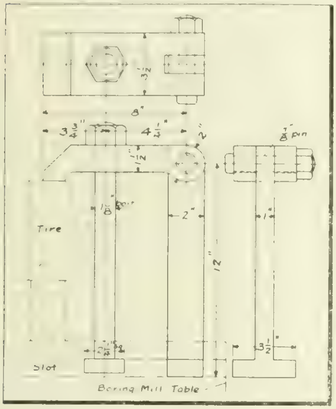
The practice at the G.T.R. shops at Port Huron, Mich., is different from this, a simpler scheme having been devised, the arrangement being shown in the accompanying illustration. For each of the different sizes of headlights, there is a heart shaped loop similar to the one around the outside of the headlight mirror in the illustration. Opposite the openings for the carbons, there are slots in the girdling band, into which 3-16 in. screws can be fitted. Over each hole, a section of thick rubber is placed, backed up by a smaller sheet of thin metal. On this plate, in a recess in the centre, a ball headed screw bears, supported from the girdling frame. This holds the rubber tightly over the hole, providing a leak proof receptacle, which is used in a manner similar to the soldered hole mirrors used in many other shops.

The monetary saving in the time required by the plater to plate a mirror, including the time of preparation, is quite considerable. In addition, there is the factor of a better job being produced. When the openings are soldered up, extreme care must be exercised after the plating, in the removal of the patch, for if the metal be too hot, the plating will be injured.

Tire Clamp at Grand Trunk Railway Stratford Locomotive Shops.

A handy tire clamp for the boring mill is shown in the accompanying illustration, as used in the G.T.R. locomotive shops at Stratford, Ont. The tire to be bored is clamped concentrically on the boring mill table, with the usual vise jaws clamped to the mill table, bearing inward on the tire flange. In addition to the vise holding, it is customary to hold the work down on the table with clamp bolts and strips resting on outside blocks. The clamping bolt has a T head on the lower end fitting into one of the channels in the table. A cross strip is held down on the work and a block of equal height by this bolt, clamping the work securely in place with the assistance of the centralizing vise jaws. This method is more or less unhandy from the fact that on every occasion the machine has a new tire inserted, the bolt, block and clamp require to be removed and replaced on the tire.

The tire clamp to be here described, combines all the advantages of the older method of clamping in a simpler form, for the whole device can be lifted bodily and placed in position on the mill. A 1 x 2 in. vertical rod of the requisite height, has the lower end formed to fit in the table slot, in which it remains permanently during the period in which tires are being bored. The clamp bar is hinged to this vertical bar at the top, and is tightened down on the tire by a 1¼ in. bolt fitting the table channel at the lower end. The bolt is off centre to give the greatest possible leverage on the tire. When removing the tire, all that it is necessary to do is to remove the nut and swing back the clamp arm. It is a very valuable boring mill adjunct, and might be employed to equal advantage on other jobs of a duplicate nature. Its use on the drill press likewise suggests itself.



Tire Clamp for Use on the Boring Mill.

Air Hoist and Screw Drill.

The accompanying drawings show a home made air hoist for roundhouse use, which is very serviceable for hoisting or lowering the heavy parts on locomotives Fig. 1 shows the elevation view of the hoist and the air cylinder with piping attachments which may be arranged to suit connections. An extra attachment, which is put on at the position indicated in fig. 2, is available to put in the hoisting cable from one side when it may be required to raise or lower air pumps on the locomotive.

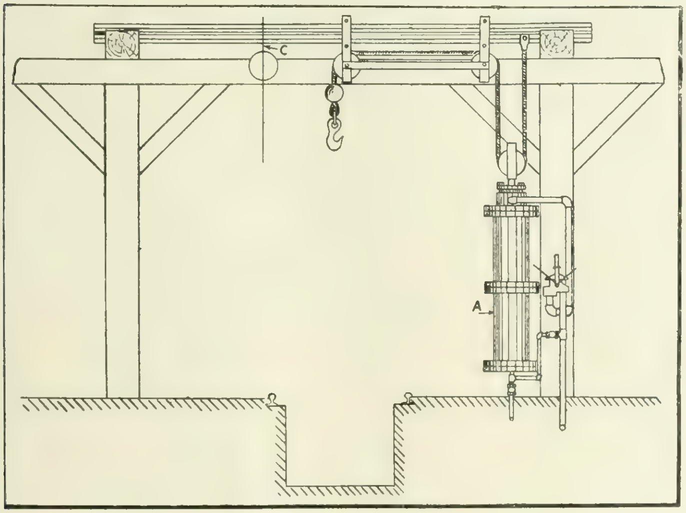


Fig. 1.—Air Hoist for Roundhouse.

Fig. 3 shows a ratchet or screw drill specially adapted for work in places where the space for drilling is limited. The drill may be made as short as possible and is combined with a feeding screw as shown. The end of the drill into which the thread is tapped may be made of a square form readily adaptable to an ordinary spanner wrench for turning the drill. The entire length of the device need not exceed 4 ins. Roundhouse men are well aware that it frequently happens that there are broken studs or bolts in spaces where the ordinary ratchet cannot be operated. A drill of this kind will be found not only of service in many instances, but will also help to avoid removing other parts of the locomotive to make room for the operation of a regular ratchet.—J. G. Koppell, in Railway and Locomotive Engineering.

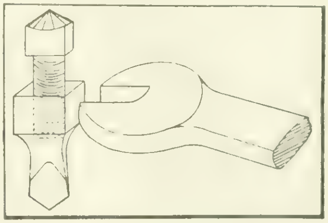

Fig. 3.—Screw Drill.

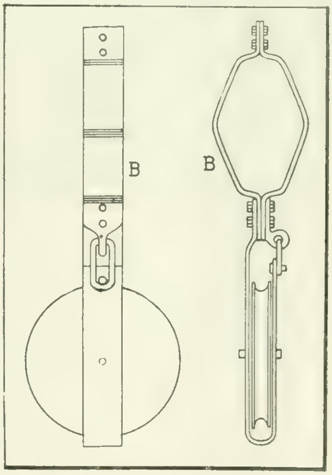

Fig. 2.—Attachment for Air Hoist.

The Canadian Pacific Railway's New Station at Edmonton.

One of the smaller works of construction which the C.P.R. is carrying out in the west is a new station at Edmonton, Alta., which is necessary owing to the rapid growth of the city. This station will have entrance both on Jasper Ave. and Ninth St., but the main entrance will be on the latter thoroughfare where a large carriage space has been provided. The tracks are elevated over Jasper Ave., and a stairway entrance leads to the concourse. At this point there is a turnstile exit from the tracks. The main entrance is imposing, and ample space has been provided for standing vehicles, with a sidewalk for foot passengers, fourteen feet wide. The entrance from Ninth St. into the main building opens directly into the general waiting room, which is 50 ft. square, and on one side have been conveniently placed the elaborate ticket offices. Leading from the main waiting room is a corridor 34 ft. long, at the end of which is arranged the baggage room, with large counter space, and adjoining this is the parcel room. On either side of the corridor a waiting room for women and a smoking room for men have been provided, each fitted up with complete toilet service. Immigrant quarters have been arranged under the main building, and entrance is made through a suitable corridor from the tracks northwards. This accommodation contains every convenience, and is artificially ventilated. The remainder of the huge basement is occupied by the baggage department with the exception of an allotment to the Dominion Express Co. for its business.

The exterior of the main building and the retaining wall running along Jasper Ave., will consist of reinforced concrete, with a certain amount of metal facing to relieve the dullness of the concrete, which will be specially treated with carborundum blocks. These will be used for rubbing the surface of the concrete smooth, giving the structure somewhat the appearance of a stone building. It will be in reality a monolithic structure, and its appearance will depend a great deal on the manner in which the cement surface will be finished by the carborundum blocks. The marquee which is to be erected at the main entrance will be of cast and wrought iron, with a glass roof, and supported on columns which will stand out to the edge of the sidewalk. The interior of the waiting room will be finished in cement, which will have a beautiful white surface, and will be very attractive. It will wash and will have the appearance of plaster, but will be of a very much harder substance. The base of the rom will be of marble and a terrazzo floor will be inserted. The wainscoting will be 4 ft. high, and above this the walls will be finished in pilasters and panneling with plaster cornices, and when colored or painted will give a very artistic effect. The front of the ticket offices, which are in the waiting room, will also be finished in cement, and above the counter will be iron grilles. There will be practically no wood used in the waiting room except the doors. The building was designed in the office of the Superintendent of Building Construction, F. L. Ellingwood, at Montreal, and the work is being carried out under the superintendence of the Chief Engineer, J. G. Sullivan, Winnipeg.

Grand Trunk Pacific Railway Terminals at Rivers.

Until last January, all the motive power work on the G.T.P.R. was handled at Rivers, Man., in shops built originally to accommodate divisional equipment only. Rivers is the first divisional point west of Winnipeg, and with the prospect of the new shops the National Transcontinental Ry. Commission was building for the company at Transcona, which have since been moved into, the divisional equipment was not made very extensive, and to accommodate the work, certain temporary arrangements and buildings were made necessary, as has been explained in previous articles.

Practically the whole divisional layout is shown in fig. 1, a view from the end of the coaling plant. It is an open prairie location. On the extreme left, out of the view, is the station. All the buildings shown are for the motive power department. The building on the extreme right is the locomotive foreman's office.

In the background is an 18 stall locomotive house, to the rear of which is the divisional machine shop, alongside the tall stack. From the volume of work handled, this shop proved unequal to the task, resulting in the light frame building to the right of the end of the locomotive house, in which the blacksmith shop is housed. To the right of this are the stores buildings for the blacksmith shop stock, and in front of this is the wheel storage ground, rather inconveniently located to the machine shop, but in the best location for loading that the limited facilities of the plant will permit.

Leading into the locomotive house are two tracks, the one to the right passing over the ash handling plant in the middle foreground. This track branches with three leads over the ash plant. The outer tracks of these three lead along beside the 400 ton coal plant, a description of which has appeared in these columns, and from which the view is taken. Wood for firing is piled on the right.

The buildings of the car shop are to the left, out of the view. These buildings are not very extensive, as all the car repairs of the system have been handled at Melville, Sask., the next divisional point west. As the view shows the grounds are of such extent as to allow of considerable expansion. In addition, the company owns a tract to the right of the land now utilized. On this tract there has been until recently, a tented city of considerable extent to accommodate the employes, the temporary location of the motive power department at Rivers making the construction of many permanent buildings such a poor investment as to keep away building companies. The company, to relieve this situation, has been compelled to construct some temporary two room buildings, which may be noticed in the distance, to the rear of the buildings.

In the distance, on the right, there will be noted a long trestle bridge, shown in fig. 2 at closer range. This is typical of the type of construction used on the line pending the time when it will be advisable to replace these structures with permanent steel trestles.

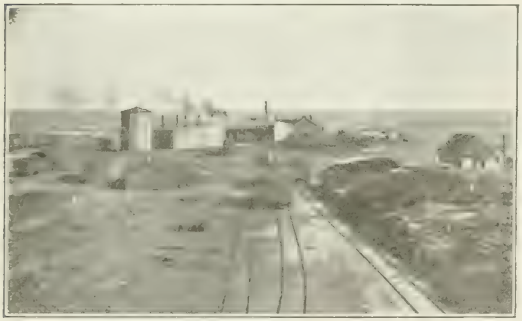

Fig. 1.—G.T.P.R. Mechanical Department Yard at Rivers, Man.

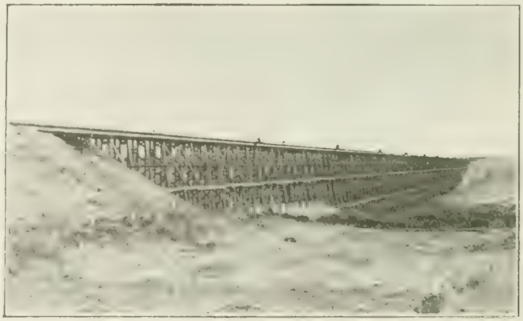

Fig. 2.—Typical Timber Trestle Bridge on G.T.P.R. at Rivers, Man.

Maintenance of Way by Contract.

A roadmaster in the Maritime Provinces writes:—I have read with much interest the articles on letting maintenance of way work by contract in Canadian Railway and Marine World for Oct. and Nov., 1912, and Feb., 1913. The article in the October issue favors a maintenance by contract, one reason given being that contractors are better equipped to do the work. I cannot understand why a railway company should not be able to equip its regular forces with material and tools as well as a contractor would be required to supply by specification.

My experience with contract work on railways has been, that in nearly every case after the contract was completed and passed by the engineers, the regular track forces had to spend a lot of time to bring it up to anything near the standard. My candid opinion is that as soon as railway officials recognize that in order to procure efficient track forces, they must cease to look upon the trackmen as common laborers, and navvies, and awake to the fact that the good trackman is a mechanic, and requires at least, as much education, intelligence and resourcefulness, as a brakeman or a fireman, and to be remunerated accordingly; then, and only then, will the efficiency of trackmen be increased. As long as the present system of employing men who cannot obtain any other employment, on account of their illiteracy, and ignorance of mechanical law exists, because they are cheap labor, the maintenance of way department will be up against difficulties.

It is, therefore, time to recognize the fact, that the man on whose faithfulness to duty, and on whose constructive intelligence, depends the safety of the lives of the great travelling public, and who holds up with his broad shoulders and honest hands, the foundation of the whole structure, should be rated, and his time and service valued as high as the men in the other departments. When this much needed reform is accomplished, and the track employes are recognized at their true value, the efficiency of the maintenance of way forces will be largely increased and progressive results will follow in economical maintenance. Then we will hear no more of track repairs by contract.

Algoma Central Terminals Bonds

There was offered in London, Eng., recently, at 95, an issue of £500,000 5% 1st mortgage 50 year gold bonds of the Algoma Central Terminals, Ltd., principal and interest unconditionally guaranteed by the Lake Superior Corporation. The Algoma Central Terminals, Ltd., has a capital of $100,000, all of which, with the exception of directors' qualification shares, are held by the Algoma Central and Hudson Bay Ry. Co. The company is authorized under Dominion charter to own and operate terminals, elevators, docks and other terminal facilities for railway and steamship lines. The company will own the following properties:—

At Sault Ste. Marie, Ont.—Station buildings, locomotive houses, machine, car and repair shops, yards, transfer tracks and right of way and other lands, including valuable water frontage. It is proposed to construct docks for the handling of coal, stone, and gravel; also commercial docks for the handling of passenger traffic, general merchandise and package freight.

At Michipicoten Harbor.—Ore docks and commercial docks now in operation, with track facilities, right of way and other lands amounting to about 1,000 acres, suitable for additional terminals, including the entire water front on Michipicoten Harbor. New pocket ore docks with a capacity for handling over 1,000,000 tons of ore a year will be constructed, also commercial docks for the handling of passenger traffic and general merchandise, and coal docks and coal storage facilities with a capacity of 250,000 tons of coal a year.

The proceeds of the bonds now issued will be applied in the acquisition of the above mentioned properties, which have been taken over by the company at a valuation of £266,288. The balance of cash provided will be utilized for the further extension of the docks and other terminal facilities at Sault Ste. Marie and Michipicoten and the construction of docks and terminals at Little Current. The company has leased all its property at Sault Ste. Marie and Michipicoten to the Algoma Central & Hudson Bay Ry. for 999 years, the railway company agreeing to pay as rental all expenses of maintenance and operation of the properties, together with the interest on the bonds and a sinking fund sufficient to redeem them at maturity. The properties at Little Current belonging to Algoma Eastern Terminals, Ltd., have been leased on the same terms to the Algoma Eastern Ry.

Steam Railway Statistics for 1911-12.

The returns for the steam railways in Canada for the year ended June 30, 1912, issued by the Comptroller of Railway Statistics, J. L. Payne, show that there were 26,727.23 miles of railway in operation, an increase of 1,330.37 miles over June 30, 1911. Of this increase over 83% took place in the four western provinces. In addition to this increase of mileage in operation there were 1,622.50 miles of line, chiefly Grand Trunk Pacific Ry., in operation, which are still regarded officially as being "under construction." In addition there are 1,752.49 miles of second track (an increase of 142.53 miles), and 6,148.92 miles of yard track and sidings (an increase of 599.39 miles), making a total of 34,629 miles of all tracks in operation, against 32,559 miles on June 30, 1911. Of the 8,825.80 miles of track dealt with as being under construction, 1,622.50 miles were in operation, 1,738.04 were completed, 3,990.76 under contract, and 1,474.50 were ready to be placed under contract. The railway mileage in operation in the several provinces, as compared with June 30, 1911, was as follows:—

	Miles	Miles
Ontario	8,545.56	8,322
Quebec	3,882.61	3,882
Manitoba	3,520.42	[illegible]
Saskatchewan	3,753.85	3,121
Alberta	1,896.64	1,494
British Columbia	1,854.53	1,842
New Brunswick	1,545.10	1,548
Nova Scotia	1,357.48	1,554
Prince Edward Island	269.33	269
Yukon	101.71	102
Total	26,727.23	25,400

A difference of 3.50 miles is made in New Brunswick in correction of an error in the returns of the previous year.

The total capital liability was $1,588,937,526, of which $770,450,351 represented capital stock, and $818,478,175 funded debt. This is an increase of $21,251,664 in stocks, and $38,996,661 in funded debt, a total of $60,248,325 in the year. By eliminating the mileage of Government railways and duplication in stock and bond issues the capital liability represents $50,832 a mile, a relatively low figure. The total amount paid in dividends on capital stock was $31,164,791, equal to a rate of 4.04%, as compared with $30,577,740, equal to a rate of 4.08% paid for the year ended June 30, 1911. Of the dividends $18,487,000 was paid on common stock, and $12,677,791 on preferred stock.

The cash aid given during the year totalled $5,892,818.34, of which $5,858,163.34 was paid by the Dominion Government, $26,115 by the provinces, and $8,500 by municipalities. The great difference in the amount paid by the Dominion Government over 1910-11, is accounted for by the payment of $4,994,416.31 paid to the Grand Trunk Pacific Ry., under the "implementing" clause of agreement guaranteeing its bond issue. These figures bring the amount paid in aid of railway construction by the Dominion Government to $154,075,235.09; by the provincial governments to $35,945,515.16, and by municipalities to $18,051,323.60. In addition land grants by the Dominion (discontinued since 1894) and the Provinces have aggregated 56,052,055 acres and bonds guaranteeing $245,070,045 of bonds have been given by the several governments as follows:—

Dominion	$91,083,553
Manitoba	20,889,660
Alberta	45,180,000
Saskatchewan	32,500,000
Ontario	7,860,000
Nova Scotia	[illegible]
British Columbia	38,046,832
New Brunswick	[illegible]
Quebec	[illegible]
Total	$245,070,045

An increase of $96,733,688, as compared with the amount outstanding June 30, 1911.

The earnings from all sources aggregated $219,403,753, an increase of $30,670,259, or 16.2% in the year, the source of revenue being as follows:—

	1910-11.	1911-12.
Passengers	$50,566,894	$56,543,664
Mails	1,869,414	1,914,720
Express	4,674,135	[illegible]
Baggage, parlor cars, etc.	1,207,555	1,295,415
Freight	126,570,534	149,961,140
Station and train privileges	826,252	1,086,687
Telegraphs, rents, etc.	3,018,710	3,307,739
Total	$188,733,494	$219,403,753

The operating expenses were $150,736,540, or 68.7% of the gross income. The total increase in operating expenses was $19,691,494 in the year, the distribution of the same, with the comparative figures for 1910-11, being:—

	1910-11	1911-12
Way and structures.	$29,246,093	$31,514,098
Equipment	26,127,638	29,811,510
Traffic expenses	4,831,744	5,293,700
Transportation	66,343,269	78,969,544
General expenses	4,487,039	5,137,688
Total	$131,034,784	$150,726,540

The railways carried 41,124,181 passengers and 89,444,331 tons of freight, an increase of 4,026,463 passengers and 9,560,049 tons of freight over 1910-11. The following tables give general statistics regarding traffic:—

Passenger Traffic	1910-11.	1911-12
Number of passengers	37,097,718	41,124,181
Passengers carried one mile	2,605,968,924	2,910,251,636
Passengers one mile per mile of line	102,597	108,888
Passengers per mile of line	1,460	1,539
Average passenger journey (miles)	70	71
Average number of passengers per train	60	62
Passenger train mileage	36,985,911	40,440,393
Mixed train mileage	6,277,468	6,473,882
Earnings from ticket sales	$50,566,894	$56,543,664
Earnings from passenger service	$58,317,998	$65,048,187
Average receipts per passenger	$1.360	$1.375
Average receipts per passenger per mile (cents)	1.944	1.943

Freight Traffic	1910-11.	1911-12.
Tons hauled	79,884,282	89,444,331
Tons hauled one mile	16,048,478,295	19,558,190,527
Tons hauled one mile per mile of line	631,829	731,776
Average haul, miles	200	218
Freight train mileage	52,498,866	60,126,023
Mixed train mileage	6,277,468	6,473,882
Revenue from freight	$124,743,015	$148,030,269
Average tons per train	305	325
Average cars per train	18.03	18.19
Average tons per car	16.91	17.87
Average receipts per ton per mile (cents)	777	757

The freight tonnage was divided by classes as follows:—

	1910-11	1911-12
Products of agriculture	13,809,536	17,300,945
Products of animals	3,190,702	3,159,280
Products of mines	28,652,236	31,467,799
Products of forest	13,238,347	14,152,721
Manufactures	13,573,987	16,241,081
Merchandise	2,138,089	2,711,963
Miscellaneous	4,981,385	4,410,542
Total	Tons 79,884,282	89,444,331

Further details of earnings and operating expenses are as follows:—

	1910-11.	1911-12.
Gross earnings	$188,733,494	$219,726,540
Net earnings	57,698,709	68,677,213
Gross earnings per mile	7,430.45	8,209.94
Net earnings per mile	2,271.60	2,569.58
Earnings per passenger	1.360	1.375
Earnings per ton	1.561	1.655
Earnings per passenger train mile	1.348	1.390
Earnings per freight train mile	2.376	2.494
Earnings per train mile, all trains	2.103	2.174
Operating expenses	131,034,785	150,726,540
Operating expenses per mile	5,158.85	5,639.48
Cost of running trains per mile	1.460	1.493

TRAIN MILEAGE.

	1910-11.	1911-12.
Passenger trains	36,985,911	40,440,393
Freight trains	52,498,866	60,126,023
Mixed trains	6,277,468	6,473,882
Special trains	[illegible]	[illegible]
Total	[illegible]	[illegible]

FREIGHT CAR MILEAGE.

	1910-11.	1911-12.
Loaded freight cars	[illegible]	[illegible]
Empty freight cars.	311,084,866	310,974,528
Caboose cars	[illegible]	[illegible]
Total	[illegible]	[illegible]

There were 4,484 locomotives, 4,946 passenger cars, 140,918 freight cars, and 10,466 company service cars in the service of the several companies, against 4,219 locomotives, 4,513 passenger cars, 127,158 freight cars, and 9,579 company service cars on June 30, 1911. In addition 181 locomotives and 7,593 cars were reported as being leased at June 30, 1912, and fast freight lines had 265 cars in service

LOCOMOTIVE MILEAGE.

Freight	[illegible]
Passenger	[illegible]
Mixed	[illegible]
Switching	[illegible]
Special	411,924
Total	127,401,480

The locomotives consumed 7,783,736 tons of fuel, chiefly coal, at a cost of $24,160,823. The use of oil as a fuel is reported for the first time officially, 1,729,577 gallons being used during the year.

The returns of accidents show that 568 persons were killed and 3,780 injured, an increase of 73 in the number killed and of 451 in the number injured, as compared with 1910-11. There were 545 persons killed and 2,437 injured by the movement of trains, distributed as follows:—

	Killed.	Injured.
Passengers	[illegible]	[illegible]
Employes	215	1,606
Trespassers	[illegible]	193
Non trespassers	[illegible]	[illegible]
Postal clerks and others	[illegible]	[illegible]
Total	545	2,437

One passenger in every 872,855 was killed, and one in every 84,792 was injured, as compared with onein every 1,324,919 killed and one in every 124,487 injured in 1910-11.

The number of railway employes on June 30, 1912, was 155,901, against 141,224 on June 30, 1911, and the aggregate salaries and fages was $87,299,639, an increase of $6,937,984.

Fifteen million ties, costing $6,700,000, were used during the year; the amount paid in taxes increased from $1,792,390 to $2,200,529, and 3,544 miles of line were operated by telephone, an increase of 238 miles over that so operated in 1910-11.

Speed of Locomotives Running Tender First.—The Board of Railway Commissioners has issued a circular stating that it has been impressed with the number of injuries to enginemen (in some cases fatal), apparently due to locomotives being run tender first at excessive rates of speed; and it directs that steam railways issue instructions requiring that locomotives running tender first, other than suburban tank engines equipped with pilot on tender, shall not exceed a speed of 20 miles an hour, and that a copy of such instructions be filed with the Board.

By means of moving pictures, colored so as to be as realistic as possible, the Union Pacific Rd. is carrying on a campaign among its locomotive drivers and firemen. The fire, in its different stages, is depicted on a screen in a car equipped for the service, and so successful has the project proved that a marked decrease in the amount of coal consumed and the density of smoke given off by the locomotives has been noticed at the points where the illustrated lectures have been given.

Reorganization of the Government Railways Management.

As already announced in Canadian Railway and Marine World, some changes have recently been made in the organization of the Dominion Government railways management, particularly in regard to the abolition of the position of Chief Engineer, the placing of all engineering matters under the Engineer of Maintenance, subject to the direction of the General Superintendent, and the placing of the maintenance of way under the superintendents. The reorganization was effected under an order in council, which provides as follows:—

THE GENERAL SUPERINTENDENT, under the direction of the Managing Board, shall have charge of all property of the Intercolonial and Prince Edward Island Railways. He will be responsible for the economical and proper maintenance and repairs of all rolling stock, machinery and equipment at shops and repair yards, for the condition of roadbed, track, bridges and other structures, and for the proper and economical maintenance, repairs and renewals of the same. He will have charge of and be responsible for the safety and efficiency of transportation service, and for the economical operation thereof; for the execution of all expenditures made on account of revenue, together with such works on account of capital as the department may from time to time place under his direction; for the cost of forces and for the quantity of material and supplies used on the work under his charge, and will perform such other duties as the Board may direct. In case of accident upon any of the lines under his charge, he shall immediately report the facts to the Managing Board, and, as soon as possible, institute a thorough investigation into the causes which led to it, and communicate in writing the result, together with his views and action upon the case, to the Managing Board. He shall keep the Managing Board fully advised of all occurrences and transactions of importance connected with his department.

THE ENGINEER OF MAINTENANCE will, under the direction of the General Superintendent, have general supervision of all engineering and maintenance of way matters. He will issue, when approved by the General Superintendent, standard plans and specifications and rules and regulations for maintenance, repairs and renewal of bridges, buildings, roadbed and track, signals and other structures, and will see that standard plans and rules are carried out. He will prepare all plans and specifications as directed. He will compile and maintain all necessary records and statistics bearing on the physical condition of the railway, other than rolling stock and machinery. He will furnish superintendents and resident engineers with copies of standard approved plans and rules and regulations. He will supervise the preparation of all rail charts, bridge load charts, standard and special bridge plans, masonry and steel work, together with specifications for the same. He will arrange for proper inspection of all new steel bridge installations, and make special and periodical inspection of existing bridges, trestles and culverts, and will compile and maintain all necessary records and statistics in connection with the same, and perform such other duties as may be assigned him by the General Superintendent.

SUPERINTENDENTS will report to and receive instructions from the General Superintendent. They will have charge of all property on, and be responsible for the operation and maintenance of, their respective divisions. They will consult the Engineer of Maintenance on all maintenance and engineering matters, and with the Superintendent of Motive Power on car and mechanical matters. They will approve all maintenance of way and engineering vouchers and pay rolls for their respective divisions, mark distribution voucher for the Auditor of Disbursements, and perform such other duties as the General Superintendent may direct.

RESIDENT ENGINEERS will report to the superintendents on general matters and to the Engineer of Maintenance on engineering and technical matters. They will prepare all necessary plans, specifications and estimates in connection with repairs, renewals and additions; will report to the Engineer of Maintenance any departure from standard and approved plans as to roadbed and track, and to the superintendents on all other matters; will make semi-annual inspections and send reports on same as above; will perform all engineering work on their respective divisions, compile and maintain complete records of the physical condition of the division and perform such other duties as may be assigned by the superintendents and Engineer of Maintenance.

ROADMASTERS will report to their respective superintendents.

THE SUPERINTENDENT OF MOTIVE power will, under the direction of the General Superintendent, have supervision of all matters pertaining to the construction, operation and maintenance of locomotives, cars, machinery, floating equipment, shops and roundhouses; will issue, when approved by the General Superintendent, standard plans and specifications and rules and regulations covering their construction, maintenance and repair, and will keep a record of all equipment and its condition, and perform such other duties as may be assigned by the General Superintendent.

THE RIGHT OF WAY AND LEASE agent will supervise the preparation of correct station, right of way and property plans; will supervise the preparation of leases, deeds, etc., and keep complete records of the same, and perform such other duties as may be assigned him by the General Superintendent.

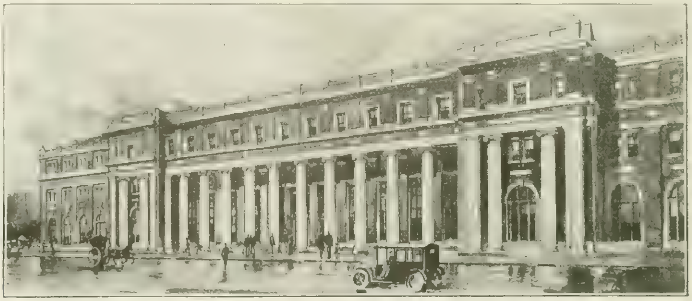
A General Passenger Agent's Appreciation.—W. P. Hinton, General Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, in remitting his renewal subscription, writes: "I congratulate you on the continued growth of Canadian Railway and Marine World and the valuable matter contained therein. It is absolutely essential to Canadian railway men."

Electric Traction on 450 miles of main line track of the Chicago, Milwaukee and Puget Sound bed between Harlowtown, Mont., and Avery, Idaho, is contemplated.

The Canadian Pacific Railway's New Station at Vancouver.

A full description of the new passenger terminal and office facilities, which are under construction at Vancouver, was published in Canadian Railway and Marine World for July, 1912, and a ground plan was given in the issue for Aug., 1912. The accompanying illustration, shows the Cordova St. elevation of the new station, which is being built immediately adjoining the old site at the lower end of Granville St. The building, which is of classic type, was designed by Barott, Blackader and Webster, of Montreal.

The new building, which will be four stories high and extend 400 ft. on Cordova St., will be of an imposing character. The exterior will be of brick and limestone with a granite base. In the designing of this new terminal the comfort of the passengers has been considered from every point and it will be a most up to date terminal. The main waiting room will be 54 ft. 10 in. by 210½ ft. with an Ionic pilaster treatment and a coffered ceiling. The sub waiting and lunch rooms will be of simple design, in harmony with the main waiting room. The upper floors are to be arranged as offices for the operating and other local staffs. The present building on Granville St. will remain until the completion of the new station.



The C.P.R.'s New Station at Vancouver.

Work has already started and the excavation and foundations are well under way. The contractors, Westinghouse, Church, Kerr and Co., are rushing the work with the greatest speed possible. The new terminals will cost nearly $1,250,000, in addition to which some $2,000,000 are being spent on the enlargement of the Hotel Vancouver.

Eight Large Wireless Telegraph Stations are to be built by the Marconi Wireless Telegraph Co. of America, according to a recent announcement. Half of these will be sending and half receiving stations; they will be in working pairs, but with sending and receiving units placed 30 miles apart to prevent interference. One pair is to be at Oahu, Hawaii, one at Tamales Bay and Bolinas, Calif., and the third near Belmar, N.J. The fourth will be in Eastern Massachusetts. It is reported that these stations will permit transmission of messages across the Pacific Ocean, and increase the capacity of the present service between New York and London. The range is designed to be from 4,000 to 6,000 miles. The towers will be 400 to 450 ft. high, it is reported, there being 12 at each station, arranged in a semicircle to support the antennæ.

The best remedy for the protection of steel or ingot iron against failure by pitting, is the removal of the mill scale.

White Pass and Yukon Railway Co's. Annual Report, Etc.

Following are extracts from the directors' report for the year ended June 30, 1912, presented at the annual meeting in London, Eng., recently. The accounts include the results of the operations of the local companies, all of whose capital is owned by the W.P. and Y.R. Co., for their financial year, which ended Dec. 31, 1911:—

The profit and loss account, after providing for interest on debenture stock and debentures and all charges, shows a net profit for the year of £25,840 19s. 9d. Adding to this £9,249 8s. 5d. carried forward from the preceding year, there is a balance at credit of profit and loss of £35,090 8s. 2d. Out of this the full sinking fund instalment of £16,586 for the 5% consolidated debenture stock, and the instalment of £2,156 3s. 10d. for the sinking fund for the branch line bonds due in 1912 have been provided by the purchase of £18,742 of 5% consolidated debenture stock at a cost of £17,965 17s. 10d. The directors recommend that a dividend of 2s. per share be declared, payable Jan. 15, 1913, making 1% for the year. This will absorb £13,750, and there will remain £3,374 6s. 6d. to be carried forward to 1913.

The directors are glad to report that in March last the Canadian Board of Railway Commissioners rescinded the order to reduce the rates charged on the White Pass and Yukon Route, to which reference was made in the report last year.

Folowing is the profit and loss account:—

	£	s.	d.
Interest on securities of local companies paid and accrued to date.	52,944	9	0
Dividends on shares of local companies to Dec. 31, 1911	34,142	4	4
Transfer fees, etc.	44	10	0
	£87,131	3	4

	£	s.	d.
Interest on 5% consolidated first mortgage debenture stock	37,335	2	0
Interest on 6% mortgage debentures (navigation bonds)	15,330	0	0
Directors' and trustees' fees	2,210	0	0
Management and London charges	2,798	3	3
Legal expenses and stamps	1,502	19	3
Audit fee to June 30, 1911	78	15	0
Income tax	1,543	19	10
Loss in exchange	491	4	3
Profit carried to balance sheet	25,840	19	9
	£87,131	3	4

Following are extracts from the report of the President of the local companies, O. L. Dickeson:—

RAIL DIVISION.—On this division we carried 10,441 passengers and 20,028 tons of revenue freight. The average haul was 71.93 miles per passenger, and 98.63 per ton of freight, and the average load per car was 9.15 tons. All necessary maintenance and general repair work for safe and efficient operation and general upkeep of the property was done. The south 192 ft. of bridge 5C was filled, 6,090 cubic yards of material being used to complete this work. 434 cubuc yards of material was used to fill the station grounds surrounding the Broadway station in Skagway to facilitate the handling of mail and baggage and to afford adequate space for the handling of passengers. Ballasting was done between White Pass and White Horse with gravel hauled from pits at Watson and mile post 102. On section 1 considerable ballast work was also carried on to lessen the expense of the permanent upkeep. 7,942 new ties were laid in main line track, using the supply of ties on hand, which had been transported from the Puget Sound territory, to replace a considerable number of ties of native timber placed in the roadway during the construction days. This replacement of ties demonstrated conclusively that the life of native timber ties was at least 13 years without having gone through the modern process of creosoting to prolong their usefulness, and serves to illustrate that our expenses in the future in this direction may be materially decreased. A new drill grinder was installed at Skagway shops. The necessary general repairs to rolling stock were made, placing the equipment in first-class condition. The operating expenses of the division show a decrease of $67,127.70 compared with 1910.

The portion of the President's report dealing with the River division appears in the Marine Department of this issue on another page.

THE WINTER SERVICE for mail, passengers, parcels, etc., was carried on without unusual interruption by means of horse sleighs and four and six horse coaches, and a few trips completed by canoe and launch, which made 145 trips during 1911, equivalent to 47,850 miles, carrying 79,555 lbs. of mail, 543 passengers, 18,637 lbs. of parcels and 381,386 lbs. of ordinary freight. A saving of $1,514.71 in operating expenses was effected as compared with 1910. During the year some experimental work has been carried on in an effort to operate a portion of the trail with gasoline equipment with considerable success, and it is confidently expected that we will make further progress in this direction during the coming year.

GENERAL REMARKS. About June 1 a complete reorganization of the company's local operating forces was undertaken on the Rail and River divisions and Mail Service department, and the most modern methods of efficiency in operation were applied in each department, bringing about a general consolidation of offices and work in various positions, with the result that by the end of the year this had resulted in the saving of $146,637.13 in the operation of the three divisions, without in any way impairing the efficiency of the service or interfering with the general upkeep of the property. It may be encouraging to know in advance that the reorganization thus made will be permanent and throughout the ensuing year will show further decreases.

The history of every mining country has been that a large number of prospectors came into the country seeking bonanzas, and when once their claims were developed they were usually consolidated and absorbed by larger companies to be operated by machinery, displacing men. Following this there are usually found a number of unsuccessful and somewhat visionary schemes of promotion, which have a tendency to retard capital into legitimate mining enterprise. The Yukon Territory has been no exception to these conditions, which have also had a tendency to decrease traffic. The country, however, is highly mineralized, and gold, silver, copper, lead, magnesite, coal and other minerals are to be found throughout the region contiguous to our transportation system, and there remain today splendid opportunities for legitimate investments in mining enterprise when conducted with efficient modern business methods. In the interest of creating traffic for the railway the company will undertake to conduct a detailed and intelligent investigation of the known natural resources with a view of interesting new industry in the country. With the progress of the investigation it is confidently believed that the result of these efforts will be eventually reflected in the railway earnings.

Alaska and Yukon Territory, as summer tourist resorts, have few equals, and as this becomes generally known increased earnings will accrue from this source. The company is taking steps to secure additional tourist traffic.

PRESIDENT'S ADDRESS.—Mr. Dickeson, in speaking at the annual meeting, said:—Beginning with June, 1911, which was the time I first reached the company's property, a complete reorganization of the methods of operating was undertaken in practically every department, eliminating work that was considered unnecessary and consolidating offices and various positions in individual offices, with the result that within three weeks from the time this reorganization work started we were able with equal efficiency to conduct the company's affairs and look after the interests of the public in respect of prompt and reasonable service with 291 fewer employes on the pay rolls than during the corresponding period of the previous year. Within 15 months from the time this reorganization work began a saving of $229,000 had been made in the operating expenes. This was effected without interfering with the standard of wages paid. On the contrary, when the work of one position was eliminated entirely the duties of the position were added to the duties of another employe. In many such instances the wages of the employe were increased, with the result that those remaining in the service were better satisfied with the conditions of employment. While the main work of the reorganization has been effected, and it will not be possible during the ensuing year again to show so large a comparative decrease in the operating expenses, it would be idle to say that we had reached the limit of economies, for improvements in the operation of the property are still going on, and I am quite willing to assume the responsibility of saying that, with the new methods employed, the operating expenses will be very materially less than in previous years without impairing the general upkeep of the property or the efficiency of the service. For many reasons, quite beyond control, the company's traffic during 1911 was considerably less than in any previous year, but regardless of this I felt fully justified last year in telling you that I was able to take a hopefully confident view of the future, and now, after another season's experience, I am pleased indeed to say that the views then expressed have been confirmed. We shall be able to show that during 1912 there has been an increase in both freight and passenger traffic, and a very material increase in the net earnings as compared with 1911. Our net increase over and above everything—operating expenses and everything but depreciation—is $96,000 down to October 31. Looking forward to 1913 I think I am justified in saying that there is every indication of a further gradual increase in the traffic. I feel that we are warranted in this prediction owing to the development work started this year and the constantly increasing interest in the country as a tourist resort.

Railway Lands Patented.—Letters patent were issued during January in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia as follows:

	Acres
Calgary and Edmonton Ry.	[illegible]
Canadian Northern Ry	[illegible]
Canadian Pacific Ry	[illegible]
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	3,359.00
Total	[illegible]

A General Storekeeper's Approval.—N. P. Tracy, General Storekeeper, Canadian Northern Quebec Ry. and Quebec and Lake St. John Ry., Limoilou, Que., writes: "I find Canadian Railway and Marine World exceedingly interesting and instructive."

Telegraph Statistics of the Dominion.

The first report of statistics of the telegraph companies operating throughout the Dominion has been issued for the year ended June 30, 1912, by the Department of Railways and Canals, having been compiled under the direction of the Comptroller of Statistics, J. L. Payne. They are provided for by an amendment to the Railway Act, passed in 1911, and relate entirely to companies engaged in commercial telegraph business, and have no reference to railway telegraph interests, that is, that companies conducting both railway and commercial telegraph business, report only as to commercial business.

The Comptroller says that in preparing schedules for companies to report on it was necessary to create bases, and the question of uniformity did not arise, as it is not known that any other country has in force a comprehensive scheme of telegraph statistics. The schedule may be elaborated later, but for primary purposes it was arranged to cover information relating to:—Organization, capitalization, cost of property and equipment, revenue from operation, operating expenses, balance sheet, pole mileage, [illegible]

Reports were received from 14 companies out of 15 doing business in the Dominion. These have been divided into cable companies, land telegraph companies and cable and land telegraph companies combined. The firstnamed comprise:—Anglo-American Telegraph Co., American Telegraph and Cable Co., Commercial Cable Co., Direct United States Cable Co., Halifax and Bermudas Cable Co., Pacific Cable Board; while those operating on land comprise:—Anglo-American Telegraph Co., Canadian Northern Telegraph Co., C.P.R. Telegraphs, Dominion Government Telegraphs, G.T. Pacific Telegraph Co., Great North Western Telegraph Co., North American Telegraph Co., Timiskaming and Northern Ontario Ry. Commission, and Western Union Telegraph Co.

The Anglo-American Telegraph Co. provides land and cable service, while the Marconi Wireless Telegraph Co. occupies a unique field, and cannot be classified with other telegraph organizations.

[illegible] Western Union, C.P.R. and the Anglo-American companies, though the last-named lines are leased and operated by the first named; the Dominion Government operates lines in the unsettled portions of the Lower [illegible] Ontario and Quebec are served by the Great North Western, C.P.R., T. & N.O.R., and the North American companies, and the Western Provinces by C.P.R., G.N.W., G.T. Pacific, Canadian Northern, and the Dominion Government.

no capital liability is attached to the C.P.R., T. & N.O.R. and the Dominion Government service.

The cost of real property and equipment is given as $184,149,677, of which a large percentage refers to foreign corporations. The revenue from operation was $5,216,170.92, this referring wholly and definitely to Canadian business, with the qualification, so far as the Western Union Co. is concerned, that it was not possible to give exact information, an arbitrary assignment of income and outgo being made for the Canadian end of the business. In doing this there is cause for the inference that too low an apportionment was made for [illegible] the immense volume of business which passed through the offices of the three cable companies in Canada, which are operated by the Western Union. Operating expenses are reported as $3,379,336.96. It was not practicable to assign wire mileage to cable lines, but with respect to land lines, a mileage of 168,017.23 was reported, being divided as follows:—galvanized, 116,974 miles; copper, overhead, 50,100 miles; copper, underground, 254 miles; copper, submarine, 689 miles. There were also reported, 36,218 miles of wire, chiefly copper, as being devoted to multiple operation, that is, the duplex and quadruplex systems, but it is not quite clear that such mileage is actually over and above the figures of the pole mileage and wire mileage according to provinces, as given below:

	Pole mileage	Wire mileage
Nova Scotia	[illegible]	[illegible]
New Brunswick	[illegible]	[illegible]
Prince Edward Island	[illegible]	[illegible]
Quebec	[illegible]	[illegible]
Ontario	[illegible]	[illegible]
Manitoba	[illegible]	[illegible]
Saskatchewan	[illegible]	[illegible]
Alberta	[illegible]	[illegible]
British Columbia	[illegible]	[illegible]
Yukon	[illegible]	[illegible]
Totals	[illegible]	[illegible]

The discrepancy of 78 miles between the wire mileage in the table, and the figures preceding, arose from the impracticability of classifying that number of miles of cable in two of the reports. The reason for the low figures assigned to Prince Edward Island is that the land lines there are almost wholly owned and operated by the Anglo-American Cable Co., and cable companies [illegible]

There were transmitted by the companies operating in the Dominion, during the year, 9,252,540 land messages, and 768,559 cablegrams. The business of cable companies, as distinct from land companies, is reckoned [illegible]. In so far as the facts are not revealed in the [illegible] been handled by the land companies, it was not found practicable for the purposes of the first report to ascertain the number of words transmitted through the cables which have termini in Canada. Much of that business has no reference to Canada, merely forming a link with Great Britain. The Pacific Cable Board, however, reported [illegible] words as compared with 1,849,613 words in the preceding year.

There were 4,828 persons employed, and of these 2,579 were classified as operators, of whom 2,413 were males and 166 females. The salaries and wages paid during the year were $2,703,032.09, equal to 76.7 of the total operating expenses.

Canadian Pacific and Canadian Northern Railway Terminals in Victoria, B. C.

The Premier of British Columbia announced recently that an arrangement has been completed between his government, the C.P.R. and the C.N. Pacific Ry., for the erection of terminals, in Victoria. The site is to be the old Songhees Indian Reserve, which has recently been acquired from the Indian Department for public purposes. It is proposed to devote 102 acres for railway terminals, the C.P.R., through the Esquimalt and Nanaimo Ry., obtaining 34 acres, and the C.N. Ry., through the C.N. Pacific Ry., obtaining about a similar acreage, the balance being reserved for future extensions.

Owing to the different levels at which the two lines enter the city, it was found impossible to arrange for a union station, and it was equally impossible to arrange for joint freight terminals, hence the division of the available area. The passenger stations, however, will be under one roof; one station being on each side of the Johnson street extension. The C.P.R. station and platform will be on the street level, while the C.N.R. station will be about 26 ft. below the street level, with two entrances. In working out the final details, arrangements will be made under which other railway lines may obtain entrance to the station.

The C.P.R. yards will be located between the main Johnson St. extension through the middle of the Reserve and the Harbor front on the south, and the C.N.R. will be located north of the E. and N. Ry. tracks on the west side of the harbor. In connection with the laying out of the reserve the following works have been arranged for:—

An up to date traffic and rail bridge from Johnson Street to reserve, the street being extended to Victoria West, over which B.C. Electric Ry. tracks will run, giving a short cut to Esquimalt. Cost of bridge will be borne by the various interests. Point Ellice bridge approach to be raised to allow for passage of C.N. trains beneath. The two sections of C.N. P.R. will link up near junction of North Douglas street and Saanich road, and will be extended southward to the arm which it crosses at Selkirk water, Deadman's island being used in making the connection. The reserve will thus be entered at its northern boundary.

A strip of land on the reserve skirting the waterfront is being reserved by the Provincial Government for wharves, warehouses and industrial plants. It will be disposed of by lease only, and a railway will be built along it to serve the factories. These tracks and industrial site to be for common use of both companies. Another portion of the reserve has been assigned for use as a city park, and 20 acres are to be subdivided into lots and sold.

The Italian railway administration is to call for tenders to convert to electric traction the line from Monza to Lecco. In addition, orders have been placed for 58 electric locomotives, which will serve partly on this line and partly for the [illegible] line. The section from Monza to Milan will be subsequently electrified.

Orders by Board of Railway Commissioners.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

18611. Jan. 31.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across 4 highways, Port Hope, Ont., mileage [illegible] to [illegible].

General Order [illegible]. Feb. 1.—Declaring that General Order 98 shall not be construed as a substitution for order 15819, but as in addition thereto; and C.P.R. is directed to comply with order 15819.

18612. Jan. 31.—Authorizing C.P.R. tc build spur to its Pontypool ballast pit, across road between cons. [illegible] and [illegible], Manvers tp., Ont.

18613. Feb. [illegible].—Ordering C.P.R. to move its yard at Herbert, Sask., from north to west side of crossing; passing and elevator track switches to be located west of and not less than 500 ft. from crossing; cattle pens, loading platform, Royal Elevator building and coal sheds be moved to west end of yard, etc., work be completed by June 1.

18614, 18615. Feb. [illegible].—Approving location Central Ry. of Canada's Montreal to Midland line, mileage 0 to 7 from Hawkesbury, Ont., and revised location from mileage 5 to 16, through Sault au Recolet, St. Martin Ste. Dorothee, and Ste. Rose parishes, Que.

18616, 18617. Jan. 30, Feb. 3.—Authorizing C.N. Ontario Ry. to build across public road between cons. 12 and 13, Chisholm tp., and to build bridge across Jackfish river, mileage 313.5 from Sudbury Jct.

18618. Feb. 3.—Authorizing C.P.R. to build bridge across Red river, on its Kildonan cutoff, near Winnipeg.

18619. Feb. 3.—Authorizing C.N. Ontario Ry. to build bridges across Goose river (first crossing), Sudbury district; and across Kabinakagami river, Algoma district.

18620. Feb. 3.—Approving location of Canadian Northern Ry. station at Briercrest, Sask.

18621. Feb. 3.—Approving Quebec, Montreal and Southern Ry. bylaw, authorizing N. J. Ferguson, General Freight and Passenger Agent, to issue special freight, competitive, and special passenger tariffs; and rescinding order 18584.

18622. Feb. 3.—Authorizing G.T. Pacific Ry. to build bridge across Fraser river, at mileage 468.4, east of Prince Rupert, B.C.

18623. Feb. 3.—Authorizing C.P.R. to build spur for A. Macdonald Co., Lethbridge, Alta.

18624. Feb. 3.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build a temporary connection with C.N. Ontario Ry., in Pickering tp., at mileage 176.11, for 18 months from date.

18625. Feb. 3.—Authorizing C.P.R. to build spur for Columbia River Lumber Co., near Sicamous, B.C.

18626. Feb. 6.—Approving regulations governing opening and closing of pivotal span of railway bridge over Fraser river, at New Westminster, B.C., and rescinding order 18490.

18627. Jan. 31.—Amending order 18479, Jan. 10, to provide that G.T.R. be authorized to cross Beaune St., Stoney Point, Ont.

18628. Feb. 4.—Amending order 5407, to provide that signalmen required at crossing of G.T. Pacific Ry. and Canadian Northern Ry. (Goose Lake branch), west of Saskatoon, Sask., be appointed by G.T.P.R., the wages to be paid by C.N.R.

18629. Feb. 3.—Approving, pending Board's decision in enquiry into rates charged generally by railway companies in British Columbia, the B.C. Electric Ry. Standard Freight Tariff of Maximum Mileage Rates, C.R.C. 1, to apply between stations on its Vancouver and Lulu Island Ry., and its Vancouver, Fraser Valley and Southern Ry.

18630. Feb. 6.—Approving Niagara, St. Catharines & Toronto Ry. revised location in St. Catharines, Ont., from mileage 0.7 to 1.8.

18631. Feb. 6.—Extending to Mar. 1, time within which C.N.R. station at Fort Frances, Ont., be built.

18632. Feb. 6.—Extending to Apr. 5, time within which C.P.R. shall install electric bell at highway crossing at east end of its yard at Sharbot Lake, Ont.

18633. Feb. 7.—Authorizing C.P.R. to build its Hawarden to Floral branch across highway between secs 19 and 29-31-4, w. 3 m., at mileage 18.17, Sask.

18634. Feb. 3.—Approving revised location of C.P.R. station at Redford, Sask.

18635. Feb. 4.—Amending order 16752, by substituting Vancouver Power Co. for British Columbia Electric Ry.

18636. Feb. 4.—Authorizing G.T. Pacific Ry. to build bridge across Fifty-Mile river at mileage 221, from Wolf creek west, B.C.

18637. Feb. [illegible].—Authorizing G.T.R. to build siding for the Berlin Trunk and Bag Co., Berlin, Ont.

18638. Feb. 6.—Authorizing G.T. Pacific Branch Lines Co. to build bridge over Bow river, at mileage 198 on Tofield-Calgary branch, Alta.; and rescinding order 13889.

18639. Feb. 4.—Authorizing G.T. Pacific Ry. to build bridges over Bulkley river at mileage 258 and 263, east of Prince Rupert, B.C.

18640. Feb. 6.—Approving revised location G.T.P. Branch Lines Co.'s Regina-Boundary branch from east line of sec. 13-[illegible], w. 2 m., to international boundary, mileage 135.93 to 154.94, Cannington district, Sask.

18641. Feb. 4.—Authorizing G.T. Pacific Branch Lines Co. to build bridge across Assiniboine river at mileage 19.5, Brandon branch, Man.

18642. Feb. 8.—Authorizing G.T.R. to build siding for Barcher & Branberger, Bertie tp., Ont.

18643, 18644. Feb. 8.—Authorizing C.P.R. to build bridge 101.5 over Kanaka creek, and to build additional track across roadway at mileage 60.17, Cascade subdivision, B.C.

18645. Feb. 4.—Authorizing Algoma Central and Hudson Bay Ry. to build bridge over Chippewa river, mileage 69.25, Algoma district, Ont.

18646. Feb. 8.—Authorizing C.P.R. to build extension to Brandon Pressed Brick & Tile Co.'s spur, in Trafalgar tp., Ont.

18647. Feb. 8.—Authorizing G.T. Pacific Ry. to build spurs for Gainford Collieries, North Alberta district.

18648. Feb. 8.—Authorizing G.T.R. to build siding for Canadian Glass Manufacturing Co., Hamilton, Ont.

18649. Feb. 10.—Dismissing application of Murray tp., Ont., for order directing G.T.R. to provide subway at crossing between lots 12 and 13.

18650, 18651. Feb 6, 4.—Dismissing application of town of Arnprior, Ont., for orders directing G.T.R. to build crossing where its Canada Atlantic branch intersects Ida St.; and directing C.P.R. to build crossings where it intersects Hugh and Ida Sts.

18652. Feb. 4.—Approving, pending Board's decision in enquiry into rates charged generally by railway companies, in British Columbia, the B.C. Electric Ry. Standard Passenger Tariff of Maximum Mileage Tolls, C.R.C. 1, to apply between stations on Vancouver and Lulu Island Ry., and on Vancouver, Fraser Valley and Southern Ry.

18653. Feb. 6.—Authorizing G.T. Pacific Ry. to build bridge across Rau Shuswap river, at mileage 208, Wolf creek west, B.C.

18654. Feb. 6.—Authorizing G.T. Pacific Branch Lines Co. to build Y turning out from Biggar-Calgary branch at Loverna, Saskatoon district, Sask.

18655. Feb. 6.—Authorizing G.T. Pacific Ry. to build bridge across Goat river, mileage 243, from Wolf creek west, B.C.

18656. Feb. 11.—Authorizing C.P.R. to build bridge 10.4 on Farnham subdivision, Que.

18657. Feb. 10.—Authorizing C.P.R. to build two spurs for Pembroke Shook Mills, Pembroke tp., Ont.

18658. Feb. 6.—Authorizing C.P.R. to build spur for R. H. Smith, Etobicoke tp., Ont.

18659, 18660. Feb. 4.—Authorizing C.P.R. to build additional track across highways at mileages 57.4; and 61.5, Cascade subdivision, B.C.

18661. Feb. 10.—Approving Canadian Northern Ry. amended plan showing spur in s.e. sec. 9-15-22, w.p.m., Man.

18662. Feb. 10.—Authorizing G.T.R. to build siding and spur for Bonner Sand and Ballast, Durham tp., Que.

18663. Feb. 10.—Authorizing C.P.R. to build bridge 84.2, near Eady, in Medonte tp., Ont.

18664. Feb. 11.—Authorizing C.P.R. to build spur for Standard Paint Co. of Canada, Lachine parish, Que.

18665. Feb. 10.—Amending order 18351, re G.T.R. spur for Beardmore and Co., Acton, Ont.

18666. Feb. 4.—Relieving G.T.R. from providing further protection at crossing of second public highway, by its Port Rowan branch, ½ mile west of St. William, Ont.

18667. Feb. 10.—Rescinding order 18162, re divisions of highway in Saskatchewan by C.P.R.

18668. Feb. 12.—Approving location of Alberta Central Ry. Red Deer to Sounding Creek Line from Red Deer, to mileage 2 from Red Deer; and revised location from mileage 2 to mileage 10; and authorizing its building across 11 highways.

18669. Feb. 12.—Approving location C.P.R Gleichen to Shepard branch, from mileage 0 to 40; and authorizing its building across 42 highways.

18670, 18671. Feb. 11.—Amending order 17823, Oct. 22, 1912, re crossing of Dundas street, Whitby tp., Ont., by Campbellford, Lake Ontario and Western Ry. (C.P.R.) to provide for [illegible] 13 and 14, con. 1, Cramahe tp., Ont., at mileage [illegible] at grade.

18672. Feb. 12.—Approving plan showing clear[illegible] C.P.R. [illegible] Fort William, Ont.

18673. [illegible] Ontario and Western Ry. (C.P.R.) revised location from lot 6, con. 1, Tyendinaga tp., at mileage 68.5 to lot 30, con. 1, Thurlow tp., mileage 70.25; and authorizing crossing of G.T.R. by bridge in lot 3, con. 1, south of base line, Tyendinaga [illegible].

18674. Feb. 12.—Authorizing C.P.R., to rearrange spurs and to build additional spurs for Swift Canadian Co., Union Stock Yards, Toronto.

18675. Feb. 7.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across road allowance between lots 16 and 17, con. A, Haldimand tp., Ont., at mileage 110.41 from Glen Tay.

18676. Feb. 11.—Authorizing C.P.R., to build bridge 109.7 over Pitt river, Cascade subdivision, B.C.

18677. Feb. 11.—Ordering C.P.R. to install within 90 days an improved type of illuminated electric bell at La Croix St., Chatham, Ont.

18678. Feb. 12.—Authorizing G.T.R., to connect tracks of its Districts 2 and 4, and to cross Central Vermont Ry. at St. Lambert, Que.

18679. Feb. 10.—Authorizing Lachine, Jacques Cartier and Maisonneuve Ry. (G.T.R.) to divert certain lanes in Montreal.

18680. Feb. 11.—Approving, temporarily, G.T. Pacific Ry. Standard Freight Mileage Tariff, C.R.C. 14, to apply between stations in Alberta and British Columbia, between Thornton and Tete Jaune.

18681. Feb. 4.—Amending order 16029, permitting arbitrator to consider substitution of foot subway for overhead bridge at George St., Smiths Falls, Ont., and opening of certain streets.

18682. Feb. 14.—Ordering that transfer track between C.P.R. and Canadian Northern Ry. to be built by C.P.R., at Conquest, Sask., be completed by May 1.

18683. Feb. 13.—Approving Canadian Northern Ry. plan showing highway bridge proposed at MacLeod Trail, Calgary, Alta.

18684. Feb. 14.—Extending to May 31, time within which C.P.R. complete spur leading to its ballast pit near Olds, Alta.

18685. Feb. 13.—Authorizing G.T.R. to build siding, with spurs for J. Ransford, Tuckersmith tp., Ont.

18686. Feb. 12.—Authorizing G.T.R. to build, subject to consent of city of Toronto, additional track across John St., leading into its King Edward yard.

18687. Feb. 13.—Authorizing G.T.R., to renew bridge 6, over Queen St. West, Toronto, and reserving question of cost.

18688. Feb. 14.—Authorizing Massey-Harris Co. to build bridges over G.T.R. at Stafford St. and Wellington Ave., Toronto.

18689. Feb. 12.—Authorizing G.T. Pacific Ry. to build, subject to city's consent, spur for Alberta Agencies, Edmonton, Alta.

18690, 18691. Feb. 13.—Ordering G.T.R., to protect Greenwoods Ave., Toronto, and Hunter St., Peterboro, Ont., by gates operated both day and night.

18692. Feb. 13.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across highways at mileage 145.33, 145.52 and 145.69.

18693. Feb. 13.—Dismissing application J. Cowie, Cramahe tp., Ont.; Campbellford, Lake Ontario and Western Ry. (C.P.R.) to move house and barn to whatever points the Board's Engineer may indicate, work to be done before any arbitration proceedings are taken; and company to be at liberty to serve fresh notice of expropriation.

18694 to 18696. Feb. 13.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across road allowance between lots 10 and 11 and lots 20 and 21, broken front concession, Clarke tp., and divert road allowance in lot 34, con. 1, Camden tp.

18697, 18698. Feb. 13, 12.—Authorizing C.P.R., to build additional track across Overend St., and five additional tracks across Water St., between Tate and Front Sts., and ordering it to install gates, operated day and night by watchmen, at Bartlett Ave., Toronto.

18699. Feb. 13.—Authorizing C.P.R. to build spur for G. B. Ferguson & Co. at Six Mile Creek, B.C.

18700. Feb. 10.—Authorizing C.P.R., to build road diversion at mileage 19.7 from Kenmay, Estevan Subdivision, Manitoba Division, existing crossing to be closed.

18701. Feb. 13.—Authorizing G.T.R. to build sidings across the Clay Road to the Ontario Paper Co.'s premises, Thorold Tp., Ont.

18702, 18703. Feb. 13, 15.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across road allowance between lots 12 and 13, con. 1, Murray Tp., at mileage 90.75, and across Ontario St., Trenton, by a bridge, at mileage 87.86 from Glen Tay, Ont.

18704. Feb. 14.—Authorizing C.P.R. to build across highway in B.C. Government lot 280, New

[illegible]

[illegible] of C.N. [illegible]

[illegible] mileage 36, to lot 114. [illegible]

18794. Feb. 26.—Authorizing G.T.R. to lay additional 6 in. water main, 4 ft. below surface, from Lake Ontario to its terminals in New Toronto, across Lake Shore Road, under Toronto and York Radial Ry., along Sixth St., and across Toronto St., New Toronto, Ont.

18795. Feb. 28.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across road allowance between Lots 20 and 21, Con. 1, Whitby Tp., at mileage 161.7 from Glen Tay, Ont.

18796. Feb. 28.—Authorizing G.T.R. to build Currie Drain under its Air Line Division, in Ekfrid Tp., Ont.; work to be completed by June 30.

18797. Feb. 28.—Authorizing Michigan Central Rd. to connect with Essex Terminal Ry. on northerly side of M.C.R. Windsor Yard, Sandwich West Tp., Ont.

18798. Feb. 27.—Authorizing Esquimalt and Nanaimo Ry. to build siding for Red Wing Lumber Co., at mileage 1.35, Victoria, B.C.

18799, 18800. Feb. 28.—Authorizing C.P.R. to build two spurs for Wilson and Clarry, Calgary, Alta., and extension to siding for Andrews and Sons, Winnipeg.

18801. Mar. 1.—Authorizing C.P.R. to build, subject to consent of British Columbia Public Works Department, additional track across highway between Provincial Government Lots 405 and 407, Tp. 14, r. 2, e. c. m., mileage 99.8, Cascade Subdivision.

18802 to 18807. Feb. 28 to Mar. 3.—Authorizing C.P.R. to build spurs for Marshall-Mitchell Hardware Co., Medicine Hat, Alta.; Redcliffe Rolling Mills and Bolt Co., Redcliffe, Alta.; P. Berg, Camrose, Alta.; Diamond Flint Glass Co., Redcliffe, Alta.; F. L. Moorehouse, Calgary, Alta.; and Alberta Ice Co., Calgary, Alta.

18808. Mar. 3.—Authorizing C.N. Ontario Ry. to build across Sturgeon River, west crossing, Janes Tp., at mileage 280.3 from Ottawa.

18809. Mar. 1.—Authorizing C.N. Ontario Ry. to build main line and siding across Mill and Fourth Sts., Deseronto.

18810. Mar. 1.—Authorizing Southwold Tp., Ont., to build Saywell Drain under G.T.R.

18811. Mar. 1.—Ordering C.P.R. to accept and transmit trans-Atlantic wireless telegraph messages over its land lines connecting with Marconi Wireless Telegraph Co.'s trans-Atlantic duplex stations at Glace Bay and Louisburg, N.S.

18812. Mar. 1.—Authorizing C.P.R. to build spur for Sawyer-Massey Co., Regina, Sask.

18813. Mar. 3.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across Toronto Eastern Ry., at junction of Scugog and Wellington Sts., Bowmanville, Ont.

18814. Mar. 3.—Approving plan of Great Northern Ry. station at Salmo, B.C.

18815. Mar. 3.—Authorizing C.P.R. to build 400 ft. extension to spur for Riverside Lumber Co., Calgary, Alta.

18816. Mar. 1.—Approving change in location of C.P.R. station at Kelloe, Man.

18817. Mar. 3.—Relieving G.T.R. from providing further protection at crossing two miles west of St. Bazile, Que.

18818. Mar. 3.—Authorizing G.T. Pacific Ry. to build spur for Edmonton Gravel Co. in Secs. 16 and 21, Tp. 53, r. 23, w. 4 m., North Alberta District.

18819. Mar. 3.—Approving location of C.N. Ontario Ry. station grounds at Wasing, mileage 204.8 from Ottawa.

18820. Mar. 5. Authorizing C.P.R. to build additional track across roadway in Provincial Government Lot 476, G. 1, Tp. 17, r. 4, e. c. m., mileage 84.4 on Cascade Subdivision, B.C.

18821, 18822. Mar. 5.—Authorizing C.P.R. to build road allowance diversions between Sec. 16 and Sec. 9-10-15, Lethbridge Subdivision; and in s. w. ¼ Sec. 16-17-12, w. 4 m., Calgary Subdivision, Alberta Division, between mileage 50 and 51, and to close up roads so diverted within its right of way.

18823. Mar. 4.—Authorizing G.T. Pacific Branch Lines Co. to build highway between Secs. 12 and 13-1-3, w. 2 m., across Regina Boundary Branch, mileage 152.8, Cannington District, Sask.

18824. Mar. 4.—Ordering that cost of installation of gates at Lapiniere Road, between Greenfield Park and St. Lambert, Que., be paid,—20% out of railway grade crossing fund, 60% by G.T.R., and 20% by the three municipalities concerned, in equal proportions; and that cost of operation and maintenance be paid,—70% by G.T.R., and 30% by the municipalities in equal proportions.

18825. Mar. 5.—Dismissing applications for stop over privilege for completion of carload shipments in transit, at additional charge of $3 a car for each such stop; ordering railway companies to re-establish arrangement, whereby apples were carried to concentration points for storage, inspection, or completion of carloads and reshipment, subject to certain conditions, at reduction of 1-3 from local tariff rates, to concentration points, to become effective within 30 days from date; and ordering G.T.R., G.T.P.R., C. P.R., and C.N.R., to notify Board, not later than Apr. 15 what number of their, and each of their, refrigerator cars in service are supplied with slatted floors, and what number are not.

18826. Mar. 5.—Authorizing C.P.R. to build additional track across roadway between s. w. ¼ Sec. 25 and s. e. ¼ Sec. [illegible], e. c. m., at mileage 90.99, Cascade Subdivision, B.C.

18827. Feb. 25.—Authorizing Canadian Northern Ry. to build its Craven Northerly Branch across C.P.R. Kirkella-Lanigan Branch, s. w. ¼ Sec. 10-23-19, w. 2 m., Sask.

18828. Mar. 6.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to take certain lands for diversion of highway in Con. 7, Camden Tp., Ont.

18829. Mar. 5.—Approving location of Canadian Northern Ry. third-class station at Inwood, Man.

18830. Mar. 6.—Authorizing C.P.R. to build spur for J. D. Fisk and W. R. Marshall, Calgary, Alta.

18831. Mar. 7.—Rescinding order 15263, Nov. 2, 1911, authorizing Dominion Atlantic Ry. to rebuild bridge across Little Joggins River, N.S.

18832. Feb. 28.—Authorizing C.P.R. to build spur for Redcliff Pressed Brick Co., Redcliff, Alta.

18833. Mar. 8.—Amending order 18581, Jan. 24, re classification of paraffin wax, to provide for issue of separate supplement, be made effective not later than Mar. 24.

18834. Mar. 7.—Extending, for two months from March 11, the time within which City of Hamilton, Ont., be required to make excavation to northern limit of Toronto, Hamilton & Buffalo Ry. track; city to retain priority over T.H. & B. Ry. spur.

18835. Mar. 7.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across road allowance between Lots 16 and 17, Con. 1, Cramahe Tp., Ont., at mileage 101.22 from Glen Tay.

18836. Mar. 5.—Authorizing R. H. Edgar, Bowling Green, Ont., to place telephone wires across C.P.R. west of Orangeville, Ont.

18837. Mar. 12.—Authorizing G.T. Pacific Branch Lines Co. to operate trains on its Regina-Moose Jaw Branch, for construction purposes, across temporary undergrade crossing of C.P.R. Moose Jaw Northwesterly Branch, at Moose Jaw Sask.; provided it keeps men off tops and sides of cars.

18838. Mar. 13.—Ordering C.N. Ontario Ry. to build transfer track with G.T.R. in Port Hope, Ont.

18839. Mar. 13.—Authorizing C.N. Ontario Ry. to divert public road between lots 5 and 6, con. 11, Chisholm Tp.

18840. Mar. 11.—Authorizing Canadian Northern Ry. to build across public road between secs. 24 and 13-2-8, w. 2 m., Sask.

18841. Mar. 10.—Authorizing Canadian Northern Ry. and C.P.R. to operate over crossing near Forward, Sask., without first stopping trains.

18842. Mar. 13.—Authorizing Canadian Northern Ry. to build across C.P.R. Crowsnest Branch in Macleod, Alta.

18843. Mar. 11.—Authorizing C.P.R. to operate over G.T.R. crossing north of Woodstock, Ont., without first stopping trains.

18844. Mar. 12.—Authorizing C.P.R. to build extension to branch constructed for Sidney Brick and Tile Co., Sidney, Man.

18845. Mar. 11.—Authorizing C.P.R. to build additional track across highway at Maple Crescent, B.C.

18846. Mar. 7.—Authorizing C.P.R. to open for traffic portion of its second track between Hammond and Westminster Jct., B.C., 7.37 miles.

18847. Mar. 10.—Approving location of C.P.R. station at Wymark, Sask.

18848. Mar. 10.—Authorizing C.P.R. to use bridge 57.9, London Subdivision, Ont.

18849. Mar. 8.—Authorizing Campbellford Lake Ontario and Western Ry. (C.P.R.) to build temporary connection with Bay of Quinte Ry. at mileage 44.03 from Glen Tay to Lot 33, Con. 8, Camden Tp., Ont.

18850. Mar. 10.—Approving revised location of Campbellford, Lake Ontario and Western Ry. (C.P.R.) over lots 11 and 12, Broken Front Concession, Clark Tp., Ont.

18851. Mar. 12.—Approving clearance of canopy to be built over G.T.R. freight transfer platform at Windsor, Ont.; provided G.T.R. keeps men off sides of cars while passing through shed.

18852. Mar. 12.—Extending to June 1 time within which G.T.R. complete siding for Snelgrove and Teer, Beaverton, Ont.

18853. Mar. 8.—Authorizing G.T.R. to use bridge 161 over River Road, St. Lambert, Que.

18854. Mar. 12.—Approving plans and specifications of Saywell Drain, to be built under G.T.R. in Southwold Tp., Ont., and rescinding order 18810, Mar. 1.

18885. Mar. 13.—Amending order 18834, Mar. 7, re excavation by City of Hamilton, Ont., to the northerly limit of Toronto, Hamilton and Buffalo Ry.

18856. Mar. 6.—Approving, subject to terms Board may subsequently fix re property damage, revised location Canadian Northern Montreal Tunnel and Terminal Co.'s line from Cathcart St. to St. Antoine St., Montreal.

18857. Mar. 7.—Authorizing C.N. Ontario Ry. to take, for making connection with C.P.R., as provided by order 18218, Dec. 4, 1912, portions of W. Thompson's, M. McDonald's and R. Nelson's properties in Westmeath and Pembroke Tps.

18858. Mar. 12.—Ordering Canadian Northern Ry. to erect gates at Frederica and Edward Sts., Fort William, Ont., to be operated by day and night watchmen.

18859. Mar. 13.—Authorizing G.T.R. to take, for building tracks for locomotive house to be built at St. Lambert, certain lands in Longueuil Parish, Que.

18860. Mar. 13.—Approving, temporarily, G. T. Pacific Ry. Standard Freight Mileage Tariff, C.R.C. 15, including and cancelling C.R.C. 13, to apply between stations in British Columbia, Prince Rupert to Beament, inclusive.

18861. Mar. 13.—Authorizing Montreal Light, Heat and Power Co. to build overhead conveyor across C.P.R. Lachine Canal South Bank Branch, in Cote St. Paul, Montreal.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	$1,829,700	$1 335,100	$494,600	$133,000
Aug.	1,745,800	1,375,000	270,800	56,100
Sept.	1,671,500	1,248,000	423,500	4,100
Oct.	2,351,200	1,645,900	705,300	24,009
Nov	2,509,700	1,631,900	877,800	212,600
Dec.	2,132,000	1,551,000	581,000	77,200
Jan.	1,513,400	1,243,200	270,200	46,500
	$13,753,300	$10,030,900	$3,723,200	$554,400
Incr	$2,190,500	$1,636,100	$554,400	

Mileage in operation during Jan., 4,297, against 3,981 in Jan., 1912.

Approximate gross earnings for Feb., 01,398,900, against $1,203,400 for Feb., 1912.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	$12,052,398.58	$7,604,221.68	$4,448,176 90	$745,148.57
Aug	12,251,715.87	7,533,790 21	4,717,925 66	642,354.65
Sept.	11,579,733.98	7,329,430.13	4,250,303.85	332,857.05
Oct.	13,060,397.80	7,999,510 61	5,060,887.19	379,782.44
Nov	12,362,666.42	8,104,527.38	4,258,139.04	270,772.55
Dec.	12,219,278.72	7,823,559 21	4,395,719.51	289,989.25
Jan	9,679,607.39	8,017,233.61	1,662,373.78	579,516.08
	$83,205,798.76	$54,412,272.83	$28,793,525.93	$3,240,420.59
Inc	$13,310,650.96	$10,070,230.37	$3,240,420.59	

Approximate gross earnings for Feb., $9,526,000, against $8,743,000 for Feb., 1912.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R. for Jan., 1913, as compared with those for Jan., 1912:—

Grand Trunk Railway.

	1913.	1912
Earnings	$3,095,800	$2,579,800
Expenses	2,695,700	2,276,600
Net earnings	$ 400,100	$ 303,200

Canada Atlantic Railway.

	1913.	1912.
Earnings	$ 176,700	$ 160,800
Expenses	186,400	160,600
Net earnings	$ 9,700*	$ 200

Grand Trunk Western Railway.

	1913	1912
Earnings	$ 589,700	$ 519,100
Expenses	544,600	477,900
Net earnings	$ 45,100	$ 41,200

Detrit, Grand Haven and Milwaukee Ry.

	1913.	1912.
Earnings	$ 185,900	$ 162,600
Expenses	213,200	190,600
Deficit	$ 27,300	$ 28,000

* Deficit.

Approximate gross earnings for Feb., $3,763,463, against $3,250,043 for Feb., 1912

TRAFFIC RECEIPTS OF THE SYSTEM

Aggregate from Jan. 1 to Feb. 28:—

	1913	1912	Increase
G.T.R.	$6,017,499	$5,089,647	$927,852
C A R	345,239	290,817	54 422
G T W R	1 108,295	996,813	111 482
D.G.H. & M.R.	346,027	310,530	35,497
Totals	$7,817,060	$6,686,807	$1 130 253

Grand Trunk Pacific Railway Earnings.

The earnings for February were $374,084, and the aggregate earnings for two months ended Feb. 28, were $751,928.

Railway Development

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Interurban Ry.—The Dominion Parliament is being asked to pass an act validating the proceedings at the organization meeting of the company held April 16, 1912, confirming the appointment of the directors, and validating their subsequent acts. (Feb., pg. 83.)

Algoma Central and Hudson Bay Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the main line extension from West St. to Bruce St., Sault Ste. Marie, Ont., 7,000 ft. (Jan., pg. 20.)

Bow City to Cassells, Alta.—Press reports state that a line of about 15 miles is to be built this year from Bow City to Cassells, Alta., on the C.P.R. It would give on outlet for the coal mined in the Bow City district to the railway. H. N. Dunning, New York, and C. R. Henderson, Regina, Sask., are interested. (Sec. Bow River Ry.)

Bow River Collieries Ry.—The Alberta Legislature has granted an extension of time for the building of the lines authorized by chap. 28 of the statutes of 1908. Parlee, Freeman and Abbott, Edmonton, Alta., are solicitors for the applicants. (May, 1908, pg. 329.)

Bruce Mines and Algoma Ry.—Application is being made to the Ontario Legislature to change the name of the Lake Huron and Northern Ontario Ry. Co. and to authorize the increase of its capital stock from $300,000 to $12,000,000. Young and McEvoy, Toronto, are solicitors for applicants. (Aug. 1912, pg. 411.)

The Brule Lake Ry. Co. has been incorporated by the Alberta Legislature to build a railway from the G.T. Pacific Ry. east of Brule Lake, at mileage 994, southeasterly to tp. 49, range 26, west of the 5th meridian. The provisional directors are:—G. G. S. Lindsay, K.C., Toronto; S. R. Woods, K.C., O. M. Biggar, S. W. Field, J. T. J. Collison, Edmonton, Alta.

Burrard Inlet Tunnel and Bridge Co.—The various difficulties which have cropped up in connection with the projected bridge over the second narrows of Burrard Inlet, Vancouver, are being got rid of, and the directors state that construction will be started on the substructure within the next few months. The Provincial Legislature has provided $400,000 towards the cost of the bridge, and arrangements are being made for its use by the Pacific Great Eastern Ry. The company has offered the C. P. R. its right of way from the bridge to Deep Cove, under certain conditions. The Dominion Parliament has granted an extension of time for construction. (Jan., pg. 20.)

Calgary, Edmonton and Fort McMurray Ry.—The provisional directors named in the application to Parliament for an act of incorporation are:—D. McGibbons, Jas. Ross, A. Violette, C. A. Violette, Edmonton, Alta., and T. J. S. Skinner, Calgary, Alta. (Jan., pg. 20.)

Canada and Gulf Terminal Ry.—Surveys for the extension of the line from Montreal to Gaspe Basin, Que., 223 miles, are being made. A preliminary survey of the whole distance has been completed, and a final survey for part of the line is being made. L. E. Rowley, Chief Engineer, did the first part of the work, and C. G. Holloway, acting Chief Engineer, is now in charge. Nothing definite has been arranged [illegible] Nov., 1912, pg. 557.

Canadian Terminal Ry.—The New Brunswick Legislature is being asked to consider a proposition to guarantee the company's bonds for $25,000 a mile for a 65 mile railway from Fredericton to St. Stephen and L'Etang, N.B. G. W. Ganong, St. Stephen, N.B.; J. S. Clarke, St. George, N.B., and L. A. Marsh, Toronto, are interested. (June, 1912, pg. 299.)

Canadian Northwestern Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from Lethbridge, Alta., northeasterly to Winnipeg, thence passing Dominion City, Manitou, Brandon and Grand View to Pas, Man., and a line from Lethbridge northeasterly via North Battleford and Prince Albert to Pas. Brosseau, Brosseau, Tansly and Angers, Ottawa, are solicitors for applicants.

Central Canada Ry.—The Alberta Legislature has incorporated a company with this title to build a railway from tp. 74 or 75, range 18 or 19, west of the 5th meridian to Peace River Landing, thence to tp. 81, range 4, west of the 6th meridian, with a branch from Peace River Landing northerly to the Battle River near tp. 94, range 22, west of the 5th meridian. The provisional directors are:—J. D. McArthur, Winnipeg; A. C. Galbraith, S. B. Woods, K.C., J. T. J. Collinson, Edmonton.

Central Ontario Ry.—We are officially advised that it has not yet been definitely decided that the proposed spur line of 1.5 miles from Marmora to the Deloro Mines, Ont., will be built this year. If it is built, as is probable, the work will be done by the C.O. Ry. staff. G. Collins, Trenton, Ont., is general manager. (Feb., 1911, pg. 141.)

Central Ry. of Canada.—The Railways Committee of the House of Commons by a vote of 19 to 8 threw out the company's bill for an extension of time for construction and other amendments to its charter.

The Board of Railway Commissioners has approved of location plans of this line between mileage 0 and 7, and revised location plans from mileage 5 to 16, in Quebec.

A contract has been entered into between the company and the Dominion Government for the building of a line from Ste. Agathe des Montes, passing near Lake St. Joseph and Ste. Marie, to Howard tp., Que., 15 miles. (Jan., pg. 20.)

A special meeting of shareholders has been called to be held at Montreal, April 22, to authorize an issue of bonds to provide for the building of the line from Montreal to Midland, Ont., and for other purposes. J. D. Wells, Montreal, is secretary.

The Chinook Ry. Co. has been incorporated by the Alberta Legislature to build a line from the Chinook Coal Co.'s mines to Kipp on the C.P.R. Crowsnest branch. The provisional directors are:—J. C. Reid, L. G. DeVeber, S. J. Shepherd, Lethbridge, Alta. This line has already been built, and extends from the mines in sec. 12, tp. 10, range 22, west of the 4th meridian, to mileage 59.09 on the C.P.R. Kipp-Alderside branch. It is being operated by the C.P.R. for coal traffic under a recent order of the Board of Railway Commissioners. (Feb., pg. 83.)

Edmonton, Dunvegan and British Columbia Ry.—Track has been laid to Sunniebend, mileage 70, north of Edmonton, Alta., and work is being proceeded with rapidly. Grading has been completed for 80 miles, and the right of way has been cleared to the Athabasca River at Mirror. It is reported that preparations are being made for the erection of a steel bridge at that point, and that large quantities of camp supplies and construction material have been shipped across the river and stored at various points up to Lesser Slave Lake in preparation for the season's construction work. Sub-contracts are reported let for 170 miles of grading this season. (Feb., pg. 83.)

Esquimalt and Nanaimo Ry.—We are officially advised that while there have been considerable negotiations with the British Columbia Government and the Canadian Northern Pacific Ry. as to the division of the Songhees Reserve, Victoria, and its disposition for railway purposes, all matters are not yet finally agreed upon.

A slip, with transfer apron and trestle complete with the necessary dolphin for moving barges at Esquimalt, B.C., was expected to be completed early in March. The slip is intended to furnish additional facilities for transferring rail freight by barge between Vancouver and Victoria. The contract was let to E. R. Doe, Victoria. (Jan., pg. 20.)

Essex Terminal Ry.—A large area has been acquired south of the race track in Windsor, Ont., by the company for laying out yards. The matter is under consideration by the city council, with a view to obtaining a street extension through the property before the yards are laid out. (Aug., 1912, pg. 411.)

Fredericton and Grand Lake Coal and Ry. Co. Construction is reported to have been started on the spur line from Fredericton to Marysville, N.B., the contract for which is reported to have been let to A. E. Trites and Son. (Jan., pg. 20.)

Gananoque and Arnprior Ry.—The provisional directors named in the application to the Ontario Legislature for the incorporation of this company are:—F. A. Heney, R. A. Sibbit, J. C. Judd, Ottawa; W. T. Sampson, Gananoque, Ont.; J. A. Donovan, Toronto; F. B. Taber, Morton, Ont.; D. W. Green, Lyndhurst, Ont. (Feb., pg. 83.)

The Glengarry and Stormont Ry. is projected to run from the C.P.R. near St. Polycarpe Jct., via Williamstown and Martintown, to Cornwall, Ont. It is said that surveys have been completed; that M. J. McLennan, D.L.S., Williamstown, has been retained to purchase the right of way and that it is expected that construction will be started this summer. C. L. Hervey C.E., Montreal, is one of the provisional directors. (Aug., 1912, pg. 411.)

Ha Ha Bay Ry.—We are officially advised that the branch from Chicoutimi to Labrosse Jct., 2.5 miles, is now operated by electricity, two electric motors taking care of the freight and passenger service. The Laterriere branch is being extended to Lake Kenogami, four miles. The contractors are Riverin and Riverin. The grading is mostly completed, and it is expected to have track laid and the extension in operation by May 1. The steel superstructure of the bridge at the mouth of Riviere a Mars is in course of erection, and when this is finished it will be possible to complete the line as far as the government wharf at Bagotville. During 1912, one mile of new track was laid. J. E. Robitaille, Chicoutimi, Que., is Comptroller. (Dec., 1912, pg. 604.)

High River and Hudson Bay Ry.—The Alberta Legislature has authorized an increase of the capital stock from $500,000 to $1,000,000; an increase of the bonding powers from $18,000 to $30,000 a mile, and and extension of time within which the projected line may be built. A. A. Ballachey, High River, Alta., is solicitor for applicants. (Feb., 1912, pg. 67.)

Huron Lake Shore Ry.—The application for the incorporation of a company with this title was defeated by 19 to 8 in the House of Commons railway committee. (Jan., pg. 20.)

International Ry. of New Brunswick.—The Maine Legislature has granted the right to build a bridge across the St. John River from Van Buren, Me., to St. Leonards, N.B. I. R. of N. B. officials are reported as stating that the bridge will be built during this year, the company already having authority from the Dominion Parliament. By the erection of this bridge the I. R of N. B., would be able to connect its line with the Bangor and Aroostook Rd. at Van Buren. (April, 1911, pg. 321.)

Intermarine Ry. and Navigation Co.—This line, the construction of which has been authorized by the Manitoba Legislature, is projected to start near the head of Lake Winnipeg and run northeasterly for 122 miles to a junction with the Dominion Government Railway to Hudson Bay at mileage 191 from Pas, Man. The provisional directors are W. J. Robertson, P. J. Gordon, W. D. Boyd, K. Clemes, C. F. Just, Winnipeg. (Feb., pg. 83.)

Kettle Valley Lines.—The engineers making the final survey of the extension of this line westerly to Hope, B.C., have completed their work. C. J. Seymour was in charge. (Feb., pg. 83.)

Lake Erie and Northern Ry.—The Minister of Railways has approved route map for the line from Brantford to Galt, Ont., 21 miles. A considerable mileage of the right of way was reported to have been purchased Mar. 13, and it was also reported that a contract had been let for the grading to Johnson Bros., Port Hope, Ont., and for masonry work to P. H. Secord and Sons, Brantford. Work will be started as soon as the plans have been approved by the Board of Railway Commissioners. (Feb., pg. 90.)

Lake Winnipeg and Nelson River Ry.—The Manitoba Legislature has incorporated a company with this title to build a railway from tp. 48, range 14, west 1st meridian, northeasterly to tp. 56, range 11, thence northerly to the south of Burntwood Lake, with branches to the Nelson River, in tp. 62, range 2, in tp. 72, range 1, and tp. 68, range 5. The provisional directors are:—J. B. Henderson., G. G Lennox, H. G. Holman, J. E. Kyle, J. Scott, Winnipeg.

London and Port Stanley Ry.—The London, Ont., City Council has decided not to enforce its claims against the company by foreclosure proceedings, and has decided to submit the question of the electrification of the line to the people at the earliest possible moment.

Application is being made to the Ontario Legislature by the city for power to lease the line, to authorize its electrification, and to operate it by commission or otherwise, after the passing of the necessary bylaws. (Oct., 1912, pg. 502.)

Michigan Central Rd.—The St. Thomas, Ont., City Council has been informed that the M.C.R. plans for a new powerhouse and machine shop in that city are about completed, and will be submitted for approval shortly. The cost of the new buildings is estimated at $150,000.

The Board of Railway Commissioners has authorized the company to connect its line with the Essex Terminal Ry. on the northerly side of the company's yard at Windsor, Ont.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—An arrangement has been made, according to press reports, under which after July, 1912, the company will obtain an entrance into the Grand Central Station, Chicago, Ill., owned by its leased line the Wisconsin Central Ry., over the Baltimore and Ohio Rd. tracks. The present entrance to Chicago is over the Illinois Central Rd. tracks.

Press reports state that the company is preparing to spend $25,000,000 upon the construction of about 725 miles of new line, from near Plaza, N.D., to the International boundary near the Montana-Idaho boundary. The line will cross the Missouri River 30 miles west of Plaza, and run along the Yellowstone River for about 250 miles, and finally reach the International boundary line in Flathead County. (Feb., pg. 83.)

New Brunswick Coal, Iron and Clay Co.—Application is being made to the New Brunswick Legislature to incorporate a company with this title having power among other things, to build railway lines connecting the company's properties with other railways and the water front. Inches and Hazen, St. John, N.B., are solicitors for applicants.

Newfoundland.—We are officially advised that the Government of the Colony has not entered into a contract with a British company for the building of an 80 mile line from Green Bay to the east coast at Bay of Islands, as stated in press reports. The construction of such a line has, however, been authorized, and its construction by British capitalists, as a part of a new short line of communication between Great Britain and Canada, is under consideration. (Feb., pg. 83.)

Northern Pacific Ry.—G. T. Reid, Assistant to the President, is reported to have stated during his recent visit to New Westminster, B.C., that the company's trains would enter Vancouver over the Great Northern Ry. from Somers. The company will use the new terminals on False Creek now being built. (Oct., 1912, pg. 502.)

Ontario-Michigan Ry. — The Dominion Parliament has extended the time for the construction of this projected railway from Sarnia to Windsor, Ont. (July, 1911, pg. 647.)

Pacific Coast Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from Hardy Bay to Squamish, Vancouver Island, about 20 miles, and to operate a line of steamships from Hardy Bay to the mainland and elsewhere. Bernard and McKeown, Montreal, are solicitors for applicants.

Pacific Great Eastern Ry.—The Superintendent of Construction is reported as stating Feb. 27, that 150 men were engaged on building a wagon road, and 300 men were working on the railway right of way, between Howe Sound and Bear Mountain. From Burkenhead easterly to Lillooet, 500 men were at work on the right of way. Satisfactory progress is being made, track laying will soon be started, and it is expected to have the line from Howe Sound to Lillooet completed during this year.

The question of the route between North Vancouver and Howe Sound, is still the subject of negotiation with the municipalities and the Provincial Government. The location surveys between Lillooet and Fort George are nearly completed.

The British Columbia Legislature has amended the act of incorporation of 1912, by authorizing the company to build the line from Lillooet "in a generally northerly direction by the most feasible route," instead of "along the bank of the Fraser River north," and by making the rate of interest on the guarantee bonds 4½ instead of 4 per cent., and a second act has been passed amending chap. 36 of the statutes of 1912 [illegible] (Feb., pg. 84.)

Peace River Great Western Ry.—The Alberta Legislature has granted an extension of time for the building of the line authorized by chap. 50 of the statutes of the second session of 1910. (Jan., pg. 21.)

Pointe Aux Trembles Terminal Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway at the Canada Cement Co.'s plant, lot 74, Pointe Aux Trembles, Que., with terminals; the work to be for the general advantage of Canada. Brown, Montgomery and McMichael are solicitors for applicants.

Portage Radial Ry. and Canal Co.—The Manitoba Legislature has incorporated a company with this title, to build a railway from Portage la Prairie to Winnipeg; from Portage la Prairie to Delta, with branch lines; and a canal from Lake Manitoba through the municipality of Portage la Prairie to the Assiniboine River. The company may develop and distribute hydroelectric power, and use the same, steam or any other motive power for the operation of its railway. The provisional directors named are:—W. Richardson, H. Stephens, F. G. Taylor, Portage la Prairie, Man.; B. L. Grant, St. Francois Xavier, Man.; A. H. Oakes, Winnipeg.

Prince Edward Island Ry.—The Minister of Railways was asked in the House of Commons recently if it had been decided to change the P.E.I. Ry. to standard gauge. He replied that the matter was receiving the Government's attention, and answered other question as to when the work would be commenced and when it would be finished by saying, "The matter is under consideration."

The estimates submitted to Parliament provide for $1,000 on account of original construction; $5,000 to increase accommodation and facilities on the line; $4,500 for machinery at Charlottetown; and $1,000,000 to provide car ferry and the necessary alterations, and change from narrow to standard gauge.

Tenders are under consideration for the construction of a car ferry terminal at Carleton Point, P.E.I., and tenders will be received to April 15, for constructing car ferry terminals at Cape Tormentine, N.B. The estimated cost of these terminals is from $1,500,000 to $2,000,000. (Jan., pg. 21.)

Quebec and Saguenay Ry.—Press reports state that an arrangement has been made with the creditors, under which one half of the indebtedness was to have been paid Mar. 15, and the balance on April 15. The report also adds that the arrangements made include the resumption of work on the line, and its completion to Murray Harbor, Que., during the summer. (Nov., 1912, pg. 558.)

Quebec press reports Mar. 16, stated that Mackenzie, Mann and Co. interests had deposited $350,000 to cover the balance owing by the company to O'Brien and Doheny, the general contractors, and that this was a preliminary step to the taking over of all length of 35 miles. The Trepossey branch

Reid Newfoundland Co.—We are officially advised that tracks were laid on the Hearts Content branch for 25 miles during 1912, completing the branch, which has a total length of 35 miles. The Trepassy branch will have a total length of 105 miles. Sixty miles of track had been laid up to the end of 1911, and an additional 40 miles were laid in 1912. The additional five miles will be laid this year, and it is expected to have this branch and the Heart's Content branch in operation by Aug. 1. Work is to be started this year on a branch of 52 miles from Carbonear to Bay-de-Verde, and for a branch of 54 miles from Come-by-Chance to Fortune Bay. Surveys have been made for a branch of 30 miles from Deer Lake to Bonne Bay, but it has not been decided when work will be started, though it is possible that something will be done this year. (Jan., pg. 21.)

St. John and Quebec Ry.—The Hibbard Co., Ltd., Fredericton, N.B., is considering subletting the track laying and ballasting on the contract between Fredericton and Woodstock, N.B.

Simcoe, Grey and Bruce Ry.—The Dominion Parliament has extended the time within which this projected railway from Kincardine to Orillia, Ont., may be built. (Dec., 1912, pg. 605.)

Taber Transit Co.—The Alberta Legislature has incorporated a company with this title to build a railway from sec. 31-9-16 west of the 4th meredian, northwesterly to sec. 12-10-7, with branches to sec. 33-9-17 and sec. 7-10-17; and a second line also from sec. 31-9-16 north and northeasterly to Bow City, Alta. The provisional directors are:—J. F. Kramer, V. O. Eastland, Calgary, Alta.; C. D. Holder, Dunmore, Alta.; J. Schissil, Canmore, Alta.; W. E. Bullock, F. Barton, Taber, Alta.; E. S. Kramer, Philadelphia, Pa.

Timiskaming and Northern Ontario Ry. We are officially advised that a contract has been let to MacDougall and McCluskey, Cochrane, Ont., for the clearing and grading of a private line to be known as the Iroquois Falls Branch. It will start from the main line at Iroquois Falls Jct., 225 miles from North Bay, and run northeasterly through Calvert Tp. to the Abitibi Pulp and Paper Mills Co.'s plant at Iroquois Falls on the Abitibi River, about seven miles. The work is very light, and it is expected to have the branch in operation by July 1.

The Elk Lake branch has been completed, and a regular train service is being operated. Engineers are in the field locating an extension of the branch from Elk Lake City into the Gowganda district.

Press reports state that plans have been made for the diversion of the line near the union station at Cochrane, and for the laying out of the yards there. It is said that the work will call for the removal of about 90,000 cubic yards of material.

Press reports stated that a survey party was to start from Cochrane, Mar. 20, in charge of P. Jobin, to make a hydrographic survey of certain parts of Hudson Bay, with a view of selecting a terminus for the proposed extension of the line to a port on the Bay. (Feb., pg. 84.)

Toronto, Hamilton and Buffalo Ry.—J. N. Beckley, President, has addressed a letter to the citizens of Hamilton, Ont., on the question of the Hunter street crossing. He states that the engineers employed by the company to examine into the whole question have reported, and that the company had replied to the petition of the Hunter St. residents to the Board of Railway Commissioners. The company claims that the tracks, as at present laid out, are lawfully located on Hunter St., and that it has the absolute right to maintain them at their present level and to operate thereon subject to the reasonable requirements imposed upon the company. Some time ago the company realized that at an early date crossings in the vicinity of the station should be eliminated. The whole of the data collected by the company's engineers was submitted to Westinghouse, Church, Kerr and Co., New York. After conferences with that company's engineer, and those representing the C.P.R., the New York Central R.R. and the Michigan Central Rd., a report was prepared recommending a plan of track elevation and subways for the streets as the only practicable solution of the problem. The estimated cost of this work is $760,590, against $2,940,000, the estimated cost of depressing the tracks and providing bridges over them for the streets. If the tracks were covered for the entire distance the estimated cost would be $3,825,000, exclusive of the cost of land and abuttal damages. The letter adds that copies of the engineer's reports have been sent to the city council, and that a drawing showing the recommended works had been sent for exhibition.

The company received tenders up to Mar. 31 for building a second track from Smithville to Welland, Ont., 16½ miles. (Mar., 1912, pg. 559.)

Western Canada Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to build a railway from Fort Churchill, Hudson Bay, to Sea Falls, Nelson River, thence north of Lake Winnipeg to Prince Albert, Sask., thence to Calgary, Alta., with a branch line from near Manitoba Lake to Edmonton, Alta. Vincent, Seguin and Labelle, Ottawa, are solicitors for applicants.

Wetaskiwin, Yellowhead and Pacific Ry.—The Dominion Parliament has incorporated a company with this title to build a line from Wetaskiwin, Alta., along the Saskatchewan and Brazeau Rivers to the Yellowhead Pass, thence to Revelstoke, B.C. (Dec., 1912, pg. 605.)

Railway Rolling Stock Notes.

The Duluth, Winnipeg and Pacific Ry. (C.N.R.) has ordered 400 box cars from the Mount Vernon Car Co.

The Algoma Eastern Ry. has received 3 forty ton steel frame box cars from Canadian Car and Foundry Co.

The C.P.R., between Feb. 12 and Mar. 12, ordered 2 buffet parlor cars from its Angus shops, and 10 wrecking cranes from F. H. Hopkins & Co.

The Canadian Northern Ry., between Feb. 15 and Mar. 14, ordered 6 sleeping cars from the Barney and Smith Car Co., and 55 cabooses from the Mount Vernon Car Co.

The Canadian Northern Ry., between Feb. 15 and Mar. 14, received the following additions to rolling stock:—150 box cars, 7 first class cars and 2 snow ploughs from the Canadian Car and Foundry Co.; 45 box cars from the Rathbun Co., and 22 cabooses from its Winnipeg shops.

The G.T.R. has received the following additions to rolling stock:—25 box cars and 4 refrigerator cars from the Canadian Car and Foundry Co.; 428 box cars from the Pressed Steel Car Co.; 15 Pacific type locomotives, 69 in. wheel, and 9 Pacific type locomotives, 73 in. wheel, from Montreal Locomotive Works; 9 switching locomotives from Canadian Locomotive Co., and 17 Mikado locomotives from American Locomotive Co.

An Ottawa press dispatch of Mar. 24 states that orders have been placed for locomotives for the Canadian Government Railways as follows:—4 Pacific type and 5 consolidation freight locomotives at $21,500 each, with the Montreal Locomotive Works; 5 switching locomotives, at $17,000 each, and 10 freight locomotives, at $24,000 each, with the Canadian Locomotive Co.; and 10 freight locomotives, at $24,000 each, with the Canada Foundry Co

The C.P.R., between Feb. 12 and Mar. 12, received the following additions to rolling stock:—1 flat car, 4 dining cars, 4 first class and smoking cars, 1 smoking car, 7 tourist cars, 8 second class cars, 11 box baggage cars, 1 superintendent's business car, 4 D.4 locomotives and 2 G.1 locomotives from its Angus shops; 121 steel frame box cars, 152 automobile cars from Canadian Car and Foundry Co.; 94 steel frame box cars from National Steel Car Co.; 16 steel frame box cars from Standard Steel Car Co.; 448 steel frame box cars from Barney and Smith Car Co.

The Intercolonial Ry., between Jan. 15 and Mar. 17, received the following additions to rolling stock:—100 flat cars, 80,000 lbs. capacity, 2 sleeping cars, 1 dining car and 1 tank car, from Canadian Car and Foundry Co.; 1 first class car from Preston Car and Coach Co.; 280 box cars from Nova Scotia Car Works; 5 refrigerator cars from E. E. Armstrong, Falmouth, N.S.; 3 locomotives from Canadian Locomotive Co., and 2 locomotives from Canada Foundry Co.

The Canadian Car and Foundry Co., between Feb. 15 and Mar. 15, delivered the following rolling stock:—To Algoma Eastern Ry., 3 forty ton steel frame box cars; Canadian Northern Ry., 6 first class cars, 158 thirty ton wood box cars; Canadian Pacific Ry., 8 forty ton steel frame box cars, 111 steel frame drop bottom box cars, 190 forty ton steel frame automobile cars, 1 forty ton steel underframe flat car; Canadian Steel Foundries, 6 slag cars; Dominion Coal Co., 50 fifteen ton wood hopper cars; F. H. Hopkins and Co., 2 thirty ton Lidgerwood flat cars, 3 thirty ton Rodger distributing ploughs; Grand Trunk Ry., 2 thirty ton steel underframe box cars; Grand Trunk Pacific Ry., 1 thirty ton refrigerator car; Intercolonial Ry., 1 forty ton steel tank car; 1 steel underframe dining car, 19 thirty ton wooden refrigerator cars; Montreal Tramways Co., 6 steel street car bodies.

J. D. McArthur Co., railway contractors, have ordered two mogul freight locomotives from the Montreal Locomotive Works. Following are the chief details:—

Cylinder, diar. and stroke	19 by 26 ins.
Tractive power	28,720 lbs.
Factor of adhesion	3.93
Wheel base, driving	12 ft. 6 ins.
Wheel base, total	20 ft 6½ ins.
Wheel base, engine and tender	49 ft 5¼ ins.
Weight in working order	130,000 lbs.
Weight on drivers	113,000 lbs.
Weight on engine truck	17,000 lbs.
Weight, engine and tender	246,500 lbs.
Boiler, type	Extended wagon top
Boiler, diar.	62 ins.
Boiler pressure	180 lbs.
Tubes, no. and diar.	240-2 ins.
Heating surface, tubes	1,301 sq. ft.
Heating surface, firebox	133 sq. ft.
Heating surface, total	1,434 sq. ft.
Grate area	28.1 sq. ft.
Driving wheels, diar.	50 ins.
Driving journals (main)	8½ x 12 ins.
" " (others)	8 x 12 ins.
Brakes	Westinghouse American
Tank	U shape, level top.
Capacity, water	5,000 imp. gals.
Capacity, coal	8 tons

Railway Accidents in January.—In connection with railway construction in Canada there were 7 fatal and 5 non fatal accidents during January. The deaths were caused by two separate explosions of dynamite. In steam railway operation, 43 fatal, and 114 non fatal accidents were reported. Of the fatalities, 11 were due to being run over, 9 to collisions, 7 to being crushed between cars, 5 each to being struck by trains, light locomotives, and cars, and to falls, and one each to a derailment, to striking an obstacle, to machinery, to electricity, to falling material, and to being run over by a horse at a level crossing.

The Quebec Central Ry. tracks are reported to have been considerably damaged as the result of serious floods in Beauce County.

Mainly About Transportation People.

Mrs. Angus, wife of R. B. ANGUS, director, C.P.R., died at Montreal Mar. 13, aged 80.

HAYTER REED, Manager in Chief, C.P.R. Hotels, returned to Montreal from England at the end of March.

W. WILKIE, for over 30 years Toronto manager for Hendrie and Co., cartage agents, died there Mar. 13, aged 87.

SIR WILLIAM MACKENZIE, accompanied by Lady Mackenzie, sailed from New York Mar. 5 for Great Britain.

G. H. PEDLAR, President of The Pedlar People, Ltd., Oshawa, Ont., died there Mar. 16 suddenly from heart failure.

H. H. BREWER, General Superintendent, G.T. Pacific Ry., returned to Winnipeg Feb. 28, after spending a holiday in California.

D. B. HANNA, Third Vice President, Canadian Northern Ry., has been elected a director of the Title and Trust Co., Toronto.

R. W. LEONARD, Commissioner, National Transcontinental Ry., and Mrs. Leonard, returned to Canada early in March from Great Britain.

G. FORD, General Superintendent, Dominion Express Co., at Winnipeg, Man., returned there Mar. 15 from California, where he spent some time.

W. I. GEAR, Vice President, Robert Reford Co., Ltd., Montreal, has been elected a director of the Bank of Toronto, to succeed the late R. Reford.

G. C. MURRAY, who has been appointed Telephone Inspector, G.T.R., Stratford, Ont., is a son of B. S. Murray, route agent, Canadian Express Co., London, Ont.

R. W. SCOTT, whose appointment as Superintendent of Monteral Terminals, G.T.R., was announced in our last issue, has been relieved of duty on account of poor health.

J. S. DENNIS, Assistant to the President, C.P.R., Calgary, Alta., who recently underwent on operation for gallstones, is reported to be making satisfactory progress.

Hon F. E. HODGINS, Judge of the Ontario Court of Appeal, has been appointed Deputy Judge in Admiralty for the Toronto Admiralty District of the Exchequer Court.

C. J. SMITH, ex-General Manager, Richelieu and Ontario Navigation Co., has opened an office in the Merchants' Bank Building, Montreal.

Miss Mary G. Hanna, elder daughter of D. B. HANNA, Third Vice President, Canadian Northern Ry., was married at Toronto, Mar. 6, to A. V. Lewis.

A. R. HUSTON, for the past three years station agent, G.T.R., at Woodstock, Ont., has been transferred to the General Superintendent's office, Montreal.

C. L. BARDO, heretofore Assistant to General Manager, Lehigh Valley Rd., has been appointed General Manager, New York, New Haven and Hartford Rd.

N. KINSELLA, private secretary to E. J. Chamberlin, President G.T.R. and G.T.P.R., has resigned to engage in business in Winnipeg.

B. D. ATKINSON was presented with a clock by the headquarter staff of the Canadian Express Co. at Montreal, Mar. 10, on resigning the position of office supply clerk to enter private employ.

The Canadian Ticket Agents' Association has admitted to membership W. S. Metzler, North Bay, Ont.; H. B. Elliott, G.T.R., Wingham, Ont., and H. W. Bell, G.T.R., Midland, Ont.

E. J. CHAMBERLIN, President G.T.R. and G.T.P.R., and Mrs. Chamberlin, have moved from Ottawa to Montreal, where they have taken up their residence at 257 Peel St.

W. E. COSTELLO, who recently resigned as Superintendent, Central Vermont Ry., New London, Conn., has been appointed Superintendent, Houston and Texas Central Rd., Ennis, Tex.

SIR DONALD MANN was recently described by a New York correspondent of a Canadian daily paper as "of the Canadian Parliament." Thus the honor is thrust on the man.

SIR JOHN JACKSON arrived in Montreal from England, Mar. 4, and subsequently went to Victoria, B.C., where his firm has a contract for the improvement and extension of the harbor.

J. A. DUFFLE, who died in the Victoria Hospital, Montreal, Feb. 23, was for 30 years in G.T.R. service, serving until his illness as chief clerk in the Motive Power Department.

The late J. P. MABEE, Chief Commissioner of the Board of Railway Commissioners, died intestate, and his estate, valued at $42,000, will be divided between his two children.

A. P. Walker, M. Can. Soc. C.E.,
Division Surveyor, Ontario Division, Canadian Pacific Railway.

JAS. PLAYFAIR, Vice President and Managing Director, Richelieu and Ontario Navigation Co., and Mrs. Playfair, left Midland, Ont., Mar. 5, for a trip to Florida, and are expected to return early in April.

SIR WILLIAM H. WHITE, K.C.B., formerly Director of Naval Construction and Assistant Controller of the British Navy, who died in London, Eng., Feb. 27, was a director of the G.T. Pacific Ry.

R. WILSON, of the Cowan Construction Co., Winnipeg, died there recently, aged 54. He was born in England, and was engaged in railway construction work in western Canada since 1882.

A. F. DION was recently presented with a leather travelling bag and address on leaving the Canadian Northern Ry. freight department, Montreal, to become Traffic Manager, Quebec Harbor Commission.

J. E. MORAZAIN was presented with a gold watch and chain by the C.P.R. staff at Quebec on his recent transfer from the position of agent to that of Assistant Superintendent.

J. STEWART, of the contracting firm of Foley, Welch and Stewart, is reported by a London cable to have purchased 50,000 acres of land in his native county of Sutherland, Scotland, from the Duke of Sutherland.

J. POWELL, Chief Draughtsman, G.T.R. Motive Power Department, Montreal, and Secretary, Canadian Railway Club, has just recovered from a broken left wrist, occasioned by a fall when skating during the latter part of January.

C. THACKER, who has retired from the C.P.R. car department, with which he has been engaged for about 30 years, was presented recently with a suitably engraved clock by the car department staff at Winnipeg.

G. W. BOYD, for more than 12 years General Passenger Agent, Pennsylvania Rd., has been appointed Passenger Traffic Manager, vice J. R. Wood, retired under the pension rules on attaining 70 years of age.

W. RUSSELL, a private banker, who died in Winnipeg, Man., Mar. 3, was engaged in the C.P.R. service in its early years in the province, having been station agent at Brandon, North Portal, Gretna and Portage la Prairie.

F. H. CLERGUE, who is associated with the North Ry. enterprise, addressed the McGill University Canadian Club, Mar. 10, on the resources of the country lying between Montreal and Hudson Bay, through which the railway will pass.

C. N. ARMSTRONG, principal promoter of the Central Ry. of Canada and other railway enterprises, will, it is said, contest the Colne Valley district of Yorkshire for the House of Commons at the next general election in England.

J. K. McNEILLIE, who has been appointed Superintendent C.P.R. Terminals at Montreal, was entertained at dinner and made the recipient of a testimonial from residents of Farnham, Que., Mar. 1, on his leaving to take up his new position.

J. J. BRIGNALL, who recently resigned the position of Travelling Passenger Agent, C.P.R., Toronto, on his appointment as Travelling Passenger Agent, Robt. Reford Co., as announced in our last issue, was on Mar. 14 presented with a purse of gold and a bag by a number of his associates.

J. E. BEDFORD, who has been appointed Master Car Painter, Intercolonial Ry. Shops, Moncton, N.B., entered I.R.C. service as a painter's apprentice, Mar., 1877, and was appointed charge hand of the paint stock room in 1902, which position he held until his present appointment.

SIR WILLIAM WHYTE, who intended joining the party making an all round the world trip on the C.P.R s.s. Empress of Russia, decided to abandon the journey on account of illness. He will probably take a somewhat shorter trip later on, as soon as his health will permit.

G. H. DUGGAN, M. Can. Soc. C.E., heretofore Chief Engineer, Dominion Bridge Co., Montreal, has been appointed General Manager, and has been succeeded in the former position by R. S. Buck, M. Can. Soc. C.E., M. Am. Soc. C.E., who has been practising in New York as a consulting engineer.

C. O. FOSS, to whom reference was made under the heading of Birthdays of Transportation Men in March, in our last issue, is District Engineer, National Transcontinental Ry., St. John, N.B., but by trans-position of lines, his position was wrongly described.

Hon. JOHN HAGGART, M.P., who died at Ottawa Mar. 13, was born at Perth, Ont., Nov. 14, 1836. He was Minister of Railways and Canals from Jan. 11, 1892, to June, 1896, under four successive premiers.

W. E. BISHOP, formerly General Manager, Hamilton Steamboat Co., Hamilton, Ont., and since the absorption of that company by the Richelieu and Ontario Navigation Co., General Agent of the latter company there, has resigned to enter private business in the same city.

J. G. SULLIVAN, Chief Engineer, Western Lines, C.P.R., Winnipeg, was elected a director of the American Railway Engineering Association at the recent annual meeting. H. R. SAFFORD, Chief Engineer, G.T.R., was elected a member of the nominating committee.

T. C. KEEFER, C.M.G., Hon. M. Can. Soc. C.E., and a past President of that society, has been elected an honorary member of the Institute of Civil Engineers, of Great Britain. The list of honorary members of this society, which in 1912 consisted of 20 persons, includes a number of royal personages and members of the British peerage.

JAS. ATKINSON was presented with an arm chair and a reading lamp by the Car Foremen's and Inspectors' Association at Windsor, Ont., Feb. 26. He entered the Canada Southern Ry. service in 1872, subsequently becoming car foreman at Windsor, and latterly acting as chief joint inspector of cars and arbitrator for the different railways entering Windsor.

W. FRASER, who died at Kentville, N.S., Feb. 20, aged 70, was superannuated from the Dominion Atlantic Ry. service in 1911. In 1879 he was appointed station master on the old Western Counties Ry., and passing over to the D.A. Ry., became General Freight Agent at Halifax in 1897; and in 1900 Traffic Superintendent at Kentville. He was also Manager of the Maritime Express Co.

A. B. CHOWN, who has been appointed Travelling Passenger Agent, G.T.R., Pittsburgh, Pa., was born at Belleville, Ont., Aug. 4, 1887, and entered G.T.R. service Apr. 1, 1907, since when he has been, to June, 1909, night ticket clerk, Belleville station, Ont.; June, 1909, to Mar. 1, 1911, day ticket clerk, Belleville station, Ont.; Mar. 1, 1911, to Mar. 1, 1913, Soliciting Passenger Agent, Toronto City Office.

E. H. EDEN, Commercial Agent, Delaware, Lackawanna and Western Rd., who died at Minneapolis, Minn., Mar. 11, began his railway career with the G.T.R. at Buffalo, and prior to joining the D.L. and W. Rd. service was on the auditing staff of the Minneapolis, St. Paul and Sault Ste. Marie Ry. One of his sons, John C., was formerly Assistant Traffic Manager, Great Northern Ry., at Minneapolis.

A. H. HOGELAND, M. Am. Soc. C.E., who was recently appointed Consulting Engineer, Great Northern Ry., St. Paul, Minn., was born in Pennsylvania in 1858, and commenced his railway career as rodman and leveller on surveys and construction, St. Paul and Pacific Ry., in 1879. From 1890 to 1896, he was Engineer of Maintenance of Way, Eastern District, 1896 to 1902, Resident Engineer, Eastern District, 1902 to 1903, Assistant Chief Engineer, and 1903 to the date of his present appointment, Chief Engineer, Great Northern Ry.

J. I. HOBSON, who has been appointed Comptroller and Treasurer, Richelieu and Ontario Navigation Co., Montreal, was born at Guelph, Ont., Mar. 30, 1872, and entered transportation service Mar., 1910, prior to which he was, from July 1888, to Apr., 1892, with Knox, Morgan and Co., wholesale merchants, Hamilton, Ont., and subsequently, to Mar., 1910, with the Bank of Hamilton, the latter four years, as Manager at Owen Sound, Ont. Before receiving his present appointment, he was Treasurer, Inland Lines, Ltd., Hamilton, Ont.

C. Forrester,
Superintendent, Stratford Division, Ontario Lines, Grand Trunk Railway.

E. W. HOLTON, who has been appointed General Passenger Agent, Northern Navigation Co., Sarnia, Ont., was born at Belleville, Ont., Dec. 15, 1872, and entered transportation service as junior clerk in the local freight office, at Belleville, Ont., and until Mar., 1904, was chief clerk to General Freight and Passenger Agent, Bay of Quinte Ry., Deseronto, Ont.; Mar., 1904, to Feb. 1, 1910, chief clerk to Traffic Manager, Northern Navigation Co., Sarnia, Ont.; Feb. 1, 1910, to Mar. 12, 1913, Eastern Passenger Agent, same company, Sarnia, Ont.

W. B. Way.
Superintendent, District 1, Eastern Division, Canadian Pacific Railway.

PETER PATON, who has been appointed Manager, Northern Navigation Co., Sarnia, Ont., was born at New Lowell, Ont., Mar. 13, 1869, and entered Northern Navigation Co.'s service May 1, 1911, as Western Travelling Agent, Winnipeg. He was appointed Assistant to the President at Sarnia, Ont., May 1, 1912, which position he held to Mar. 1, 1913, the date of his present appointment. Prior to entering transportation service, he was from June, 1885, to May 1, 1911, in mercantile business, during the latter portion of this period as Manager, Collingwood Packing Co., Ltd.

H. D. PATERSON, who has been appointed General Agent, Passenger Department, Richelieu and Ontario Navigation Co., Toronto, was born at Port Perry, Ont., Sept. 5, 1881, and entered transportation service in 1897, since when he has been, to 1898, clerk, City Ticket Office, G.T.R., Toronto; from 1899 to Mar. 1, 1913, consecutively, clerk and stenographer, District Passenger Agent's office, C.P.R., Toronto; clerk and stenographer, General Agent's office, Chicago and North Western Ry., Toronto, and Travelling Passenger Agent, Richelieu and Ontario Navigation Co., Toronto.

T. A. WILSON, who was recently appointed Assistant Superintendent, District 3, Lake Superior Division, C.P.R., Schreiber, Ont., was born at Stratford, Ont., Jan. 27, 1872. Prior to Feb., 1891, he was car checker, G.T.R., Stratford, Ont., and assistant agent, same road, Kincardine, Ont.; Feb., 1891, to Aug., 1892, consecutively, operator and agent, same road at various points between Toronto and Sarnia, and in train service at Windsor and Allandale, Ont.; Aug., 1892, to Oct., 1900, agent, C.P.R., at various points on the Lake Superior Division; Oct., 1900, to Oct., 1912, Yard Agent, C.P.R., Ottawa.

L. A. W. DOHERTY, who has been appointed Freight Traffic Manager, Richelieu and Ontario Navigation Co., Toronto, was born there, April 10, 1878, and entered transportation service, July, 1896, since when he has been, to 1897, clerk to Assistant Freight Traffic Manager, C.P.R., Toronto; 1897 to 1906, chief clerk to General Freight Agent, C.P.R., Toronto; 1907 to 1908, chief clerk to Assistant Freight Traffic Manager, C.P.R., Toronto; 1908 to 1910, Assistant Manager, Inland Navigation Co., Hamilton, Ont.; 1911 to Feb. 27, 1913, Traffic Manager, Inland Lines Ltd., Hamilton, Ont.

H. H. GILDERSLEEVE, who has been appointed Manager, Western Lines, Richelieu and Ontario Navigation Co., Toronto, and whose portrait appears in this issue, was born at Kingston, Ont., Dec. 15, 1865, and after spending six years in the Bank of Montreal, entered Lake Ontario and Bay of Quinte Steamboat Co.'s service in 1890, since when he has been, to 1894, purser on one of the company's vessels, bookkeeper and auditor in the company's office, and Freight and Passenger Agent; 1894 to Feb., 1904, General Manager, same company; Feb., 1904, to Feb. 27, 1913, Manager, Northern Navigation Co., Collingwood, and latterly at Sarnia, Ont.

W. B. WAY, whose appointment as Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que., was announced in our last issue, and whose portrait appears in this issue, was born at Bowmanville, Ont., Aug. 22, 1867, and entered C.P.R. service, Sept., 1884, since when he has been, to Feb., 1888, telegraph operator, North Bay, Ont.; Feb., 1888, to Oct., 1899, dispatcher, North Bay, Ont.; Oct., 1899, to Nov., 1906, Chief Dispatcher, Chapleau, Ont.; Nov., 1906, to Sept., 1907, Trainmaster, White River, Ont.; Sept., 1907, to May, 1911, Assistant Superintendent, Chapleau, Ont.; May, 1911, to Feb., 1913, Assistant Superintendent, District 3, Eastern Division, Montreal.

W. M. HOOD, who has been appointed Travelling Passenger Agent, Canadian Northern Ry. and Canadian Northern Steamships Ltd., Toronto, was born at Harrow, Ont., Nov. 25, 1872, and entered transportation service, Nov. 1, 1892, since when he has been, to 1900, Local Freight and Passenger Agent, Lake Erie and Detroit River Rd., McGregor, Ont.; 1900 to 1901, Travelling Freight and Passenger Agent, same road, Cleveland, Ohio; 1901 to 1905, Local Freight Agent, same road, Sarnia, Ont.; 1905 to 1910, Local Freight Agent, Pere Marquette Rd., Chatham, Ont.; 1910 to Feb., 1913, Travelling Passenger Agent, same road, London, Ont.

L. L. HENDERSON, General Manager, Montreal Transportation Co., who has been elected President, Dominion Marine Association and whose portrait appears in this issue, was born at Kingston, Ont., Mar. 5, 1866, and entered the Montreal Transportation Co.'s service in 1884 as clerk, and passing through the various departments was appointed agent at Kingston in 1896, and General Manager in 1909. He is also a director of the Montreal Transportation Co., and a director of the Montreal Dry Dock and Ship Repairing Co., besides being connected with some realty and investment companies, and was a member of the council of the Montreal Board of Trade for 1911-12.

A. T. SHORTT, whose appointment as Superintendent of Ogden Shops, C.P.R., Calgary, Alta., was announced in a recent issue, was born in Quebec in 1873, and entered railway service in 1880, since when he has been, to 1884, apprentice machinist, G.T.R.; 1884 to 1885, machine fitter, G.T.R.; 1885 to 1898, fitter, Canadian Locomotive Co., Kingston, Ont.; 1898 to 1905, fitter, C.P.R.; 1905 to 1906, Foreman, Calgary Shops, C.P.R.; 1906 to 1908, General Foreman, Calgary Shops, C.P.R.; 1908 to 1910, District Master Mechanic, Crowsnest District, C.P.R.; 1910 to 1912, General Master Mechanic, Saskatchewan Division, C.P.R.; 1912 to Jan. 18, 1913, General Master Mechanic, Alberta Division, C.P.R.

T. HENRY, who has been appointed Manager, Eastern Lines, Richelieu and Ontario Navigation Co., Montreal., and whose portrait appears in this issue, was born in Montreal, May 29, 1865, and entered transportation service in 1879, since when he has been, to 1881, ticket agent, Ottawa River Navigation Co., Montreal; 1881, local freight agent, same company, Montreal; 1881 to 1882, clerk in audit office, G.T.R., Montreal; 1882 to 1884, ticket clerk, City Ticket Office, G.T.R., Montreal; 1884 to 1887, clerk, Northern Pacific Ry.; 1887 to 1900, District Freight and Passenger Agent, Northern Pacific Ry., Montreal; 1900 to Feb. 27, 1913, Traffic Manager, Richelieu and Ontario Navigation Co., Montreal.

ROBERT REFORD, President Robert Reford Co., Ltd., shipping agents, Montreal, died there Mar. 15, aged 82. A native of Belfast, Ireland, he came to Canada in 1845, settling in Toronto, where he conducted a wholesale grocery and shipping business. He moved to Montreal in 1865, continuing in the same business, but the shipping end of it became the most important, and he ultimately devoted himself entirely to it. The business was incorporated under the present title in 1897, and acts as agents for the Donaldson, Cunard, and Lord Lines of steamers. During the last few years he gave large sums to public institutions, including $150,000 to McGill University; $35,000 to Montreal General Hospital, and $10,000 to Montreal Y.M.C.A.

M. B. Dube,
General Foreman of Shops, Grand Trunk Pacific Ry., North Transcona, Man.

G. H. Jenkins,
Assistant to General Purchasing Agent, Grand Trunk Railway

R. F. MORKILL, who has been appointed Signal Engineer, G.T.R., Montreal, was born at Sherbrooke, Que., June 7, 1878. From 1898 to 1899 he was Assistant Engineer, West Kootenay Electric Power Co., Rossland, B.C.; 1899 to 1901, Superintendent, St. John's Electric Ry. Power and Lighting Co., Reid Newfoundland Co., St. John's, Nfld.; 1902, Assistant Electrical Engineer, Simmer and Jack Gold Mines, Ltd., Johannesburg, South Africa; 1902 to 1908, Engineer in charge of Signalling, Central South African Railways, Johannesburg, S.A.; 1910 to 1911, Assistant Engineer of Signalling for Union Switch and Signal Co., New York; 1911 to Mar. 1, 1913, Sales Manager and Assistant General Manager, Railway Signal Co. of Canada, Montreal.

H. FOSTER CHAFFEE, who has been appointed Passenger Traffic Manager, Richelieu and Ontario Navigation Co., Montreal, and whose portrait appears in this issue, was born at Knowlton, Que., Dec. 18, 1868, and entered transportation service in 1883, since when he has been, to 1884, ticket clerk, South Eastern Ry., Montreal; 1884 to 1885, ticket clerk, C.P.R., Montreal; 1885 to 1895, City Passenger and Ticket Agent, Richelieu and Ontario Navigation Co., Montreal; 1895 to 1900, also in charge of the company's transfer books; 1900 to Feb., 1907, Western Passenger Agent, same company, Toronto; Feb., 1907 to June, 1912, Assistant General Passenger Agent, same company, Toronto; June, 1912, to Feb. 27, 1913, General Passenger Agent, same company, lines west of Prescott, Ont., Toronto.

J. H. CORMICK, whose appointment as Signal Engineer, Canadian Northern Ry., Winnipeg, was announced in our last issue, has been connected with the manufacturing side of the signalling business since 1890, when he entered the Union Switch and Signal Co.'s service, during which period he acted for that company as battery man on the Boston and Albany Rd., subsequently being engaged by the B. & A.R., and remaining with that company for five years. He later returned to the manufacturing business with the American Automatic Switch and Signal Co., and again re-entered railway service, his subsequent experience covering service with the Boston and Maine Rd., New York, New Haven and Hartford Rd., Boston Elevated Ry., Interborough Rapid Transit Co., U.S. Government, Hall Signal Co., General Railway Signal Co., and Northern Pacific Ry., latterly as Signal Inspector, St. Paul, Minn.

A. P. WALKER, M. Can. Soc. C.E., whose appointment as Assistant Division Engineer, C.P.R., Toronto, was announced in our last issue, was born at West Hartlepool, Eng., Dec. 9, 1860, and entered Canadian railway service Apr. 15, 1882, since when he has been, to July, 1882, right of way surveyor, C.P.R., Norwood, Ont.; July, 1882, to Dec., 1883, Assistant Engineer of Construction, C.P.R., Bethany, Ont.; Mar. to Nov., 1884, Assistant Engineer of Construction, C.P.R., Peterboro, Ont.; Nov., 1884, to Mar., 1885, Assistant Engineer of Construction, G.T.R., South River, Ont.; Feb. to Apr., 1886, on special surveys, C.P.R., Montreal; Apr., 1886, to Apr., 1887, Assistant Engineer of Construction, C.P.R., Green Valley, Ont.; Apr., 1887, to Jan., 1889, Engineer in charge of location, C.P.R., Ottawa, Ont.; Apr., 1890, to Apr., 1891, on special surveys, C.P.R., Toronto; Apr., 1891, to Feb., 1913, Assistant Division Engineer, C.P.R., Toronto.

PETER S. ARCHIBALD, M. Can. Soc. C.E., who died at Moncton, N.B., Mar. 16, of Bright's disease after a brief illness, was born at Truro, N.S., Mar. 21, 1848, and was educated at the Truro Normal and Model schools. He joined the Intercolonial Ry. survey staff in 1867, under Sir Sandford Fleming, and acted as assistant and resident engineer during the construction period. He became Assistant Engineer of Maintenance of Way in 1874, and in 1879 was appointed Chief Engineer at Moncton in succession to Collingwood Schreiber, which position he retained until 1898. He was a member of both the Canadian and the American Societies of Civil Engineers, of the former of which he was Councillor in 1894, 1895, 1901 and 1912. In 1894 he was appointed a member of the Royal Commission to enquire into the alleged excessive freight rates charged by the C.P.R. in Manitoba and the Northwest. On leaving the Dominion Government Railways, he engaged in practice as a consulting engineer, and his services were in constant request. In 1902 he was chairman of the board of arbitrators appointed to settle the $2,000,000 claims made by the Reid Newfoundland Co. against the Newfoundland Government; subsequently he was engaged as the engineering expert in the settlement of disputes arising out of the construction of the Algoma Central and Hudson Bay Ry., and in 1907 acted as a member of the conciliation board in settlement of disputes between the Cumberland Ry. and Coal Co. and its employes. In 1908 he was appointed a member of the commission operating the New Brunswick Coal and Ry. Co.'s line for the N.B. Government, which appointment he held up to his death. He was also General Manager of the Elgin and Havelock Ry. up to his death. He made a number of surveys in 1902 in connection with a project for building a bridge across the Strait of Canso. The funeral took place Mar. 19, the body being taken from Moncton, N.B., to Antigonish, N.S., in the private car of D. Pottinger, Assistant Chairman, Government Railways Managing Board.

Canadian Pacific Railway, Construction, Betterments, Etc.

Branch Lines Legislation.—The Dominion Parliament has granted extensions of time for the building of lines under construction or projected by the following companies, whose charters are held in the interests of the C.P.R.: Ottawa, Northern and Western Ry.; Collingwood Southern Ry.; Manitoba and Northwestern Ry.; Alberta Central Ry.; Alberta Ry. and Irrigation Co.; British Columbia Southern Ry.; Kootenay and Arrowhead Ry.

Atlantic Division.—It has been stated by a member of the New Brunswick Government that the C.P.R. is arranging to build a new railway bridge near the present cantilever bridge across the St. John River at the Reversible Falls.

Tenders are being asked for the erection of a concrete machine shop at McAdam Jct., N.B., to replace the present shop.

W. Downie, General Superintendent, is reported to have stated Mar. 13, that 715 miles of track on the division will be relaid with heavier rails, and block signalling will be installed between St. John and Vanceboro during the year.

Eastern Division.—Work is to be carried on this year on the second track from St. John to Farnham Jct., Que.

Interprovincial and James Bay Ry.—We are officially advised that the only work in immediate construction on this projected railway, is on a 10 mile section northerly from Kipawa, Que., contract for which was let in Sept., 1912. The work is in charge of C. W. P. Ramsey, Engineer of Construction, C.P.R., Montreal. (Nov., 1912, pg. 558.)

Campbellford, Lake Ontario and Western Ry.—The Dominion Parliament has extended the time within which this line may be built. This line extends from Glen Tay, Ont., to which point there is a double track from Montreal, to the Lake Ontario shore near Brockville, and thence parallel to the G.T.R. on the south side to Port Hope, thence on the north side to Agincourt, from which point the existing line is [illegible] The entire line is under contract, and well advanced to completion so far as grading [illegible]. A start is to be made on track laying early in April.

A meeting of shareholders has been called to be held in Montreal, April 16, for the purpose of approving a lease of the line when completed, to the C.P.R.; to arrange for the raising of money for construction [illegible]

Ontario Division.—A second track is to be built from Agincourt, the point where the Campbellford, Lake Ontario and Western Ry. joins the Montreal-Toronto line, into Toronto, 15 miles. Engineers are completing the surveys and plans.

Tenders are under consideration for building the substructures of subways at Davenport and Spadina Roads, Howland Ave., and Bathurst St., North Toronto. These are a part of the grade separation work now in progress there, in the carrying out of which the Canadian Northern Ry. is interested. B. Ripley, 262 Avenue Road, Toronto, is engineer in charge of the work.

D. McNicoll, Vice President, was in Toronto, Mar. 14, and is reported to have said the work was not being pushed ahead as fast as it might be, on account of the objection raised by the city to the height of the subways. As soon as this matter was settled, the work would proceed without interruption.

The Ontario Legislature has before it for confirmation the sale of the old Government House property in Toronto to the C.P.R. by the Ontario Government. The purchase price was $800,000. The company acquired considerable additional land adjoining, and the work of laying out the area as yards is nearly completed. Several large sheds and an office building are about ready for occupation. Access to the yard is obtained by a line leaving the C.P.R. main tracks near Bathurst St.

Engineers are completing the surveys for the second track work from near Islington to Guelph Jct., 30 miles. There will be apparently a slight deviation from the present tracks from near Dixie to the crossing of Dundas St. at Cooksville station, as right of way agents have been negotiating for an 80 ft. strip to the south of the present track. This will reduce the curve approaching Cooksville. A contract has been let to Jones and Girouard, Ottawa, for this 30 miles of second track and it is expected to be completed this year.

The taxpayers of Stratford, Mar. 10, by 1,063 votes to 936, defeated a bylaw granting a right of way by what is known as the South River route through Stratford, for a line which would connect the St. Marys and Western Ontario Ry. at St. Marys with the Guelph and Goderich line near Millbank. H. P. Timmerman, of the C.P.R., who was in Stratford recently, is reported to have stated that the alternative route would cost $500,000 more than the South River one, and was not so convenient. J. W. Leonard, Assistant to the Vice President, was reported to have stated, Mar. 16, that the project for the line into Stratford was abandoned for the present as the result of the defeat of the bylaw.

Lake Superior Division.—Surveys are in progress for the carrying out of plans for building a second track between Romford, the junction of the line from Toronto with the main transcontinental line, and Fort William, 553 miles. About 75 miles in short sections were completed last year, and we are officially advised that contracts have been let for the following additional mileages to be gone on with this year:—Agilda, mileage 86.1 to Cartier, mileage 114.6, Cartier Subdivision, Cook Construction Co., Sudbury, Ont.; from Tarpon, mileage 3.3 to Mobert, mileage 23.5, Schreiber Subdivision, Chambers, McQuaig, McCaffrey and Cochrane; from mileage 120 to Devon, mileage 132.4, Chapleau Subdivision, Dominion Construction Co., Toronto, which company has also secured the following mileages:—from Esher, mileage 7.1 to 40, White River Subdivision; from mileage 43 to Heron Bay, mileage 55.5, Schreiber Subdivision; from Selim, mileage 8.7 to 23, and from mileage 29 to 40, Nipigon Subdivision. It is also proposed to carry out some work of grade revision on the Sault Ste. Marie Branch during this year.

Manitoba Division.—The substructure has been completed for the double track bascule bridge at Island No. 2, Fort William, Ont., and considerable work has been done towards the preparation of the steel superstructure. An additional story is being added to the company's freight office building on the Kaministikwia River, Fort William, which will be devoted to the grain business. Tenders are under consideration for the erection of an extension to the car shops at Fort William.

New station buildings are to be built during this year at Edrans, Stony Mountain and Arnaud, Man.

Saskatchewan Division. — Tenders are under consideration for the erection of A2 stations at 20 points on this division, and for a boiler and machine shop at Wilkie.

The Board of Railway Commissioners has approved revised location plans for the Kerrobert northeasterly branch, mileage 20.2 to 36.10, and the Minister of Railways has approved the route map for revision of branch line from Lanigan to Prince Albert, Sask., 117.14 miles.

Alberta Division.—Tenders are under consideration for the construction of a reinforced concrete bridge at Anthony St., Strathcona; A2 stations at nine points on the division; and additions to locomotive houses at Strathcona and Calgary.

Construction is being pushed on the Weyburn-Lethbridge line, from both directions, and it is expected to have the grading practically completed, and most of the track laying done this year.

Kootenay Central Ry.—Press reports state that contracts were signed Mar. 14, for the completion of this line, 80 miles, which will give a direct connection between the Crowsnest Pass line near Galloway, and the transcontinental line at Golden. Burns and Jordan, Spokane, Wash., are reported to have a contract for 60 miles; and Boomer and Hughes, Spokane, Wash., for the remaining 20 miles. The work is to be completed by the end of 1914.

Pacific Division.—A contract has been let to W. P. Tierney, Vancouver, for the completion of the standard gauge line on the Kaslo and Slocan Ry., recently taken over by the C. P. R., including the mileage between Whitewater and Kaslo. Work has been started, J. R. Paget, Kaslo, B.C., engineer in charge.

Work has been resumed on the Port Moody line, a large gang of men being engaged in ballasting operations, broken rock being used.

Press reports state that work will be started early in April relaying the New Westminster Branch with 90 lb. steel.

C.P.R. Elevator Construction at Fort William.—A contract is reported to have been let to the Canadian Stewart Co. for the erection of a 3,000,000 bush. addition of the C.P.R. elevator D. W. R. Sinks, General Manager of the contracting firm, is reported to have stated that the material for the building has been ordered, and that it is expected to have the work completed by the fall.

Clearing Railway Right of Way of Grass, Weeds, Etc.

The Secretary of the Board of Railway Commissioners has issued the following circular to railway companies: "I am directed to call your attention to sec. 297 of the Railway Act, which provides that railway companies shall at all times maintain and keep their right of way free from dead or dry grass, weeds and other unnecessary combustible matter. On account of the large amount of rain during the summer of 1912, the growth of vegetation was unusually heavy. On this account the fire danger along railway lines is likely to be great during the early spring of 1913 and the ensuing summer, unless prompt and vigorous action is taken as required by the section above quoted. The work of burning or otherwise disposing of combustible matter on rights of way should accordingly be begun at the earliest possible date in the spring and prosecuted vigorously until completed. As required by regulation 10 of order 16570 such supervision of burning must be provided as will prevent fires from spreading beyond the strip being cleared. Experience has shown that along portions of some lines, right of way clearing can be handled satisfactorily only by the employment of extra gangs. It is essential that each company takes whatever steps are necessary to ensure prompt and efficient compliance with the requirements of the section referred to. The Board requests that you submit a statement showing what arrangements have been or will be made for handling this work on your lines."

Intercolonial Railway Extensions and Betterments.

The estimates for this year submitted to Parliament for betterments and extensions on the line include the following:—

Original construction	$ 800
Bridges, to strengthen	190,000
General protection of highways	65,000
To increase accommodation and facilities along the line	126,100
To increase water supply	41,500
Surveys and inspections	25,000
Halifax—Dock and wharves	400,000
" —Increased accommodation, etc.	111,500
" —New terminal facilities	2,500,000
Dartmouth to Deans Settlement, new branch line, on account	1,000,000
Mulgrave, increased accommodation	33,000
" new car ferry and dock	400,100
Point Tupper, improvements	90,000
Sydney Mines diversion	40,000
Truro, increased accommodation	155,000
Wallace Harbor, spur line	60,500
St. John, increased accommodation	18,000
Sussex, improvements	35,000
Moncton, locomotive and car shops, etc.	136,000
Fredericton, increased accommodation	20,000
Chatham, diversion of line	128,000
Nelson and Derby Jct.	128,000
Levis to St. Romauld, second track	173,000
Levis, improvements	160,000
Riviere du Loup, additional facilities	78,000
St. Flavie, increased accommodation	18,000

Plans have been filed at Halifax showing the land required for the rearrangement of the terminals there. The property included extends for more than a mile along the southern water front of the city to Point Pleasant Park, and westward from the harbor to Young Ave.

The other extension work for which a vote has been provided is the building of a line from Dartmouth to Deans Settlement. The Minister of Railways recently said in the House of Commons that this line had not been placed under construction because the government felt that further information, particularly as to probable traffic, was required. The late government had let a contract, which the present government had held up for consideration. The government also felt that complete surveys did not appear to have been made for the building of the proposed 24 mile line from Alva to Baddeck, for which $200,000 had been voted by the last parliament. When the tenders came in the prices were found to be too high, and no contract was let. With respect to the main line, particularly between Truro and Sydney, N.S., the bridges must be strengthened, heavier steel laid, a better alignment secured, and the gradients lowered. By spending a sufficient sum on these works the haulage power of the locomotives could be increased 50%. When there was sufficient trade to warrant it, the line would be double tracked from St. John to Halifax. It would not be long before this was necessary, and the government was willing and ready to proceed with such work as soon as the proper information was obtained, the surveys made, and the necessity proved. (Feb., pg. 83.)

Bridge Work on the Canadian Pacific Railway.

It is estimated that during last year about $10,000,000 was expended by the C.P.R. bridge department on new and old structure and a very large amount of bridge work is still in progress and proposed, exclusive of the very costly and extensive constructions that will be required soon for the proposed abolition of grade crossings in Montreal. The magnitude of the bridge work is indicated by the following summary taken from the annual report of P. B. Motley, Engineer of Bridges, for the year ended June 30, 1912: At the end of the fiscal year there were in existence 3771 bridges and open culverts. These had an aggregate length 68.69 miles. There were 25,125 culverts other than open, of which 14,032 were permanent and 11,093 of a temporary nature. During the year 778 old bridges and open culverts were replaced, aggregating 39,402 lineal feet, including 24 old iron and steel bridges, too light for present traffic, and having a total length of 2438 lin. ft. There were 923 culverts other than open and overhead bridges replaced. New bridges to the number of 109, aggregating 2.3 miles, were added. The number of temporary bridges was reduced during the year by 629, aggregating 3.89 miles.

Rates on brick from the United States to Canada:—In the matter of the investigation and suspension of advances in rates by carriers for the transportation of building brick and other articles in carloads from Orchard Park and Jewettville, N.Y., to Canadian points in which the Ellicott Brick Co., Buffalo, Rochester & Pittsburgh Ry., Michigan Central Rd., Wabash Rd., and Grand Trunk Ry., were represented. the Interstate Commerce Commission decided Feb. 3 as follows:—1. The Committee's decision in the Stowe-Fuller case, 12 I.C.C., 213, to the effect that various grades of brick should take the same rate, has no application to common brick. 2. Proposed increased rates on common or building brick from Orchard Park and Jewettville, N.Y., to Canadian points not shown to be reasonable, and tariffs under suspension required to be withdrawn.

London St. Ry.—Gross earnings for Jan., $26,646.49; expenses, $18,104.45; net earnings, $8,542.04; deductions, $2,450; net income, $6,092.04; gross earnings for Feb., $23,453.32; expenses, $16,731.68; net earnings, $6,721.64; deductions, $2,222.10; net income, $4,499.54.

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—E. J. ZAVITZ and W. J. C. HALL have been appointed Provincial Fire Inspectors for the Board, for Ontario and Quebec respectively, for the enforcement of the Board's fire regulations as contained in order 16570. These appointments do not carry any salary from the Board. A number of fire inspectors, already employed by the Provincial Governments, have also been appointed by the Board.

Canadian Lake Line.—H. A. YOUNG, Traffic Manager, having resigned, the position has been abolished.

A. V. COLLINS, heretofore chief clerk to Traffic Manager, has been appointed General Freight Agent, in charge of all matters pertaining to traffic, rates and claims. Office, Toronto.

Canadian Northern Ontario Ry.—T. R. McLEOD, heretofore Master Mechanic, Halifax and Southwestern Ry., has been appointed Master Mechanic, Canadian Northern Ontario Ry., vice C. L. Webster. He will also have jurisdiction over the Central Ontario, Bay of Quinte, and Irondale, Bancroft and Ottawa Railways. Office, Toronto.

Canadian Northern Ry.—LEWIS LUKES, who has been in Mackenzie, Mann and Co.'s service for a number of years, in various capacities, has been appointed Assistant to the President, C.N.R. Office, Toronto.

A. GUENETTE, heretofore chief clerk and accountant, Montreal, has been appointed Freight Agent there, vice A. F. Dion, whose appointment as Traffic Manager, Quebec Harbor Commission, was announced in our last issue.

W. M. HOOD, heretofore ticket passenger agent, Pere Marquette Rd., London, Ont., has been appointed Travelling Passenger Agent, C.N.R., Toronto.

R. LOGAN, heretofore Soliciting Freight Agent, Hamilton, Ont., has been appointed Soliciting Freight Agent, Toronto.

B. H. DORLAND, heretofore chief clerk, Freight Department, Hamilton, Ont., has been appointed Soliciting Freight Agent there, vice R. Logan, transferred to Toronto.

Canadian Northern Steamships, Ltd. — W. M. HOOD, heretofore ticket passenger agent, Pere Marquette Rd., London, Ont., has been appointed Travelling Passenger Agent, C.N.S. Ltd., Toronto.

Canadian Pacific Ry.—H. A. CHANDLER is reported to have been appointed Division Surveyor, Atlantic Division, his duties including the preparation of plans and descriptions for purchases, sales and leases of land, re-surveys of right of way, and such other land survey work as comes within the jurisdiction of the Operation and Maintenance Department. Office, St. John, N.B.

D. H. RYAN, hertofore Chief Dispatcher and Trainmaster, District 1, Atlantic Division, [illegible] District 1, Atlantic Division, vice W. B. Brown, transferred. Office, St. John, N.B.

W. R. HOWARD, heretofore dispatcher, and latterly acting as Chief Dispatcher, has been appointed Chief Dispatcher and Trainmaster, District 1, Atlantic Division, vice D. H. Ryan, promoted. Office, Brownville Jct., Me.

[illegible] District 2 (Montreal) [illegible] Eastern Division, [illegible] McNEILLIE, Superintendent, have been extended to include south switch at Adirondack Jct., and west switch at Jacques Cartier Jct., Que.

G. E. FISET, A.M. Can. Soc. C.E., is reported to have been appointed Division Surveyor, Eastern Division, his duties including the preparation of plans and descriptions for purchases, sales and leases of lands, re-surveys of right of way, and such other land survey work as comes within the jurisdiction of the Operation and Maintenance Department. Office, Montreal.

A. J. BLAISDELL, heretofore General Agent, Passenger Department, Cincinnati, Ohio, has been appointed General Tourist Agent, vice C. E. Benjamin, transferred. Office, Montreal.

A. C. BRADY has been appointed Assistant Superintendent, District 2, Eastern Division, with special jurisdiction over station staffs and service. Office, Montreal.

W. B. BROWN, heretofore Assistant Superintendent, District 1, Atlantic Division, St. John, N.B., has been appointed Assistant Superintendent, District 2, Eastern Division, with special jurisdiction over the transfer, switching and train service. Office, Montreal.

E. J. MELROSE, heretofore General Yardmaster, has been appointed Assistant Superintendent, District 2, Eastern Division, in charge of operation during the night. Office, Montreal

E. G. WHITE has been appointed Assistant to the Manager, Department of Natural Resources. Office, Montreal.

A. McNAUGHTON, heretofore Secretary-Treasurer, Kingston and Pembroke Ry., Kingston, Ont., has been appointed to a position in the Accounting Department, C.P.R., Montreal.

A. P. WALKER, M. Can. Soc. C.E., heretofore Assistant Division Engineer, Ontario Division, Toronto, has been appointed Division Surveyor, Ontario Division, including the preparation of plans and descriptions for purchases, sales and leases of land, re-surveys of right of way, and such other land survey work as comes within the jurisdiction of the Operating and Maintenance Department. Office, Toronto.

G. H. DAVIS, heretofore Resident Engineer, Toronto Terminals, has been appointed Assistant Division Engineer, Ontario Division, vice A. P. Walker, transferred. Office, Toronto.

W. C. ELMER, heretofore chief clerk, City Ticket Office, Chatham, Ont., has been appointed Travelling Passenger Agent, Toronto, vice J. J. Brignall, resigned.

J. A. ERVINE has been appointed Resident Engineer, Toronto Terminals, vice G. H. Davis, promoted.

E. W. HUTCHISON, heretofore fitter, has been appointed Assistant General Foreman, West Toronto Shops, vice G. Black.

W. A. SIBBETT is reported to have been appointed Division Surveyor, Lake Superior Division, his duties including the preparation of plans and descriptions for purchases, sales and leases of land, re-surveys of right of way, and such other land survey work as comes within the jurisdiction of the Operation and Maintenance Department. Office, North Bay, Ont.

R. HUNTER has been appointed Assistant Superintendent, Sleeping, Dining and Parlor Cars and News Service, Manitoba Division, vice D. S. Fraser, promoted. Office, Winnipeg.

D. S. FRASER, heretofore Assistant Superintendent, Sleeping, Dining and Parlor Cars and News Service, Manitoba Division, Winnipeg, has been appointed Superintendent, same department, Saskatchewan Division, vice S. A. Simpson, transferred. Office, Moose Jaw.

J. L. DOUPE, formerly General Townsite Agent, Department of Natural Resources, Calgary, Alta., is reported to have been appointed Chief Surveyor for the Operating Department, Western Lines, his duties to include the surveying of new townsites in the west.

C. BAKER has been appointed Locomotive Foreman at Outlook, Sask.

S. A. SIMPSON, heretofore Superintendent, Sleeping, Dining and Parlor Cars and News Service, Saskatchewan Division, Moose Jaw, has been appointed Superintendent, same department, Alberta Division, vice E. W. Kolb, resigned. Office, Calgary.

G. WHITELEY, heretofore District Master Mechanic, Moose Jaw, Sask., has been appointed Master Mechanic, Alberta Division, vice A. T. Shortt, appointed Superintendent, Ogden Shops, Calgary, Alta., as announced in our last issue. Office, Calgary.

F. G. BANNISTER, heretofore Storekeeper, Strathcona, Alta., has been appointed General Foreman of Stores, Ogden Shops, Calgary, Alta.

We are officially advised that the press report to the effect that —. Mitchell, heretofore Park Superintendent, Lethbridge, Alta., has been appointed Landscape Gardener of the Forestry Branch of the Department of Natural Resources, C.P.R., Calgary, Alta., is merely a press rumor, as he is not employed by the Department.

G. R. BLAKE has been appointed Storekeeper at Strathcona, Alta., vice F. G. Bannister, promoted.

W. McKINTY, heretofore Building Inspector, Brocket, Alta., has been appointed Bridge and Building Master, Cranbrook, B.C., vice R. Sinclair.

L. NORMAN has been appointed Storekeeper at Kamloops, B.C., vice T. R. McSwain, resigned.

W. C. MACKENZIE, heretofore in the Audit Department, has been appointed Storekeeper at Grand Forks, B.C.

A. E. BENNETT, Locomotive Foreman at Grand Forks, B.C., has had his headquarters moved to Eholt, B.C.

J. V. MURPHY has been appointed District Passenger Agent, Nelson, B.C., vice M. E. Malone, transferred.

W. H. Evans, hertofore Road Foreman of Locomotives, District 2, British Columbia Division, Vancouver, has been appointed District Master Mechanic, District 2, British Columbia Division, his former position having been abolished. Office, Vancouver.

J. T. HAGGIN, heretofore city ticket agent, Seattle, Wash., has been appointed City Passenger Agent there, vice H. W. Edwards, resigned.

L. J. SPECK, heretofore City Passenger Agent, Western Pacific Ry., San Francisco, Cal., has been appointed City Ticket Agent, C.P.R., Seattle, Wash., vice J. T. Haggin, promoted.

G. W. WATSON, heretofore City Passenger and Ticket Agent, Detroit, Mich., has been appointed Passenger Agent, Bay City, Mich., vice F. C. Wherrett, transferred.

F. C. WHERRETT, heretofore Passenger Agent, Bay City, Mich., has been appointed Travelling Passenger Agent, Detroit, Mich., vice C. M. Harwood, transferred.

C. M. HARWOOD, heretofore Travelling Passenger Agent, Detroit, Mich., has been appointed City Passenger and Ticket Agent, Detroit, Mich., vice G. W. Watson, transferred.

Duluth, Winnipeg and Pacific Ry.—C. J. WILSON, heretofore Superintendent, District 3, Central Division, Canadian Northern Ry., Winnipeg, has been appointed Superintendent, D.W. and P.R., vice C. W. Houston, resigned. Office, Virginia, Minn.

Esquimalt and Nanaimo Ry.—W. M. STOKES has been appointed acting Resident Engineer, vice A. W. R. Wilby, Resident Engineer, resigned. Office, Victoria, B.C.

T. S. WILSON has been appointed Assistant Roadmaster, Victoria, B.C. All employes of the Road Department report to him instead of to the Roadmaster, as heretofore.

Grand Trunk Ry.—W. M. MACPHERSON, of Quebec, a director of the G.T. Pacific Ry., has also been elected a director of the G.T.R.

R. GILMOUR, heretofore General Yardmaster, Montreal Terminals, has been appointed Superintendent of Montreal Terminals, vice R. W. Scott, relieved on account of ill health.

A. KASTELLA, heretofore electrical engineer, G.T.R., Stratford, Ont., has been appointed engineer in charge of light, heat and power, G.T.R. station and Chateau Laurier, Ottawa.

C. E. HORNING, heretofore City Passenger and Ticket Agent, Toronto, has been appointed District Passenger Agent there, reporting to General Passenger Agent, Montreal, vice A. E. Duff, resigned to enter commercial life.

C. E. JENNEY, heretofore Travelling Passenger Agent, Pittsburgh, Pa., has been appointed City Passenger and Ticket Agent, Toronto, vice C. E. Horning, promoted.

W. A. MASON has been appointed Soliciting Passenger Agent, Toronto, vice A. B. Chown, promoted.

J. WALKER, heretofore Resident Engineer, Northern Division, Allandale, Ont., has been appointed Assistant Engineer, Barrie Division, Ontario Lines, and his former position has been abolished. Office, Allandale.

A. WARREN, heretofore Roadmaster, Woodstock, Ont., has been appointed Supervisor of Track, with territory from Paris Jct. to Hyde Park, and Hyde Park to Wingham Jct., London Division, Ontario Lines. Headquarters, London.

G. H. ALLEN, heretofore Roadmaster, London, Ont., has been appointed Supervisor of Track, with territory, Hyde Park to Sarnia, Petrolia Branch, Komoka to Glencoe, Kingscourt Jct. Branch, Sarnia Tunnel to Point Edward and St. Clair Tunnel, London Division, Ontario Lines. Headquarters, London.

M. J. O'LEARY, heretofore Night Yardmaster, London, Ont., has been appointed General Yardmaster there, vice J. C. Cloghesy, transferred.

W. OGILVIE has been appointed Night Yardmaster, London, Ont., vice M. J. O'Leary, promoted.

G. C. MURRAY, heretofore in Bell Telephone Co.'s service, London, Ont., has been appointed Telephone Inspector, G.T.R., Stratford, Ont.

R. WRIGHT, heetofore chief clerk, Freight Department, London, Ont., has been appointed Freight Agent at Brantford, Ont.

W. McGAR, heretofore Roadmaster, Stratford, Ont., has been appointed Supervisor of Track, with territory Fort Erie to Goderich, Paris Jct. to Lynden Jct., London Division, Ontario Lines. Headquarters, Brantford.

J. PIPER, heretofore Roadmaster, Brantford, Ont., has been appointed Supervisor of Track, with territory, Tavistock to Port Dover, Simcoe to Port Rowan, Harrisburg to Tillsonburg, Junction Cut, District 16 to Alford, B. & G. to B. & T. to Lynden Jct., London Division, Ontario Lines. Headquarters, Brantford.

D. P. DREWERY, Travelling Passenger Agent, Cortland, N.Y., has been transferred to 285 Main St., Buffalo, N.Y.

A. B. CHOWN, heretofore Soliciting Passenger Agent, Toronto, has been appointed Travelling Passenger Agent, Pittsburgh, Pa., reporting to General Passenger Agent, Montreal, vice C. E. Jenney, transferred.

Great Northern Ry.—A. H. HOGELAND, heretofore Chief Engineer, has been appointed Consulting Engineer. Office, St. Paul, Minn.

R. BUDD, heretofore Assistant to the President, has been appointed Chief Engineer, vice A. H. Hogeland. Office, St. Paul, Minn.

C. A. DUNHAM, heretofore Signal Engineer, G.T.R., Montreal, has been appointed Assistant Signal Engineer, Lake District, G.N.R., vice H. E. Brashares. Office, St. Paul, Minn.

Halifax and Southwestern Ry.—G. H. GREEN, heretofore General Foreman, Bridgewater, has been appointed acting Master Mechanic, vice T. R. McLeod, appointed Master Mechanic, Canadian Northern Ontario Ry. Office, Bridgewater, N.S.

Intercolonial Ry.—J. E. BEDFORD, heretofore charge hand painter, has been appointed Master Car Painter, Moncton Shops, vice A. S. Coleman, deceased.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—J. G. SHELDRICK, heretofore Resident Engineer, Superior, Wis., has been appointed Division Engineer there.

New York Central and Hudson River Rd. M. A. DOW has been appointed General Safety Agent, reporting to the General Claims Attorney and to the General Manager, vice G. Bradshaw, resigned. Office, New York, N.Y.

New York Central Lines.—A. H. SMITH, heretofore Vice President, has been appointed Senior Vice President, N.Y.C. & H.R.R. and its leased lines, L.S. & M.S.R., T. & O.C.R., Z. & W.R., L.E. & W. Rd., C.I. & S. Rd., C.C.C. & St. L.R., P. & E.R., C.N. Rd., M.C. Rd., P. & L.E. Rd., R. Rd., O. & N.Y.R., and I.H.B. Rd. He will, under the direction of the President, have general charge of the property and business of these companies, and will perform such duties as may be assigned to him by the Board of Directors, the Executive Committee or the President. Office, New York.

A. T. HARDIN, heretofore Assistant Vice President, has been appointed Vice President, N.Y.C. & H.R. Rd. and O. & N.Y.R., in charge of operation, maintenance and construction. Office, New York.

J. J. BERNET, heretofore Assistant Vice President, Lake Shore and Michigan Southern Ry., Chicago, Ill., has been appointed Vice President, L.S. & M.R., L.E. & W. Rd., C.C.C. & St. L.R., P. & E.R., C.N. Rd., M.C. Rd., T. & O. C.R., Z. & W.R., C.I. & S. Rd., and I.H.B. Rd., in charge of operation, maintenance and construction. Office, Chicago, Ill.

Pere Marquette Rd.—W. M. HOOD having resigned as Travelling Passenger Agent, London, Ont., the position has been abolished, and the office closed.

Richelieu and Ontario Navigation Co.—Full particulars of the changes in the official organization will be found in the Marine Department on page 193 of this issue.

Wabash Rd.—T. O'CONNELL, heretofore Contracting Freight Agent, has been appointed Travelling Freight Agent, vice S. C. Lockman, promoted, reporting to Division Freight Agent, Detroit, Mich. Office, Detroit.

C. H. Gaunt, General Manager, Western Union Telegraph Co., was on a tour of the company's system recently, and visited Victoria and Vancouver, inspecting the company's stations there and in the neighborhood.

Great Northern Railway Lines in Canada.

The Midland Ry. Co. of Manitoba has been authorized by the Manitoba Legislature to increase its capital stock from [illegible] to [illegible].

U. S. press reports state that it is likely that work will be started this year on a line from Neche, N.D., to Winnipeg, Man.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—In an interview at Hope, B.C., Feb. 25, J. H. Kennedy, Chief Engineer, is reported to have stated that construction would be started there June 1.

The British Columbia Legislature re-amended the description of the lands mentioned in the False Creek Confirmatory Act of 1911 conveyed by the City of Vancouver to the V.V. and E.R. and N. Co.

The Board of Railway Commissioners has authorized the construction of a transfer track connecting with the C.P.R. near Hawkes Ave., Vancouver. (Feb., pg. 75.)

Dominion Government Railway to Hudson Bay.

We are officially advised that negotiations are in progress with the Department of the Interior for the necessary land for terminals at Pas, Man. The plans for these terminals are being prepared by the engineers, but they will not be ready for some time. Referring to the proposed terminals press reports state that the passenger station will occupy an entire block, and that the freight shed and locomotive house will adjoin the freight yards on which 10 tracks will be laid, with accommodation for 100 cars on each.

The question of harbor construction at the Hudson Bay terminal is under consideration. H. T. Hazen, who spent the winter at the Bay, having arrived at Ottawa to consult with the Minister on the matter. The problem of finally selecting a harbor, the Minister recently stated, is a difficult one, as there is much to say for and against both Port Nelson and Fort Churchill as sites. (Feb., pg. 77.)

Railway Route Maps Approved

The Minister of Railways has approved the following railway route maps:—

Canadian Northern Branch Lines Co., Feb. 26, Canora to Hudson Bay Jct., Sask., revision of line from Sturgis northerly for 21.09 miles.

Canadian Pacific Ry., Feb. 26, revision of Lanigan to Prince Albert Branch, 117.14 miles.

Grand Trunk Pacific Branch Lines Co., Feb. 26, Canora to Etoimami, Sask., revision of line between tp. 39, r. 3, and tp. 34, r. 5, w. 2 m., about 28 miles.

Lake Erie and Northern Ry., Mar. 5, from Brantford to Galt, Ont., about 21 miles.

Michigan Central Rd. Tunnel Taxation.—The Ontario Railway and Municipal Board, in the appeal of the M.C.R. against the assessment of the city of Windsor, Ont., of $2,500,000 on the Detroit River tunnel, has decided that the property is not assessable under the section of the Railway Act which states that a company assessed under that act shall be exempt from municipal taxes, had previously agreed to pay taxes on an assessment of $444,444 on the tunnel.

B. S. Jenkins, General Superintendent of Telegraphs, C.P.R., Winnipeg, was presented recently, with an engraved cane, and a cut glass set for Mrs. Jenkins, on the occasion of the removal of the offices to new quarters in Empress Block.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

B. C. Electric Railway's Freight Tariff.

18629. Feb. 3. Re application of British Columbia Electric Ry., under section 328 of the Railway Act, for approval of its Standard Freight Tariff of Maximum Mileage Rates, C.R.C. 1, to apply between stations on the Vancouver & Lulu Island Ry. and the Vancouver, Fraser Valley & Southern Ry.:—It is ordered that, pending the Board's decision in the inquiry into rates charged generally by railway companies in British Columbia, the company's said tariff be approved.

B. C. Electric Railway's Passenger Tariff.

18652. Feb. 4. Re application of British Columbia Electric Ry., under sec. 331 of the Railway Act, for approval of its Standard Passenger Tariff of Maximum Mileage Tolls, C.R.C. 1, to apply between stations on the Vancouver & Lulu Island Ry. and between stations on the Vancouver, Fraser Valley & Southern Ry.:—It is ordered that, pending the Board's decision in the inquiry into rates charged generally by railway companies in British Columbia, the company's said tariff be approved, subject to the condition that the lower tolls already approved between certain stations of the Vancouver, Fraser Valley & Southern Ry. be not advanced without the Board's approval.

G.T.P.R. Standard Freight Mileage Tariff.

18680. Feb. 11. Re application of Grand Trunk Pacific Ry., under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff, C.R.C. 14, to apply over its lines between Edmonton, Alta., and Tete Jaune, B.C., inclusive:—It is ordered that the said tariff be temporarily approved, pending the result of the Board's inquiry into rates charged generally by railway companies west of and including Crowsnest, Canmore and Thornton.

Rates on Lumber to Eastern Manitoba.

18773. Feb. 20. Re complaint of G. R. Scruton, of Beausejour, Man., that rates charged by the C.P.R. on lumber and shingles from British Columbia points, and on lumber from Keewatin, Ont., to Beausejour are excessive and discriminatory as compared with rates charged from the same points to Winnipeg:—It is ordered that the Canadian Pacific, the Canadian Northern, and the Grand Trunk Pacific Railway Companies be required to reduce the local and joint rates on lumber, and on other commodities carried at the lumber rates, from shipping points west of and including Blairmore, Alta., and Laggan, Alta., to points east of the Red River, as shown in the special joint tariffs published and filed, so as to graduate less abruptly from the Winnipeg basis to the maximum basis west of Lake Superior, and that in so doing, the rates to Molson, Man., and to intermediate points on the company's Kenora and Lac du Bonnet subdivisions, also to Giroux, Man., on the Canadian Northern Ry., and Hazel, Man., on the G.T.P. Ry., be reduced so as not to be higher than 2c. per 100 lbs. over and above the respective rates to Winnipeg on the said commodities; the said reduced rates to be published and filed so as to become effective not later than April 1, 1913. The complaint with respect to the rate from Keewatin is dismissed.

Lumber Rates from Mountain Shipping Points.

18771. Feb. 19. Re application of Mountain Lumber Manufacturers' Association for an order (1) compelling the publication of rates on lumber from the so-called mountain shipping points to all stations in Alberta, Saskatchewan, and Manitoba, where the mileages involved do not exceed those to Winnipeg, to 33c. per 100 lbs.: and (2) requiring that the rates from Golden, B.C., to prairie destinations be the same as those applying from Crowsnest where the mileages involved from Golden do not exceed those from Crowsnest: 1. The Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railway Companies are required to adjust the special joint tariffs filed so that, without increasing any rates shown therein, the rates on lumber, and on other commodities carried at the lumber rates, from shipping points west of and including Blairmore, Alta., and Laggan, Alta., to Winnipeg shall not be exceeded for similar or less distances from the same shipping points to points in Alberta, Saskatchewan, and Manitoba; the companies to have leave reasonably to grade up the local and joint rates for distances greater than those to Winnipeg; the schedules to give effect to this order to be filed so as to become effective by April 1, 1913. 2. The disposition of the application for a reduction of the rates from Golden, B.C., to prairie destinations, as applied for, is reserved pending the Board's decision in the inquiry now being made into the western freight rates generally.

Rates on Wire Fencing, Etc.

18775. Feb. 22. Re application of Montreal Board of Trade, under sec. 315 of the Railway Act, for an order directing the G.T.R. and C.P.R. to equalize their rates on wire fencing and wire netting, also staples and wire gates, in carloads, from Montreal to Ontario points, on a basis similar to that prescribed by order 6844, April 6, 1909, in the application of the Canadian Freight Association:—It is ordered that the G.T.R. and C.P.R. be required to file, so as to become effective by April 1, 1913, commodity rates on wire fencing and wire netting, in carloads (including staples and wire gates, when forming part of the said carloads), from Montreal on the following basis:—To Sarnia, Walkerville, Woodstock, Hamilton, and Toronto at the rates charged from those points to Montreal under the commodity tariffs filed; to Port Hope and Peterboro at the rate charged for approximately the same distance from Toronto to Cornwall, and to Kingston and Sharbot Lake at the rate charged thereto from Toronto; rates to be provided to those points west of Kingston and Sharbot Lake and east of Toronto which are provided with commodity rates from Toronto, also to all points south of the G.T.R. main line between Toronto and Sarnia, in reasonable proportions to the basing rates specifically prescribed above; the said basing rates to be the maxima to intermediate points on the direct lines.

Pulpwood Tariffs in Eastern Canada.

18787. Feb. 27. Re application of International Paper Co. and others, under sec. 323 of the Railway Act, for an order disallowing the tariffs of the Canadian Pacific, Grand Trunk, Canadian Northern, and Temiscouata Railway Companies, namely, C.R.C. no. 2424, C.R.C. no E. 2500, C.R.C. no. E. 131, and C.R.C. no. 203, respectively, increasing rates on pulpwood from Ontario, Quebec, and New Brunswick to Eastern United States points, published and filed to become effective September 1 and 2, 1912; and reinstating the present rates of the railway companies:—It is ordered—1. The application is refused. 2. Subject to the condition that the rates from C.P.R. stations west of Avonmore to and including Smiths Falls, in effect at the date of this order, be restored,—the said tariffs of the railway companies, increasing the rates on shipments of pulpwood, in carloads, are allowed; provided that such increases shall not become effective before Aug. 15, 1913.

Transportation of Apples.

18825. Mar. 5. Re application of Simcoe Fruits, Limited, of Barrie, Ont., for order restoring the arrangement in effect prior to Mar. 29, 1911, whereby apples (green) carried by the railways in less than carload lots for aggregation into carload reshipments, received, on reshipment, a reduction of one-third from the inwards less than carload rates; or, as an alternative, for the application of the through carload rate, subject to the minimum carload weight, from the original shipping point to the final railway destination, plus a reasonable charge ($3 a car suggested) for the stopover at the intermediate point of consolidation, with the privilege of inspection and repacking thereat; and re the application of the Fruit Growers' Association of Ontario, for an order directing the railway companies (a) to accept and forward part carloads of fruit at the carload rate, subject to the carload minimum weight, from the original shipping point to the final railway destination, to be stopped in transit for completion of the carload at an additional charge of $3 a car for each such stop; (b) for the carriage of fruit, to furnish refrigerator cars equipped with rack or slatted floors, so as to ensure free circulation of cold or warm air; (c) to reimburse the cost of such rack or slatted floors when they have to be furnished by shippers themselves; and (d) to reimburse the cost of the slatted floors and paper linings necessary to adapt box cars for this traffic when the railway companies are unable to furnish refrigerator cars on reasonable notice: It is ordered 1. That the applications for the stopover privilege for completion of carload shipments in transit, at an additional charge of $3 a car for each such stop, be refused. 2. That the railway companies re-establish the arrangement formerly in effect, whereby apples were carried to concentration points for storage, inspection, or for completion of carloads and reshipment, subject to certain conditions, at a reduction of one third from the local tariff rates, to the concentration points, so as to become effective within 30 days from the date of this order. 3. That the Grand Trunk, Grand Trunk Pacific, Canadian Pacific, and Canadian Northern Railway Companies notify the Board, not later than April 15, 1913, what number of their, and each of their, refrigerator cars in service are supplied with slatted floors, and what number are not.

Classification of Paraffine Wax.

18833. Mar. 8. Re order 18581, Jan. 21, 1913, directing the addition of paraffine wax to the "chemicals" list in the first supplement to be issued to Canadian Freight Classification 16:—Upon its appearing from the report of the Chief Traffic Officer that the proof of the said supplement has not yet been submitted for the Board's approval, and that in all probability there will be considerable delay before the same can be approved and made effective. It is ordered that order 18581 be amended to provide that its requirements be complied with by the issue of a separate supplement to be made effective not later than Mar. 24, 1913.

The Montreal Tramways Co. has received 6 steel frame car bodies from the Canadian Car and Foundry Co.

National Transcontinental Railway Construction.

The Dominion Parliament has passed an act extending for one year, the time within which the line is to be completed. It is also being asked to vote $19,000,000 on account of construction and $3,000,000 on account of the building of the bridge over the St. Lawrence at Quebec.

A contract is reported to have been let by M. P. and J. T. Davis, general contractors, for the Levis-New Brunswick boundary section, 130 miles, to W. Daly, Montreal, for the completion of work on the section. There is about nine miles of track to be laid, and some bridging is to be done, and there is also a good deal of ballasting and the general finishing up. It is expected that the work will be completed by Sept. 30.

Tenders are under consideration for the supply of 1,732 long tons of 80 lb. steel rails for delivery, June 1 at St. Anselme, Que., and 4,349 long tons of 80 lb. steel rails for delivery June 1 at Harvey Jct., Que. (Feb., pg. 82.)

Grand Trunk Pacific Railway Construction.

The Dominion Parliament has passed acts granting an extension of time for the construction of the main line and branches of the G.T.P. Ry., and of the various lines of the G.T.P. Branch Lines Co., and authorizing the Dominion Government to purchase at par the company's bonds at present unissued and subject to the "implementing" clauses of the guarantee agreement.

Construction on the main line is being proceeded with between the end of steel at Rau Shuswap River, B.C., 1,123 miles west of Winnipeg, and at mileage 195 east of Prince Rupert. The work has been in progress westerly to Fort George and easterly to the Enderka River, leaving about 140 miles on which no work has been done. The general contractors, Foley, Welch and Stewart, are reported to have let subcontracts for grading, etc., on this mileage in sections to Carlton, Griffin, Burns and Jordan; John Bostock; Stuart Bros.; Duncan Ross; M. Sheedy; H. McLeod; and Feilburg and Stone. It is also reported that a contract has been let to Bates, Rogers and Co., Spokane, Wash., for the bridge construction on the line from mileage 1,094 to 1,486 west of Winnipeg, at a cost of about $2,000,000. The bridge work is said to include the following structures:—McLellan Creek crossing 249 ft. long; Little Shuswap crossing 129 ft.; Rau Shuswap crossing 1,032 ft.; Cottonwood Creek crossing 129 ft.; Fifty Mile River crossing 129 ft.; Goat River crossing 308 ft.; Dome Creek crossing 129 ft.; Second Fraser River crossing 689 ft.; Third Fraser River crossing 968 ft.; Willow River 459 ft.; Fourth Fraser River crossing 1,227 ft.; Upper Nechaco River crossing 642 ft.; Bulkley River crossing mile 1,481, 154 ft., and crossing the same river at mile 1,486, 364 ft.

Press reports state that an arrangement has been made with the Canadian Northern Ry., under which the G.T.P. Ry. will build a second track for 12 miles from about 20 miles west of Yellowhead Pass, to be used jointly by the two companies.

[illegible] programme for the current year, it is reported, embraces the completion of the various branch lines on which work was in progress in 1912. These include:—The line from Harte to Brandon, Man., in respect of which it is reported that a contract for the bridges has been let to the Hyland Navigation and Trading Co. The completion of the line from Regina to the International Boundary to a junction with the Great Northern Ry. Noble Branch, on which about two miles of track has yet to be laid. The branch into Weyburn from this line will also be completed. Work will be done on laying out terminals in Moose Jaw, and it is reported that connection will be made via the Moose Jaw line with Swift Current. Ballasting and other finishing up work will be done on the branch to Battleford. The most important line which will be completed is that from Tofield to Calgary, Alta. The grading has been completed into Calgary, and the tracklaying was expected to be completed close to the city by Mar. 31. Steel bridges are being erected over the Elbow and Bow Rivers, and until these are completed the line will not be opened. It is expected that this work will be done and the line be ready for operation by Aug. 31. A connection will be made with Lethbridge at a later date, but the proposed line from Calgary to Coutts has been abandoned, according to a recent statement by President E. J. Chamberlin. The Alberta Coal Branch from Bickerdike is in operation to mileage 56.4 A branch line is reported to be under construction to the Yellowhead Coke Co.'s mine and to the Mountain Park mine. On this latter line track is reported to have been laid to five miles west of Edson. (Feb., pg. 82.)

Birthdays of Transportation Men in April.

Many happy returns of the day to—

F. T. Anderson, Car Service Agent, C.P.R. Western Lines, Calgary, Alta., born at Lambeth, Ont., April 1, 1878.

W. H. Ardley, General Auditor, G.T.R., Montreal, born at London, Eng., Apr. 24, 1858.

Jas. Black, Freight Claim Agent, C.P.R.. Vancouver, B.C., born near Seaforth, Ont., Apr. 19, 1858.

C. G. Bowker, General Superintendent, Eastern Lines, G.T.R., Montreal, born at Medford, N.J., Apr. 21, 1871.

S. P. Brown, M. Am. Soc. C.E.. M. Am. Soc. M.E., Chief Engineer, Canadian Northern Montreal Tunnel and Terminal Co., Montreal, born at Dover, Me., Apr. 29, 1877.

W. J. Camp, Assistant Manager Telegraphs, C.P.R., Montreal, born at Oakville, Ont., Apr. 22, 1855.

G. Cobb, Superintendent, Reid Newfoundland Co., St. John's, Nfld., born at Coupar Angus, Scotland, Apr. 21, 1885.

A. E. Edmonds, District Passenger Agent, C.P.R., Detroit, Mich., born at Woodstock, Ont., Apr. 8, 1866.

J. H. Flock, K.C., Honorary Counsel, Canadian Ticket Agents' Association, London, Ont., born at Toronto, Apr. 6, 1834.

B. C. Gesner, Moncton, N.B., formerly Air Brake Inspector, I.C.R., now Eastern Sales Agent, Galena Signal Oil Co., born at Cornwallis, N.S., April 23, 1859.

J. Murray Gibbon, Advertising Agent, C.P.R., London, Eng., born at Udewella, Ceylon, Apr. 12, 1875.

V. A. Harshaw, Superintendent, District 2, Atlantic Division, C.P.R., Woodstock, N.B., born at Mono, Ont., Apr. 26, 1865.

A. Hatton, Superintendent of Car Service, Western Lines, C.P.R., Winnipeg, born at London, Eng., Apr. 12, 1869.

J. M. Horn, District Freight Agent, Canadian Northern Ry., Edmonton, Alta., born at Allanton Mills, Lanarkshire, Scotland, Apr. 12, 1880.

B. S. Jenkins, General Superintendent, C.P.R. Telegraphs, Winnipeg, born Apr. 8, 1859.

J. H. Johnston, Superintendent of Bridges and Buildings, Eastern Lines, G.T.R., Montreal, born at Uxbridge, Ont., Apr. 22, 1860.

J. Kyle, Master Mechanic, Western Division, Canadian Northern Ry., Edmonton, Alta., born at Toronto, Apr. 11, 1877.

D. McNicoll, Vice President, C.P.R., Montreal, born at Arbroath, Scotland, Apr. 7, 1852.

P. Mooney, General Freight and Passenger Agent, Halifax and South Western Ry., Halifax, N.S., born at St. Catherines, Que., April 19, 1871.

J. O. Norrie, Travelling Passenger Agent, C.P.R., Atlantic Steamship Lines, Winnipeg, born at Belfast, Ireland, Apr. 20, 1879.

G. D. Perry, General Manager, Great North Western Telegraph Co., Toronto, born at Whitby, Ont., April 19, 1858.

R. A. Pyne, Superintendent of Shops, C.P.R., Winnipeg, born at Toronto, April 10, 1874.

R. S. Richardson, Superintendent, Macdonnell & O'Brien, contractors, National Transcontinental Ry., La Tuque, Que., born at Napanee, Ont., April 9, 1865.

F. Rioux, Assistant to the President, Reid Newfoundland Co., St. John's, Nfld., born at Trois Pistoles, Que., Apr. 18, 1867.

W. A. Ritchie, District Superintendent, Pullman Co., Montreal, born at Edinburgh, Scotland, Apr. 13, 1854.

E. W. Smith, Superintendent, Dining and Parlor Car Service, G.T.R., Toronto, born at North Bridge, Mass., Apr. 21, 1869.

W. S. Tilston, Chief of Montreal Board of Trade Transportation Bureau, born at Manchester, Eng., Apr. 14, 1877.

W. Wainwright, Vice President, G.T.R., and G.T.P.R., Montreal, born at Manchester, Eng., Apr. 30, 1840.

W. Woolatt. Walkerville, Ont., ex-General Superintendent, Buffalo Division, Pere Marquette Rd., born at Weedon, Hertfordshire, Eng., Apr. 2, 1855.

C.P.R. Main Line Diversion in the Selkirk Mountains.

Tenders will be received to April 15 for the construction of a diversion of the C.P.R. main transcontinental line starting from mile 69, Mountain Subdivision, which is one mile west of Six Mile Creek, B.C., and ending at mile 92, two miles west of Cambie, mileage 89 on the new line.

We are officially advised that the grades on the present line from mile 69 to 84 are plus 2.2% compensated; from mile 84 to 85 at the summit, Rogers Pass, they average plus 0.5%, and from mile 85 to 92 they are minus 2.2% compensated. On the new line the grades from mile 69 to 75¾ will be 1% compensated; from mile 75¾ to 76½ plus 0.5%, from mile 76½ to 81½ plus 2.2% compensated, from mile 81½ to 86½ plus 1%, from mile 86½ to 86¾ minus 0.10%, from mile 86¾ to 87½ minus 0.50%, and from mile 87½ to 89 minus 2.2% compensated.

On the new line the summit will be lowered 533 ft. and the distance shortened 3 miles, and the curvature reduced by 2,356 degrees. There will be 4½ miles of snowsheds and 2,260 ft. of steel bridges eliminated.

There will be a double track tunnel, 28,000 ft. long, on tangent with plus 1% grades from the east portal for five miles, and a minus 0.1% grade to the west portal for 1,600 ft. Where found necessary it will be lined with concrete.

F. F. Busteed, Kamloops, B.C., is engineer in charge of second track work between Calgary and Vancouver. J. G. Sullivan, Winnipeg, is Chief Engineer.

Canadian Northern Railway, Construction Betterments, Etc.

Canadian Northern Montreal and [illegible] that about a mile and a half [illegible] under Mount Royal, Montreal, have been completed. An injunction was obtained, [illegible] passes under his property, under the old civil code which sets out "Ownership of the soil carries with it ownership of what is above and what is below it." An arrangement was, however, arrived at under which work was resumed.

The Board of Railway Commissioners has approved, subject to terms to be fixed, of revised location of the projected line from St. Catherine St. to St. Antoine St., Montreal.

Montreal-Ottawa-Port Arthur Line.—It is reported that grading has been so far advanced on the various sections of this line that there is a probability of steel being laid between the present track end west of Sudbury and the present track end east of Port Arthur by the fall.

Canadian Northern Ontario Ry.—Track is reported to have been laid on the Toronto-Ottawa line between Chaffey's Locks and Lombardy, and that only about seven miles of tracklaying is required to complete the line.

In connection with the building of the [illegible] company is asking for the incorporation of Leaside, or its annexation to the city. The Board of Control was informed, Mar. 5, that a car building plant and other industries will be established there. The plans for an entrance to the yards on Eastern Ave. have been filed with the Toronto City Council. The line connects with the Ottawa-North Toronto line at the junction with the C.P.R. just outside the city, crossing the Don River, paralleling the C.P.R. to Winchester St., crossing the C.P.R. and parallel to the Don River, to south of Queen St., then across the river to Eastern Ave.

Canadian Northern Ry.—Hugh Sutherland, Executive Agent, in an interview at Winnipeg, Mar. 13, is reported as stating that no further development plans will be considered until the financial conditions are improved. All that will be done will be the completion of work already in hand, for which the money had been provided.

The Canadian Northern Coal and Ore Docks [illegible] proposes to build a new dock at Port Arthur, Ont., east of the present one, to be [illegible] with storage sheds and loading pockets.

It is reported that a new station, to cost about $50,000, will be built on Victoria Ave., Fort William, Ont., this year.

[illegible] build a branch from mileage 111.89 on the Oak Point branch, in Manitoba, through sections 29, 32 and 33, tp. 26, and sections 16, 15 and 22, tp. 27, range 7 west principal meridian.

The Minister of Railways has approved a [illegible] line of the Canadian Northern Branch Lines Co. from Canora to Hudson Bay Jct., Sask.

The Alberta Legislature, Mar. 15, authorized the building of the following lines under guarantee of bonds:—From Taber to Consort; from Medicine Hat to a junction with the Saskatoon-Calgary line; from range 12 to 14 of last mentioned line, northerly to the main line in ranges 6 to 9, and northeasterly to the eastern boundary of Alberta; from Merking Creek, on the Vegreville-Calgary line to Wetaskiwin, thence by Pigeon Lake to the Edmonton-Pincher Creek line; from Cardston to the western boundary of the province, and from Drumheller, on the Vegreville-Calgary line, to Carbon.

Grading has been completed on the branch line out of Macleod as far as Fishburn, Alta., [illegible] right of way is being purchased westward of Fishburn. Construction gangs are being taken in to Pincher Creek, which will be the centre of work during the year.

An arrangement is reported to have been made with the G. T. Pacific Ry. for the building of a second track on its line for about 12 miles along the shore of Moose Lake, about 20 miles west of Yellowhead Pass, in order to avoid engineering difficulties in the way of building a second line.

Canadian Northern Pacific Ry.—The British Columbia Legislature has authorized the company to construct or acquire railway yards, terminals, wharves, shops and works, connecting lines, telegraph and telephone lines, hotels, etc., and to carry on any business incidental thereto. A second act confirms an agreement made with the Vancouver City Council for the laying out of terminals at False Creek, the Canadian Northern Ry. being a party thereto. A third act authorizes the guaranteeing by the province of $10,000,000 of 4½% bonds, in aid of the laying out of terminals at Port Mann, including the tunnel approaches, Victoria, Steveston, and at Union Bay on Vancouver Island. A fourth act authorizes the building of the following lines:—From the north end of the Westminster bridge to Vancouver, 11 miles; from the north end of Westminster bridge to Steveston, 15 miles; and from near Victoria to Union Bay, 18 miles, and the province is authorized to guarantee the company's bonds for $35,000 a mile to aid in the building of the same.

Grading has been completed on the main line between Yale and Kamloops, and the bridge work is well advanced. Track was expected to be laid into Yale by Mar. 31, and tracklaying was expected to be started westerly from Kamloops early in April. Fourteen station buildings are to be erected between Port Mann and Yale during the summer. About 85% of the grading from Kamloops east to the B.C. boundary is reported to have been completed, and according to some reports it is expected to have the greater part of the steel laid this year. A [illegible] of the terminal and bridge work, however, will not be completed until the end of 1914.

The right of way for the line on Lulu Island has been cleared, and grading was [illegible] Mar. 6 by C. R. Schacht, who is reported to have received a subcontract for five miles.

The bylaw confirming the agreement between the company and the city of Vancouver was voted on by the taxpayers Mar. 15, and approved by 5,032 votes to 1,485. (Mar., pg. 119.)

New Train Service on Grand Trunk Pacific Ry.—A Winnipeg press [illegible] says:—General Passenger Agent Hinton, of the G.T.P., announces six new daily trains, to be run each way, this summer as follows:—Winnipeg and Fort William, starting June 1; Regina, Moose Jaw and end of steel, starting Aug. 1; Calgary and [illegible], starting Aug. 1; Brandon branch from Harte, starting Aug. 1; Regina to [illegible], starting Aug. 1; Battleford to Oban, starting June 1.

Recent Provincial Legislation

Acts affecting transportation interests were passed at the recent sessions of Provincial Legislatures as follows:—

BRITISH COLUMBIA.

Canadian Northern Pacific Ry.—Amending the original act of incorporation of 1910; confirming an agreement between the company, the C.N. Ry. Co., and the city of Vancouver; providing for the extension of the company's lines and granting aid towards their construction, and granting aid for construction of terminals.

Esquimalt and Nanaimo Ry.—Authorizing issuance of Crown grants of certain lands.

False Creek.—Amending act relating to reclamation of False Creek, Vancouver, and amending the False Creek Confirmatory Act. These affect the Canadian Northern Pacific Ry. and the Great Northern Ry.

Pacific Great Eastern Ry.—Two acts amending act of incorporation of 1912.

Railway Act.—Amending Railway Act.

MANITOBA.

Intermarine Ry. and Navigation Co.—Incorporation.

Lake Winnipeg and Nelson River Ry.—Incorporation.

Midland Ry. of Manitoba.—Extending time for construction.

Portage Radial Ry. and Canal Co.—Incorporation.

Public Utilities Act.—Amending original statute.

Railway Act.—Amending Railway Act.

Winnipeg Electric Ry.—Respecting company's powers.

Recent Dominion Legislation.

The first lot of measures receiving the Royal assent at the current session of the Dominion Parliament includes the following affecting transportation interests:—

Alberta Central Ry.—Extending time for construction.

Alberta Ry. and Irrigation Co.—Amending company's powers.

British Columbia Southern Ry.—Extending time for construction.

Burrard Inlet Tunnel and Bridge Co.—Extending time for construction and increasing bonding powers.

Campbellford, Lake Ontario and Western Ry.—Extending time for construction.

Canada Shipping Act.—Amending various provisions.

Collingwood Southern Ry.—Extending time for construction.

Grand Trunk Pacific Ry.—Extending time for construction; amending financial provisions, and extending time for construction of lines to be built by the G.T.P. Branch Lines Co.

Grand Trunk Ry.—Amending various provisions.

Kootenay and Arrowhead Ry.—Extending time for construction.

Manitoba and Northwestern Ry.—Extending time for construction.

Montreal Harbor Commission.—Respecting powers of commissioners.

Montreal, Ottawa and Georgian Bay Canal Co.—Extending time for construction.

National Transcontinental Ry.—Extending time for construction.

Ontario-Michigan Ry.—Extending time for construction.

Ottawa, Northern and Western Ry.—Extending time for construction.

Ottawa Terminals Ry.—Extending time for construction.

Simcoe, Grey and Bruce Ry.—Extending time for construction.

Wetaskiwin, Yellowhead and Pacific Ry.—Incorporation.

Grand Trunk Railway Betterments, Construction, Etc.

Southern New England Ry.—The special committee appointed by the Rhode Island Legislature to consider the company's application for a guarantee of $6,000,000 of bonds to complete the line under construction to Providence has reported against the proposal. M. M. Reynolds, Vice President, G.T.R., is reported to have stated in an interview at Providence, Mar. 13, that every effort to obtain the money has failed, and that under no circumstances could the G.T.R. secure it unless with the guarantee of the State.

Ontario Terminals Ry.—The Dominion Parliament has extended the time within which the company may complete the laying out of the terminals at Ottawa.

Black Rock Terminals, etc.—The Buffalo, N.Y., Park Commissioners have under consideration an application from the G.T.R. through the International Bridge Co., for the right to use certain properties on Porter Square for building a new station.

Toronto Grade Separation.—The first section of the railway grade separation work at Toronto has been practically completed. This consists of 4.5 miles from Mimico, through South Parkdale, and is entirely a G.T.R. work. It has already been fully described in these columns.

London Terminals.—Recent press reports from London, Ont., state that it is expected work will be started this spring on the rearrangement and extension of the company's terminals there. The dispatch reports H. E. Whittenberger, General Superintendent Ontario Lines, as stating that a considerable area of land has been purchased in the esat end of London for yard extension, and that six new tracks will be laid at once.

London to Windsor, Ont.—In connection with the relaying of the track with 100 lb. steel, large quantities of new rails are being distributed west of Strathroy to Windsor, and other preliminary work is being done. The work will be rushed to a completion as speedily as possible. (Feb., pg. 71.)

Additions to G.T.R. Point St. Charles Shops.

Several additions have been made recently, or are nearing completion, to the buildings of both the G.T.R. motive power and car departments at Point St. Charles, Montreal. Along the north side of the locomotive machine shop, a brick addition, 150 by 40 ft., has been completed, and with the additional space provided, it is expected that a better grouping of the machine tools will be possible, as the old shop was very cramped. The new section has had a cement floor laid, and in the older section, as the machines that are to be rearranged are moved, a cement floor will also be laid, a section at a time, so as not to interfere with the progress of the locomotive work. The boilers in the locomotive department boiler house are being replaced with more modern boilers.

The car department is undergoing more extensive changes. To the east end of the freight car shop a 7 track addition, 130 ft. wide by 170 ft. long, the full width of the old shop, has been added. This addition is of wood, like the old shop, but of more modern construction. The roof is about half as high again as in the old shop, giving greater head room. Through the whole of the freight car shop it is the intention to have adjustable scaffolding constructed along the sides of the tracks. A 200 foot section of the south wall of the old freight shop has been knocked out, and a leanto building, 40 ft. wide, built along that length. This section is to house the locomotive department carpenter work, such as pilots, cabs, etc.

An exhaust fan system is being installed in both the freight and passenger car wood shops for the removal of the shavings, etc., to the car department boiler house. This system will consist of one 70 in. double, two 70 in. single, and one 60 in. double exhaust fans, all delivering to the boiler house.

The passenger car shop is not being added to, but on each side of every shop track there has just been constructed an adjustable scaffolding system, for convenience in working on the sides of cars.

The car department blacksmith shop, heretofore a round building, 50 ft. diameter, has been extended by an addition to the east, the full width of the former building, making the complete building 130 ft. long. This will provide much needed room, in which will be installed a bulldozer, steam hammer, and additional forges.

The car department power house is undergoing extensive changes. All the machinery in the car department is being changed over from line to individual motor drive, necessitating conversion of the power units. Power for the Montreal and Southern Counties Ry. is generated in this station. The main 600 volt generator for this service will be left as before. Up to the present there has been an additional 500 h.p. unit for this service, held principally in reserve. This engine has been rebored, and the 600 volt generator on it replaced by a 250 volt machine for supplying power for the variable speed individual drive motors throughout the shops. The 600 volt generator from this machine is being added to the old 450 h.p. line shaft engine, and will be held as a reserve for the M. and S.C. Ry. A new 16 by 26 by 25 by 16 by 18 in. air compressor, with a capacity of 1,500 cu. ft., has also been installed in the power house.

Railway Finance, Meetings, Etc.

Buffalo and Lake Huron Ry.—The report for the half year ended Dec. 31, 1912, presented at the general meeting of shareholders at Liverpool, Eng., Mar. 5, shows that the available balance, including the amount brought forward from the previous half year, was £15,069 14s. 5d., from which a dividend of 5s. 3d. a share was declared, absorbing £13,784 13s. 3d., leaving a balance of £1,285 1s. 2d. to be carried forward to the current half year. The directors have decided to write up their investments to full market value, and debit the balance sheet with the surplus thus created, under the heading of investments reserve account. T. Lindley was elected a director in place of J. M. Synge, deceased. The line is operated under lease by the G.T.R.

Canadian Northern Ry.—A lease of rolling stock from the Imperial Rolling Stock Co., to the C.N.R., dated Mar. 1, and numbered Series F. 1, has been deposited with the Secretary of State at Ottawa. Bonds to cover the rolling stock in this lease are being offered by W. A. Reid and Co., Philadelphia, Pa., to the amount of $4,000,000, bearing 4½ per cent. interest. The issue price will net 5 per cent. The value of the rolling stock secured by the bonds is $5,333,600.

Dominion Atlantic Ry.—Estimated passenger earnings for Feb., $20,309.14; freight earnings, $41,309.83; total earnings $61,618.97.

Esquimalt and Nanaimo Ry.—Under an agreement of Mar. 1910, subsequently [illegible] on Vancouver Island to be selected within three years. Certain lands have been selected, viz., 16,293 acres in the Nootka and Rupert Districts, and 3,484 acres in Sec. 2A Nelson District. The Legislature has passed an act authorizing the issuance of Crown Licenses for the same; subject to the company acquiring rights which had been granted to the Nelson District areas under the Coal and Petroleum Act, and extending to April 1914 the time within which the remaining area may be selected.

Grand Trunk Pacific Ry.—A special meeting of shareholders is called for April 11, in Montreal, to pass a by-law authorizing the issue of debenture stock created by the G.T. Pacific Act of 1913, to which assent was given recently.

Pacific Great Eastern Ry.—A London, Eng., press dispatch of Mar. 7, states that arrangements are in progress for an issue of $1,000,000 4½ per cent. debentures at 99, principal and interest guaranteed by the British Columbia Government.

Railway Building in Alberta.

A statement recently issued by the Alberta Minister of Railways shows that the total mileage of railways built in Alberta during 1912 by the various companies was 955 miles, made up as follows:—Canadian Northern Ry., 583 miles; Grand Trunk Pacific Ry., 254 miles; C.P.R., 93 miles; Edmonton, Dunvegan and B.C. Ry., 25 miles. In addition to this, 518 miles of grade had been prepared ready for laying steel. The total mileage on which steel had been laid in the province to the end of the year was 3,055 miles, divided as follows:—C.P.R., 1,480 miles; Canadian Northern Ry., 912 miles; Grand Trunk Pacific Ry., 658 miles; Edmonton, Dunvegan and B.C. Ry., 25 miles. Since the policy of guaranteeing railway companies' bonds was adopted by the province in 1909 more miles of railway had been built than in all the previous history of the province. Of 1,550 miles of steel laid by the various companies within the last three years more than 50% were built under guarantee. Of the total guaranteed mileage 782 miles of steel had been laid, equal to 25%; while 266 miles of grade were ready for the steel, equal to 34% of the total mileage for which bonds had been guaranteed.

The following information was recently given by the Government in the Legislature as to the bonds of the several companies guaranteed by the povince. The amounts received from the sale of the guaranteed bonds were:—Canadian Northern Ry. (1909-1911-12), $6,477,325.22; Canadian Northern Western Ry., $2,215,500; G.T. Pacific Ry. (1909), $2,246,807.50, 1911 $1,046,261; Edmonton, Dunvegan and British Columbia Ry., $3,194,546.69. The amounts paid out of these sums to the companies on account of construction were:—Canadian Northern Ry. (1909), $4,803,727.72, (1911-12) $1,530,295; Canadian Northern Western Ry., $2,054,715.80; G.T. Pacific Ry. (1909), $2,246,807.50, (1911-12), $1,406,260; Edmonton, Dunvegan and British Columbia Ry., $1,351,600. The amounts, with interest, to Jan. 31, standing to the credit of these companies were:—Canadian Northern Ry., $99,966.52; Canadian Northern Western Ry., $109,202.20; G.T. Pacific Ry., $1; Edmonton, Dunvegan and British Columbia Ry., $1,878,946.69.

The Great North Western Telegraph Co. has reopened its office at Cobden, Ont., and has closed its offices at Ameliasburg, Ont.; Dunham, Little Metis, and Paspebiac, Que.

Changes in National Transcontinental Railway Gradients.

The Minister of Railways, Hon. F. Cochrane, gave the following answers in the House of Commons, Mar. 19, to questions asked by the ex-Minister, Hon. G. P. [illegible]

No temporary trestles on the eastern division of the National Transcontinental Ry., originally intended to have been permanently filled, have been substituted for permanent structures.

No temporary or wooden bridges have been substituted where concrete and steel or permanent bridges were to have been constructed.

None of the momentum grades, or any portion of them, are on trestles.

The changes in gradients, bridges and trestles were suggested and recommended by the Commission's Chief Engineer. The estimated saving in cost to date is $27,797. The estimates having been made by H. M. Balkam, District Engineer.

No yards or divisional points have been reduced from the original plans in area, trackage, buildings or efficiency.

In addressing the Quebec Board of Trade, Feb. 21, referring to the correspondence published in Canadian Railway and Marine World for February, the Minister of Railways is reported to have said:—"At two points on the line, viz.:—near mileage 395, and near mileage 397, west from Quebec, gradients eastbound of 4.1%, and westbound 6.1%, have, for economy of construction and operation, been adopted for the present. These are what are known as velocity gradients and do not injuriously affect the operation of the road. Should it become advisable for any reason in the future to eliminate these sags, it can be done at one half the cost that the present contract prices call for." (March, pg. 118.)

Among the Express Companies.

W. G. [illegible] has been appointed Supply Agent, Canadian Ex. Co., Montreal, vice D. B. Atkinson, resigned.

E. C. Miner, heretofore Assistant General Agent, Canadian Ex. Co., Montreal, has been appointed acting General Agent, there, vice R. Murphy, General Agent, resigned.

H. Y. Knox, heretofore chief clerk to Superintendent, Dominion Ex. Co., Winnipeg, has been appointed agent at Saskatoon, Sask., vice C. H. S. Hammond, resigned.

E. W. Redmond, a Dominion Ex. Co. messenger, was recently found guilty of stealing a package containing $1,678.03 from one of the company's bags at [illegible] Lake, Ont.

R. Murphy, agent, Canadian Ex. Co., Montreal, who has resigned to enter private business, was presented Feb. 10 with a [illegible]

L. Trent, one of the Canadian Ex. Co.'s messengers between Detroit and Port Huron, Mich., has been retired after 40 years' service. It is stated that he travelled about 2,000,000 miles without mishap.

The Dominion Ex. Co. has opened an office at 1 Mount St., Manchester, Eng., in charge of D. H. M. Pim, who has been appointed agent for Manchester and District, reporting to London, Eng. The company will act as Freight and Passenger Agents for Manchester and District, for the C.P.R.

The territory of the route agents of the Canadian Ex. Co.'s Northwestern Division, [illegible] Port Arthur, Ont., to Watrous, Sask., inclusive, route agent, F. M. Smith, with headquarters at Winnipeg; lines west of Watrous, Sask., route agent, W. H. Nattress, with headquarters at Edmonton, Alta.

The Dominion Ex. Co. was organized May 23, 1873, the capital stock consisting of 20,000 shares of $100 each, all of which have been issued and are outstanding. The directors are: Sir Thos. G. Shaughnessy, W. S Stout, R. B. Angus, C. F. Smith and C. R. Hosmer, who are trustees of the entire capital stock on behalf of the C.P.R. A dividend of 8% was declared June 30, 1912. The company's officers are: President and General Manager, W. S. Stout; Vice President, R. Paton Lea; Secretary, H. C. Oswald; Treasurer, G. A. Newman; General Auditor, W. H. Plant.

The British Columbia Ex. Co., which operates stage, automobile and steamboat lines, chiefly in northern British Columbia, is making considerable alterations and improvements in its service, in order to accommodate itself to the changed conditions in the territory covered by it, on account of railway expansion, etc. A warehouse is being built at Tete Jaune Cache, and one of its vessels will ply on the Upper Fraser River between the end of steel on the G. T. Pacific Ry. and Grand Canyon, and possibly Fort George.

The Dominion Ex. Co. commenced its service over the Intercolonial Ry. and Prince Edward Island Ry., Feb. 1, with direct connection to Newfoundland, and at the same time its service was placed in operation over the Atlantic, Quebec and Western Ry., Caraquet and Gulf Shore Ry., Kent Northern Ry., New Brunswick Coal and Ry. Co., North Shore Ry., and Quebec Oriental Ry. The company now has 385 offices in New Brunswick, 210 in Nova Scotia, 93 in Prince Edward Island, and 504 in Quebec.

The Canadian Ex. Co. was organized Feb. 16, 1865, with an authorized capital of $3,000,000, in shares of $100, of which, $1,705,200 has been issued and are outstanding. The cash realized from the sale of these shares is given as $865,200. The G.T.R. acquired the capital stock of the company in 1891, by payment of $660,000 in cash, the total capital liability at that time being $1,500,000. This has since been raised to $1,705,200, the whole of which is held in trust for the G.T.R., by various officials of that company. The officials of the express company are: President and General Manager, John Pullen; Secretary-Treasurer, Frank Scott; General Counsel, W. H. Biggar, K.C.; General Auditor, W. W. Williamson.

In connection with the recent arrangement between the Dominion Government Railways management and the Dominion Ex. Co. by which the latter's service was put in operation over the Intercolonial and Prince Edward Island Railways, in addition to that of the Canadian Ex. Co., a dispute arose early in January, when the G.T.R. objected to carrying Dominion Express messengers and matter between Ste. Rosalie, Que., and Montreal, and claimed that Bonaventure Station, Montreal, was too congested to permit of the Dominion Ex. Co. handling matter there. After some little delay the G.T.R. permitted the Dominion Ex. Co. to carry on its business as arranged with the Government, pending some permanent arrangement being arrived at.

The Canadian Northern Ex. Co. was organized June 13, 1902. It has a capital stock of $1,000,000, in $100 shares, of which $300,000 was outstanding on June 30, 1912, but as yet no dividend was declared. The control of the company is in the hands of Mackenzie, Mann and Co., by right of ownership of 90% of the capital stock. The directors are: Sir William Mackenzie, Sir Donald Mann, R. J. Mackenzie and Z. A. Lash. The company's officers are: President, Sir William Mackenzie; Vice President, Sir Donald Mann; Third Vice President, D. B. Hanna; Secretary, R. P. Ormsby; Treasurer, L. W. Mitchell; General Counsel, F. H. Phippen, K.C.; Chief Solicitor, G. G. Ruel; Auditor, J. D. Morton; General Superintendent, W. C. Muir; Superintendent, C. A. Cunningham.

Telegraph, Telephone and Cable Matters

The Great North Western Telegraph Co. has opened an office at Kenogami, on the Quebec and Lake St. John Ry.

The G.T. Pacific Telegraph Co. announces that it has placed in operation telegraph circuits between Regina, Canora, Yorkton and Winnipeg.

The Great North Western Telegraph Co. has appointed Miss A. Lord, local manager at Barrie, Ont., vice W. M. Dobbs; and J. W. Deslauriers, local manager, at Sherbrooke, Que., vice S. F. Butzer, resigned.

It is reported that the Dominion Government is arranging for the erection of wireless telegraph stations at Pas, Man., and the proposed terminus of the Hudson Bay Ry. on Hudson Bay, in order to facilitate construction.

H. Hughes, who died at Canso, N.S., recently, was connected with the Commercial Cable Co., for several years, chiefly in underground cable construction in Nova Scotia, Newfoundland and New England states.

The Board of Railway Commissioners has ordered the C.P.R. to accept and transmit over its land lines, transatlantic wireless messages received by the Marconi Wireless Telegraph Co., connecting with the Marconi stations at Glace Bay and Louisburg, N.S.

F. A. Hamilton, Chief Electrician, Commercial Cable Co.'s. s.s. Mackay-Bennett, who died at Halifax, N.S., recently, was connected with telegraph construction from its early days, and took part in several cable expeditions to various parts of the world. Some of his work was connected with the laying of cables between Sydney, N.S., and Placentia, Nfld.

An additional cable is being laid to connect Prince Edward Island with New Brunswick, at an approximate cost of $45,000. The rate of 30c. for 5 words for night lettergrams has been extended to include all offices on the Island. The telegraph system is operated by the Western Union Telegraph Co., under a lease for 99 years from Jan. 1, 1912. The property taken over consists of 317.5 miles of land lines in P. E.I., about 9 miles of cable between Cape Traverse and Cape Tormentine, and about 35 miles of land lines between Cape Tormentine and Sackville, N.B., and there are 28 telegraph offices.

The Mackay Companies' annual meeting was held at Boston, Mass., Feb. 15. The financial statement for 1912 showed that $4,136,000, sufficient for the dividend on preferred and common stock, and for administration expenses, was drawn from the operating companies and disbursed. The investments in other companies were $92,013,000. The amount realized from the sale of the holdings in the American Telegraph and Telephone Co., some three years ago, is still held in easily convertible form as an emergency fund and for extensions. The earnings for 1912 were reported to have shown a considerable increase over 1911, there was no increase in capital stock, and the company has no debts. Sympathetic reference was made to the loss sustained in the death of one of the trustees, R. A. Smith, Toronto, and Sir Edmund Osler was elected in his place.

Electric Railway Department.

Winnipeg Electric Railway Company's Car Shops.

About six years ago the Winnipeg Electric Ry. management took up the policy of constructing such rolling stock as would be required by the company, and in pursuance of that policy built the shops now in use in Fort Rouge, Winnipeg, to the rear of the Fort Rouge car barns, on a large tract of land connected with the Canadian Northern Ry. by a siding, and utilized as a storage for such outside material as is used on the lines. The location of the shop in this reservation, alongside the railway siding, gives easy access to the bringing in of the materials for car construction.

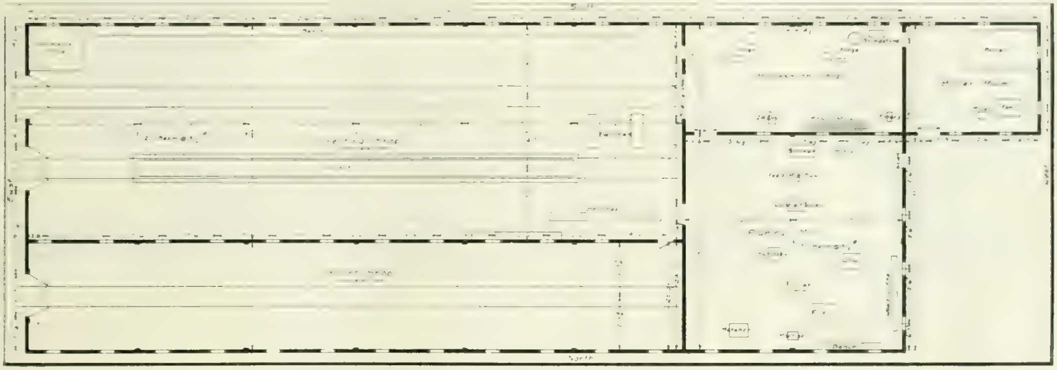

Fig. 1—Plan of Winnipeg Electric Railway Car Building Shops in Fort Rouge.

A plan of the shops is given in fig. 1, and the different departments in the other illustrations. The main structure is of brick, a 9 in. brick wall resting on a concrete footing 6 ft. deep, and 2½ ft. wide at the base, owing to the soft nature of the soil on which the shops stand, this providing ample footing. The building is 200 ft. by 75 ft., with a leanto addition to the rear for the boiler room. In the centre of the building there is a clear height of 18 ft., sloping to each side, there being three bays the length of the building, supported either by a brick wall or 12 in. I beams, according to the position in the building. The bents are 25 ft. apart. The I beams are supported on concrete footings that have a 4 ft. square base. All the departments, save the blacksmith, are paved with concrete.

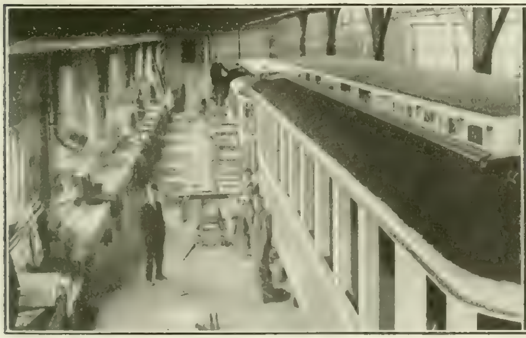

Fig. 2.—Interior of Erecting Shop, from the East

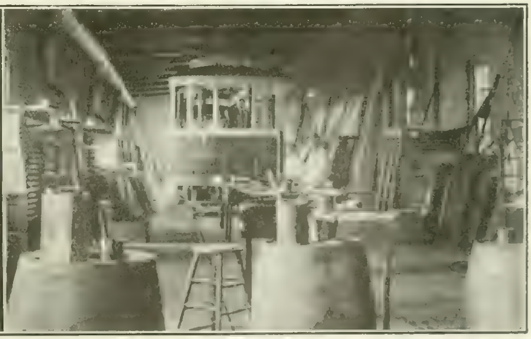

Fig. 3—Interior of Paint Shop, from the West.

The erecting shop, which occupies the main portion of the building, opening through large car doors to the east, facing on the rear of the car barns, is 150 by 50 ft., occupying two bays, the northerly one being divided off by a brick wall. The interior arrangement is shown in fig. 2, and the plan in fig. 1. In the southeast corner is the foreman's office, from the top of which the view, fig. 2, was taken. Along the south side, and on the tracks at the west end, are sundry carpenters' and fitters' benches, for the men fitting the cars together.

The erecting shop has two erecting tracks, which will each hold two cars with plenty of room at each end, in the space to the east of the bench space at the west end of the room. The northerly track has a 100 ft. pit, centrally located in the shop length. It is 4 ft. 2 ins. wide and 5 ft. deep, the bottom being of concrete, with a 13 in. brick wall, on the top of which is an 8 by 10 in. timber carrying the rail. The pit slopes from the centre and ends to points a quarter the length of the pit from each end, draining out into the sewer.

The paint shop, fig. 3, occupies the northerly bay of the building, and is the same length as the erecting shop, and 25 ft. wide. It is arranged to accommodate only two cars at a time, the rear portion of the shop from which the view in fig. 3 was taken, being set out with racks and benches for the finishing and drying of sash and other removable car parts. In general it resembles the usual railway varnish room, for such is most of the work on a street car.

The mill, fig. 4, is to the rear of the paint shop, occupying two bay widths of the building. It is 50 ft. square and of the same general characteristics as the other rooms. The machinery equipment, as noted on fig. 1, is sufficiently extensive to handle the car work to advantage, and includes the usual run of mill machinery. The arrangement of the machines is shown in the two illustrations.

The blacksmith shop, fig. 5, to the south of the mill, is 25 by 50 ft. It is only lightly equipped, containing two forges, with an anvil and die block accompanying each, and in addition, a 24 in. drill press, double emery wheels and a grindstone. The drive for this machinery is from the line shaft in the mill projecting through the wall. A 35 h.p. induction motor on the floor in the mill provides ample power for all purposes. The air blast for the forges is derived from an 18 in. centrifugal fan on the wall at the end of the room.

All power being electrical, obtained from the company's lines, the only requirement of a boiler room is for heating purposes. It contains a small unit, about 30 h.p., maintaining a low pressure of steam. On top and to the rear of the boiler are mounted heating coils, in batteries in the usual manner. Air is forced in among these coils by an 8 ft. fan, operated by a 10 h.p. induction motor. A large pipe leads out from the top of the fan, branching off in the boiler room, one leading straight down to the erecting shop, where it again divides, with a branch along each wall, while the other branch from the main pipe passes diagonally across the mill, and runs along the north wall of the paint shop. The nature of the pipe and the type of outlet used are shown in the several illustrations.

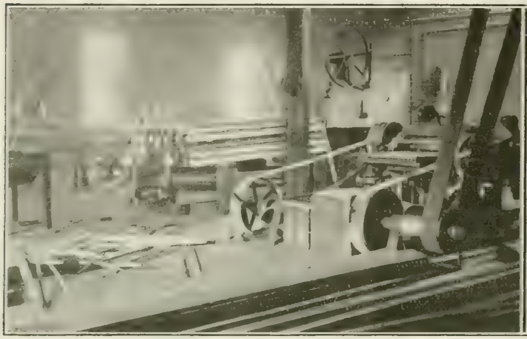

Fig. 4.—Interior of Mill, Looking Northeast.

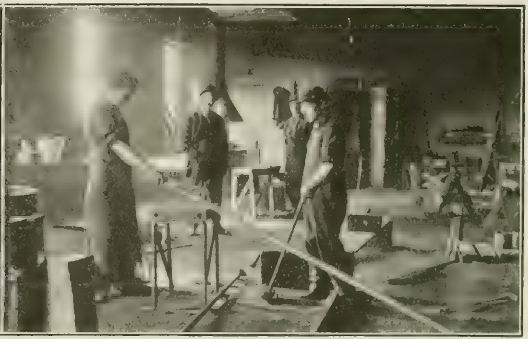

Fig. 5.—Interior of Blacksmith Shop, from the East.

The type of cars under construction in this plant was described in Canadian Railway and Marine World for February, this plant being equipped to turn out one of these cars a week. This capacity is not maintained throughout the year, it having been the policy the last two years to turn out about 40 cars a year, running the shops on short time during a portion of the year. Everything pertaining to the car body is constructed in the shops, with the exception of the heavier forgings and some of the machine work, which is produced in the company's Assiniboine Ave. repair shops. Standard equipment, such as trucks and electrical equipment, is all obtained on the outside.

The shops are under the direction of G. Garrett, Master Mechanic, from whom the information above has been obtained.

Report on the Ontario West Shore Railway's Condition

A report prepared by H. W. Middlemist, C.E., Toronto, upon the condition of the partially constructed Ontario, West Shore Ry., was recently laid before a meeting representing the municipalities which had guaranteed the company's bonds, held in Goderich, Ont. The report states that the work done on the line may be divided into two sections—first, from the junction with the C.P.R., opposite Goderich, in Colborne Tp., to Kintail, and from Kintail to Pine River. The grading has been done along the whole of the first section for a width of 9 ft. for the top of the embankment, and the deep cuts about 20 ft., but there is considerable dilapidation, owing to the falling away of banks. Track has been laid to Kintail, but requires to be lifted, lined up and ballasted. The culverts are in good condition, but the wing walls will have to be enlarged so as to take the slopes for a 14 ft. bank. The trestle work at the Port Albert bridge is in poor condition; and the piers for the steel superstructure are in an unsatisfactory condition. "To sum up," adds Mr. Middlemist, "this section is in a very bad state and is far from being completed in a satisfactory manner. . . In making the estimate I have endeavored to keep down the expense as far as I could conscientiously do so. No provision has been made for any turnouts for passing cars on the work already done."

The section from Kintail to Kincardine has been partially graded, but only to the same average width of 9 ft. There is considerable excavating yet to be done in the deep cuts, and the bank should be widened to 14 ft. The abutments for one bridge have been partly put in, but will have to be reconstructed. In order to make up his estimates Mr. Middlemist made the necessary designs for the bridges on this section.

His enquiries showed that 859 tons of steel rails have been delivered sufficient to lay 7.8 miles of track, and there are fishplates, bolts and spikes on hand sufficient to properly lay these rails. It would require 1,066 tons of rails to complete the 9.7 miles remaining into Kincardine. The other material on hand includes 4,050 ties, one 70 ft. steel span, two 20 ft. steel spans, and a quantity of bridge timber and fence posts, available for these two sections of the line.

The two miles of line required to carry the line from the Kincardine road into Goderich would be the most expensive to build on the whole line. This section would require a steel bridge of three spans of 150 ft. each; a steel bridge of 100 ft. span; considerable trestle work and subways under the C.P.R. and the G.T.R. He submitted four propositions as to this section, and recommended the adoption of the fourth. This plan gives a road with a 3% gradient to the Goderich northern road, a 1,500 ft. on the flats by the side of the river, and a 500 ft. trestle to the G.T.R., thence to North St. and on to the court house.

Appended to the report are detailed estimates, and the following: -

Valuation of Works Already Executed.

Right of way	$ 1,725.00	
Fencing on one side ..	11,4[illegible]1.00	
Excavation, including overhaul	46,961.00	
Pipe culverts	3,64[illegible].00	
Rails, fish plates, bolts, spikes, etc., including switches and crossings	70,288.00	
Ballasting	6,960.00	
Ties	22,310.00	
Laying track	7,250.00	
Road and farm crossings	420.00	
Bridges and culverts..	31,243.00	
Temporary trestle at Port Albert	11,633.00	
Engine shed	3,000.00	$216,801.00
Engineering, 5%		10,840.00
		$227,641.00
Profit, 15%		34,146.00
		$261,787.00
Add for material as far as could be found:		
70 foot steel span ...	$ 2,605.00	
859 tons of rails at $36	30,924.00	
55 tons of fish plates at $37	2,035.00	
Estimated 95 cwt. of bolts at $3.90	370.50	
Estimated 458 cwt. of spikes at $2.65	1,213.70	
Estimated 7,000 ties at 50c	3,500.00	
Estimated 431 bridge ties at $1.50	775.80	
Two plat girder spans of 25 feet, 17,550 feet at 4½c.	789 75	
Estimated 1,000 fence posts, 8 feet long, at 15c.	1,200 00	$43,413.75
Total		$305,200.75

Summary of Total Cost of Work to be Done and Rolling Stock.

Cost of line into Goderich	$120,969.34
Cost of line from C.P.R. junction to Kintail	86,189.71
Cost of line from Kintail to Lambton Street, Kincardine	279,807.15
Cost of electrical equipment for 35 miles	196,770.00
Total cost with rolling stock	$707,536.20 * 104,800.00
Total cost with rolling stock ...	$707,536.20

Estimate for rolling stock includes 6 passenger cars, 2 baggage cars for light freight, 1 electric locomotive, 10 flat cars, 10 box cars.

The municipalities interested had guaranteed bonds for $400,000, as follows:—Town of Goderich, $150,000; Town of Kincardine, $50,000; Ashfield Tp., $125,000; Huron Tp., $75,000. On these bonds the municipalities are paying 5% interest.

The representatives at the meeting passed a resolution, stating that the situation disclosed by the report was unsatisfactory to the municipalities which had guaranteed the bonds, and asking the Ontario Railway and Municipal Board to investigate "generally everything in connection with the affairs of the said company, and to apply any and all remedies within its power."

The O. & W.S. Ry. is a project that Canadian Railway and Marine World has never been able to obtain any official information in regard to, communications asking for the same having almost always been ignored. J. W. Moyes, of Toronto, appears to have had charge of construction and is said to be one of the principal promoters.

Electric Railway Projects, Construction, Betterments, Etc.

The Alberta Metropolitan Ry., which was incorporated by the Alberta Legislature in 1912, has been granted an extension of time for the construction of its authorized line from Calgary to Shepard, Alta. The provisional directors are:—W. J. C. Madden, J. M. Empey, G. P. Madden, W. T. Lathwell, Calgary, Alta.; W. H. Clipperton, Toronto; D. B. Waller, Dresden, Ont.; M. E. Brown, St. Thomas, Ont.

British Columbia Electric Ry.—The civic authorities of Vancouver recently met Chief Engineer Conway, of the B.C.E.R., and discussed the possibility of the company placing its wires through the centre of the city in underground conduits. It is stated that Mr. Conway promised that within a few weeks he would submit plans showing an extensive system of underground conduit work for the city business district. In carrying out this project the city will, as far as possible, have conduits laid in the lanes.

The New Westminster City Council is considering the company's plans for the laying out of a new yard at a cost of about $100,000. There will be track accommodation for 480 cars, and repair tracks.

A new substation, with a capacity of 2,000 k.w., is to be equipped at Victoria, according to press reports. The ballasting and other work necessary on the completion of the Saanich Peninsula line is being pushed forward, and it is expected that the line will be opened as far as Todd Inlet early in April.

In connection with the development of the power plant at Jordan River, contracts are reported to have been let for much of the machinery necessary for the development of an additional 12,000 h.p. The company has purchased the Vancouver tug Protective to take the place of the Nidge, which was recently lost while carrying supplies from Victoria to Jordan River. (Mar., pg. 141.)

Buffalo and Fort Erie Ferry Ry.—Press reports state that plans are being made for the electrification of the line between Fort Erie Ferry and Fort Erie Beach, Ont., and to extend the line to Bridgeburg and to Port Colborne, connecting at the latter place with the Niagara, St. Catharines and Toronto Ry. (Mar., pg. 141.)

Burrard, Westminster Boundary Ry. and Navigation Co.—The Dominion Parliament is being asked to extend the time for the construction of the several lines authorized; to increase the capital stock from $1,000,000 to $2,000,000, and the bonding powers from $30,000 to $40,000 a mile. Tupper, Kitts and Wightman, Vancouver, B.C., are the solicitors.

In connection with the building of the proposed line from Stave River Falls to Mission City and New Westminster, the first section of which, from the Falls to Pitt River, is expected to be put under construction in May, the British Columbia Legislature voted $200,000 towards the construction of a railway and general traffic bridge across the Pitt River at Coquitlam. The estimated cost of the bridge is $700,000, and it is expected to have it, and the entire electric railway, 40 miles, completed during 1915. (Mar., pg. 141.)

Edmonton Radial Ry.—The following track construction is projected for this year on this municipally owned line at Edmonton, Alta.:—Permanent (double track basis) 54,748 ft.; temporary (single track basis) approximately 5,000 ft. W. T. Woodroofe is Superintendent.

The Edmonton, Stoney Plain and Wabamun Ry. Co. has been incorporated by the Alberta Legislature to build a railway from Edmonton to Stoney Plain, thence to the shores of Lake Wabamun, Alta. The provisional directors are:—A. Boileau, E. S. McQuaid, Edmonton; A. V. Pujebet, Paris, France.

The Elbow River Suburban Ry. Co. has been incorporated by the Alberta Legislature to build a line from the junction of Canyon Creek with the Elbow River, northerly and easterly, starting the Sarcee Reserve on the west, and finally returning into Calgary along a line just south of and parallel to the Springbank Trail. The provisional directors are:—W. Georgeson, G. L. Peet, O. S. Chapin, Dr. G. A. Ings, A. D. Connors, Calgary, Alta.

Forest Hill Electric Ry.—The provisional directors named in the application to the Ontario Legislature for the incorporation of a company with this title are:—W. E. Grierson, T. J. Glover, R. H. C. Harris, W. T. Rogers and J. Hales, Toronto. (Mar., pg. 141.)

Halifax Electric Tramway Co.—It is proposed, we are officially advised, to build about a mile of new track on Quinpool Road, from Oxford St. to the Arm Bridge, Halifax, N.S., during this year. Application has been made to the city council to build a second track on about one mile of existing lines in the city. J. W. Crosby is Manager and Purchasing Agent. (Feb., pg. 90.)

Hamilton Incline Ry.—Plans have been filed with the Hamilton, Ont., City Council, for an incline railway from Wentworth St. to the top of the Mountain. The gradient will be 35 ft. in 100, and the line will be equipped to carry street cars, as well as vehicles and pedestrians.

Hamilton Mountain Electric Ry.—The Ontario Legislature is being asked to incorporate a company with this title to build a railway from the point where the Horning Mountain Road is crossed by the Brantford and Hamilton Ry., easterly to Mount Albion, with branch lines. The provisional directors are:—T. H. Crerar, L. E. Awrey, S. B. Thomson, G. E. Armstrong and T. H. Sturson, Hamilton.

Hamilton St. Ry.—Press reports state that it is proposed during this year to relay the tracks on King St., Locke St., and Sherman Ave., Hamilton, Ont. (Dec., 1912, pg. 622.)

Hamilton, Waterloo and Guelph Ry.—Press reports state that owing to the death of Jno. Patterson, this project will be dropped, and the lands acquired for the right of way sold. (Aug., 1912, pg. 421.)

Hull Electric Ry.—Press reports state that plans have been prepared for an extension to Connaught Park and the Jockey Club race track; to build a second track on about half a mile, and to lay out terminal facilities at Connaught Park, Hull, Que. (Feb., pg. 90.)

International Ry. and Development Co.—G. R. McDuff, the company's engineer, is reported to have completed surveys for an electric railway through the Delta district to New Westminster, B.C., and to have gone to England to arrange the financing for its construction. This information was made public at a recent dinner of the Delta Board of Trade. (Aug., 1912, pg. 421.)

Kingston, Portsmouth and Cataraqui Ry.—An agreement has been signed between the company and the Kingston, Ont., City Council, under which the Princess St. line is to be reconstructed. (Jan., pag. 39.)

Lethbridge Municipal Ry.—The City Council of Lethbridge, Alta., is considering plans for the building of an additional four miles of [illegible] (Nov., 1912, pg. 573.)

Montreal Tramways Co.—In an interview, Mar. 7, E. A. Robert, President, is reported as stating that the proceeds of the issue of additional capital stock will be utilized in improvements and betterments. It is estimated that during this year at least $2,000,000 will be required for this purpose, and the plans made call for a total expenditure of $4,000,000. The work will be taken in hand at once, and the shares will be issued as the money is required. (Mar., pg. 141.)

Port Arthur and Fort William Electric Ry.—The city of Fort William, Ont., will take over, Dec. 1, the portion of the lines, situated within its own borders, now operated by the joint commission with Port Arthur. The lines to be taken over are 14.875 miles, the remaining mileage—10.45—is within the boundary of Port Arthur. After the date mentioned each city will operate the lines within its own boundary and the present joint commission will be dissolved. During the period within which the joint commission has been operating the lines each city has been spending money on betterments and extensions, and in the purchase of additional rolling stock. The city of Fort William proposes during this year to add six miles of new tracks as follows:—Franklin St. to Walsh St., single track, 3,600 ft.; Syndicate St. to Franklin St., double track, 3,618 ft.; Dease to Simpson St., single track, 4,500 ft.; Victoria to Dease St., single track, 4,460 ft.; on Island no. 2, 8,800 ft.; Mission Road across G.T. Pacific Ry. property to Mission River, 8,800 ft. The first of these lines to be built will be the last mentioned. (Feb., pg. 90.)

Regina and Moose Jaw Interurban Ry.—Press reports state that work is to be started early in the spring on the construction of an electric railway between Regina and Moose Jaw, Sask., 42 miles. The line will pass through Belle Plaine, Grand Coulee, and Pense. S. Friedman, Moose Jaw, is one of the provisional directors. (Feb., pg. 90.)

Regina Municipal Ry.—Among the bylaws carried by the taxpayers of Regina, Sask., Feb. 25, was one providing for the expenditure of $825,000 upon street railway construction. Tenders are under consideration for the supply of track intersections, track curves and turnouts. It is proposed to invite tenders for a 1,000 k.w. motor generator set, and one 400 k.w. steam driven unit to be installed in the new addition to the power house.

The City Council has granted permission to Anderson and Luneny to build an electric line on 16th Ave. from McDonald St. to Park St. The line will be operated as part of the city system. (Nov., 1912, pg. 574.)

St. John, N.B.—A contract has been let to the Dominion Bridge Co., by the Provincial Government, for the superstructure of a bridge to replace the present suspension one at St. John, N.B. The new bridge will be of the spandrel arch type, and is estimated to cost $275,000. It will have a concrete floor, 50 ft. wide, on which will be laid a double track for electric cars, two driveways, and two sidewalks. The contract calls for the completion of the work by June 1, 1914.

St. John Ry.—Application is being made to the St. John, N.B., City Council for permission to extend some lines, and to build a second track on other lines. (Dec., 1912, pg. 623.)

St. Thomas Street Ry.—The City Engineer has been directed to prepare estimates for the thorough reconstruction of the Talbot St. line, St. Thomas, Ont. (Aug., 1912, pg. 623.)

Sherbrooke Ry. and Power Co.—We are officially advised that it is intended to build about a mile of new track this year. The route has not been definitely decided, but it is likely that it will be on Drummond, Belvedere, Armoury, Alexander and Aberdeen Sts. to the G.T.R. station. (May, 1912, pg. 252.)

Toronto and York Radial Ry.—Surveys are reported to have been completed for an extension of the Metropolitan Division easterly to Unionville, Markham and Stouffville, Ont., and local reports state that construction will be started at an early date. There have been several conferences between officials of the company and the city respecting the electric railway situation at the north end of Yonge St., and it is expected that an arrangement may be made for the building of a double track line on Yonge St. to York Mills, to be used jointly by the company and the city owned lines. (Mar., pg. 141.)

Tramways, Limited.—The Alberta Legislature has incorporated a company with this title to build the following lines:—From Edmonton northerly to Bon Accord, with a branch to Fort Saskatchewan Settlement; from Edmonton northeasterly to Fort Saskatchewan Settlement, and from Edmonton easterly and northerly on the south bank of the Saskatchewan River to Fort Saskatchewan Settlement, with branch lines not exceeding in any one case six miles in length. The provisional directors are: G. Cresswell, S. Carson, W. Golley and S. H. Smith, Edmonton.

White Horse to Dawson, Y.T.—A Dawson, Yukon, press report states that representatives of the White Pass and Yukon Ry., the Klondike Mines Ry., and the Noyle Concessions, Ltd., are negotiating for the joint construction of an electric railway from White Horse to Dawson.

Winnipeg Electric Ry.—The Winnipeg Board of Works passed a resolution, Mar. 5, calling upon the company to build a number of additional lines during this year. We are officially advised that the company proposes to build a car barn, plans for which are being made, but no definite arrangements have been made as to when it will be erected. (Mar., pg. 142.)

Taxation of Electric Railways in Ontario.

The Ontario Government collected $12,833.10 in taxation from the electric railways operated in the province for the year ended Oct. 31, 1912. This was made up as follows:—Berlin and Northern Ry., $22.70; Brantford and Hamilton Ry., $251.60; Chatham, Wallaceburg and Lake Erie Ry. (for 1911), $597.10; Cornwall St. Ry. Light and Power Co., $40; Galt, Preston and Hespeler St. Ry., $77; Hamilton, Grimsby and Beamsville E. Ry., $254.40; Hamilton St. Ry., $785.75; Hamilton and Dundas St. Ry., $55.72; Hamilton Radial Ry., $377.30; International Ry., $175.10; International Transit Co., $37; Kingston, Portsmouth and Cataraqui St. Ry., $104; London St. Ry., $451.20; London and Lake Erie Ry. and Transportation Co., $290; Niagara Falls, Wesley Park and Clifton Tramway Co., $76.60; Niagara, Welland and Lake Erie Ry., $15.20; Oshawa Ry., $38.90; Ottawa Electric Ry., $1,372.50; Peterborough Radial Ry., $105.82; Preston and Berlin St. Ry., $72.50; Sandwich, Windsor and Amherstburg Ry., $397.06; Sarnia St. Ry., $92.50; Toronto Ry., $6,422.82; Toronto Suburban Ry., $130.54; Windsor Essex and Lake Shore Rapid Ry., $553.59.

St. John Railway Company's Annual Report.

The following report for 1912 was presented at the recent annual meeting:—

The past year's business shows a net profit after providing for interest on bonds and all other charges of $58,158.06, out of which there have been paid 4 quarterly dividends of 1½%, amounting to $48,000, leaving a balance of $10,158.06, which has been transferred to profit and loss account. Our street railway earnings were reduced during the year in consequence of paving by the city of Mill, Dock, King and Charlotte Sts. This work was done during our rush season and prevented us operating our full service. We have recognized the efficient service given by our employes by increasing their wages.

Careful attention has been paid to the maintenance of the plant, rolling stock and other properties, the physical condition of which is equal to that of any other electric light and street railway system in Canada. During the year we purchased six p.a.y.e. combination cars, seven acres land adjoining our Seaside Park property, and built a line for the transmission of electric current for light and power to Rothesay, and through Simonds Parish as far as Crouchville. We are now building an auxiliary boiler house for three boilers. We have on hand all the rails, ties, etc., required for the extension of our railway to Crouchville, the cemetery, and for the new line on Broad St. We have also built a fireproof car barn on Wentworth St. We propose during the coming year to purchase additional cars, to erect another fire proof car barn, to install additional engine and generators, to extend our street railway to Crouchville, and the cemetery, and to lay a new track on Broad St. Other extensions of the railway are also proposed.

We were able to come to an agreement with the local Government as to crossing the new bridge to be erected at the Falls. We regret to report that the terms exacted by the Government are in our opinion too onerous. Our company is required to pay an annual rental, starting with $3,000, increasing to $5,000. In addition, we are obliged to pay half the cost of protecting the railway crossing, which includes wages of gatemen. We are also to pay the cost of connecting our railway and laying tracks on the bridge. This will require an expenditure of upwards of $68,000. When the bridge is completed, it will enable us to give a through service between East and West St. John. We applied to the City Commissioners for permission to lay double tracks on the proposed extension to Kane's Corner. Negotiations in connection therewith have been pending for some time. The Commissioners have notified us that they will not give us the right to put down double tracks unless we will pave from curb to curb with granite blocks on a concrete base from Walsh's Corner to the northeast side line of Erin St., and from there to Kane's Corner between the tracks and 18 ins. on each side. Under the company's charter the duty imposed on it is to maintain and keep in repair that part of the street occupied by the company and 18 ins. outside of the rails. The work required by the city would cost upwards of $30,000. Your directors did not feel warranted in committing the company to such a large additional expenditure. A double track would have enabled us to furnish the public with an up to date and efficient service. We do not expect that this extension will be profitable for some time, but we hope in the future as the suburbs are built up that it will pay. Your directors have been able to obtain permission from the Dominion Government to cross the Intercolonial Ry. at Haymarket Square.

In answer to enquiries that have been made by prominent shareholders and citizens as to our running large double truck cars, we have to say that in consequence of the narrow strip between the two tracks and the sharp curves and steep hills, we are not able to operate them. We would be glad to put such cars in commission if it were practicable, as it would effect a considerable saving in the wages of motormen and conductors.

Press reports state that an offer of $1,200,000 for the company's stock, equal to $150 a share, was considered at the meeting, the same having been made by J. P. Graham, President, Bangor St. Ry., and Portland St. Ry., and H. W. Cushman, President of the Merrill Trust Co., of Bangor, Me., and who are said to be promoting the New Brunswick Hydro Electric Co. The matter was referred to a committee, but it was stated later by the Vice President, H. H. McLean, K.C., M.P., who presided in the absence of the President, Jas. Ross, of Montreal, that the property was not for sale.

Building for British Columbia Electric Railway Employes.

The B.C. Electric Ry. Co. has called for tenders for the construction of a building for the use of its motormen, conductors and shop employes, stationed in Vancouver. It will be located at the corner of Main and Prior Streets, in the heart of the city, and directly opposite the principal car barns and repair shops.

It will be 25 by 60 ft. and five stories high, built of reinforced concrete, with facings of brick and artificial stone. The estimated cost is about $35,000. There will be two entrances to the ground floor, one from Main St. and the other from Prior St. On the Main St. frontage will be located the Station Master's office and behind this a large waiting room for the men. The entrance from Prior St. will be at the rear of the block and will lead to the elevator and stairways by means of which the upper stories will be reached. Above the ground floor, the first floor will be used for lockers for the men, the second floor for a reading room and the third floor for a billiard room with one billiard and two pool tables. In the upper story will be a gymnasium 18 ft. high, the entire area of the floor being left clear for this purpose. The company will equip the gymnasium with a full outfit of apparatus. Lavatory accommodation will be provided on each floor and shower baths are planned for the gymnasium. The entire building will be heated with hot water. Work will be started at once and it is planned to have the building ready for use during next summer.

The Regina Municipal Ry. Employes have organized a club to further athletics and social gatherings among themselves, and have elected as President the Superintendent, H. Doughty, who takes a strong interest in the movement.

Height of Street Car Steps.—The New York State Public Service Commission is reported to have ordered that all closed street cars in New York City be equipped with steps not higher than 15 ins. from the ground by Jan. 1, 1914.

In connection with the operation of electric railways in Canada, two non fatal accidents were reported in January, one being due to a collision, and the other to a falling crane.

Report on the Street Railway Situation in Winnipeg.

The report submitted to the Manitoba Public Utilities Commission by R. M. Fenstel, C.E., a civil engineer of Madison, Wis., who is connected with the Wisconsin Railway Commission, on the street railway traffic in Winnipeg, is a preliminary one. It is a lengthy document and deals with the general problem, the special problems, such as bad rail conditions, subways and engineering difficulties. The general problem outlined was that of investigation as to the general character of the service furnished, but this Mr. Fenstal states can only be dealt with after an exhaustive study of all the conditions by special observation. The special problems can be considered before a general study is made. Referring to these Mr. Fenstal states it is generally recognized that the Main St. subway is taxed beyond its capacity. It was thought that the Arlington St. overway would have relieved this congestion but the company has protested against its use on the ground that the gradient of the approaches made it dangerous for the operation of traffic. The approaches were found to have a gradient of 7.1% each, and there should be no difficulty in operating an average car in use in the city, fully loaded, with the track in "good average condition." The three words quoted are stated to mean the conditions which usually obtain during the whole year, excepting certain times in Jan., Feb. and Mar. There are times during the year when very bad rut conditions exist owing to fine snow which combines with the sand used, forming a black scale. In Duluth cars are operated over 6.95 and 8.3% gradients; in Minneapolis cars are operated over a 7% gradient, and in other cities over equally steep gradients under practically the same conditions. In each case the operation of the cars is considered a serious problem to be met with "continuous vigilance." The survey of Logan and Dufferin avenues intersections with Arlington St. developed the fact that connecting curves could be installed for both east and west directions off the driveway. The operation of cars on the Arlington St. overway would benefit the movement of traffic from north of Dufferin Ave. and east of McPhillips St. to and from the C.P.R. shops, and from north of Dufferin Ave. and west of Arlington St. to the south of the C.P.R. and east to the downtown district. This traffic, however, could be taken care of by the connection of the line from Selkirk Ave. across under the McPhillips St. subway to Logan Ave. The territory served in this way would be larger than that served by the Arlington St. overway. This would give some relief to the Main St. subway, but further data was required to form a definite opinion. An additional crossing of the C.P.R. is required between Main St. and Arlington Ave., and two propositions have been considered—a subway at Princess St., and an overway or subway at Salter St. Even if it were proved desirable for general traffic purposes to have a subway at Princess St., there were features which made it undesirable as a street railway proposition. A subway or overhead bridge at Salter St. would be more suitable and, that being at present a residential district, which would ultimately become a retail district, it could be constructed at a reasonable cost. The single track on Main St. bridge was the cause of much congestion. The strengthening of this bridge to carry a second track would be impracticable from the standpoint of economy, and the building of a new bridge is the only solution of the problem. The delays at the St. James single track subway are a source of considerable irregularity in the operation of the Deer Lodge line. The grade conditions and the narrowness of the subway are a source of danger. A subway for general, as well as for street railway traffic, could be constructed at moderate expense, and would meet the needs of a rapidly developing district.

British Columbia Electric Railway Co.'s New Receiving and Sub Stations.

Operations have been started by the B.C. Electric Ry. Co. on the construction of a large receiving station, which will regulate the distribution of current to the company's territory on the southern mainland of B. C. The site for the building is in D.L. 118, Burnaby, just on the boundary line of the city of Vancouver, where the company has a large tract of land. The total expenditure which will be made on the property is estimated at $250,000. Two buildings are to be erected, a main receiving station and a small sub station. Both will be of steel frame and reinforced concrete, and fire proof throughout. They will be one story high with an additional story for the transformer galleries. In the receiving station there will be four incoming lines, delivering the current at 60,000 volts. The electrical equipment will consist of 4 banks of 3 transformers each, with a total capacity of 36,000 k.w., by which the current will be stepped down from 60,000 to 11,000 volts for distribution to the sub station. The sub station which will be erected in connection with the receiving station will be equipped with 2 motor generator sets and a bank of 11,000-2,200 volt transformers. From this station will be regulated the supply of current for railway purposes and for public and private lighting in the vicinity of the station. The electrical equipment of both stations will include the usual installation of a full outfit of lighting arresters, switching apparatus, etc., the company's electrical engineers having designed the stations in accordance with the latest methods followed by central station and electric railway companies. At present the current from the company's generating station is sent to the Vancouver and other sub stations at high voltage. When the new sub station is completed, the Vancouver station and other stations now connected with the transmission lines will be used as sub stations, receiving their current at 11,000 volts from the Burnaby station. In connection with the new arrangement the company will reconstruct its transmission system from the power house on the North Arm of Burrard Inlet to Burnaby, in order to enable the current to be carried at 60,000 volts.

As soon as the Burnaby receiving station is completed, the company will erect a similar station near Sapperton, just on the outskirts of New Westminster. The equipment of this plant will be almost identical with the Burnaby station and the plans call for an expenditure of about $200,000. From the Sapperton station, power will be sent to the sub stations in the South Fraser Valley, which cover the supply of the Fraser Valley interurban railway and the demands of private parties for light and power in the district at 34,000 volts. From the point will also be distributed the current for the various sub stations lying to the east of Sapperton. In the plans arrangement has been made whereby in case of accident to the transmission line, current from either the Burnaby or Hastings station may be supplied to any point in the company's territory.

In Vancouver the company is erecting a sub station covering the west end of the city, the residential and apartment house centre. This building will be 60 by 68 ft. and one story high, with an additional story for the transmission gallery, and fire proof throughout. Structural steel with brick curtain walls and a concrete roof are being planned. The estimated expenditure on the station will be about $100,000. Current will be fed to the building at 11,000 volts, transmission lines being arranged from the Vancouver sub station as well as the Burnaby receiving station, thus affording an alternate base of supply in case of accident to either line. The electrical equipment of the building will consist of two 1,000 k.w d.c. motor generator sets, consisting of 11,000 volt motors and 600 volt generators, this equipment regulating the current for the tram lines in the section and the d.c. current used by elevators in apartment houses. The station will also be equipped with one bank of three transformers of 7,500 k.w. capacity for regulating the private and street lighting.

Port Arthur and Fort William Electric Railway.

The report for 1912 was submitted to the commission operating the joint systems, recently, and shows that 5,447,927 revenue passengers were carried, against 3,863,068 in 1911. There was an increase of 37% in the revenue, 31% in the expenditure, and 48% in the net earnings. The details of receipts and expenses are as follows:

RECEIPTS.

Passenger fares	$212,299.35
Baggage fares	4,026.26
Freight	4,902.46
Advertising	783.50
Power	750.00
Scrap sold	546.81
Mail contract	350.00
Arthur St. branch line	9,336.81
Interest	3,927.91
Total	$236,923.10
1911	$172,976.75

EXPENDITURE.

Arthur St. branch line	$ 5,289.73
Maintenance of way, etc.	18,323.00
Maintenance of equipment, etc.	21,096.05
Conducting transportation	56,459.22
Power purchased	30,813.98
General expenses	10,095.83
Reserve for accidents	12,351.25
Total	$154,429.06
1911	$117,469.67
Net operating earnings for 1912	$82,494.04

The Fort William Electric Railway.

The Mayor of Fort William, Ont., in his inaugural address to the City Council, recently, said:—"During the present year the street railway system will be extended to serve the Islands industrial centre at the Grand Trunk Pacific Ry. terminals, and also through the residential sections of Fairview, Victoria Ave. and Franklin St. The city, during this year, will take over its own street railway, money has been provided by the ratepayers to complete the car barn, supply generators and everything necessary for this work. It is now the duty of the council to plan for the management of this very important utility."

The electric railway in Fort William is now operated by a joint commission appointed by the cities of Fort William and Port Arthur, the whole system being known as the Port Arthur and Fort William Electric Ry.

Electric Railway Notes

The Saskatoon, Sask., City Council is considering a report recommending the purchase of six new cars for its lines.

The Quebec Public Utilities Commission has approved the Montreal Tramways Co.'s plans for putting its wires underground on certain streets.

The town of Walkerville, Ont., has entered an action against the Sandwich, Windsor and Amherstburg Ry., alleging failure to give the service called for in the franchise.

The Edmonton Radial Ry. is to have the following equipment added during this year:—35 semi convertible p.a.y.e. cars, 2 Simplex dump cars (1 already ordered), one 4,000 gal. sprinkler, 1 line car, 1 bonding car.

The bylaw recently submitted to the taxpayers of Saskatoon, Sask., in connection with the proposed operation of cars on the [illegible] passed by 419 votes to 150, and a Sunday service was started Mar. 9.

The Nipissing Central Ry., which is operated by the Timiskaming and Northern Ontario Ry. Commission, between Cobalt and Liskeard, Ont., has received two electric cars from the Preston Car and Coach Co.

A new schedule of wages for street car men was put in force in Fort William and Port Arthur, Ont., Mar. 1. The new rates of pay are: First six months, 24c. an hour; second six months, 26c.; second year, 28c.; third year, 30c.; fourth year, 32c. The men have a 10 hour day.

The Sandwich, Windsor and Amherstburg [illegible] It is equipped with two Canadian Westinghouse motors, two trolleys, electric heating system, push buttons and leather upholstered seats, and was built by the Preston Car and Coach Co.

[illegible]

The Electric Railway Situation in Montreal.

The Quebec Public Utilities Commission gave judgment, Mar. 14, dismissing the Montreal Tramways Co.'s exception to the Commission's jurisdiction, and directing the company and the city to get together and reach a settlement upon the matters in dispute.

In connection with this discussion of the betterment of service, etc., on the company's lines in Montreal, a report by J. P. Fox of New York, who was engaged by the Montreal Star, was made public Mar. 15. The suggestions made cover the abolition of cross seats; removal of heavy partitions between the rear platform and the body of the car; installation of sliding or folding doors on the steps to prevent the dangerous overcrowding of the rear platform; the operating of every available car; single truck cars should be operated in pairs or connected together by an enclosed centre platform; delays should be minimized; there is no convincing evidence that more streets are needed to make a satisfactory service possible; the double tracking of St. James and Notre Dame Sts. is feasible, and would relieve congestion on Craig St.; a reserve of cars should be provided for rush hours; a new type of double truck car is badly needed, the present type can seat except for local improvements. The M.C.R. only 40 passengers.

Duncan McDonald, formerly General Manager Montreal Tramways Co., is also preparing a report at the request of the Montreal Herald.

The company is doing what it can to come to an agreement with the city council as to the making of such improvements as will provide for a better service. A new proposition was submitted to the Board of Control, Mar. 12, providing for double track work on various lines, and the construction of subways under the G.T.R. and the Lachine Canal, and the extension of a number of lines. The carrying out of the plans would require the expenditure of between $8,000,000 and $10,000,000. There are 200 new cars on order, and the plans would necessitate the ordering of an additional 200. It would require three years to carry out the work suggested. The proposition is still under discussion.

Proposal to Build Electric Railways in Toronto as Local Improvements.

The [illegible] Committee of the Toronto City Council took up the consideration, Mar. 19, of a project for the construction of electric railways upon the local improvement plan. The suggestion is that owners of land in any outlying district of the city who desire street railway accommodation may obtain it by paying for it on the frontage tax system. The estimated cost of street railway construction is $50,000 a mile, including rolling stock; and such lines would be built from outlying parts of the city to the points served by the proposed civic tube railways. To be successful the suggestion must be worked out on comprehensive lines, and would have to lead to the building of lines equally all over the city area, so as not to create [illegible] The report was considered by the City Council Mar. 25.

A plan something upon these lines is being developed in Alberta, where at Calgary and some other cities, the financial interests developing real estate, have built short pieces of line to open up these properties, and have presented the lines to the city to be operated as part of the municipal railway.

Compensation for Carrying Postmen on Electric Railways.

The Postmaster General introduced the following bill in the House of Commons, Feb. 21, and secured its first reading:

"1. Letter carriers in the service of the Post Office Department shall be conveyed on every electric railway in Canada on such terms and conditions and under such regulations as are made by the Postmaster General.

"2. If any company operating such electric railway refuses to carry any such letter carrier at the amount so fixed by the Postmaster General, the company shall refund an amount equal to the difference between the amount so fixed and the amount actually expended for such carriage.

"3. This Act shall be deemed to have come into force on the first day of March, one thousand nine hundred and thirteen."

No notice of the introduction of the bill had been given to the interests affected and the first intimation of it was the announcement in the daily press of its first reading. The Secretary-Treasurer of the Canadian Street Railway Association, Acton Burrows, immediately communicated with the Postmaster General, requesting that the second reading be delayed until a deputation from the Association could be heard, which was granted, and a conference with the Minister was held in Ottawa, Feb. 28, the Association being represented by its President, Patrick Dubee, and the Secretary-Treasurer, who were accompanied by some representatives of member companies who were in Ottawa, including H. H. McLean, K.C., M.P., Vice President, St. John Ry.; Jas. D. Fraser, director and Secretary-Treasurer, Ottawa Electric Ry.; A. A. Dion, President Moose Jaw Electric Ry., and G. Gordon Gale, General Superintendent, Hull Electric Ry.

Mr. Burrows, in addressing the Minister, stated that the electric railway companies had been taken completely by surprise, having received no intimation that such a measure was to be introduced. The Minister, in writing to him answering his request for a conference, had stated that the introduction of the bill had been rendered necessary by the fact that certain electric railways had asked for largely increased compensation, amounting in one case to an advance of over 100%. Mr. Burrows contended that the fact of higher rates being asked did not necessarily mean that they were excessive. There was no desire on the part of the electric railway companies to hold up the government in any way, but investigation had shown that postmen were being carried by many companies at ridiculously low rates and that in some cases they were transported at less than actual cost. He submitted that there was no reason why postmen should be carried less than any other ordinary citizen, for as a matter of fact with their mail bags they took up more room and weighed more. If a lump sum per year was to be paid to the companies it should be based on the value of the tickets the postmen would have to buy if they travelled in the ordinary way. He submitted that it was not fair to the companies to give the Postmaster General the power to decide what should be paid, a power which might under some circumstances be used arbitrarily and unjustly, and he urged that the rate should be settled by conference between the department's officials and the companies and that in case an agreement could not be arrived at the matter should be referred to the Board of Railway Commissioners, an independent body, created by the government, but to which the companies would be perfectly willing to submit. He pointed out that the method of dealing with the steam railways in regard to the transmission of mails could not be taken as a precedent, as of course nearly all of those lines had been subsidized, while only one electric railway had been, all the others having been built entirely by private capital. He urged that the bill be withdrawn, or failing that, that a conference be held between the companies and the department's officials to endeavor to arrive at an arrangement based on the actual cost and value of the service.

Messrs. Dubee, McLean and others supported Mr. Burrows' arguments, and the Postmaster General, in reply, dwelt on the increased rates asked and said that he was not prepared to refer the matter to the Board of Railway Commissioners, giving the extraordinary reason that they would doubtless decide it on the value of the service. In the conversation which ensued it developed that the Montreal Tramways Co., the contract with which had expired and which was carrying the postmen under a temporary arrangement, had notified the Minister that unless its new terms were agreed to it would abrogate the arrangement on Feb. 28, and he admitted that the bill was introduced for the primary purpose of enabling him to meet that situation. He, however, undertook, if the Montreal Tramways Co. would extend its arrangement for another month, to postpone the second reading of the bill, in order that some general arrangement might be discussed. On the following day, E. A. Robert, President, Montreal Tramways Co., agreed to this, and at the date of writing (March 22) no further action had been taken on the bill.

Extensions to Regina Municipal Railway.

Service on the Regina (Sask.) Municipal Ry. was started in 1911. During the spring of that year 10½ miles of street railway track were laid, and in July cars were in operation. The first order for cars was placed in England. Since that time all orders have been placed with Canadian firms, and 16 cars are now on order. During 1912 three and a half miles of additional lines were laid, and during this year it is proposed to extend the railway lines considerably, as they are much in demand. The programme of extensions provides for an additional 14 miles of trackage, which when completed will make 28 miles of lines in service. Despite this big programme of work, the residents in the outlying districts are anxious to secure service at the earliest possible time, and in many cases petitions have been presented to the city council in this regard. The railway during the latter half of 1912 paid almost $2,000 a month above all charges, including debenture interest. Among other things, it is proposed to materially extend the car barns, so as to provide for the additional 16 cars ordered. A total expenditure of $825,000 is provided for this year.

Regina has what is known as a "warehouse area" or "spur track area," where only warehouses or factories may locate. This area, which comprises about 400 acres, is served in certain sections by the C.P.R., in others by the Canadian Northern Ry., and in still others by the Grand Trunk Pacific Ry. The interswitching arrangements have, it is claimed, not always been satisfactory to the manufacturers, and the city council has discussed the question of electrifying the spur track area, and shunting cars by city owned electric locomotives. It is estimated that a good revenue would be derived by this means.

Personal Paragraphs.

W. K. JEFFERY, heretofore acting Manager, Ottawa Car Co., has been appointed Manager.

MRS. J. F. DEADEY, wife of the Superintendent, Mimico Division, Toronto and York Radial Ry., died in Toronto Feb. 26.

P. J. MITTEN, Master Mechanic, International Ry., Buffalo, N.Y., has resigned to enter the Philadelphia Rapid Transit Co.'s service.

H. G. Matthews, General Manager, Quebec Railway Light, Heat and Power Co., has been taking a complete rest necessitated by overwork.

W. O. ROBINSON, has been re-engaged as Manager of the Port Arthur and Fort William Electric Ry., for another year at a salary of $2,800.

H. G. MATTHEWS, General Manager, Quebec Railway, Light, Heat and Power Co., has been absent from his office for some weeks owing to illness.

W. G. ASTLE, heretofore Chief Clerk, car shops, Dominion Power and Transmission Co., Hamilton, Ont., has been appointed Storekeeper, Toronto Electric Light Co., Toronto, Ont.

The Saskatoon, Sask., City Council cancelled the engagement of E. L. WHITE as Manager of the municipally owned street railway, Mar. 31, and placed the line under the charge of Electrical Engineer HANSON.

W. KERLEY, who recently acted as plaintiff in the litigation against the London and Lake Erie Ry. and Transportation Co., for operating its cars on Sundays, died at St. Thomas, Ont., Mar. 14.

PATRICK DUBEE, Secretary-Treasurer, Montreal Tramways Co., and President, Canadian Street Railway Association, left Montreal Mar. 16 and sailed from New York for England on the company's business, expecting to return during April.

ALLAN PURVIS, Manager Interurban Lines, and W. H. Elson, Superintendent British Columbia Electric Ry., returned to New Westminster, B.C., Mar. 5, after an extended trip in the United States to inspect the electric railway systems of a large number of larger cities.

T. AHEARN, President, and J. D. FRASER, Secretary-Treasurer, Ottawa Electric Railway, sailed from New York Mar. 27 on the s.s. Groesser Kurfuerst for Havana, Colon, Panama and Kingston, Jamaica, expecting to return to Ottawa about the middle of April.

Proposed Hydro Electric Power Lines and Railways in Ontario.

A meeting representative of a number of municipalities in Western Ontario, was held at St. Thomas, Mar. 20, for the purpose of discussing the extension of the Hydro Electric Power Commission's power lines through to Windsor and various points in that district, and the construction of electric railways along the power lines, and centering in the larger cities.

Deputations have visited nearly every town between St. Thomas and Windsor, and have secured the passing of resolutions endorsing in general terms, the proposal to erect the power line, and favoring the building of one continuous electric railway from Ottawa to Windsor by the municipalities.

The Mesaba Electric Railway has been completed and placed in operation between Hibbing and Gilbert, Minn.

Marine Department.

Canadian Lake Protective Association's Annual Meeting.

The Association's second annual meeting was held in Ottawa, Feb. 6, James Playfair, of Midland, Ont., occupying the chair. Following are extracts from the report for year 1912:—

It would be improper to attempt to base upon the record of the past season any conclusion whether the Association's work has already shown a decided effect upon the number and extent of the casualties suffered by the Canadian vessels enrolled, because a variety of circumstances may contribute in any one season to raise or lower the total amount of damages incurred. Yet a review of the cases and an examination of the character of the casualties might be expected to afford some indication of the restraining and correcting effect of the committee's supervision if any such effect has resulted, and the facts noted hereafter in this respect will probably be accepted as some evidence.

Before dealing with the actual casualties considered by the committee during 1912 reference must be made to the relations between the Association and the underwriting companies. In 1911 a feeling was expressed by New York underwriters that the Association had not established a valid claim for immediate recognition and would require to put its avowed intentions in practice, and prove its ability to enforce its regulations and rulings, before it could expect to enjoy the advantages given to the Great Lakes Protective Association in the United States; and that because of this feeling and possibly for other reasons which need not be discussed, a preference of ½% from the premium rate was given to members of the Great Lakes Protective Association. On the other hand, underwriters in London gave the Canadian organization full recognition in 1911, and extended identical treatment to the members of both associations. A very low rate of [illegible] was fixed, but in New York a member of the Great Lakes Protective Association could procure cover, by reason of the above preference, at [illegible].

Your Committee at the outset of 1912 [illegible] and for full enjoyment of the best rate, both in New York and London, for all its members. Efforts were made by correspondence to place the leading New York underwriting firms in possession of the true facts regarding the Canadian Association and to show that its work was of a character that demanded full recognition. Able assistance was also given by leading firms of brokers, and finally interviews were arranged with Percy Chubb and Sons and F. Hermann and Co. of New York, at which by direct personal representation of the facts it was possible to establish the Association's claims. It was these interviews which cleared away difficulties and settled the matter satisfactorily. There was at first a contention that it would be necessary for members of this Association to become personally interested in the underwriting risk, even to the small amount of say 5%, but it was readily admitted that the interest of each member in avoiding casualties was already very much more than this small share of the policy risk, and that this question might be very fairly waived. It was also claimed by underwriters that the Canadian Association ought to take some direct part in the exclusion of improper charges from adjustments, and that this could be done even without participating in the insurance losses. It was suggested that in the event of its being found necessary the Canadian Association might in time require the submission of all adjustments to its officers for revision under the direction of skilled assistants, but no definite arrangements were made regarding this. Underwriters also expressed much satisfaction with the statements submitted regarding the Association's plans and its actually achieved results. Only one difference remained and that was the proposal that a preferred list of a few fleets, deemed entitled to a lower premium rate on account of their good record, would be made by underwriters, and that it might not be possible to include any Canadian fleet in this list. The question was discussed at length but remained unsettled, the matter being one entirely within the underwriters' discretion and to be settled by the exercise of an arbitrary judgment.

I. L. Henderson.
General Manager, Montreal Transportation Co., and President Dominion Marine Association.

Shortly after this, the desired recognition was given to the Canadian Association, the announcement as to rates for 1912 being as follows:—1. Values reduced from £11 or $53.50 a ton to £10½ or $51. 2. A rate of 5¾% pro rata agreed to. 3. A list of preferred fleets to be entitled to a rate of 5¼% pro rata. 4. All vessels attaching on and after Aug. 1, ½% additional. All vessels attaching on and after Oct. 1, 1% additional. 5. An additional rate of ½% to be charged on all boats not entered in the Great Lakes Protective Association or Canadian Lake Protective Association. 6. An agreed policy to be used as in previous years. 7. Protection and indemnity clause: —To consult and agree with London underwriters as to form for clause in view of recent workmen's compensation acts.

This was a distinct step in advance and was especially satisfactory, in that it estimated membership in this Assoication as sufficiently important from an underwriting point of view to justify at the outset the maintenance of the same preference as had prevailed in the case of the Great Lakes Protective Association. It is true that the preferred list referred to above did not include any Canadian fleets. It is also understood that no examination of the records of individual Canadian fleets was made with a view to classifying them. Nevertheless, it was stated that this question could be taken up in 1913, and while the Association as a body cannot single out any fleet for preferential treatment, it will doubtless be proper for any individual member to advance any claims he may have for special consideration. It is possible that losses experienced this year by fleets in the preferred list of U.S. tonnage may have some bearing on the consideration of proposals for an extension of this plan.

Towards the close of the season suggestions were made by the Dominion Government for the extension of the period of navigation to Dec. 31, and after some correspondence, in which it was pointed out to the authorities that the extension was dependent upon underwriters, representatives of the Government attended a joint meeting of the Committees of the Dominion Marine Association and of your Association in Toronto during November, when it was agreed that vessel owners would make use of any assistance given by the Government in maintaining aids and breaking ice provided insurance cover could be obtained. It was not possible to do anything with certainty until Nov. 14, when the following extensions were announced by underwriters:—

"Warranted by the assured that loading of cargo is completed prior to midnight, Dec. 4, 1912, Chicago time.

"Warranted vessel sails prior to midnight, Dec. 5, 1912, Chicago time; also warranted not to abandon except in case of actual total loss.

"We reserve the right to withdraw this offer on written notice to you but without prejudice to any actual charters which have been made and have been reported to us in writing prior to our sending such notice.

"Rate, 1% not below Lake Erie.

"Lay up trips on one lake only to ¼ of 1% sailing prior to midnight, Dec. 5, 1912, Chicago time."

On Nov. 22 the extension privileges were extended as far as Ogdensburg at an extra rate of ¾%, and early in December the loading and sailing dates were extended to Dec. 7 and 8 respectively, at a rate of ½% additional to the 1% above mentioned. It is noteworthy that no casualties of any moment occurred under the extended insurance.

Your committee has held regular monthly meetings, and early in the season resolved that a complete record of the casualty reports dealt with at each meeting should be published in a bulletin which should circulate among all members of the Association and all masters of enrolled vessels. These bulletins have been regularly issued each month, and if preserved by members will provide a complete record of the casualties which are reported. One master has filed a protest against the bulletin, but your committee, after due consideration, has resolved to continue the publication of this record, believing that it will assist materially in advancing the Association's policy. An indexed record is kept by the Association in a book, which shows under the name of each master the names of vessels on which he has been employed, the casualties in which he has been involved, and the action taken by the committee in each case. This book is open for inspection at any time, and members can be provided with an extract regarding any master on application therefor. A similar record is kept regarding engineers, and it has recently been resolved that complaints of owners regarding the use of intoxicants by masters or engineers should be noted so that the information will always be available. This decision was made after the submission to the Department of Marine of a complaint regarding an engineer dismissed for drunkenness. The Association was informed that an official investigation would be held if desired with a view to dealing with the man's certificate, but the suggestion was made that possibly the Association's records would serve the desired purpose if members would report complaints freely, and also enquire carefully before engaging men.

The load draught has been watched throughout the season and your committee has been constantly in touch with canal superintendents, although on account of the higher water which has prevailed complaints of overloading have been much less frequent than in 1911. The recommended draught at Sault Ste. Marie Canadian Canal has been fairly observed and no resort to penalties has been necessary. On the St. Lawrence, early in the season, the imposition of fines was threatened, and the Superintendent's action was commended and endorsed by circular letter from your committee to all owners and masters, with good results

Circulars have been issued regarding the method of mooring in canals, the obligation to keep the reversing engines at all times in commission, and various other matters which have been brought directly to your committee's notice by casualties which proved the necessity for better observance of precautions against accident.

A number of accidents due to the breaking of canal gates in the Welland, the Cornwall and the Lachine canals, have convinced your committee of the urgent need of installation of some device to assist lock gates to withstand water pressure when forced slightly out of mitre. The Gowan safety device was demonstrated to your committee, and the Department of Railways and Canals was asked by your committee to make provision as promptly as possible for the installation of some such simple affair on all lock gates. Experiments are now being made, and it is expected that an approved device will be adopted in the near future. Your committee believe that the recommendation should be urgently pressed, and that serious accidents of this nature, which are not always entirely attributable to faults in navigation, will be avoided by the adoption of the protection asked for.

Your committee has also dealt with the question of inattention on the part of bridge tenders on canal bridges, by reason of which a number of avoidable accidents have occurred, and at the instance of the Association, after a number of cases had been reported fully to the Department of Railways and Canals, instructions were given by the Department to all bridge tenders requiring them to respond promptly to whistle signals. At present the Department does not contemplate any change in the canal rule requiring the vessel to stop if a bridge is not open, and the prima facie responsibility for accident therefore remains upon the vessel.

James Carruthers,
President, Richelieu and Ontario Navigation Company.

James Playfair,
Vice President and Managing Director, Richelieu and Ontario Navigation Co.

Throughout the year your committee has followed closely the adopted plan of dealing with all casualties. Reports have been regularly considered, and masters known to be in default in reporting have been required to furnish the necessary detailed information. The records of the committee's work, therefore, furnish an accurate review of the season's casualties. The records show one total loss, this time in the St. Lawrence River, the Keystorm striking in sudden fog and rapidly sinking in deep water near the Sister Islands light. The master was censured by your committee, an official wreck investigation was held, and the master's certificate was suspended for 12 months from Nov. 1, 1912. The certificate of the mate, during whose watch the accident occurred, was also suspended for 24 months from the same date. In addition to this there were three strandings of varying importance. In one case the Leafield was run up on Beausoliel Island by her master, under exceptional circumstances which induced the committee to exonerate him from blame. The other two cases were the Empress of Midland, near Cabot Head in Georgian Bay, and the Rosedale at Detour Point. In both of these instances the committee censured the masters and asked for official wreck investigations, which the Wreck Commissioner proposes to hold while navigation is closed this winter.

Lock gates were broken in three or four instances, but in at least three cases the accidents were due to vessels not enrolled in this Association. In the case of the steamboat Nevada, of this Association, the committee realized that the current at the foot of the lock in question was a contributing cause, but nevertheless censured the master for permitting his ship to approach the gates at excessive speed. The other casualties were on the whole of minor importance. Although there were 19 groundings, many of them had no appreciable results, and very few contributed materially to the season's losses. The same may be said of the collision, the number of these being entirely disproportionate to the small extent of damages occasioned. Twelve of the 27 were casual contacts of vessels in crowded harbors, and 10 of the collisions were in the canals, where heavy damage was not possible. None of the other casualties reported were serious. On the whole, claims upon underwriters will undoubtedly compare very favorably in amount with the records of previous years and probably show a substantial decrease. But for the one regrettable total loss, the total of claims would be comparatively light.

Seven masters have been censured by the committee during the year; one of these on three separate occasions. With respect to that one, an official wreck investigation is also arranged for and will be held shortly. One engineer has been censured for causes contributing to a collision, and another for intoxication. One pilot on the Upper St. Lawrence and one Bay of Quinte pilot have had votes of censure recorded against them, and an official investigation is pending regarding two groundings of the Mapleton in Montreal Harbor when in charge of a branch pilot.

The recognition and the preferential rates given to this Association by underwriters place the organization on a secure footing and bring into membership practically all the tonnage intended. Apparently only one Canadian vessel still relies exclusively upon the Great Lakes Protective Association for the benefits enjoyed.

Reference must be made to the sympathetic attitude of the Dominion Government towards a proposal for the establishment of a Canadian Lloyds. The proposition originated with reference to the lower St. Lawrence, but has been extended to include shipping on the Great Lakes, and an official of one of the departments has been deputed to give it special attention. Statistics are being compiled and various plans for working out underwriting assistance are under consideration. It is quite possible that during 1913 this Association may have an opportunity to consider plans for some new insurance undertaking calculated to give relief from present conditions.

ANALYSIS OF ACCIDENTS, 1912.

Strandings	4
Groundings	10
Collisions	27
Striking locks or gates	7
Striking bridges, docks, piers, harbors and channel banks	11

Propeller wheel broken	5
Rudder broken	1
Damaged machinery	2
Stress of weather, unnecessarily reported	3
Damaged by breaking of lock gates by [illegible]	
Broke anchor flukes attempting to stop vessel when making landing	1
Lightning	1
Fire	1
Total	8[illegible]

The foregoing report was fully considered and unanimously adopted.

The following committee of management was elected for the current year:—L. Henderson, C. A. Jaques, Montreal; S. Crangle, J. T. Mathews, J. W. Norcross, F. Plummer, Toronto; Jas. Playfair, Midland, Ont.; H. H. Gildersleeve, Sarnia, Ont.

The meeting was addressed by R. J. Dale, of Montreal, who outlined a proposal that members should agree to carry a definite percentage of their insurance risks by some form of mutual undertaking which Dale & Co. would be ready to arrange and supervise. Alternative methods of working out the proposal were discussed. Messrs. Prime and Sexton, representing United States underwriters, also addressed the meeting, and after a short discussion regarding the practicability and advisability of any of the arrangements mentioned and a brief argument by A. A. Wright, based on the experience of his own company, the question dropped without any action by the meeting.

The Loss of the s.s Oscar.

Following is a summary of the judgment delivered at Victoria, B.C., by Capt. G. E. L. Robertson, and assented to by A. H. Reed, H. Carmichael and C. A. Wardill, as assessors, in the investigation of the destruction of the s.s. Oscar, owned by the Steamship Oscar, Ltd., Victoria, by the detonation of its cargo of explosives in Nanaimo harbor, Jan. 15.

The explosion occurring on the southeast side of Protection Island, was outside Nanaimo harbor, and in the waters of British Columbia. None of the existing regulations in the Canada Shipping Act, or in the rules and regulations for the government of Pacific Coast harbors in Canada, were broken, and the court advises the Minister of Marine to give the fullest consideration to the question of handling, stowing and transporting explosives in vessels sailing from or arriving at any port in the Dominion, and to make such regulations as would lessen the risk of explosions. The court has no evidence as to the origin of the fire, and no negligence is attributed to the master or any member of the crew, and it expresses its appreciation of the bravery of the master under the trying circumstances.

The Oscar was built at Victoria in 1897, her dimensions being, length 81 ft., breadth 21 ft., depth 7 ft., tonnage 95 gross, 61 register, and she was screw driven with engine of 8 n.h.p. Since this enquiry was held, the regulations governing the management of public harbors, have been amendeed, giving the harbor master power to control vessels loaded with explosive materials, and providing penalties for disobedience. Details of these regulations are given elsewhere in this issue.

The Ocean Freight Line, Ltd., has been incorporated under the Dominion Companies Act, with $100,000 capital, and office at Toronto, to carry on a general navigation business. The company owns the s.s. Moldigaard. The President of the company is T. K. [illegible], New York, [illegible] provisional directors being R. H. Parmenter, A. J. Thomson, W. S. Morlock and N. B. Wormwith, Toronto.

Regulations for Operating Swing Span of Railway Bridge Over Fraser River.

H. H. Gildersleeve.
Manager, Western Lines, Richelieu and Ontario Navigation Co.

T. Henry.
Manager, Eastern Lines, Richelieu and Ontario Navigation Co.

The regulations governing the operation of the swing span of the railway bridge across the Fraser River at New Westminster, were recently authorized by the Board of Railway Commissioners, on the application of the Minister of Railways for British Columbia. Following is a summary of the chief points of the order:

The operation of the pivotal or swing span shall be under the direct control of the Bridge Superintendent, and shall be opened only for the passage, up and down, of such vessels as cannot, by the adoption of a hinge, or similar device, lower their smokestacks, flagpoles or other similar erections and pass under the bridge. The span shall be opened with the least possible delay after receiving three long blasts from the vessel's whistle, excepting when there is a train actually within the home signals of the interlocking system, or in motion toward the bridge between the distant and home signals, and then not till after the train is clear of the home signals at the opposite end of the bridge, provided, however, that when two trains are approaching the bridge within the distant signals, when the vessel's signal is given, a train of the superior class shall have preference, and shall be permitted to cross the bridge, the inferior train being held until the vessel giving the approach signal shall have passed, and the bridge is again closed. A double arm semaphore signal shall be provided on the top of the swing span, with lamp for signalling by night, the signal for the bridge being closed will show the semaphore arms at right angles to the pole, and at night, a red light, and the signal for the bridge being open will show the semaphore arms in the upper quadrant, that is, in a vertical position, during the day, and a green light at night. During foggy weather on receipt of a vessel's signal on the bridge, a fog horn will be sounded, two long blasts and repeated at intervals of 10 seconds, when the bridge is closed, and three long blasts, repeated at similar intervals, until the vessel has cleared the bridge, when the span is open. Any failure to comply with the regulations will be sufficient cause for the refusal to open the span, but the master of any vessel may make a protest in writing to the Bridge Superintendent, who will refer it to the harbor master, who together shall consider the matter and give a decision within one week, but in the meantime, the bridge shall be opened to allow the vessel to pass. Notwithstanding any of these regulations, the bridge tender may, in his discretion, direct traffic, either across the bridge, or on the water, through the bridge, and no vessel shall attempt to pass the bridge until the bridge tender shall give the necessary clear signal. An automatic gauge shall be maintained at each end of the swing span, so that it may be seen from any vessel approaching the bridge, indicating at all stages of the tide, the clearance between the level of the water and the underside of the lowest member of the structure. During foggy weather, a fog signal shall be sounded continuously, from the bridge, the sound being distinct from the other signals indicating the position of the swing span, before mentioned.

A system has been worked out in Germany, which it is hoped will, at any rate, minimize erosion in canals caused by the wash from vessels passing through. The canals are built with the bottoms sloping toward the centre, and the vessels are built with twin propellers and two rudders. The effect on erosion has been demonstrated to be considerable, and in addition it has also been shown that the minimum wearing effect of the propellers is reached when they are revolved in opposite directions to each other, the number of revolutions for the same speed being about 15% less, than when revolved in the same direction as each other.

The Montreal Warehousing Co. is reported to be considering the question of replacing its elevator at the foot of Colborne St., Montreal, with an up-to-date structure of greater capacity, in order to cope with the increased grain requirements of the port.

Two fatal, and 14 non fatal accidents were reported during January in connection with the navigation of Canadian waters. Of the fatalities, one employe was drowned in the sinking of a vessel, and another was killed by being struck by a swinging sling of hoisted goods.

The Richelieu and Ontario Navigation Co.'s Reorganization.

Following on the changes in the directorate made at the recent annual meeting, as announced in Canadian Railway and Marine World, for March, the company's vessels have been separated into divisions, as follows:

EASTERN DIVISION, covering the operation of the steamboats Beaupre, Belleville, Berthier, Boucherville, Longueuil, Montreal, Murray Bay, Pandora (tug), Quebec, Rapids King, Rapids Prince, Rapids Queen, St. Irenee, Saguenay, Tadousac and Three Rivers, all formerly owned by the R. & O.N. Co.

THOUSAND ISLAND AND ST. LAWrence Division, covering the operation of the steamboats America, Jessie Bain and Pierrepont, formerly owned by the St. Lawrence River Steamboat Co., and the steamships New Island Wanderer, Newsboy, Ramona, St. Lawrence and Thousand Islander, formerly owned by the Thousand Island Steamboat Co.

WESTERN DIVISION, covering the operation of the steamboats Kingston, Rochester and Toronto, formerly owned by the R. & O.N. Co.

NIAGARA-TORONTO DIVISION, covering the operation of the steamboats Cayuga, Chicora, Chippewa, Corona and Ongiara, formerly owned by the Niagara Navigation Co.

HAMILTON DIVISION, covering the operation of the steamships Macassa and Modjeska, formerly owned by the Hamilton Steamboat Co., and the steamship Turbinia, formerly owned by the Turbine Steamship Co., both of which companies were absorbed into the Niagara Navigation Co.

The vessels owned and operated by the Inland Lines, Ltd., and the Northern Navigation Co., will be operated as heretofore, each company maintaining its own organization under the central management. The following appointments have been made:—

JAMES PLAYFAIR, Vice President, has also been appointed Managing Director. Office, Montreal.

J. R. BINNING, one of the directors, has been elected Chairman of the Executive.

C. J. SMITH, General Manager, having resigned, that position has been abolished.

J. I. HOBSON, heretofore Treasurer, Inland Lines, Ltd., Hamilton, Ont., has been appointed Comptroller and Treasurer R. & O.N. Co., vice J. A. Villeneuve. Office, Montreal.

F. P. SMITH has been reappointed Secretary. Office, Montreal.

H. H. GILDERSLEEVE, heretofore Manager, Northern Navigation Co., Sarnia, Ont., has been appointed Manager, Western Lines, R. & O.N. Co. Office, Toronto.

T. HENRY, heretofore Traffic Manager, has been appointed Manager, Eastern Lines. Office, Montreal.

GILBERT JOHNSTON has been reappointed Mechanical Superintendent. Office, Montreal.

L. A. W. DOHERTY, heretofore Traffic Manager, Inland Lines, Ltd., Hamilton, Ont., has been appointed Freight Traffic Manager, R. & N.O. Co. Office, Toronto.

H. FOSTER CHAFFEE, heretofore General Passenger Agent, Western Lines, Toronto, has been appointed Passenger Traffic Manager. Office, Montreal.

J. F. PIERCE, heretofore Travelling Passenger Agent, Boston, Mass., has been appointed Assistant General Passenger Agent and General Baggage Agent. Office, Montreal.

G. PUJOS has been reappointed Excursion Agent in charge of Ticket Department. Office, Montreal.

J. V. FOY has been reappointed District Passenger Agent. Territory, Kingston and west in Canada, Michigan, Illinois and the Northwestern States. Office, Toronto.

H. Foster Chaffee,
Passenger Traffic Manager, Richelieu and Ontario Navigation Co.

H. D. PATERSON, heretofore Travelling Passenger Agent, Toronto, has been appointed General Agent, Passenger Department. Office, Toronto.

S. J. MURPHY, heretofore Excursion Agent, Niagara Navigation Co., Toronto, has been appointed Travelling Passenger Agent and Excursion Agent, with jurisdiction over all excursion business for Niagara Navigation Co. Office, Toronto.

L. A. W. Doherty,
Freight Traffic Manager, Richelieu and Ontario Navigation Co.

J. F. DOLAN, heretofore City Passenger Agent, Montreal, has been appointed District Passenger Agent, Boston, Mass., vice H. D. Paterson, promoted. Territory, Montreal and east in Canada, and the New England States.

J. W. CANVIN has been reappointed District Passenger Agent, Alexandria Bay, N.Y. Territory, Montreal to Kingston in Canada, New York State east to Rochester, Eastern Pennsylvania and the Atlantic seaboard.

W. F. CLONEY, heretofore District Passenger Agent, Rochester, N.Y., has been appointed District Passenger Agent, Buffalo, N.Y. Territory, Rochester and west in New York State, Western Pennsylvania, Central and Southern United States.

J. V. O'DONAHOE, heretofore Manager's Assistant; A. ANGSTROM, Naval Architect, and J. E. COOKSON, Baggage and Claims Agent, are reported to have resigned.

NORTHERN NAVIGATION CO.—PETER PATON, heretofore Assistant to the President, has been appointed Manager, vice H. H. Gildersleeve, transferred to R. & N. Co. service. Office, Sarnia, Ont.

C. A. MACDONALD continues as Assistant Manager and Treasurer. Office, Collingwood, Ont.

E. W. HOLTON, heretofore Eastern Passenger Agent, has been appointed General Passenger Agent. Office, Sarnia, Ont.

R. V. ROBINSON, heretofore Eastern Freight Agent, has been appointed General Freight Agent, in charge of Freight Traffic and Claims. Office, Sarnia, Ont.

W. J. McCORMACK, heretofore Agent at Sarnia, Ont., has been appointed Superintendent, with jurisdiction over Sarnia terminals and operation of Lake Superior vessels. Office, Sarnia, Ont.

The President, Jas. Carruthers, has issued a circular recalling all annual passes for 1913 issued by the former management, stating that on their return new passes bearing authorized signature will be issued in lieu of them, and that only annual passes bearing the written signature of the President, or the Vice President and Managing Director, will be honored. Another circular by the President says: "The officer authorized to issue or request annual or trip transportation on account of this company is Jas. Carruthers, President. The officer authorized to countersign annual transportation, or requests for same, is Jas. Playfair, Vice President and Managing Director. The officers authorized to countersign trip transportation, or requests for same, are Jas. Playfair, Vice President and Managing Director; H. H. Gildersleeve, Manager Western Lines; T. Henry, Manager Eastern Lines, and F. P. Smith, Secretary. All annual and trip transportation will be requested by and issued from this office."

The Nova Scotia Steel and Coal Co. has the following vessels under charter for the present season; half of these vessels will be used in the coal trade, and the remainder in the foreign ore trade:—August, 9,300 tons; Beatrice, 940 tons; Gladstone, 7,950 tons; Jethou, 7,080 tons; Othello, 6,360 tons; Tellus, 13,000 tons; Themis, 13,000 tons; Victoria, 1,300 tons; Wacousta, 5,650 tons; Wagama, 8,000 tons; Wascana, 8,000 tons; Wasis, 580 tons.

The Superior Sand and Towing Co., recently incorporated at Fort William, has acquired the steam tug Bennett, which will be operated during the season with the scow Derry. The equipment will be increased as the business demands.

The Department of Naval Service is considering the erection of wireless telegraph stations at Pas, Man., and the proposed terminus of the Dominion Government railway on Hudson Bay.

Proposed Dyke in Livingstone Channel, Detroit River.

[illegible] this way the cross current now flowing through this section of the river into the lower part of the new channel. Objection [illegible] burg channel will be much increased and that [illegible] dian master has [illegible] sented and produce expert evidence on that [illegible]

A Ship Captain's Responsibility When a Pilot is on Board.

In Canadian Railway and Marine World for February, some comment was made in connection with various criticisms of recent judgments by the Dominion Wreck Commissioner, on the question of the responsibility of a steamship's captain during the period when a pilot was on board, and the Wreck Commissioner's opinion, and the section of the Pilotage Act, governing this point, were quoted.

This matter was dealt with during the [illegible] St. Lawrence pilotage system, at Montreal, early [illegible] in response to a question, stated that he considered himself, when on board, in full charge of the navigation of the vessel, though he made no claim to interfere with the master in any other department, and gave an instance, which occurred in the St. Lawrence some years ago when he was piloting a vessel, when he gave orders to anchor the vessel during the night, the captain insisting that he should proceed to Quebec and ordering that the anchor be raised. This order the pilot countermanded, [illegible] to take the vessel further that night. For this, he stated, he was [illegible] by the head of the line and [illegible] captain [illegible] with his navi[illegible] Montreal and Quebec.

[illegible] one of the commissioners stated that the commissioners' understanding of the law is that [illegible] so the pilot is only on board in an advisory capacity, and the captain is the person responsible, the pilot merely giving him the benefit of his local experience.

In [illegible] Pilot Anger, said that if he were drunk or otherwise incapable, the captain would have the right to order him off the bridge and take [illegible] a captain refused to allow his orders to be carried out, he would leave the bridge of his own accord and leave the responsibility with the captain.

From the point of view of those officially connected with navigation interests, it is [illegible] on the captain's part, that he is in full charge at all times, and that for all practical purposes [illegible] 473 and 474 of the Canada Shipping Act, which [illegible]

"473. [illegible] of any ship shall, in any case, be compelled to employ or to give his ship into the charge of a pilot, either on the ground of his being compelled to pay pilotage duties to any person, or otherwise."

"474. Nothing in this part shall exempt any owner or master of any ship from liability for any loss or damage occasioned by his ship to any person or property, on the ground of either such ship being in the [illegible] loss [illegible] by the act or [illegible] other grounds."

So far as lake navigation is concerned, captains are definitely instructed on this [illegible] of the vessel, and responsible for anything that may occur in the course of navigation, [illegible] dues, whether they take a pilot or not, a [illegible] cation is strongly opposed to.

[illegible] considered in a Canadian court.

Winter Storage of Grain in U. S. Vessels at Port Arthur and Fort William.

F. King, Counsel, Dominion Marine Association, Kingston, Ont., went to Winnipeg in the middle of February to meet the Dominion Grain Commission with reference to the coasting laws and the winter storage of grain in United States vessels at Port Arthur and Fort William, Ont. The Commission has now definitely stated that the construction to be placed upon the concessions granted in favor of U. S. vessels at the close of Nov., 1912, should apply only to vessels loaded after Dec. 10, and as to which no original charter had been made prior to Nov. 29. The intention of the concessions was to bring in more tonnage for storage, so that there is no logical reason for construing the concessions in favor of vessels which were already under charter on Nov. 29. It is said that no cancellation of such charters and making of new charters will suffice to bring such vessels under the terms of the privileges granted.

Incidentally the Lake Shippers Clearance Association came under review by the Commission, and a brief statement was made of the difficulties between that Association and the Dominion Marine Association. The Commission agreed to hold a session in the East on its return from Vancouver to hear from individual vessel owners just what they have to say.

Coal vs. Oil as Fuel on Steamships.

The following report by G. W. Dickie, and published in the Vancouver Province, on the comparative costs of coal and oil as fuel on two of the C.P.R. British Columbia Coast Service steamships, is of interest, in view of the number of vessels which have recently been built to consume liquid fuel, or have been changed so that either of the two fuels may be used. The costs of coal and oil for the s.s. Princess Victoria are given as follows:—

Coal.	Per day.
100 tons at $4.50	$450.00
9 firemen at $55 a month each	16.50
9 trimmers at $45 a month each	13.50
Food for 18 men	7.56
Total	$487.56
Oil.	
344.17 barrels, at 90c	$314.25
6 firemen	11.10
Food for 6 men	2.52
Total	$327.87

The costs for the s.s. Princess Charlotte, a larger vessel and of greater horse power, are as follows:—

Coal.	Per day.
100 tons at $4.50	$450.00
13 firemen at $55 a month each	23.80
10 trimmers at $45 a month each	15.00
Food for 23 men	9.56
Total	$498.36
Oil.	
344.17 barrels at 90c	$314.25
6 firemen	11.10
Food for 6 men	2.52
Total	$327.87

Canadian Marine Casualties in 1912.—In response to question in the House of Commons recently respecting casualties to Canadian shipping at sea and on the inland waters, the Minister of Marine stated that during 1912, there were 104 casualties at sea, and 4 on inland waters, to sailing vessels, connected with which 12 lives were lost at sea and none inland; and there were 52 casualties at sea and 30 inland, to steam vessels, in connection with which 2 lives were lost at sea, and 14 inland.

The St. Lawrence Pilotage Investigation.

The investigation into matters concerning the pilotage of the St. Lawrence, for which the Government recently appointed Commander H. St. G. Lindsay, Dominion Wreck Commissioner; T. Robb, Manager and Secretary, Shipping Federation of Canada, and A. Lachance, Chairman, Quebec Pilotage Commission, as a commission, was concluded at Quebec, Mar. 11. Sittings had been held at Montreal and Quebec, and considerable evidence from those connected with various shipping interests, as well as from pilots, was taken.

The chief point of discussion towards the end of the enquiry, appeared to be whether the Corporation of Pilots should be abolished, and as to the control of pilots generally, it being contended that the authority presumed to be invested in the Minister of Marine, was largely offset by the powers granted to the Corporation of Pilots by charter. This, it was suggested, might be overcome to some extent by placing the pilots under a salaried officer of the Department of Marine. It was also pointed out that the Corporation was, apparently, governed by two sets of bylaws and rules, and there was considerable conflict under what was in reality a dual control. Other matters taken up were, the apprentice system, the double language qualification, sight tests, and age limit for service.

On the question of dual control, it was contended on behalf of the pilots, that there was no such dual control, as the Canada Shipping Act made it plain that the control lay with the Department of Marine. This was, however, controverted.

Prior to 1903, the pilotage authority for the pilotage district of Montreal, was the Montreal Harbor Commission, but in that year it ceased to be the authority, all the powers with which it was vested under either the Pilotage Act, or the Montreal Harbor Commissioners Act, being transferred to the Minister of Marine. In 1905, the powers vested in the Quebec Harbor Commissioners, as the pilotage authority for the pilotage district of Quebec, were transferred to the Minister of Marine, with the exception that the Minister was not authorized to sit as a tribunal for the trial of offences of which pilots may be accused before the pilotage authority, except in any cases not provided for in the Shipping Casualties Act of 1901.

Dominion Government Lighthouse and Buoy Steamship Estevan.

The steamship Estevan, which was recently built at Collingwood, Ont., for the Dominion Government lighthouse and buoy service on the British Columbia coast, arrived at Victoria, B.C., Mar. 4. The voyage of about 17,000 miles was commenced Nov. 4, 1912, and was completed without accident of any kind.

The vessel is built of steel, to be equal to class 100 A1 at Lloyd's, with double bottom from peak to peak, with water ballast, and divided into seven water tight bulkheads, and the general construction has been arranged to make the vessel suitable for navigation through 12 in. ice, if necessary. There are four decks, and the general equipment includes electric light, with 25,000 c.p. searchlight, 2 surf boats, captain's dinghy, one steam launch, boat hoisting winch, a five barrelled 20 ton, and 2 two ton, double barrelled steam winches and wireless telegraph equipment.

The propelling machinery consists of two sets of inverted, vertical, direct acting, triple expansion, surface condensing engines, capable of developing sufficient horse power to make a speed of 12 knots an hour, running at 130 revs. a minute, supplied with steam by two cylindrical single ended boilers, at 180 lbs., and fitted with forced draught. The propellers are of the three bladed, built up type, and are arranged to turn outward when the vessel is going ahead. The approximate general dimensions are:—Length between perpendiculars, 200 ft.; moulded breadth, 38 ft.; depth, moulded to main deck, 10 ft.; depth to lower deck, 10 ft.; main to bridge deck, 7 ft. 11½ inches; mean loaded draught, 11½ ft., with deadweight capacity of 375 tons, and coal capacity of 269 tons.

LAKE GRAIN SHIPMENTS IN 1912.

The following statement, prepared by F. Symes, acting Grain Inspector at Fort William, Ont., shows the bushels of grain shipped from Fort William and Port Arthur, during the navigation season of 1912, from Apr. 23 to Dec. 17. The figures in each column after the period denote lbs.

[illegible]

Daily papers, early in March, gave currency to what purported to be a dispatch from London, Eng., concerning the reconstruction of the White Star s.s. Olympic with an inner shell, and stated "the nature of the work has thus far been kept secret." As a matter of fact, there has been really no secrecy about the matter, as official descriptions of the work appeared in Canadian Railway and Marine World some months ago.

The Montreal Chamber of Commerce has recorded its opposition to the proposed scheme for a fast short route between Great Britain and Canada, from the west coast of Ireland to a port in Labrador, chiefly on the ground of the transport difficulties involved. It was claimed that, if a new route were required, the shortest and most convenient route would be between Liverpool and Halifax, but the members themselves prefer that Montreal should be the port.

J. Thom, Passenger Traffic Manager, White Star-Dominion Line, Montreal, has also been appointed local agent of the Austro-Americana Line, which is to be run this season between Trieste, Austria and Canadian ports. It is stated that all vessels will call at Naples each way. The first sailing from Trieste was the Arabiana, which left Mar. 15 for Portland, Me., subsequent sailings being to Quebec and Montreal. The Arabiana has been secured on time charter from Furness, Withy and Co.

The Ulster Steamship Co., operating the Head Line, in its annual report, shows net earnings of £74,462 for the year ended Jan. 31. The net balance to the credit of profit and loss after paying interest, etc., is £69,594, from which £26,167 has been deducted for depreciation. Dividends for the year were 5% free of income tax, with a bonus of £1 a share, leaving £3,551 to be carried forward to the current year. A call of £1 a share was also made, this amount being payable with the bonus declared.

The Elder Dempster Co. will, it is reported, discontinue its service between Canada and Mexico on the expiry of the Mexican mail contract in April. The company has used its steamships Bornu and Sokoto in this service for some time, and it is probable that they will return to England at an early date. D. W. Campbell is reported to have stated that an increasing number of tramp vessels would be consigned to the company during the forthcoming season, and these would take care of the imports of asphalt, etc., from Mexico.

The Central Vermont Transportation Co.'s s.s. Narragansett was launched at Wilmington, Del., recently, and will shortly be followed by a sister vessel, named Manhattan. They are 336 ft. long and 63 ft. wide at the guards, with six decks, and accommodation for 700 first class passengers and 500 tons of express freight. They are of steel, with twin screws, and will be equipped with engines of 480 h.p., supplied with steam by three boilers, and have a gross tonnage of about 5,000. These vessels will ply between Providence, R.I., and New York.

It is announced that the C.P.R. transpacific steamship service, which will be put in operation on the arrival of the two new vessels, the Empress of Asia and the Empress of Russia, will be a fortnightly one, each of the vessels named making the round trip in two months, while the Empress of Japan, Empress of India and Monteagle, will run in the intervals. Capt. Robinson, of the Empress of Japan, has been appointed to the command of the Empress of Asia, and W. D. Hopcroft, chief officer, has been promoted to the command of the Empress of Japan. Capt. Beetham, of the Empress of India, will command the Empress of Russia.

The sailing vessel Scotia is being equipped for patrolling the waters off the northeast coast of the continent, as the result of a recommendation of the Merchant Shipping Advisory Committee, with a view to observing the movements of ice during its southward flow. The vessel will have a wireless telegraph installation capable of communicating with the stations at Labrador and Newfoundland. It is anticipated that the stationing of this vessel in the ice region will contribute greatly to the safety of vessels using the North Atlantic routes, and prevent the possibility of such an accident as occurred to the s.s. Titanic last year, if the warnings of the proximity of ice are heeded by captains.

Maritime Provinces and Newfoundland.

T. Gilbert, at one time one of the leading shipowners of St. John, N.B., died there, Mar. 11, aged 92.

Dredging in Courtenay Bay, St. John, N.B., is to be resumed about Apr. 1, in connection with the large improvement works there, for which Norton Griffiths and Co. have the contract.

The Nova Scotia Steel and Coal Co. has secured the steamships Wagoma and Wascama, under charter for 10 years, with the option of purchase. They have coal carrying capacity of 8,000 tons each.

Press reports from Fredericton, N.B., Mar. 18, stated that the Provincial Government had adopted the principle of granting financial aid to Norton Griffiths and Co., in connection with the development work at Courtenay Bay, St. John, for the establishment of a shipbuilding plant there.

Tenders for the construction of terminals at Carelton Point, P.E.I., are to be received by the Department of Railways and Canals, Apr. 1, and tenders for the construction of the terminals at Cape Tormentine, N.B., will be received to Apr. 15 in connection with the projected car ferry service to connect the Intercolonial Ry. with the Prince Edward Island Ry.

Province of Quebec Marine.

Capt. J. D. Weir has been appointed Superintendent of Construction and Lights, Department of Marine, Montreal.

Work has been commenced on the foundation of the Harbor Commission's elevator in Quebec harbor. The contractors are the Canadian Stewart Co.

Jas. Carruthers, President, and J. R. Binning, director, Richelieu and Ontario Navigation Co., inspected the company's workshops, plant, and vessels at Sorel, Mar. 7.

The Sincennes-McNaughton Line's steam tug Aurelie G., which was to have been delivered by the British builders last year, but which was delayed owing to labor troubles in Great Britain, is expected to arrive in Montreal towards the end of May. She will cross the Atlantic under her own steam.

Rapid progress is being made on the various works on the Louise docks and river front near the Customs House in Quebec. The concrete foundations of the freight station at the foot of St. Paul St., and the Commission's offices were expected to be completed ready for the erection of the steel frame work at the end of March.

The Minister of Public Works stated in the House of Commons, recently in reply to a question, that no tenders had been received relating to the construction of a dry dock at Quebec or Levis; tenders had been received for the lockage of the St. Charles River, but names of tenderers could not be given until the contract had been awarded.

The Montreal Harbor Commission has had under consideration plans for the provision of a new entrance to the Lachine Canal, but it is stated that the work, which would be undertaken in conjunction with the Department of Railways and Canals, may not be gone on with this year. Plans for this year's work cover the completion of the addition to elevator no. 1, and alterations to the Victoria pier, with general repairs and developments.

The Quebec and Levis Ferry Co. will operate two car ferry steamboats between Quebec and Levis during this year. The vessel John R. Langford, recently purchased in Ogdensburg, N.Y., is being equipped at Quebec with hydraulic and other machinery suitable for the work, and when complete she will, with the companys other vessel, John S. Thorn, be placed in operation conveying cars across the river for transhipment to the south shore lines.

At a recent meeting of the Quebec Board of Trade, a letter was read from St. G. Boswell, Chief Engineer of the Harbor Commission, stating that the harbor improvement work to be undertaken immediately consisted essentially of the building of a quay wall 2,900 ft. long parallel to the southern wall of the Louise Embankment. This wall, with the 40 ft. already built, will give a continuous water front of 3,300 ft., which is to be dredged to give 35 ft. of water at low tide for about 1,200 ft. out.

Ontario and the Great Lakes.

Forwarders, Ltd., operating vessels in the grain trade, etc., into Kingston, has changed its head office from Kingston to Ottawa.

The s.s. Turret Crown has been thoroughly overhauled during the winter, and a new Scotch marine boiler installed, at Port Arthur.

The act granting an extension of time for the construction of the proposed Montreal, Ottawa and Georgian Bay Canal, has been assented to.

Press reports state that the Algoma Central and Hudson Bay Ry. will spend $400,000 on the provision of dock and terminal facilities for its railway lines and steamships at Sault Ste. Marie during this year.

The contract for the improvement of Hamilton harbor, for about $178,000, has been awarded to Taylor, Poupore, Hennessy and Dwyer, Ottawa. It is stated that work will be commenced immediately.

The Dominion Transportation Co.'s steamboat Manitou, which was damaged by fire at Owen Sound recently, and afterwards sank, has been raised. Tenders for repairs will shortly be asked for.

J. L. Weller, Chief Engineer, Welland Canal, is visiting Panama to study the method of dealing with quicksand, etc., as adopted there, as it is reported that in the borings on the route of the Welland quicksand has been encountered at several points.

Capt. F. Traunche, a lake captain of the early days of navigation, who died recently at Detroit, Mich., aged 80, was buried at Goderich, Mar. 4. He was connected with navigation on Lake Huron and Georgian Bay, all his life, and commanded a schooner at the age of 16.

The claims of the Dominion Transportation Co. having been adjusted in connection with the fire damage to its steamboat Manitou, the vessel is being repaired by R. Morrel, Collingwood, and it is said that it will be ready for operation by the opening of navigation.

The Superior Sand and Towing Co., Ltd., has been incorporated under the Ontario Companies Act, with $100,000 capital, and office at Fort William, to carry on a general towing, dredging and wrecking business. W. McCall, G. A. McLaurin, A. I. Perry, H. L. Palmer, Fort William, and G. Fineout, Port Arthur, are the incorporators.

A. V. Collins, heretofore chief clerk to Traffic Manager, Canadian Lake Line, Toronto, has been appointed General Freight Agent, in charge of all matters pertaining to traffic, rates and claims, with office at Toronto. The position of Traffic Manager, heretofore occupied by H. A. Young, has been abolished.

The Gilchrist Transportation Co.'s fleet of lake steamships, consisting of about 48 vessels, has been sold by auction by the Receivers, and it is reported that the amount received approximated $3,500,000. Several of the vessels owned by this company have, at various times, been acquired by Canadian companies operating on the Great Lakes.

The Keystone Transportation Co.'s s.s. Keystorm, which sank about 12 miles west of Brockville in Oct., 1912, has been finally abandoned. A diver was recently sent down, and his report was to the effect that the vessel was lying on her starboard side in deep water, with her bow ripped for about 60 ft., and he considered it would not be possible to raise her.

J. S. Robertson, of Owen Sound, is reported to be forming a company for the establishment of a steamship service between Owen Sound and Fort William. On his recent return from Cleveland, Ohio, he is reported to have stated that he had secured options on two vessels from Hutchinson and Co., there, and that he hoped to take up the options and to have the line in operation early in the spring.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater, for February, as follows:—Superior, 601.61; Michigan and Huron, 579.96; Erie, 572.39; Ontario, 246.75. As compared with the average February levels for the past 10 years, Superior was 0.23 ft. below; Michigan and Huron, 0.10. ft. below; Erie, 0.81 ft. above, and Ontario, 1.23 ft. above. It was anticipated that during March, Superior, Michigan and Huron would fall 0.1 ft., Erie 0.2 ft., and Ontario 0.3 ft.

The Temiskaming Navigation Co. held its annual meeting in Haileybury, Mar. 12. The report showed a profit of about $5,000 for the year, as against a deficit of about $1,500 for the previous year. The following are the directors for the current year:—President, J. Lumsden, Ottawa; Vice President, A. Ferland, Haileybury; Secretary-Treasurer, pro tem, J. A. Larochelle, Haileybury; other directors, G. H. Rochester, Haileybury; S. McChesney, Liskeard, and J. I. McCracken, Ottawa. The Haileybury Navigation Co.'s annual meeting was held subsequently, and the same officers and directors were also elected.

The Algoma Central Steamship Line has acquired from the receivers of the Gilchrist Transportation Co., Cleveland, Ohio, the two freight steamships, Saturn and Uranus, both of which will be transferred to the Canadian register. They were built at Wyandotte, Mich., and Lorain, Ohio, respectively. Following are the chief dimensions, etc.:—Length, 346 ft.; breadth, 48 ft.; depth, 28 ft.; hatches, ten, each 8 ft., spaced 24 ft. centres; engines, triple expansion, with cylinders 22, 35 and 58 ins. diar., by 42 ins. stroke; boilers, two Scotch type, 13 ft. 2 ins. by 11½ ft., 170 lbs. working pressure; cargo capacity, 5,500 tons; tonnage, Saturn, 3,717 gross, 2,772 register; Uranus, 3,748 gross, 2,943 register.

The Canadian Towing and Wrecking Co. is having built at Port Arthur an ice breaking steam tug, to be named J. T. Horne, which will be ready for operation early in the summer. The dimensions will be:—Length over all, 125 ft.; length between perpendiculars, 114 ft.; moulded beam, 28 ft.; moulded depth, 16 ft. The frames are spaced very closely forward in that part of the shell which will come in contact with ice, and she is strongly plated throughout this part. The propelling machinery consists of triple expansion engines, with cylinders 18, 30 and 48 ins. diar., by 39 ins. stroke, supplied with steam by one Scotch boiler 15 ft. 4½ ins. diar. by 11½ ft. long, with three furnaces equipped for natural draught, with a working pressure of 185 lbs. In addition to the ordinary pumps, the vessel will be fitted with a large fire pump, with one turret nozzle forward and connections for hose lines on both sides of the cabin. She will also be equipped with electric light throughout and a large searchlight.

British Columbia and Pacific Coast Marine

The C.P.R. s.s. Princess Ena has been drawn out on the ways at Esquimalt for a general overhauling.

The C.P.R. s.s. Princess Royal, which has been laid up for overhauling during the winter, has been replaced in service.

Press reports from Port Mann state that work on the lengthening of the present dock, making it a mile long, will be resumed at an early date.

M. J. Wright, heretofore Contracting Freight Agent, Pacific Coast Steamship Co., Seattle, Wash., has been appointed General Agent of the company, at Vancouver, B.C.

The Dominion Public Works Department's dredge Mastodon is at work dredging the Parthia Shoal in Burrard Inlet. For navigation purposes, a stake light is being maintained until the completion of the work, on the north side of the channel south of the shoal.

The Fort George Lake and River Transportation Co., Ltd., has been incorporated under the British Columbia Companies Act, with $50,000 capital, and office at Fort George, to own and operate steam and other vessels and carry on a general navigation business.

It is reported that the C.P.R. has decided to lengthen its s.s. Princess Mary, but no details are available, and it is improbable that anything will be done in the matter until the return of J. W. Troup, Manager of the B. C. Coast Service, from Great Britain.

There is under construction at Port Arthur, a new and powerful ice breaker for the Great Lakes Dredging Co. The vessel will be of steel throughout, 120 ft. long, and will have approximately 700 h.p. more than the ice breaker James Whalen, which is at present the most powerful one on the Great Lakes.

C. Gardiner Johnson, who has been appointed agent for the Hamburg-American and Eastern Asiatic Steamship Co., at Vancouver and Victoria, was reported recenty to be negotiating for the acquirement of waterfront sites for the erection of office and warehouse buildings in Vancouver.

The Coquitlam Shipbuilding and Marine Railway Co. recently announced that towards the end of March, it would build its first steamboat on the Fraser River. The vessel, which will have capacity for about 2,000,000 ft. of lumber, will be 236 ft. long over all, 187 ft. keel, and 43 ft. beam, and oil will be used as fuel.

The White Pass and Yukon Route is reported to be building two steamboats at White Horse for the Alaska trade. The vessels will, it is said, be equipped with the machinery from the steamboats Tyrell and Victoria. The question as to whether these vessels will be placed on the Canadian or U. S. register is said to be undetermined, this depending on the U. S. decision as to whether Fairbanks is to be made an open port or not.

The Minister of Marine is considering the question of the appointment of assessors in cases of enquiry into marine accidents. The composition of recent courts, especially in British Columbia, has been the subject of considerable comment, culminating in the recent refusal of the master of the Union Steamship Co.'s Chelohsin, to give evidence in the enquiry into the stranding of that vessel in the Skeena River, on the ground that the assessors appointed were not competent to deal with the matter, being deep sea men, and not acquainted with coast navigation conditions. The courts in some later cases have been composed of men more in touch with local conditions, and it is presumed that any new rules which may be promulgated by the Department will follow on the lines indicated in these later appointments.

Terms for Installation of Wireless Telegraphy on Vessels.

When the bill "An Act respecting Radiotelegraphy" was before the House of Commons Committee on Marine and Fisheries recently, there was considerable discussion as to the cost of installing and maintaining wireless telegraph apparatus on vessels. J. H. Lauer, Manager of the Marconi Wireless Telegraph Co. of Canada, submitted a copy of the standard agreement, some of the principal provisions of which are as follows:—The company installs the apparatus at its own cost and pays the operator. The vessel owner provides cabin accommodation and board for the operator, also masts, spreaders, halyards, aerials, insulators, accumulators, electrical current, mains and controlling gear. Vessel owners are to pay on the following scale:—$1,000 a year for steamships in service during navigation season only; $1,250 a year for steamships in service the whole year. If more than one operator has to be provided, an additional $500 is payable for steamships in service during navigation season only and $600 for steamships in service during the whole year. Monies received by the company for transmission of messages are to be divided between the company and the vessel owner, after $250 ship's tax has been retained by the company. The company is to be entitled to a share of any salvage money which the ship may earn, according to the extent to which the wireless apparatus and operator may have contributed to the rendering of such service. The ship owner is to provide the operator with board, etc. Contracts are made for five years, with privilege of renewal.

The Western Elevator Co. has awarded a contract to the Burrell Construction Co., Chicago, Ill., for an annex to its grain house on the Kaministikwia River, at Fort William. The additional capacity will be for 1,100,000 bush., and it is understood that the work will be completed for the accommodation of the forthcoming season's crop.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

LUMEN BEARING CO.—Kester Barr, who has been appointed Manager of this company at West Toronto, succeeding F. Ganderton, resigned, was heretofore with Manning, Maxwell and Moore, Inc., of New York.

AMERICAN LOCOMOTIVE CO.—Leigh Best, Vice President, in addition to his other duties, has been given full charge of the automobile department, which, so far as is practicable, is to be segregated from the company's locomotive department.

BUTTERFIELD & CO., manufacturers of stocks and dies, die and screw plates, tap dies, reamers, etc., Rock Island, Que. and Derby Line, Vt., have sold their business to the Union Twist Drill Co. of Athol Mass. The business will be continued under the same name, and there will be no change in the management or policy.

THE UNITED STATES GOVERNMENT has recently purchased from The Safety Car Heating and Lighting Co., 43 Pintsch beacons for use on the St. Marys River. These beacons will use high pressure Pintsch gas and 6 ft. high pressure Pintsch gas flasks. They will also use 300 mm. Pintsch mantle lanterns. The U.S. Government has also purchased from the same company 5 range lights for use on the Detroit River.

High Speed Trains in Germany.—The 1912 summer time table of the German Railway Systems provides an interesting study, for it reveals that a new era of rapid transit has dawned in that country. In 1911 a non stop run from Berlin to Hamburg in 3 hours and 20 minutes was inaugurated, and in 1912 the run was further accelerated. The train left Berlin at 8.55 p.m., reaching Hamburg, 178¼ miles distant, at 12.09 a.m., the speed being 55.1 miles an hour. The return journey was made at 54.5 miles an hour. The train was a light one, consisting of four four-axle carriages and a six-axle dining car.

The Gas Electric Motor Car.—Railway officials have been watching with interest the development of the self-propelled car for use on steam roads. Under steam operation, short branch lines, carrying a limited traffic, are notoriously unprofitable. Single units running at sufficiently frequent intervals give a more satisfactory service than the once a day trains; and the managers have turned to the self propelled car as offering a solution of the problem. Today over 20 railways in the United States and one in Canada have self propelled units of the gas electric type running on regular local schedule. The consumption of gasoline, while varying with the local conditions, is found to be low, the economy being due to the electric transmission, which lends itself admirably to the particular requirements of local service.

Children Who Ride Free Not to Occupy Seats.—The Twin City Rapid Transit Company, Minneapolis, Minn., is enforcing the rule against children occupying seats while older persons stand. Heretofore an adult has been allowed to take three children of six years and under on cars without paying fare. The rule which is now being enforced is as follows: "Children under six years of age, when acompanied by parent or guardian, provided not more than three such children are in the care of one person, will be allowed to ride free. Should more than three children be in charge of one guardian, a full fare will be collected for each child in excess of that number. Should conductor see free riding children occupying seats while other passengers are standing, he will ask the parent or guardian either to take the child on his or her lap, have the child stand, or else pay full fare on account of each occupied seat."

TENDERS.

TENDERS addressed to the undersigned at Ottawa and endorsed on the envelope "Tender for Fisheries Patrol Steamer" will be received up to noon of the

TWENTY FIFTH DAY OF APRIL, 1913, for the construction of a steel wood sheathed twin screw patrol steamer to be delivered at Selkirk, Manitoba, of the following dimensions, viz.:—

Length B.P.	140 ft.
Breadth moulded	25 ft. 6 inch.
Breadth extreme	27 ft ¾ inch
Depth moulded	13 ft. 6 inch.
Indicated horse power	900.

Plans and specifications and tender forms can be seen at the Department of Marine and Fisheries, Ottawa, at the offices of the Collectors of Customs at Toronto, Collingwood, Midland and Kingston, Ont., at the offices of the Harbour Masters at Port Arthur and Fort William, and also at the offices of this Department at Montreal, Quebec, St. John, N.B., Halifax, N.S., and Victoria, B.C.

Plans and specifications and tender forms can be procured upon application from the Department of Marine and Fisheries, Ottawa, and from the Agent of this Department at Victoria, B.C.

Each tender must be accompanied by an accepted cheque on a chartered bank in favour of the Deputy Minister of Marine and Fisheries, equal to ten per cent. of the whole amount of the tender, which cheque will be forfeited if the successful tenderer declines to sign the contract prepared by the Department or fails to complete the steamer.

Cheques accompanying unsuccessful tenders will be returned.

The Department does not bind itself to accept the lowest or any tender.

Newspapers coyping this advertisement without authority from the Department will not be paid

ALEX. JOHNSTON,
Deputy Minister of Marine and Fisheries.

Winnipeg Electric Railway Company

Annual Report for Fiscal Year ended December 31, 1912

Report of the President and Directors.

To the Shareholders:—

Your directors beg to submit a statement of the past year's business, showing gross earnings of $3,765,384.06, as compared with $3,829,749.67 last year.

After providing for the percentage on earnings accrued to the city and interest on bonds, your directors declared four quarterly dividends, amounting to $720,000, leaving a surplus of $474,463.12, which has been transferred to the credit of profit and loss account, making a total credit to this account to Dec. 31, 1912, of $2,091,236.37.

All the properties of the company have been efficiently maintained.

In accordance with the plan of extensions adopted at the last annual meeting, the following improvements and additions to the company's equipment and system have been made in the various departments.

TRACK AND ROAD BED.—9.235 miles of track was laid as follows: 6.92 miles with 80-lb. rails with concrete foundation and asphalt pavement; 2.157 miles with gravel ballast; 0.158 mile with creosote block pavement.

ROLLING STOCK.—33 large double truck closed motor cars with wide vestibules equipped with air brakes and all other modern appliances to insure the comfort and safety of passengers and trainmen, were constructed in the company's Winnipeg shops and put in service. Two new snow sweepers and one 5,000-gallon pneumatic street sprinkler were purchased and put in service.

ELECTRIC LIGHTING AND POWER Distribution System.—1,852 new poles were erected and 409,066 lbs. of wire with 114 transformers put up in extension of the company's light and power distribution system.

Transmission line 4½ miles long with necessary transformers to serve the plant of the Canada Cement Company and the new industrial town site in the Municipality of Assiniboia was constructed.

Three new motor generator sets were installed, one in the St. James sub station, one in the new sub station on Logan Avenue and one in the Assiniboine Avenue power house.

GAS DISTRIBUTION SYSTEM.—79,890 feet of new gas mains were laid, and 1,478 new gas services were installed in extension of the company's gas distribution system. In addition to the extensions to the exhauster house and the purifying house at the gas works, the necessary equipment to increase the capacity of this portion of the gas works by 2,000,000 cubic feet per day was installed.

CONSTRUCTED.—Gas Works—Extension to exhauster house, extension to purifying house.

Stores and offices at South Main Street car barns, of steel and brickwork with concrete foundations.

Sub station on Logan Avenue of steel and brick with concrete foundation.

Six track addition to North Main Street car barns to house 22 additional cars. Construction is of brick and steel with concrete foundation. The tracks are constructed with pits for convenience when repairing or adjusting cars.

Offices and employes' waiting room constructed at North car barns.

Twenty horse Stable on Kylemore Avenue, Ft. Rouge, two stories in height. Upper story used for hay loft and grain and for storage of wagons. Construction is of re-inforced concrete with brick veneer exterior.

Four story warehouse on Assiniboine Avenue in course of construction, of re-inforced concrete and brick veneer exterior.

Addition to the St. James sub station.

NEW OFFICE BUILDING.—Owing to the increase in the company's business, the directors thought it advisable for the company to secure its own office premises and therefore purchased a lot on the corner of Notre Dame Avenue and Albert Street, in the heart of the city of Winnipeg, and on June 13 commenced the construction of a fully modern 10 story fireproof office building. The company will use the basement and two first floors for its own offices, the balance will be rented, and on account of the great demand for office space it is estimated that the rentals received from the building will make itself sustaining. The company expect their portion of the building to be ready for occupation by April 1, and the portion to be rented by May 1, 1913.

WM. MACKENZIE, President.

Directors:

Sir Wm. Mackenzie, President: Sir Wm. Whyte, Vice President; F. Morton Morse, Secretary-Treasurer; Sir W. C. Van Horne, Sir D. D. Mann, D. B. Hanna, A. M. Nanton, Hugh Sutherland, R. J. Mackenzie; Manager, Wilford Phillips.

Auditors' Report.

To the President and Shareholders, Winnipeg Electric Railway Company.

Gentlemen:—

We beg to report that we have made a monthly audit of the accounts of your company and also of its subsidiary companies, viz.:—Winnipeg, Selkirk and Lake Winnipeg Railway, and the Suburban Rapid Transit Company, for year ending 31st Dec., 1912, and that our requirements as auditors have been complied with.

STATEMENTS.—The accompanying statements, viz.:—

WINNIPEG ELECTRIC RAILWAY Company.—Assets and Liabilities, Receipts and Expenditures, Profit and Loss, Capital Account.

WINNIPEG, SELKIRK AND LAKE Winnipeg Railway Company.—Assets and Liabilities, Receipts and Expenditures, Profit and Loss, Capital Account.

SUBURBAN RAPID TRANSIT COMpany.—Assets and Liabilities, Receipts and Expenditures, Profit and Loss, Capital Account have been examined by us, and we are of opinion that the said statements are properly drawn up so as to exhibit a true and correct state of the company's affairs according to the best of our information and as shown by the books of the company.

RECEIPTS.—The cash in the hands of the cashiers was counted on the afternoon of the 31st of December last and found to agree with the day's receipts as entered in the cash books. The working funds held by the cashiers were checked and duly accounted for.

The bank accounts of the three companies have been examined, and it has been found that all sums received were deposited daily and that the balances in the bank pass books, after deducting the outstanding cheques, agree with those shown in the cash books.

The supplementary cash books have been checked daily with the cashier's ticket. The incandescent power and gas bills have also been checked and only authorized discounts have been allowed.

The postings in the customers' ledgers have been verified, as also have the entries in the general cash book.

EXPENDITURE.—Vouchers duly approved by the General Manager have been produced for all disbursements of the companies and the entries in the ledgers agree with those in the books of original entry. Each month's pay rolls have been checked and it has been found that all amounts unpaid were deposited to the credit of unpaid wages account, with the exception of November and December, which have been deposited since the first of the year.

TICKETS.—On the 1st of January last the stock of tickets on hand was examined by us and found to agree with the stock as shown in the stock books.

CAPITAL STOCK.—The returns of the transfer agents were examined quarterly and the number of shares stated therein agreed with the amount of paid up capital.

DIVIDENDS.—The dividend sheets for the four quarterly dividends paid during the year have been audited and found correct.

All of which is respectfully submitted.

W. A. HENDERSON & CO.,
Chartered Accountants.

Winnipeg, Feb. 7, 1913.

Canadian Railway and Marine World.

May, 1913.

The Creosoting Process of Treating Railway Ties.

The preservation of organic substances against decay has been a subject of considerable prominence through all the ages, the ancients having acquired considerable dexterity in the practice of the art, as evidenced in the wonderful preservation of the Egyptian mummies and other early organic remains. Various materials were employed by the ancients in their preserving against decay, but the two principal ones used in the preservation of the mummies were a substance called natrum, supposed to be a mixture of several sodium salts, and different resins and bitumens. The bodies were supposed to have been immersed in vats containing the preservatives at high temperatures, as the compounds have penetrated to the innermost parts. That the fibres of the body were left as in the original state was demonstrated by an experiment of an English scientist, in which the preservatives from the heart of a mummy were completely withdrawn, when, after 3,000 years of perfect preservation, the heart at once began to putrefy. Some light on the lasting qualities of the preservatives is gathered from the discovery that the mummies preserved with solid resin and bitumen products are the best preserved. That the ancients had considerable knowledge of preservatives is beyond question, but the reasons for their beliefs seem to be obscure. They also held the opinion that those woods lasted the longest which were the most odoriferous, implying those that contained the most resin.

From those early days down to the present, there have been repeated endeavors to discover and embody new preservatives, but it is only within the last 200 years that the greatest activity has occurred. As early as 1756, there are reported attempts to impregnate timber with vegetable tars or extracts therefrom, but the first practical process embodying this principle was due to Jno. Bethell in 1838, and it is from this source that the creosoting process is frequently called the Bethell process. Of the many processes tried, the practical ones appear to have, early in the last century, narrowed down to four, embodying respectively corrosive sublimate (the Kyanizing process), sulphate of copper, chloride of zinc, and creosoting. Of these four, the first two have practically disappeared within the last half century, leaving the field clear to the last two, each receiving liberal support, and having its own particular group of supporters, although the general consensus of opinion is that each particular process has its own field of usefulness.

The Dominion Tar and Chemical Co., Ltd., in its plants at North Transcona, Man., and Sydney, N.S., is the only company in Canada employing the creosoting process for the treatment of ties, although there is another plant in this country, that while equipped for this process, is employing another process, which will be described in a later issue.

In Canadian Railway and Marine World for Aug. 1911, mention was made of a contract given by the C.P.R. to the Dominion Tar and Chemical Co. for the treatment of about 1,000,000 ties annually for a number of years. In addition to this, the creosoting company has a large contract to supply creosoted ties for the Canadian Northern Ry., this contract also to run over a number of years. In consequence, a plant of considerable size has developed at North Transcona, the company's main tie treating plant, the plant at Sydney being employed principally on creosoting blocks, and the general treatment of wood products.

The layout of the plant at North Transcona is shown in fig. 1, and the principal buildings, looking from the south, in fig. 2. The plant covers a tract of about 40 acres, but as the company owns a total area of about 110 acres, there is ample room for future expansion. The location is on the open prairie, 6 miles east of Winnipeg, the C.P.R.'s new main line bounding the property on the north, and the C.N.R. Dundee Branch on the south.

To the north and east of the buildings is a large area for the seasoning of the untreated ties, a section of this area being shown in fig. 3, the piles stretching north as far as the box cars shown in the distance. The ties, as they come to the plant, principally in box cars from points on the lines of the company whose ties are being treated, are first of all barked. This is performed at the door of the car as they are being drawn out to the pile, and consists simply in shaving the bark off with an adze, removing that part which is most liable to early decay. The ties thus barked are piled in the manner shown in fig. 3. Standard gauge tracks run the length of the grounds a few feet apart, between which are piled the ties. The cars are brought directly to the piling ground, where the ties are stripped and piled.

In the piles, the ties are not placed close together, but are so arranged as to give good circulation, to season rapidly. The time during which the ties must be allowed to remain for seasoning depends entirely on the kind of wood under treatment, and the condition in which it is received at the treating plant. No definite figures can be given for these periods, but as a rule jack pine is left for from 2 to 3 months, and spruce and tamarack for from 5 to 6 months. The time of year and drying conditions are other important factors.

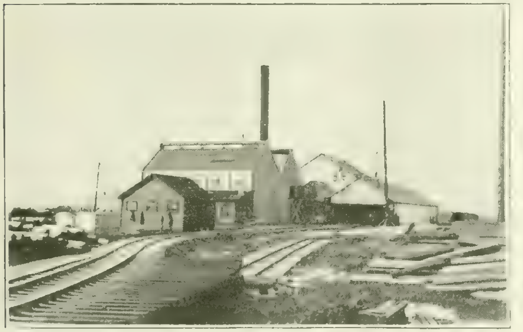

Fig. 2.—The Treating Plant from the South

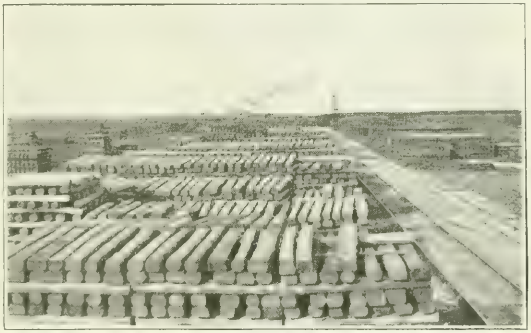

Fig. 3.—Untreated Tie Storage Yard.

Paralleling and close alongside of each of the standard gauge tracks is a narrow gauge service track, on to cars operating on which are piled the ties for treatment. Service cars loaded with ties, and awaiting treatment, are shown in fig. 4. The construction of these is unique, and is best illustrated in fig. 5, showing the cars coming out of the treating cylinder, following impregnation. The car is low set, and attached to the sides are retaining arms, which, with a band over top from side to side of the truck, forms a circle of a diameter slightly smaller than the diameter of the treating cylinder into which the cars are run. The cars are loaded at the seasoning piles, and the retaining bands secured over the top, two bands per car. The individual cars are hitched up into a train, as in fig. 4, the ends of the ties butting up against each other, to all practical purposes forming a single long log the length of the train.

The whole treating process is carried out in the cylinders. At North Transcona there are at present 3 treating cylinders, and a fourth on the way. Of these [illegible] 2 are 135 ft. long, and the third, [illegible] ft. The cylinder to come is similar to the first two. All are 6½ ft. diameter. They are simply long barrels constructed of boiler plate, and both ends are capped with dome doors, supported from a small swinging crane by which they can be swung out of the way, and when in service are secured to the ends of the cylinder by a series of clamps around the outer flange of the cylinder. A tight joint is necessitated. The construction is shown in fig. 5.

Along the bottom of the cylinder are four 4 in. pipes running the full length of the cylinder, supplying 135 lbs. of steam. Over top of these steam pipes are tracks for the small service cars, the loaded cars running on these rails just clearing the inside of the cylinder. The trains of tie cars are shunted into the cylinder. At this plant, for shunting purposes, are 2 small narrow gauge switching locomotives, in place of cable transfer systems in use in some other plants. From a railway standpoint, one of the switching locomotives is of peculiar interest. Constructed in England, it has all the characteristics of the [illegible] practice.

[illegible]

the cylinder of from 15 to 20 ins., and at the same time, steam is turned on in the heating coils under the track, and the temperature of the oil raised in the neighborhood of 200 degrees Fahr., which, in conjunction with the low vacuum in the cylinder, causes the water in the wood to vaporize and be drawn off to the vacuum pump. Early experiments determined that if the wood were subjected to a dry heat of sufficient intensity to drive off the water in it, the fibres would be injured to a certain degree, but that by applying the heat indirectly through the creosote medium and maintaining a vacuum at the same time, the water is drawn from the innermost fibres of the tie, and dispelled as vapor.

After being subjected to a vacuum for over an hour, it is discontinued and more oil allowed into the cylinder, this time under pressure. This pressure is made to gradually rise, taking upwards of 2 hours to reach a pressure of from 100 to 180 lbs., depending on the nature and condition of the wood. In one of the 135 ft. cylinders about 2000 gals. [illegible] introduced by gravity are forced into the cylinder, this amount entering directly into the fibres of the wood. [illegible] tie, but the average runs considerably above this, as much as 4 gals. entering ties [illegible]

[illegible] carefully watched, as the quality of treatment [illegible] If there is a "blow back," that is to say, if there is a rush of oil out of the cylinder on the pressure being removed, it is an indication of the fact that there must be air in the pores of the wood, not permitting the oil to enter freely, necessitating another application of the pressure. If there is no blow back of any consequence, other than that due to the compression of the wood in the cylinder, the ties have been treated sufficiently. The oil is then discharged from the cylinder into the working tank by compressed air, draining out through the bottom of the cylinder. The treated ties are allowed to stand in the cylinder for some time after the completion of the treatment, in order that the surplus creosote oil may drain off.

The power house adjoins the building containing the working tanks, and like the other buildings of the plant, is of corrugated iron. In it are two 9 x 14.9 x 13.7 in. vacuum pumps, four 8 x 4 x 10 in. oil pumps, and two compressors, respectively 8 x 8 x 12 in. and 10 x 10 x 14 in., all steam driven. On the wall of the power house are recording and indicating gauges in appropriate panels. In the rear of the power house is the boiler room, containing two water tube boilers, with a total capacity of 1000 h.p. The feed water, obtained from wells in the grounds, is treated in a softening plant before entering the boiler, and is heated by a feed water heater. Electrical power is generated in a small building adjoining the main power house, [illegible] plies the sundry lights about the buildings, and 16 arc lights placed high on poles at various points in the grounds, as shown in figs. 4 and 6. These are made necessary by the nature of the work, which is continuous day and night.

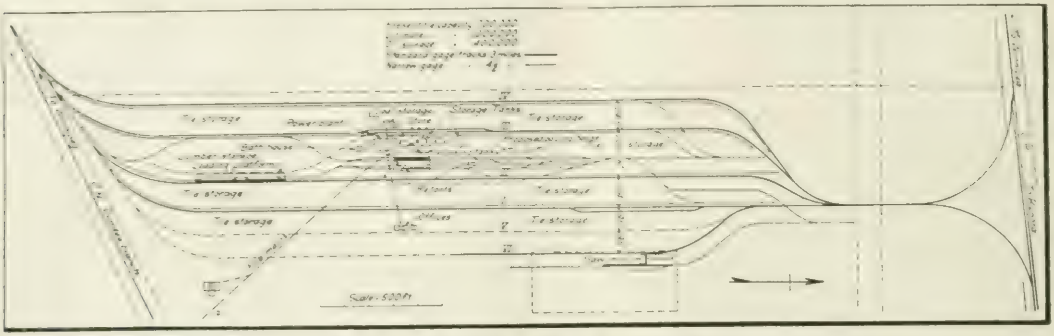

Fig. 1.—Layout of Buildings and Yard of Creosoting Plant.

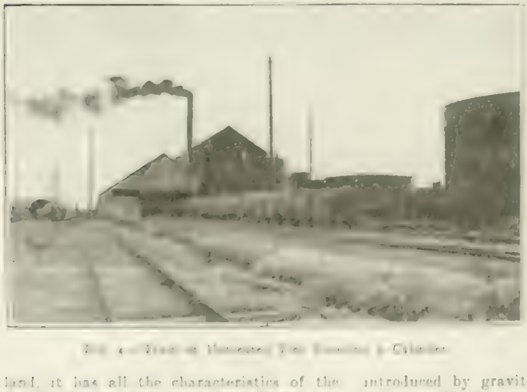

Fig. 4.—Train of Untreated Ties Entering a Cylinder.

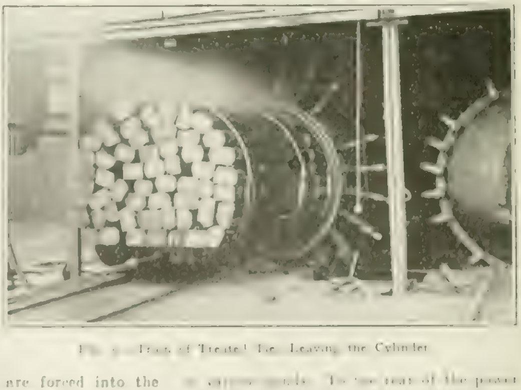

Fig. 3.—Train of Treated Ties Leaving the Cylinder.

The ties, on completing the period of draining following the treatment, are drawn out of the cylinder, as in fig. 5, by one of the narrow gauge locomotives, and drawn up the track in the foreground of fig. 2, on to the platform shown in fig. 7, which is at the level of the flooring of the cars on the standard gauge track alongside from a small 50 h.p. generator. This supthe platform. The ties are loaded directly on the awaiting cars when these are available; otherwise they are stored in promiscuous heaps at the far end of this loading platform, as may be noted on the right in the distance. Flat cars and coal cars are the only ones that can be employed for this purpose, as if box cars are used, the creosote oil left in the cars on the removal of the ties renders them unfit for grain service for months.

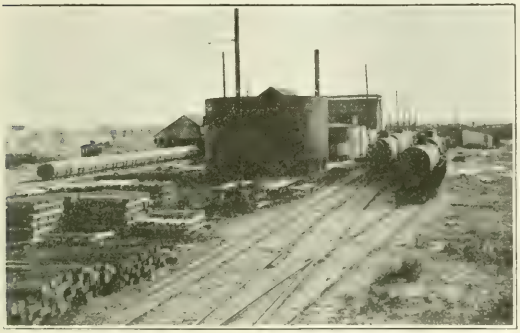

Fig. 6.—Creosote Oil Tank; Cylinders on Left.

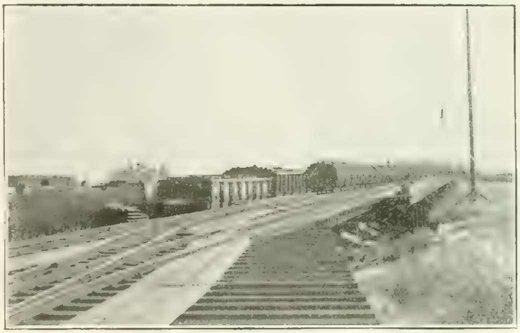

Fig. 7.—Treated Tie Unloading Platform

The creosote oil, as received in tank cars from the company's two plants, is drained from the tank cars on the tracks to the right in fig. 6, into an underground chamber, from which it is pumped up into the large tanks in the centre of the illustration. The combined capacity of these tanks is about 500,000 gallons.

The company's offices are due east of the treating cylinders. The isolated nature of the plant made necessary the erection of buildings to accommodate the employes, of whom there are over 300. These are housed in bunk houses to the east of the plant.

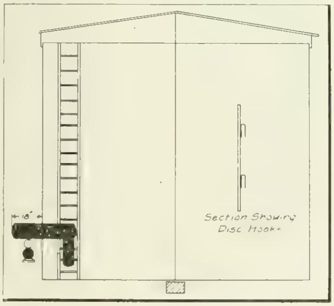
The company's head office is in Montreal, E. Bernard Smith being General Manager. G. G. Roberts is the Local Manager at North Transcona.

Second Track Work on the Canadian Pacific Railway in the Mountains.

The work of double tracking the C.P.R. between Calgary and Vancouver is in progress on the western end of the line, and construction will be begun at several points in the mountains early in the spring. Better gradients are to be secured at the same time that second trackage is provided, and for this reason it is necessary to abandon the present route entirely in some places. Changes in the route across the Selkirk Mountain range will shorten the line about 3 miles, and will involve the construction of a tunnel 5 miles long to eliminate the present summit crossing through Rogers Pass.

For the major portion of the mileage between Calgary and Vancouver the proposed changes will give a maximum gradient not exceeding four-tenths of 1%, the exceptions being on the grades to the summits in the Selkirk and Rocky Mountain crossings. The spiral tunnels in the Rockies between Hector and Field, B.C., which have a maximum grade of 2.2%, will still be used, other spiral tunnels being driven to provide for the second track. The present spiral tunnels were described and illustrated in Canadian Railway and Marine World for Jan., 1911.

In the Selkirk Mountains a route with better grades than those now in use has been located by the recent surveys. Westward from Six Mile Creek the present route, which ascends the side hills of Beaver River Valley and follows its tributary, Bear Creek, to the summit in Rogers Pass, will be abandoned altogether to secure a maximum grade not exceeding 1%. The new line follows the bottom of the Beaver River Valley to the eastern portal of the proposed tunnel, which will do away with the grade up to Rogers Pass and incidentally eliminate 4 miles of snowsheds. The western portal of the tunnel will be a few miles below Glacier in the valley of the Illecillewaet. It is expected that the grade through the tunnel will not be much in excess of 1%. In addition to the grades exceeding four-tenths of 1% which have already been mentioned, there will be one other exception to this as a maximum gradient, which will be in that part of the line between the western portal of the tunnel and Revelstoke. Here the line often skirts the brink of the Illecillewaet Canyon, and great difficulties would attend grade alterations at many points. Fuller particulars of this portion of the work were given in last month's issue.



Proposed Car Repair Protection Disc.

The cost of the proposed route changes, second tracking and driving the tunnel, is estimated at about $150,000,000, and at least 4 years will be required to complete the work. F. F. Busteed, M. Can. Soc. C.E., is in immediate charge of the work, with office at Kamloops, B.C.

Protection for Car Repairers.

As a result of a general discussion of this question at the Board of Railway Commissioners sitting in Ottawa, Dec. 12, 1912, the Board has issued the following circular to railway companies:—"The present practice of using a flag for protection purposes is considered very unsatisfactory, and a simple device, as set forth in the accompanying diagram, has been suggested for use. This could be of light steel or wood, made so as to fold up, and when opened up could hang on the ladder rungs by hooks, as shown in the sectional view. The disc could project 18 ins. beyond the car and be 10 ins. in depth, with a hook on the bottom side for hanging a lantern for night use. This disc would not be as subject to the caprices of the wind as a flag, and would be readily discernible for the full length of any ordinary train. Furthermore, as it can be so easily applied, there will be no excuse for failure of employes to neglect its use. The arm of the disc should be painted blue, and a blue light used at night as required by the standard rules. The Board will be glad if railway companies will give this suggestion careful consideration and let the Board have their views thereon as early as possible."

Taxation of Steam Railways in Ontario.

The Ontario Government collected $448,515.66 as taxes from the various steam railways operating in Ontario during the financial year ended Oct. 31, 1912. This amount was made up as follows:—Algoma Eastern Ry., $233.76; Algoma Central and Hudson Bay Ry., $1,724.51; Bay of Quinte Ry., $1,405.12; Brockville, Westport and North Western Ry., $675; Canada Atlantic Ry., $20,635.74; C.P.R., $157,166.28; Canadian Northern Ry., $14,316; Canada Southern Ry., $32,669; Central Ontario Ry., $1,984.50; G.T.R., $181,482; G. T. Pacific Ry., $8,236.80; Irondale, Bancroft and Ottawa Ry., $765; Kingston and Pembroke Ry., $1,551; Lake Erie and Detroit River Ry., $3,348.20; Niagara, St. Catharines and Toronto Ry., $553.80; Nosbonsing and Nipissing Ry., $55; Ottawa and New York Ry., $853.50; Thousand Islands Ry., $55; Toronto, Hamilton and Buffalo Ry., $1,223.05; James Bay Ry., $9,486.40; Marmora Ry. and Mining Co., $96.

The removal of 78.8 cu. ins. of metal weighing 22 lbs. from a 1 in. square test bar, is the reported performance of a 14 in. high speed file, tested on both sides at a Sheffield, Eng., plant. The file made 120,000 strokes in 39 hours.

Railway Mechanical Methods and Devices.

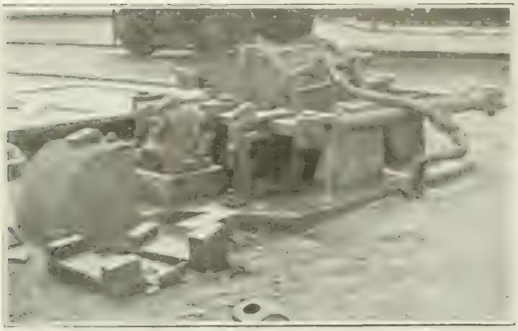
Coupler Stripping Press at Michigan Central Shops.

[illegible]

[illegible]

[illegible]

[illegible] the rivet. One of the big advantages claimed for this method by Mr. Marple is [illegible] This method is a considerable improvement [illegible]



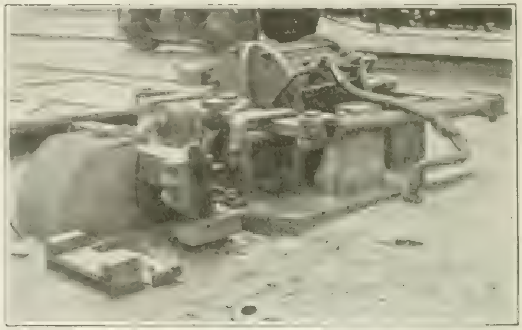


Fig. 1.—Air Operated Coupler Stripping Press. Fig. 2.—Coupler Stripping Press in Operation.

Spring Leaf Roller at Canadian Northern Railway Shops.

[illegible] fulcrumed foot lever, by means of which the upper roller is brought down on the pair of spring leaves, there is a short lever just the length of the machine base. This is fulcrumed, as usual, at the right end, with a link near its middle connecting with the bearings on each side, which are movable in vertical ways in the frame of the [illegible].

[illegible] there is mounted a small air cylinder, the piston rod of which is attached to this fulcrumed lever. On turning the air valve, attached to the frame of the machine, the plunger is depressed, pulling down the upper rollers, and holding them down tightly on the spring leaves while the latter are being rolled, leaving both the blacksmith and helper freer to perform the necessary forming operations.

It is the intention to still further improve the roller by having the rolls operated by power. This is to be accomplished by having a long air cylinder attached to the side of the frame directly below the present location of the handle. To the upper end of the cylinder plunger rod will [illegible] on the handle end of the upper roller, the movement of the plunger thereby turning [illegible] free of mechanical work. The cylinder will be double acting, to turn the rolls in both [illegible]

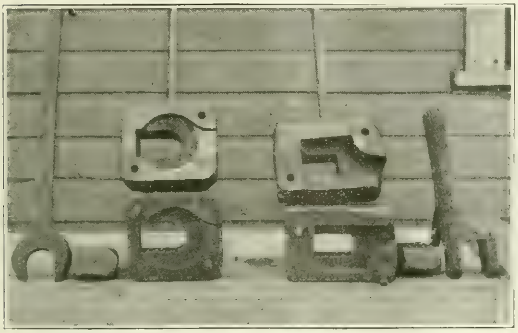
G.T.R. Ordered to renew Rails. — The Board of Railway Commissioners has passed a rather unusual order, requiring the G.T.R. to renew the rails on its Barrie Division [illegible] the completion of the work trains between [illegible]

[illegible] duced in the construction of the 90 mile water supply tunnel for New York. On the [illegible] a narrow strip of concrete flooring as the tunnel progresses, the inner surface of which is curved to form the lower portion [illegible] mould on the car is pushed forward between settings. The car also carries on its top, a pair of tracks over which the work cars operate, en route to the tunnel shaft.

Steam Hammer Forgings at Grand Trunk Pacific Railway Shops.

The lack of a forging machine at the G.T.P.R. old shops at Rivers, Man., made necessary the development of alternative methods of producing work that would ordinarily be done in the forging machine. For most of the work, the steam hammer has been found to be useful, and by various means the work is now being produced through its use. Some small shops are still called upon to do the work in the same way, but such shops are becoming fewer every year.



Steam Hammer Forgings and Dies at G.T.P.R. Rivers Shops.

In the accompanying illustration are shown completed a spanner and the forked end of an eccentric rod, with the dies and tools used in their production. In both instances, bar stock is drawn down under the steam hammer to roughly the required shape, and formed to final outside shape in the dies shown, the upper die being guided down over the lower one on the two guiding pins. On the outside shape of the pieces being formed in the dies, that is, when the two parts are brought down flush, the flash forming in the upper and lower holes, shearing pins, shown alongside the dies, the shape of these holes are placed therein, and driven through under the steam hammer, forming the openings in the ends as in the spanner and rod ends.

A smooth and perfect job results, equal in quality with the forging machine work, but of course, at a much slower rate of production.

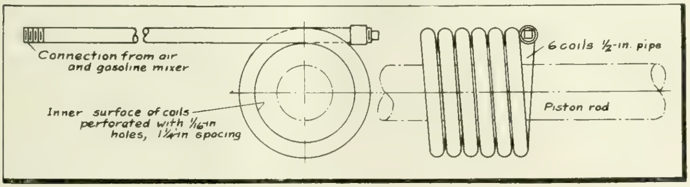
The company's repair shops are now located in the new buildings at Transcona, Man., and in consequence, the foregoing method of production has been superseded by more modern means.

In its final report to the U.S. Interstate Commerce Commission, the Block Signal and Train Control Board made the recommendation that all interstate railways should be compelled to adopt the block signal system. The Board also recommended that tracks be inclosed and laws against trespassing be enforced.

Heater for Bending Piston Rods at Grand Trunk Railway Stratford Shops.

At the G.T.R. locomotive shops at Stratford, Ont., piston rods that after forging are found to be eccentric to a degree that would be inadvisable to attempt to bend cold, are straightened without removal from the lathe. Usually it is necessary to remove the rod to a forge fire, heat and bend back to shape, and then return to the lathe. Straightening them in the lathe, when set up for machining, effects a considerable saving in time, from the fact that it is there that the rods are found to be out of true, so that the error is remedied without removal from that spot.

The heater employed for the purpose is shown in the accompanying illustration. It consists of six turns of ½ in. wrought iron pipe, coiled, to give an internal diameter of 4½ ins. One end of the pipe is made blind with a pipe plug, and the other end has a tangential section about 3 ft. long, to which a connection is made to a portable air and gasoline mixing tank that is commonly to be found around locomotive shops. Radially inward from the inner surface of the coiled pipe, there is a series of 1-16 in. holes at a 1¼ in. spacing, through which the inflammable vapor impinges on the rod, burning with an intense heat, all the small jets of flame being directed towards the centre.



Connection from air and gasoline mixer
Inner surface of coils perforated with 1/16-in holes, 1¼-in spacing
6 coils ½-in. pipe
Piston rod

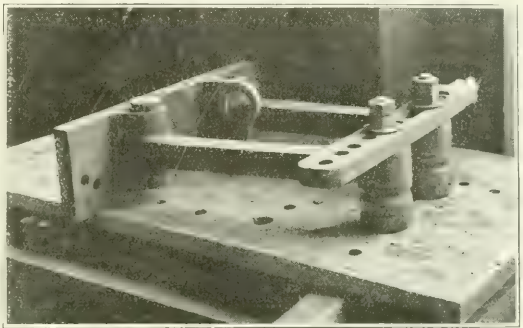
Heater for Use in Bending Piston Rods Without Removal from the Lathe.

The burner, connected by a rubber hose to the supply tank, is slipped over the end of the piston rod in the lathe, and located over the point to be bent. The heat is so intense that a very short time suffices to heat the rod to a bending heat, when it is a simple matter to rectify the error without removing the rod from the centres, or straining the lathe, as might happen if an attempt was made to bend cold between centres.

By means of exhaust fans for the drawing off of fine dust from grinding rooms, the polishing of metals has now become a much more healthful and agreeable business than formerly.

Bulldozer Forming Die at Canadian Pacific Railway Winnipeg Shops.

A handy form of die for attachment to the movable bulldozer head is in use at the C.P.R. shops at Winnipeg. There is a wide range of bending operations performed on the bulldozer in which the whole operation consists simply in bending the two projecting ends of a bar around a stationary block or pin, such, for example, as the various sizes of coupler yokes, eye bolts, and other similar parts. The conventional practice is to make a male and female die for each such part.



Adjustable Bulldozer Forming Die.

With the die as made in these shops, the one female die may be used with a large number of male dies, reducing the stock of dies required, this being accomplished in a very simple manner, as the accompanying illustration indicates. Instead of the two arms of the female die being solid, with the usual rollers on the outer ends, the two arms are still retained, but are attached to the base of the die by a pin connection in such a manner as to be free to swing on that pin connection. The outer ends of these pinned arms are held in a fixed relation to each other by a cross member, consisting of a piece of flat stock, drilled with spaced holes, and a bolt slot. By bolts in the ends of the arms above the rollers, the rollers are set in any fixed relation to each other, for forming any size of stock around a given mandrel. The nearer roller cannot slip in the holes, but in the slot, the far bolt might be liable to do so if the friction of the bolt and nut were alone depended on. In consequence, there is a set screw in the other end of the cross piece, locating the roller on that side without danger from slippage.

The whole adjustable die is attached to the face of the bulldozer ram. While it would be possible to operate on heavy stock with such a die, it is used for the most part only on lighter stock.

The problem of keeping superheater tubes clean has been solved on one U.S. road, where the flue cleaners are supplied with pocket flash lamps which enable them to see the whole length of the tube, and thus determine whether they are doing effective work.

In order that the mining and transportation of ore might progress even in the coldest weather, the railway ore cars of an Alaska mining company are provided with false bottoms, containing heating pipes, through which steam is passed from boilers at the bunkers. This thaws the ore, and it is said no difficulty has been experienced in handling the ore even at 50 degrees below.

American Railway Engineering Association's Committees' Reports.

The various standing and special committees of the American Railway Engineering Association have been continuing their investigations during the past year along the lines assigned to them. Following is a summary of their investigations and recommendations.

COMMITTEE ON ROADWAY.

One of the subjects assigned to this committee was the presenting of formulae of general use for determining waterway areas under varying conditions, including the consideration of hydraulic features. In the matter of waterway areas it reports some progress, but considers that at this early date enough data cannot be had to derive a simple formula. Considerable information has been gathered dealing with hydraulic features of culverts, but owing to the incompleteness of certain data it is deemed advisable to defer the report until a later date.

On the subject of the allowable unit pressures on roadbeds of different materials, which was to be investigated jointly with the committee on ballast, the committee has been unable to get any new information. Pointing to the present high percentage of rail failures and the probable advent of 100 ton cars and increasing locomotive axle loads, as well as to the time and expense that would be required to make comprehensive tests under service conditions, the committee directs attention to a resolution previously submitted, that an appropriation be made and a special committee be appointed to make such tests.

A large amount of information has been collected on the ventilation of subway tunnels in connection with the study of tunnel construction and ventilation. It is pointed out, however, that the ventilation of railway tunnels used by coal burning locomotives is an entirely different subject from that of city subways and conclusions are withheld until experiments now being conducted on single and double track steam railway tunnel ventilation are completed.

It has agreed with the committees on track, and signals and interlocking on a subdivision of the study of economics in roadway labor, and reports progress along this line. It recommends that the last three subjects for investigation be reassigned.

COMMITTEE ON BALLAST.

As mentioned in the work of the committee on roadway, these two committees were instructed to investigate the unit pressures on roadbed, the ballast committee to report on the proper depth of ballast of various kinds to insure uniform distribution of the loads. The committee has made tests under artificial conditions as near like regular traffic conditions as possible, but believes that such tests, to be of value, should be made in track under regular heavy traffic. To this end it outlines and recommends a plan for a test to be made on a stretch of track on clay roadbed under heavy traffic, providing successive short lengths of ballast of various kinds and thicknesses, accurate records of maintenance costs being kept, and photographs being taken at regular intervals to show deformation of the roadbed.

Another assignment of this committee was a continuation of the study of physical tests of stone for ballast. No further information is offered on this subject, but certain additions for clearness are recommended in the wording of the Manual on these tests. A record is also presented of a test made by the Pennsylvania Rd. in regard to the first cost and that for maintaining various sizes of stone ballast.

The other subject under investigation was that of gravel ballast and methods of grading different qualities. Extensive tests have been made by H. B. MacFarland, Engineer of Tests of the Atchison, Topeka and Santa Fe Ry., on samples of gravel ballast from nineteen pits in various parts of the country. His report gives a photographic cut of each sample, a brief description of tests, and a table of the weights of the samples and the percentages of moisture, gravel, sand and dust. The committee presents for adoption a description of the method used in testing grading gravel.

The report includes a description by W. I. Trench, Division Engineer, Baltimore and Ohio Rd., of a method of employing specially designed screens instead of ballast forks for cleaning stone ballast. It was found possible by the use of this method to clean ballast for double track at a cost of $640 a mile, as compared with $1,466 a mile with the fork method. The committee recommends that the various methods and the corresponding costs for cleaning stone ballast be investigated during 1913.

COMMITTEE ON TIES.

This committee was asked to report on the effect of the design of tieplates and track spikes on the durability of ties; to continue the study of the stresses to which crossties are subjected, and determine their proper size; to report on the economy in labor and material effected through the use of treated ties as compared with untreated ones; and to continue the compilation of information as to the use of metal, composite and concrete ties.

In connection with the first matter, information obtained from 61 railways showed that 27 use tieplates with longitudinal flanges, 15 use plates with transverse flanges, 20 use corrugated plates, 11 use pronged ones, and 13 use flat ones—many of the roads using two or more types. Few of the roads use screw spikes, although several are experimenting with them. The committee was unable to obtain definite information as to the relative effect of the different designs of tieplates and spikes on the life of ties, but it believes that experiments now being conducted will throw some light on the subject in the near future.

After two years of exhaustive study of the stresses in ties, the committee is of the opinion that its findings submitted at the 1912 convention are correct. It believes experiments to determine the size of crossties are impracticable on account of the wide variation in the character of track and roadbed standards and maintenance and in the loads to which the ties are submitted.

During the year members of the committee inspected Simplex steel ties, Bates concrete ties, Carnegie steel ties and Universal steel ties on several railways. Information was also received from a number of other steam and electric railways concerning substitutes for wooden ties in service on their lines. It submitted the data received without recommendation as to the value of the substitute ties.

It also reports progress on the subject of economy in labor and material effected through the use of treated ties as compared with untreated ones.

COMMITTEE ON RAIL.

This committee was directed to consider revision of the Manual of the association, to present recommendations on standard rail sections, to continue the investigation of rail failures and present conclusions drawn therefrom, and to make concise recommendations for next year's work. The committee recommends a number of changes in the wording of the Manual to clarify certain points capable at present of more than one interpretation.

No recommendation is made as to standard rail sections, the committee believing that the sections already under observation have not been so long enough to permit the reaching of definite conclusions. A sub committee is considering modified sections, and will continue to do so as it learns of weak spots in the present sections. It proposes also to study rail joints and work toward a means of determining the stresses in rail and track under service conditions. In this connection an appendix by P. H. Dudley, Consulting Engineer on rails, tires and structural steel for the New York Central Lines, on stremmatograph tests of track under service conditions is presented.

Statistics of rail failures for the year ended Oct. 31, 1911, covering more than 12,000,000 tons of rail, are presented in a report by R. Trimble, Chief Engineer Maintenance of Way, Northwest System, Pennsylvania Lines. His chief conclusions from a study of the statistics are that they give a fair test of the performances of the different mills, showing lack of uniformity in the products of the different mills, or even the individual mills; that wide variations in the specified chemistry for the rails exist, to guard against which it may be necessary to take chemical tests from the finished products as well as from the ingots; that the heavier sections do not show as good average performances as the lighter; that open hearth rail as a whole shows a lower rate of failure than the bessemer, but an increase for the year as against a decrease for the bessemer, suggesting that the open hearth will approach the bessemer figures with increase of age, and that the tops of ingots are inferior to the bottoms, showing an insufficient discard from the top. The committee in calling attention to these conclusions emphasizes the wide range in tonnage and physical characteristics for the different roads, making comparisons between them difficult.

In the line of special investigations it presents various reports from its Engineer of Tests, M. H. Wickhorst, and others from other investigators. One of Mr. Wickhorst's reports gives results of abrasion tests of rails on a revolving machine, consisting of a circular track 20 ft. in diameter, on which revolved a heavy beam which could be given additional load by means of springs. In the tests, which were few and not entirely satisfactory, open hearth steel of 0.74% carbon abraded more slowly than bessemer steel of 0.50 to 0.54% carbon.

Other reports treat of the influence of titanium on bessemer ingots and rails and that of silicon on open hearth ingots and rails. The use of from 0.1 to 0.6% of metallic titanium in tests prevented the honeycombing of the bessemer ingot, but produced a larger and deeper pipe. The heavy segregation in the upper part was largely restrained, but that in the lower part was little affected. The brittle zone in the upper part was avoided, but large internal flaws were found lower down than with plain steel. Tests with up to 0.5% of silicon in open hearth steel showed similar results as to honeycombing, pipes, and segregation. The strength seemed to be increased somewhat, but the ductility remained about the same.

Another report deals with two ingots made by a special process, acid open hearth steel being treated with titanium.

The ingots were cupped down at the top, but contained no interior pipe. Another report describes a method for determining the transverse ductility of the bottom of the rail base and the load required to break the flanges of a rail supported near the flange edges. All of these reports were made by Mr. Wickhorst.

A description by Dr. Dudley of the ductility and elongation tests of the New York Central Lines, is given. The influence of seams or laminations in base of rail on rail failures is treated in a report by H. B. McFarland, Engineer of Tests of the Santa Fe System. J. R. Onderdonk, Engineer of Tests of the Baltimore and Ohio Rd., contributes a paper on the effect on the finished rail of piping, cavities and porous spots in ingots. C. D. Young, Engineer of Tests, and F. N. Pease, Chemist, of the Pennsylvania Rd., make a joint report on transverse or internal fissures in rail heads. Other reports are made on the Hadfield method of making sound ingots and on rail tests from a foreign viewpoint.

The committee recommends that investigations for the coming year be aimed at various methods in the making of both ingots and rails, at their composition, and at several special topics.

COMMITTEE ON TRACK.

The work of this committee was directed along three lines. The first was to present general specifications for track bolts, nutblocks, tieplates, and common and screw track spikes. The chief recommendations as to tieplates are that they shall be 6 in. or more in width, long enough to provide safe bearing area on the tie, and not less than ⅝ in. in thickness along either edge of rail base; each plate must have a shoulder at least ½ in. high, so placed as to give a greater projection of the plate outside than inside of the rail base, must be shaped to support screw spikes if such spikes are to be used, and must have punching to correspond to the slotting in the splice bars.

Bolts should be as large as possible. Anti-creepers should be designed to fit two or more different weights of rail, must be easily placed and removed under full ballasted track, should have as few movable parts as possible, the controlling parts to be non-rustable, should have sufficient takeup to allow proper tightening, and must not loosen when in place. It also gives specifications for the various track appurtenances above mentioned.

For the second topic, the design of main line turnouts, the committee presents typical plans for nos. 8, 11 and 16 main line turnouts, is preparing similar ones for crossovers, and is securing data as to the height of centre of gravity of new locomotives and tenders and allowable speeds through turnouts and various curves with varying superelevation of outer rail.

The third topic is economics in track labor. The committee has adopted an outline for future study to extend over a period of several years. The work of the past year was directed toward means of securing a better class of section foremen, and the committee concludes that the principle of apprenticeship should be applied to promising track laborers for a definite period, after which those considered suitable should be made assistant foremen with increased pay, and eligible to become foremen; that there should be periodical meetings for instruction and discussion and that where possible educational articles on the best practices should be sent to foremen and assistant foremen, after which they should be examined to determine their suitability for promotion.

The committee also presents a supplement for the table of junctions of the ten-chord spiral on pages 102-110 of the Manual.

COMMITTEE ON BUILDINGS.

On two of the subjects assigned to this committee—the design of inbound and outbound freight houses and methods of heating and lighting and sanitary provisions for medium sized stations—the committee makes no report other than that progress is being made.

A complete report is made on roof coverings, combining the last two previous reports, with some corrections and additions. Numerous classes of material and their applications are discussed, and conclusions are drawn that metallic roofings and those using Portland cement are valuable if properly used and protected, and that iron and steel for roofs should be of the best quality. It is therefore recommended that the previous finding in the Manual, that steel or impure iron materials should be avoided, no matter how protected, should be changed to cover these conclusions.

The other topic for investigation was the advantages and disadvantages of various types of freight house floor construction. The report on this subject states that freight house floors should be built to carry a uniformly distributed load of at least 250 lb. per sq. ft., that they should be of materials which will not in any way damage any articles placed upon them, that they should present a smooth and durable surface, and that they should be easily repaired. The merits of various types of construction are stated somewhat briefly, but no specific rules or recommendations are set forth.

WOODEN BRIDGES AND TRESTLES.

This committee presents a series of tables, standard drawings and other data on the practices and experiences of 61 railways relating to guard rails and rerailing devices for bridges, their effectiveness, and the manner of securing them to bridge floors; also reports are printed from 19 railways concerning fire protection for wooden bridges and trestles. On the latter subject it makes no recommendations.

On the subject of guard rails, it is recommended that guard timbers be used on all open floor bridges, that metal guard rails extend not less than 50 ft. beyond the ends of bridges, that guard timbers and rails be so spaced that derailed trucks will strike the latter without striking the former, and that the height of the guard rail be not more than 1 in. less than that of the running rail.

On the other topic assigned to the committee—formulae for determining the strength of sheet piling—it reports progress and recommends that in the coming year the report on this matter be completed; it also recommends that docks and wharves be studied.

COMMITTEE ON MASONRY.

This committee has been continuing its study of waterproofing of masonry and bridge floors, and has been investigating the effect on concrete structures of the rusting of the reinforcement, and also as to the principles of design of plain and reinforced-concrete retaining walls, abutments and trestles. No recommendations are made, but in the matter of disintegration of concrete and corrosion of reinforcing metal a report is presented, pointing out the effect of sea water on concrete, as described in a number of recent papers and publications, to which reference is made; that of water containing acids or alkalies; the behavior of cinder concrete under various conditions and the effect of electric currents. It indorses the conclusion of 1908 that steel embedded in good concrete will not corrode, whether above or below fresh or sea water level, but that it will in the presence of moisture if the concrete is porous.

SIGNS, FENCES AND CROSSINGS.

One of the subjects assigned to this committee was a study of the relative advantages of different kinds of fence posts. The committee presents data from 44 railways on the kind of wooden posts they use, and their cost and length of life. It also presents data from manufacturers of steel and concrete fence posts, and from railways experimenting with them. The data include descriptions, dimensional drawings, cost figures, and service records.

The committee concludes that concrete posts are practical and economical; that they should taper upward, being not less than 5½ in. at the base and 4 in. at the top; that the reinforcement should be about ½ in. from the surface; that the proportions should be one part of cement to four parts of run of pit gravel, or one part of cement, two parts of sand and four parts of crushed rock or screened gravel not smaller than ¼ in. nor larger than ½ in.; that great care should be taken to give the posts a smooth finish, molds with a vibratory motion when the concrete is being introduced being desirable; and that the posts should be cured for at least 90 days before being set or shipped. It also recommends that a series of tests be made to determine the comparative strengths of different types of posts.

Another line of investigation followed by the committee was that of track construction and flangeways in paved streets. It recommends that 141 lb., 9 in. girder rails or similar sections should be laid on treated ties, with tieplates and screw spikes, the ties to be laid on a bed of ballast 8 to 12 in. thick; that the roadbed should be drained with a 6 in. or larger vitrified tile drain with open joints on each side of the track, outside of the ties; and that the ballast should be carried up to the bottom of a 2 in. sand cushion for the pavement, which should preferably be of stone blocks.

It also endeavored to get data as to means of securing a suitable fence wire to resist corrosion and be durable, but obtained little useful information, and recommends that the subject be dropped for the present and that various kinds of signs for railway purposes be made a subject for investigation.

SIGNALS AND INTERLOCKING.

This committee continued its investigation, extending over several years, of an outline description of a comprehensive and uniform signal system suitable for general adoption. It now recommends upper quadrant signals with three fundamental positions—the horizontal position, indicating "stop"; the vertical, "proceed," and the intermediate oblique, "proceed with caution." It also offers two other more elaborate schemes based on these fundamental positions, but providing for other degrees of speed and caution. Four methods of designating stop signals operated under automatic block system rules are suggested.

Another line of investigation followed by the committee was that of the effect of treated and metal ties on track circuits. It points out that in the case of metal ties each rail must be completely insulated from the ties to prevent a short circuit, and that defective insulation at both ends of any tie will throw the track circuit out of service.

The effect of creosoted ties the committee finds to be not serious. As to the effect of zinc treated ties, it summarizes the information received, in response to requests, from 92 railways as follows:—That track circuits a mile long are rendered inoperative by the extensive use of zinc treated ties; that circuits 2,000 ft. long may [illegible] age is noticeable.

[illegible] convention in 1914.

[illegible] specification for timber for treatment.

COMMITTEE ON ELECTRICITY

[illegible]

tees of the American Electric Railway Association and the American Railway Association, so that joint recommendations may be made. As to the interference between the clearance diagrams for third rail and for bridge structures previously mentioned, it is recommended that as much of the bridge clearance diagram as interferes with the third rail be eliminated.

Another subject for study was crossings for transmission lines carrying voltages higher than 70,000. In this investigation it reports progress, but requires more time before making recommendations.

Electrolysis was the other subject assigned to it. The committee points out that while this subject was of little interest to railway engineers until the comparatively recent advent of the electric locomotive, electric railway engineers have been studying the matter for many years without reaching unanimity of opinion. The committee has therefore compiled a series of descriptions of the methods of preventing electrolysis employed in various important cases and localities, but it makes no recommendations as to the best methods. It also presents a bibliography on the subject.

CONSERVATION OF NATURAL RESOURCES.

This committee makes no recommendations, but calls attention to the work of the national conservation commissions of the United States and Canada, and follows with a comprehensive report of the work along these lines being done in Canada, covering tree planting and reforestation, prevention of fires from railways, and the natural resources of coal, peat, gas and petroleum.

SPECIAL COMMITTEES.

The special committee on uniform-contract forms presents a form of agreement between railroad company and contractor for construction contracts and a series of stipulations covering the general conditions of such contracts. It recommends that the standing committees which have prepared specifications be instructed to harmonize them with the approved contract form by the elimination of provisions which duplicate or nullify clauses of the contract form, and that the special committee itself be discharged, having completed the work assigned to it.

The special committee on grading of lumber has submitted the rules adopted last year to the various lumber manufacturers' organizations, and has obtained the approval of the respective associations interested in Southern yellow pine, hardwoods and Douglas fir, with slight modifications of the rules. The white pine rules were not acceptable to the Northern Pine Manufacturers' Association. The committee has also during the year made studies of rules for classes of lumber not already covered by adopted rules, and recommends that the rules for cypress, submitted for information last year, be adopted.

Action on Committees' Reports.

Most of the recommendations presented by the various committees for insertion in the Association's Manual were adopted with or without modifications. Those accepted by the association are briefly summarized in the following notes:

BALLAST.—Additions were made to the previously adopted information on "Physical Tests of Stone for Ballast" by specifying whether the maximum or the minimum results as to weight, hardness and other characteristics previously enumerated should govern in selecting stone for ballast.

A method of testing the quality of gravel for ballast was adopted as follows: Five samples of about 1 cu. ft. each are to be taken from different parts of the pit and run over screens of specified sizes to separate the ingredients, these ingredients then to be measured in percentages by volume of the original volume.

RAIL.—A revision of the specifications for carbon steel rails was adopted, together with four forms—a "Report of Mill Inspection," a "Certificate of Inspection," a "Laboratory Rail Report" and a "Tabulation of Results of Mill Inspection of Rails."

TRACK.—Typical plans of nos. 8, 11 and 16 main line turnouts were adopted, as well as a table of functions of the ten chord spiral to supersede a part of the table previously printed in the Manual.

Three rules as desirable agencies in obtaining a better class of section foremen were adopted.

General principles or specifications, or both, were adopted covering steel, wrought iron and malleable tieplates, track bolts, spiral spring nutlocks, ordinary track spikes, screw spikes, and anti creepers. The recommendation prescribing a minimum thickness of ⅝ in. for the parts of tieplates under the edges of rails was rejected, and other slight modifications were made in the rules as presented.

BUILDINGS.—The association indorsed the committee's conclusions as to the value of metallic roofings and those using Portland cement, either with reinforced concrete or with asbestos, and authorized the committee to print in the Manual an abstract of the information presented on roofing materials.

The information on filled in freight house floors was adopted as presented.

WOODEN BRIDGES AND TRESTLES.—The recommendation to use guard timbers, so constructed as to space the ties properly and hold them securely in place, on all open floor bridges was adopted, but the one recommending the use of guard rails on all bridges was referred back to the committee. Where they are used, the recommendations governing them were accepted substantially as presented.

SIGNS, FENCES AND CROSSINGS.—The comprehensive rules presented for use and manufacture of concrete fence posts, were adopted with slight modifications.

The specifications and standard cross section for track construction proposed, were adopted after certain changes had been made, the principal one being the elimination of the maximum limit of 12 in. set for depth of ballast below tie.

SIGNALS AND INTERLOCKING.—The recommended rules for signal practice, using the upper quadrant, and using certain additional signals to give supplementary information were adopted.

RULES AND ORGANIZATION.—Certain modifications of previous rules were accepted, as well as additional rules of a general nature. Of the 40 new rules proposed for minor track officers, all but two were adopted, a number of them being rewritten before adoption. The new rules pertain to tieplates, gauging, curve casement, switches and frogs, switch ties, guard rails, track posts and signs, care of track tools, road crossings, platforms, fences and cattle guards, track jacks, flagging, slow orders, signals, obstructing track, and use of handpush, motor and velocipede cars.

YARDS AND TERMINALS.—The recommendations as to passenger station layouts were adopted as proposed, except that it was voted that "where practicable" curvature for throat switches should not exceed that of a no. 8 slip on tangent.

The recommendations relating to hump yards were adopted with the slight alteration that cut lists should be made in multiple as required.

IRON AND STEEL STRUCTURES.—The 80 rules presented for the guidance of inspectors in mill, shop and field were all adopted (with three or four slight modifications), except no. 23, which provided for certain assembling work at the shop to insure the accuracy of field connections. Two additional rules proposed and accepted provide for checking the dimensions of the materials used in each member and for checking the accuracy of the weighing and of the scales.

ECONOMICS OF RAILWAY LOCATION.—The recommendations as to train resistances, ratings for different temperature ranges, and compensation for curvature, as embodied in the report of R. N. Begien, were adopted as presented, superseding all previously adopted conflicting rules.

UNIFORM GENERAL CONTRACT forms.—A form of agreement and series of stipulations covering the general conditions for a construction contract were adopted substantially as recommended. The few changes made widen the range of the contract as to both character and magnitude of undertakings.

GRADING OF LUMBER.—The lumber grading rules for cypress, as published last year in Bulletin 144, were adopted.—Engineering Record.

Canada Southern Railway Bond Issue.

The Canada Southern Ry. Co. recently offered in England at 106¼% $2,000,000 consolidated guaranteed 50 year 5% gold bonds, due Oct. 1, 1962, being the remainder of $22,500,000 issue and outstanding, out of a total authorized issue limited to $40,000,000. The remaining $17,500,000 bonds can only be issued (1) to refund $130,000 first mortgage bonds of the Leamington and St. Clair Ry. Co. (now amalgamated with The Canada Southern Ry. Co.) which are due Oct. 1, 1945, and are secured upon 14 miles of line, (2), to acquire the undertaking of any other railway, railway bridge, or railway tunnel company, or to acquire the stocks, or other securities of such a company. The issue of the $17,500,000 is regulated by the mortgage deed and cannot exceed an average of $3,000,000 per annum.

The Bonds are secured by a First and Refunding Mortgage dated Oct. 1, 1912, made between The Canada Southern Ry. Co., The Michigan Central Rd. Co. and Guaranty Trust Co. of New York as trustee upon the company's 380 miles of railway (subject to the mortgage for $130,000 above referred to) and upon its equipment and other property now owned or hereafter acquired, including the entire capital stock of the Niagara River Bridge Co. but excluding any other shares or bonds owned by the company.

Railway Building in British Columbia.

The B.C. Minister of Finance, in speaking in the Legislature, Feb. 25, on the finances of the province, said:—"During 1912 there were considerably over 2,000 miles of railway under construction. The lines under construction and for which practically all the contracts have been let, were:

	Miles
"Canadian Northern Pacific on Mainland and Island	600
"Canadian Pacific on Vancouver Island	[illegible]
"Pacific Great Eastern	[illegible]
"Kettle River Valley	[illegible]
"Grand Trunk Pacific	[illegible]
"Kootenay Central	[illegible]
"British Columbia Central	[illegible]
"Others	[illegible]
"Total	[illegible]

"And I may say that for 1,500 miles of these lines the policy of this Government is directly responsible. These huge operations involved an actual expenditure of about $25,000,000 during 1912."

Canadian Pacific Railway Observation Cars on the Austrian State Railways.

On account of the increasing importance of Vienna, the Austrian capital, as a point of interest to tourists visiting Europe, the C.P.R. opened an important agency there for the convenience of its passengers and other Canadians visiting that city.

After the introduction of the observation cars on the C.P.R., which have proved such an attraction to tourists and other travellers between Montreal, Toronto and the west, and especially through the mountain scenery in the Rockies and Selkirks, representations were made to the Austrian government that in view of the great natural beauty of the Arlburg Pass route between Switzerland and Vienna, similar cars would be a great attraction to passengers. After considerable negotiation an agreement was [illegible] with the C.P.R. for the operation of observation parlor cars between Buchs and Vienna on the Arlburg Pass route, and between Vienna and [illegible] for the run to Italy, the arrangements being very similar to those under which Pullman sleeping cars are operated on many lines in the United States and some in Canada.

It was thought that the cars should as closely as possible resemble those used in Canada, in order that they might reproduce the latest types of construction and provide the greatest degree of comfort to passengers. It was of course impossible to duplicate the actual C.P.R. equipment on account of the differences in the clearances, coupling and [illegible] arrangements, etc. Negotiations were entered into with the Nesselsdorf Co., the largest car builders in Austria, and H. H. Vaughan, Assistant to the Vice President, C.P.R., visited Vienna and arranged for the construction of cars that would resemble as closely as possible C.P.R. equipment and be suitable for operation on the Austrian State Railways. On account of [illegible] [illegible] at the Nesselsdorf works, three of the cars were built at the Ringhoffer works, Smichow, Prague. These three were put into service during the past summer, and the balance of five will be delivered during this spring. The service has already become exceedingly popular, and officials of the Austrian State Railways are so pleased with the operation of the service that they are anxious to extend the use of the cars to other routes.

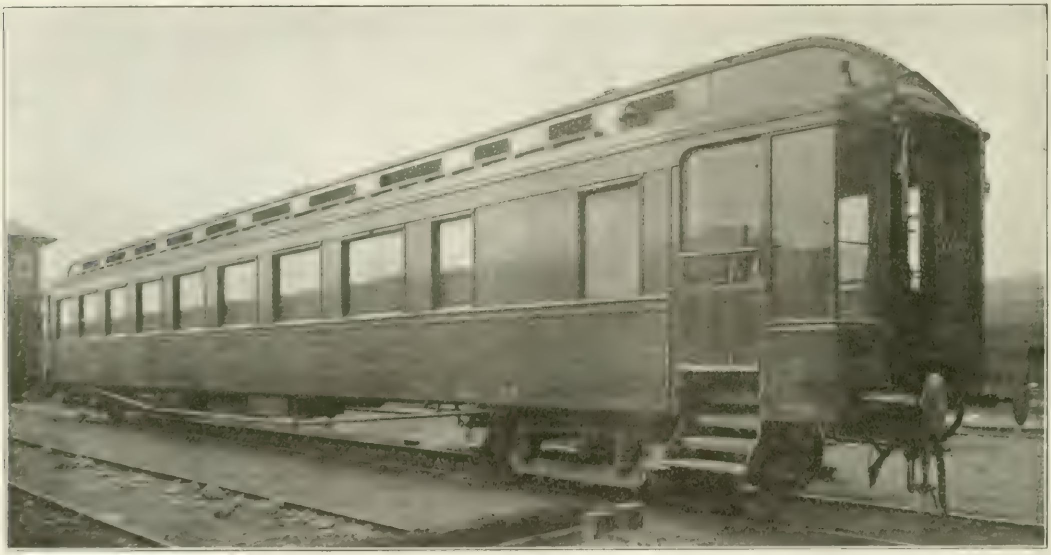
The accompanying illustrations show that the appearance of the Canadian car has been closely obtained. The bodies of the cars are 71½ ft. over buffer plates, and 9 ft. 5⅛ ins. wide over eave moulding, and an over all height of 13 ft. 6⅜ ins. The underframe is of steel, that being standard on Austrian State Railway cars. The buffers, vestibules and underframe in general are all of standard Austrian State Ry. construction. The body of the car is divided into two compartments, one for smoking and the other non smoking. The floor plan is very similar to that of an ordinary C.P.R. parlor car, the chief novelty being the use of two baggage compartments, which are required on account of the large amount of hand baggage usually carried by European travellers. In order to provide storage space for this, the porter of the car checks each piece of hand baggage from the passenger and thus avoids it being laid on the floor of the car or occupying seating capacity. The chairs are the C.P.R. parlor car chair of the "slumber" type. Ten are placed in the smoking compartment and 24 in the non smoking compartment. The equipment and finish are of the latest on C.P.R. parlor car style, and the lighting system is also similar, excepting that the system which is standard on the Austrian State Railways is used.

On account of the objections of the Austrian authorities to the open vestibule platform, arrangements were made for enclosing it in glass, which have proved entirely successful. Unfortunately, it was found necessary to fit a vestibule to the observation end on account of there being no turntables of sufficient length to turn the cars at the ends of some of the runs, and as they had to be handled backwards for short distances the railway authorities insisted on the vestibules being applied.

The cars are sheathed outside in mahogany and lettered "Canadian Pacific," and the appearance throughout of a standard Canadian Pacific parlor car is maintained as closely as possible. The Burnett 4 wheel all steel truck, recently adopted as standard by the C.P.R., is used, it being considered by the Austrian State Railways as decidedly superior to their standard type.

In order that the cars built in Austria should be as closely similar in construction and finish as the C.P.R. cars from which they are modelled, sample sections of the C.P.R. cars were made up in the Angus shops in Montreal, and shipped bodily to Austria as a guide to the finish desired. The main thing sent was a full cross section of a standard C.P.R. observation car, including the desk and book case, showing the style of finish and marquetry. The other sample parts sent included a hopper, washstand, water cooler, towel racks, brush racks, soiled towel rack, drinking glass holder, centre and deck lights, deck sash, stencilling and lettering, sample of outside finish, section of car side, sample of doors, door locks and hand rails, deck sash screens, inlaid rubber flooring, roof canvas, inside and lavatory door locks, door holder and door checks, mosaic tiling, cork tiling, carpet strip, toilet room tiling, passage way marquetry, pantasote blinds, toilet room window glass, chairs, and inside lettering.

The photographs on this page and the next, show how successfully the Canadian Pacific type of parlor car has been followed, with the alterations imposed upon it by foreign railway practice, and the car as a whole exceed in comfort, beauty of finish, size and general appearance, any that have ever been operated on the European continent.



C.P.R. Observation Cars Built for the Austrian State Railways.

Record Performance of an Atlantic Locomotive on the Pennsylvania Rd.

Some results of peculiar interest were developed recently in a series of tests at the Pennsylvania Rd.'s testing plant at Altoona, Pa., on a unique Atlantic passenger locomotive. The locomotive in working order weighs [illegible] lbs., with 23 by 26 in. cylinders and 80 in. driving wheels. The total heating surface is 3661.3 sq. ft., made up as follows: tubes, 2433.2, superheater pipes, 980.1, and firebox, 248. The tubes are 15 ft. 8½ ins. long and the grate area is 55.13 sq. ft.

Some 40 tests were made at speeds commencing at 120 r.p.m., running up progressively to 160, 200, 240, 280, 320 and 360, the latter corresponding to a speed of 84.42 miles per hour. The following are some of the observed results at the latter high speed: cut off, 40.6%, mean pressure, 205.5 lbs. per sq. in.; draft in smokebox, 14.2 ins. of water, and in ashpan, 0.16 in.; dry fuel, 6,380 lbs. per hour and 115.5 lbs. per sq. ft. of grate; water to boiler per hour, 38,846 lbs.; equivalent evaporation, 52,084 lbs.; evaporation per hour per sq. ft. of heating surface, 16.9 lbs., and per lb. of dry fuel, 8.2 lbs.; boiler horsepower, 1509.7; superheat, 233.7 degs.; dry steam to cylinders, 37,594 lbs. per hour; indicated horsepower, 2350.1; dry fuel per i.h.p., 2.71 lbs.; dry steam per i.h.p., 16 lbs.; drawbar pull, [illegible] lbs.; dynamometer horsepower, [illegible]; dry fuel per d.h.p., [illegible] lbs.; dry steam per d.h.p., [illegible] lbs. Machine efficiency (ratio of d.h.p. to i.h.p.), [illegible]. Machine efficiencies as high as [illegible], were developed at speeds of [illegible] r.p.m., when the dry steam per d.h.p. dropped as low as 20.6 lbs. These figures show the development of 1 i.h.p. per 99.2 lbs. of locomotive weight, a result said to be unequalled.

The [illegible] on the figures obtained in these tests, but lower figures were obtained in the test of a smaller Atlantic type locomotive. With an i.h.p. of 1574.8 and d.h.p. of 1339.6 at 46.7 m.p.h., the principal fuel and water results are as follows: dry fuel per i.h.p., 2.3 lbs.; dry steam per i.h.p., 16.1 lbs.; dry fuel per d.h.p., 2.7 lbs.; dry steam per d.h.p., 18.9.

While it is conceded that the d.h.p. is the best basis in denoting the performance of a locomotive, it must be borne in mind that the peculiar conditions of the testing plant, with the locomotive standing on large rollers connected to absorption brakes, and the drawbar pull measured directly on a traction dynamometer, the locomotive is not subjected to a wind resistance, and has no tender to haul. In consequence, both these resistances must be deducted when the locomotive is taken out for a road test with a dynamometer car. Due consideration must be given to the fact that these are running conditions, and do not take into consideration the standby losses while the locomotive is [illegible], nor the fuel consumption on the return trip, or [illegible] holding time.

Interior View of Observation Cars for Austrian State Railways.

Flour Unloader at Canadian Pacific Railway Fort William Shed.

During 1911 season the new C.P.R. shed at Fort William, Ont., to handle the [illegible] Upper Lakes [illegible] was completed and put in service. It is a [illegible] structure, [illegible] the [illegible] for the [illegible] of rail [illegible] and the boats can be [illegible] unloaded from the vessel and loading on cars. For the [illegible] rail freight, there is a track along the rear of the building, the height [illegible] at the level of the freight shed. Along this side are 19 doors, spaced for the freight car door openings. The [illegible] face of the shed has a similar track and door arrangement along that side for the outgoing rail freight.

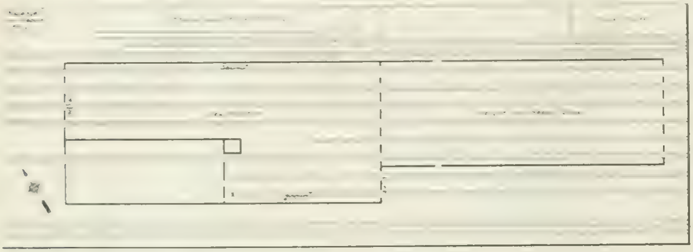
One of the principal articles of shipment by water from this point is flour in bags, and for the handling of this product, a flour bag loading machine was devised by R. Armstrong, who was then Superintendent there and is now Superintendent at Saskatoon, and was built [illegible]. Along the rear wall, and just under the upper floor there is an endless belt, 26 ins. wide, running the full length of the building, driven from a motor at one end. It is similar in every way to the usual conveyer belt, the upper part running over closely spaced idler pulleys. The belt is open the length of the building. At five points near one end of the shed, corresponding to the port openings of the vessel to be loaded, there are cross belts of the same width under the floor, at a slightly lower level, enabling the bags of flour on the belt to pass under the floor. These lead to chutes at the front side of the building, to which inclines can be attached for chuting the bags directly into the hold of the vessel.

On this longtitudinal travelling belt are dumped the bags of flour from as many cars as are ready to be unloaded, irrespective of the make of the flour, it not being necessary to use the belt for only the one brand of flour at a time, as explained further on. At each of the cross belts on which it is desired to divert the bags into the vessel's hold, there is arranged a vertical board, at an angle of 45 degrees to the motion of the longtitudinal belt. This board, coming down just over top of the belt, diverts the bags of flour on to the cross belt, and thence into the hold. These diverting boards are set in vertical guides, each with a rope passing up over a pulley above. At each of the cross belts being occupied there is stationed a man who either leaves the board down and diverts the bag on to the cross belt or raises the board and allows the bag to pass to the cross belt on which it should be diverted. The belts move at a good rate of speed and consequently, quick action on the part of the board operator is required, but by its means, as many as five different brands can be unloaded on the belt, and be diverted to the proper hold. It is the usual thing to unload as many as five 30 ton cars in an hour, or at the rate of 150 tons an hour. The gang of men employed is comparatively small.

Records of tests made on chrome vanadium steel wheels on the Virginian Ry. [illegible] that these wheels offer the means of increasing wheel mileage where conditions have resulted in a great decrease in mileage secured from other steel wheels.

Addition to Intercolonial Railway Freight Car Shop at Moncton, N. B.

The existing freight car shop is one of the buildings comprising the [illegible] in 1906 and is 360 ft. by 138 ft. [illegible] end of the present shop, extending northerly 360 ft. to the north end of the planing mill, at which [illegible] will be [illegible] ft. [illegible]. From the [illegible] will extend southerly in line with the west side of the planing mill to the north end of the present shop, 200 ft., then easterly 44 ft. to the northwestern corner of present shop. This addition will cover an [illegible] sq. ft. With the present [illegible]



New Addition to Intercolonial Ry. Freight Car Shop.

[illegible]

The construction will be similar to the present shop, with foundations and walls of concrete, and well lighted reinforced cinder concrete slab roof covered with a layer of cork insulation 1 in. thick, on which will be 3 plies of asbestos roofing and insulating felt mopped on with Trinidad Lake asphalt. The roof will be well lighted by skylights. The internal frame will be of structural steel, the roof trusses being spaced 20 ft. centres, with a clearance under lower chord of 20 ft. The heating will be by the hot blast system, carried under ground by ducts and registers located at floor line along the walls. The building will be equipped with [illegible] ers for the convenience of the workmen. [illegible] by Aug. 1.

Safety First on the Canadian Pacific Railway.

The C.P.R. has taken up the safety [illegible] on both its eastern and western lines, the organization being in [illegible] similar to that of the Michigan Central Rd. described in Canadian Railway and Marine World for Nov., 1912. [illegible] organizations are [illegible]. As the movement on the C.P.R. is much newer than that on several of the U. S. lines, including the M.C.R., the scheme has not as yet been fully developed, but, with characteristic energy, it is being [illegible] it will be in good working condition in a [illegible]

On the Eastern Lines the system has been in operation for about two years. There are divisional committees, presided over by the general superintendents, the whole to come under the supervision of the general superintendent of transportation. In each division, the several districts have their separate organizations, presided over by the superintendent or assistant, and [illegible] composed of the several higher district officials, with representatives from the enginemen, trainmen, yardmen, bridge and building men, roadmasters, gang foremen, agents, train dispatchers, shopmen and carmen. Divisional meetings are called every three months for the discussion of the subject, with district meetings every month, at which the matter is threshed out from the lower man's position. As typical of the matters discussed at a recent meeting of a district in Toronto, the reports received and considered included those from the signal department, car department, yards, bridge and building department, trainmen, shops, and general or miscellaneous.

On the Western Lines, in addition to the general organization, there are divisional safety committees, as on the Eastern Lines, composed of the division superintendent, master mechanic, division engineer, and other division officials. In each division there will be a separate organization for each of the several districts, presided over by the superintendent or assistant, with the committee composed of minor officials and representatives from all the different departments, the same as on the Eastern Lines. The movement has been more recently introduced in the West.

The following are a few of the resolutions headed "Safety First," which the men on the C.P.R. have been asked to make this year: —"I will not stand in front of a moving car or locomotive to board the same. I will always respect the blue flag, as the lives of my fellow employes depend on it. I will not stand between the cab and the apron when coaling a locomotive. I will not push a drawbar with my foot or hands when cars are moving or are close together. I will turn down boards with nails sticking out of the same. I will not adjust a coupler, turn an angle cock, or uncouple hose when a car is in motion. I [illegible] on to the side of a car when passing platforms, buildings, or obstructions close to the tracks. I will not use 2 in. nails in building a scaffold where 4 in. nails would be safer. I will not push cars into a freight shed or on team tracks without making sure that all men and teams are clear. I will do all I can to stop the loss of life and lessen the injuries to my fellow employes. I will not kick cars into a siding where boarding cars, or cars being loaded or unloaded are standing. I will remember it is better to let a train be late than to cause an accident. I will not take chances. I believe that safety first is simply habit, and I will cultivate the habit. The prevention of accident is a duty I owe to myself, my family, and my fellow employes. I believe that some accidents are not inevitable, and I know that the great majority can be prevented by care. I will immediately take out sufficient accident insurance to protect myself and those dependent upon me."

Stresses in Railway Track.

Stresses in railway track are prominent among the unknown factors in engineering regarding which there is need for experimental investigation and the collection of data based on service observations. Emphasis has again been laid on this point in the report of the U.S. Interstate Commerce Commission on the derailment of the Twentieth Century Limited on the New York Central Rd. on March 31, 1912. The finding is that the derailment was due to the spreading of the track, probably because of the inability of the outer rail of the curve, in its shimmed position, resulting from winter conditions, to withstand the thrust of the locomotive running at high speed. The track seems to have been in a condition fulfilling the requirements of the best practice, though the unusually severe winter had necessitated extensive application of the customary measures for maintaining surface at such times. Here is where the argument is raised, in that the line of demarcation between safe and unsafe practice in track construction has not been determined. It is not known what margin of strength is present in track above the immediate demand of the load. Though it is extremely desirable to have this information, there are many difficulties to be met in obtaining it, due to the large number of variables involved. Type of construction, drainage, season and similar factors are involved in the track itself, while speed, condition of equipment, curvature and surface are among the variables affecting the application of the load. But some very good progress has already been made toward definite information. The American Railway Engineering Association is giving attention to the subject, and has made preliminary studies leading toward more accurate knowledge of track strength and stresses. Among these might be mentioned those of last year on roadbed pressures, the tests of spike pulling values and the impact measurements on bridges. The investigations of the Pennsylvania Rd. on the proper depth of ballast, reported to the Association in 1911, also throw much light on the distribution of loads on ties and roadbed. The Canadian Society of Civil Engineers, recognizing the probable existence due to increased loads of stresses not satisfactorily distributed by the old, short ties, has discussed the question of a longer tie. These are indications that an effort is being made to obtain practical data bearing on track. If research is further encouraged, a much more definite basis of design than the present should be obtained, though it may not be practicable to bring it to the exactness of the data underlying the design of steel bridges.

At the Long Island Rd.'s Brooklyn station where a heavy suburban traffic is handled, a ticket issuing machine has been installed. It can be operated by four men, each having a separate recording apparatus. The tickets are issued in amounts from 5 to 35 cts., and are printed directly in the machine. A hundred a minute can be turned out.

The 800,000 lb. Riehle testing machine at Lehigh University, South Bethlehem, Pa., is being utilized for the testing of rails by the American Railway Engineering Association's rail committee. These tests are expected to aid materially in the effort to reduce the number of defective rails. The present phase of the research is that of investigating the rate of reduction of the cross section of rails in rolling from the ingot to the finished rail. One hundred pieces of 100 lb. A.R.A. section, each 2 ft. long, are being used.

Rapid Method for Volume Calculation in Railway Cuts and Fills.

By Chas. W. Rauch, Hanceville, Alabama.

The accompanying tables were designed for the rapid computation of yardage in railway work, after the areas of the sections have been figured. The tables are based on a distance between sections of 50 ft., but can be used satisfactorily for other distances by multiplying by the proper factor, i.e, twice the distance between stations in feet, divided by 100. In using these tables, no difficulty need be experienced as to the position of the decimal point if it be kept in mind that the final result in cubic yards is always equal to 8% less than the sum of the two end areas, these being expressed in sq. ft. In the first column of the tables will be seen values of double end area, and opposite the corresponding values of volume between stations in cubic yards, zeros and decimal points being omitted. For instance, 1404 sq. ft. is equivalent to 1300 cu. yds., 28 sq. ft. is equivalent to 25.9 cu. yds., etc.

In using the tables proceed as follows: First add the two end areas of the sections, expressing the result to the nearest tenths; find the nearest value in table 1 and subtract, the figures opposite being the first one or two digits of the result; the remainder are found opposite the values in table 2 expressed by the result of the subtraction. As an example assume station 7240 to have an end area of 732.31, and station 7240 plus 50 an area of 243.16. The double end area is then 975.5. In table 1 we find 9720 equals 90. Subtracting mentally 9720 from 9755 we obtain 35, and consulting 35 in table 2 we find 324. The result is then 903.2 cu. yds.

For double end areas of values less than 109 sq. ft., table 2 may be used alone. Neglecting temporarily the figure in the tenths place find the corresponding value in the second column; then arithmetically add to this value the digit expressing the tenths of the area value, except it be 7, 8 or 9, when add one less in each case. For instance, 62.3 sq. ft. is equivalent to 57.4 plus 0.3 or 57.7; however 62.8 equals 57.4 plus 0.7 or 58.1 cu. yds.

For larger areas, a combination of these two methods must be used. For example, let us say we have a double end area of 6824.3 sq. ft. In table 1 we find 6804 equals 63; subtract 6804 from 6824, and consult table 2 for 20; this gives us 185. We now add the 3 to 185, giving us 188. The final result is then 6318.8 cu. yds.

As an example of odd stations, let us assume that station 5932 has an end area of 633.24 and station 5932 plus 27 an end area of 244.80. The double end area is then equal to 878.0, giving a yardage of 8130 on a basis of 50 ft. Since it is 27 ft. we multiply by 0.54 giving us 439.0 cu. yds.

This method is especially valuable to railway resident engineers, as it will save a great deal of time and work in preparing monthly estimates. A little practice with the tables should enable one to perform the operation almost as fast as the result can be set down on paper.—Engineering and Contracting.

Protection of Exrta Gangs in Maintenance Work.

The safety of extra gangs in railway maintenance work is a matter deserving special attention in connection with the present widespread movement for the protection of employes from injury. The extra gang is in many cases largely made up of foreigners who are unfamiliar with the English language and with American railway practices and conditions. This renders them particularly subject to danger of injury, and places a greater responsibility for their safety upon the officials in charge of their work and upon their more intelligent associates on the line. The obligation may be in part met by providing for the instruction of such foreigners and by impressing upon the workmen who are better equipped the necessity of great care in the performance of duties affecting the safety of these men. Emphasis was recently laid on some of these points on the Chicago Great Western Rd. in an appeal to American employes to attend closely to such matters as flagging, where the safety of the extra gang men may be involved, and to enforce the closing of camp car doors on the side next to the running track. It was pointed out that increased safety results directly from these efforts and also that the new men learn through the examples thus set. Instructions printed in several languages are often helpful in promoting work of this nature. The United States Steel Corporation has met with encouraging results in its efforts both along educational and direct lines toward the protection of foreign workers, and other large companies are having similar experiences.

Railway Freight Statistics.

The aggregate tonnage of freight carried by Canadian railways during the year ended June 30, 1912, was 89,444,331 tons, against 79,884,282 tons in the previous year. Of the total tonnage 63,186,732 tons originated on the home lines, and 26,257,599 tons on the lines of other companies, as against 55,152,430 tons originated on the home lines and 24,731,852 tons received from connecting lines, in the previous year. In the following table are the details for the various lines. Figures showing the total freight tonnage on each line were given in Canadian Railway and Marine World for January, pg. 67.

Instructions for Fighting Fires on or near Railway Right of Way.

The Secretary of the Board of Railway Commissioners has notified railway companies that the Board has under consideration the amendment of regulation 15 of order 16570, to read as follows:—"Every such railway company shall give particular instruction to its employes in relation to the foregoing regulations, and shall cause such instructions to be posted and maintained at all stations, terminals and section houses along its lines of railway. Said instructions to employes shall also be included in the employes' time tables in use between April 1 and Nov. 1 of each year. As to lines or portions of lines where, in its judgment, the fire danger is not material, the Board may, upon application, waive the requirements as to the posting of public notices and the inclusion of special instructions in employes' time tables."

The companies have been asked to submit any representations they wish to make in connection with the proposed amendment.

The secretary has also sent the companies a tentative draft of instructions which may be used, if desired, as a basis for the preparation of special instructions to employes, as required in regulation 15 above mentioned. The issuance of these particular instructions is not prescribed. It is, however, considered essential that the instructions to be issued shall embody the substance of regulations 6, 7, 10, 14 and 17 of order 16570. The draft is as follows:—

WORKING INSTRUCTIONS IN CONNECTION WITH ORDER 16570 OF THE BOARD OF RAILWAY COMMISSIONERS FOR CANADA, DATED MAY 22, 1912.

TO ENGINEERS, CONDUCTORS, Baggagemen and Firemen:—It will be the duty of train and engine crews on freight and passenger trains, when discovering any fire adjoining the right of way of the railway to stop and use every effort to extinguish it. In the event of this being impracticable, either by reason of the extent of the fire or its distance from the right of way, the train will proceed to the nearest telegraph station, where the conductor will wire a report to the superintendent giving the exact location of the fire, and the action taken by engine and train crews concerning same. It will also be the duty of engineers to stop and notify the first section gang passed of any fire not extinguished as above.

No employe shall do or cause damage or injury to any of the fire protective appliances on any engine; open the back dampers of any engine while running ahead, or the front dampers while running tender first; or permit fire, live coals or ashes to be deposited on tracks or right of way outside of yard limits, unless same are extinguished immediately thereafter.

TO AGENTS:—Engineers and conductors of all trains have received instructions to report fire along the right of way and adjacent thereto, and it will be your duty to immediately wire the superintendent, giving the location of the fire, extent of same, and any other information which might be of value, particularly as to the number of men needed to control the fire and extinguish it. The local fire inspector of the Railway Commission should be first notified immediately, giving the exact location of the fire, and its extent.

TO ROADMASTERS, ASSISTANT ROADmasters, Master Carpenters and other Officials:—In cases where fires are reported, it will be the duty of any division official to proceed to the scene of the fire as quickly as possible and take charge of the work of fire fighting until he can be relieved by the division roadmaster. The man first on the ground should organize his men to do the best work possible, and, when this is done he should immediately proceed to investigate the origin of the fire, location where it started; get statements from all witnesses and make every effort to learn the origin and responsibility. The law as now interpreted practically makes this company responsible for fires starting within 300 ft. of the track, unless it can be shown that the company is not responsible. It is necessary, therefore, to positively determine the origin in order to relieve the company of the responsibility. The first officer on the ground should endeavor to hold a joint investigation with the local fire inspector of the Railway Commission, or other local forestry officer, and agree upon the origin of the fire. This will avoid disputes later on.

TO CHIEF DISPATCHERS:—In all cases where fires are reported, it will be the duty of the dispatcher to get full information as to the extent of such fire, its location and the number of men necessary to fight it. It will also be the duty of the dispatcher to furnish whatever train service will be required to move extra gangs, section gangs, or bridge crews, to the fire immediately, giving this movement preference if the emergency requires it.

TO SECTION, EXTRA GANG AND Bridge Foremen:—In all cases where fire occurs, it will be the duty of all section crews, extra gangs and bridge crews to immediately proceed to such fire and extinguish same, remaining as long as may be necessary to do this, and it must be understood that this is the most important work that can be done, and the carrying on of your work, which may be important, must be set aside until the fire is under control, and is completely extinguished. The section foreman on whose district the fire occurs, will, in the absence of an official of the company, make a thorough investigation regarding the origin of the fire, submitting full report to the roadmaster.

Between April 1 and Nov. 1 no ties, cuttings, debris or litter upon or near the right of way shall be burned except under such supervision as will prevent such fire from spreading beyond the strip being cleared. Officers of the Railway Commission may require that no such burning be done along specified portions of the line, except with the written permission or under the direction of such officer.

PENALTY (Reg. 17, order 16570):—"If any employe or other person included in the said regulations, fails or neglects to obey the same, or any of them, he shall, in addition to any other liability which he may have incurred, be subject to a penalty of $25 for every such offence."

Recent tests on freight car trucks have developed the following conclusions:—1st, that the curve friction is almost directly proportional to the degree of curvature; 2nd, that the frictional resistance on new rails is from 10 to 25% less than on old rails; 3rd, that old wheels with high flanges give practically 100% more friction than new wheels; 4th, that a rigidly square track has less friction than a loose one; and 5th, that a truck with atmospheric temperature from 40 to 50 degs. Fahr., when lubricated with winter oil, has about 43% less friction than others lubricated with summer oil.

The C.P.R. hotel at Banff, Alta., will be open continuously, in future, instead of only in summer as heretofore.

Efficiency in Railway Engineering Work.

The addresses of both the retiring President of the American Railway Engineering Association, Mr. Churchill, and the incoming President, Mr. Wendt, at the recent convention emphasized that more devolves upon the railway engineer than merely the preparation of plans, specifications and rules, which if properly followed will give the desired results. The further duty is to see that they are followed. Mr. Churchill appealed for better workmanship, and noted the tendency to supervise work more closely. Mr. Wendt, pointed to the most effective way of securing good workmanship by adopting sound and efficient principles of organization—and he finds ample justification for the best organization possible since 55% of railway operating expenses are due to labor. He has just established the unit system of track and roadway maintenance on the Pittsburgh and Lake Erie Rd. Other roads are adopting similar systems. Many managers, however, are sceptical of recent ideas in organization, even though the methods are successfully applied in many industries. The Railway Engineering Association, as a whole, is evidently much interested in the subject, if judged not only by the discussions on the floor but also by the number of committees that have been directed to study labor and organization problems. With the close attention that will be given these matters by the association this year the railways should soon be in a position to judge to what extent and in what ways they can profitably employ in maintenance and construction work the methods of management advocated in recent years.

Food Supplies for Construction Camps.

The following list, compiled by a Canadian Pacific Ry. engineer from several years' store sheets, and representing the daily ration per man in construction camps, will be of interest to engineers and contractors who have to maintain construction camps in the wilds. The bacon and flour may be a little high, but much depends upon work being done, working temperature and cook's ability. If tinned meat be taken, the bacon can be reduced. Beside the supplies in the list, a little lard was used in the cooking, for which no allowance is made. The total of the above ration is 4.32 lb. Other supplies on a per diem basis were:—Soap, 0.05 lb.; candles, 0.01 lb.

DAILY RATIONS

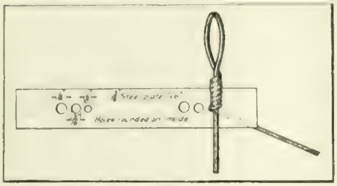
Flour	1.25	lbs
Bacon and ham	1.40	"
Beans	0.47	"
Dried fruit	0.20	"
Sugar	0.40	"
Tea	0.04	"
Coffee	0.08	"
Baking Powder	0.06	"
Salt	0.10	"
Mustard and pepper	0.01	"
Currants	0.03	"
Raisins	0.01	"
Oatmeal	0.15	"
Rice	0.05	"
Potatoes or vegetables	[illegible]	"
Syrup	0.03	"

The use of track troughs for watering locomotive tenders has been practically impossible in Canada, the only line operating them being the Michigan Central Rd. on its Canada Southern Division. Ice on the departing end of the track trough is also experienced even in the milder climates further south, but this trouble has been eliminated on one road by simply laying steam pipes between and on each side of the departing end of the trough, melting the ice, and keeping the roadbed clear.

A Wire Splicer.

By H. C. Swartz, Master of Bridges and Buildings, Grand Trunk Railway, St. Thomas, Ont.

The wire splicer shown on accompanying drawing is used to splice wires without taking out the temper as is apt to be the case when the wire is wound without pinchers. This splicer is of special use in connection with semaphores where the wire has to be

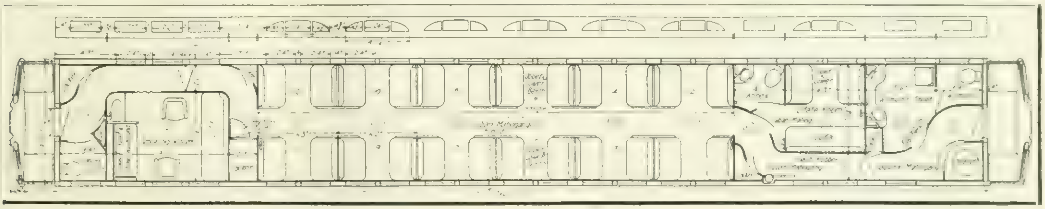


A Wire Splicer.

covered and passes through pipes filled with oil, it being necessary to connect up the hardened wire in the pipes with the regular semaphore wire at either end. It is also useful in making "tell tales" for overhead bridges and for making coil springs.—Railway Age Gazette.

New Sleeping Cars for Canadian Pacific Railway.

The C.P.R. has recently had delivered 30 sleeping cars from the United States, a portion of the order it placed there last year. The length over end sills is 72 ft. 8 ins., with an over all height from top of rail of 14 ft. 5 9-16 ins. The construction is C.P.R. standard throughout, of the usual all wood construction, with the exception of the end framing, which is composed of six 3 by ⅝ in. wrought iron end posts, the ends of which are turned at right angles and secured to the end sills and end plate with 3 by 3 by ⅝ in. corner angles. The underframing is all wood, save the needle beams, which are rolled steel 5 by 8 in bulb tee irons, 20.2 lbs. per ft.



Plan of New Sleeping Cars for Canadian Pacific Railway.

The interior finish of the body of the car is of the C.P.R. standard mahogany finish, using the best grade of Cuban mahogany, the finish being in the marquetry design of the Chippendale style. The smoking room differs from the body, in so far as the finish is in English oak. Through the whole car, the ceiling is of ¼ in. agasote, finished in colors. The section seats and sofas in the main part of the car and state room are upholstered in green frieze plush, while the seats and lounges in the ladies' retiring room and the men's smoking room, are upholstered in Spanish leather.

The Gold duplex system of hot water circulation, with Frumweller heater, controlled by a C.P.R. standard heat controller, is the heating arrangement used. The lighting is electric, using a 24 volt axle generator, with 24 cells of storage batteries arranged in two parallel sets of 12 each. Clusters in opal shades in the clerestory of the car provide the main lighting, with individual seat lighting from small opal corner lights at the window side of each seat. The upper berths are also illuminated, and are provided with the latest type of cut out switches, whereby the current is automatically shut off by the closing of the upper berth.

The air brake arrangement is of the Westinghouse L.N. 1612 type, with hand brake arrangement co-operating therewith, and operating from both ends of the car.

The 6 wheel trucks are of special design, built up of steel. They have a wheel base of 11 ft., and are 6 ft. 10¼ ins. wide. They are equipped with 36¼ in. cast steel wheels, mounted with Krupp steel tires, and are designed for a capacity of 80,000 lbs. The journals are 5 by 9 ins. The trucks are provided with Simplex brake beams, American Brake Shoe and Foundry Co.'s cast steel back brake shoes, McCord journal boxes, and Susemihl side bearings.

In general points of comfort, they compare with the usual standard type of C.P.R. car, and differ only in minor improvements, which are constantly being introduced in the company's rolling stock.

A Bolt Puller.

By H. C. Swartz, Master of Bridges and Buildings, Grand Trunk Railway, St. Thomas, Ont.

The shackle bar is of use for withdrawing bolts without heads, as shown in the illustration. By pressing down on the bar, the toe of the bar and the shackle grip two sides of the bolt and the harder the bar is pressed down the tighter is the grip. By raising the bar slightly the shackle is loosened and a new grip can be secured. Where the bolt is too far down in the timber to secure a grip, a little adzing will usually enable the device to secure a hold on the bolt.—Railway Age Gazette.

Improvements in Grand Trunk Railway Ottawa Shops.

A number of minor improvements have been introduced in the G.T.R. shops at Ottawa, Ont., which were taken over on the absorption of the Canada Atlantic Ry. In the locomotive house, an air jacking system is in use in the pits. At the front of the pit are located two 24 in. cylinders, side by side, the upper end of the plungers of which are flush with the top of the rail. These are supplied with 110 lb. air. They are found very useful in jacking up the front ends of locomotives for the removal of driving springs, for which operation they are used mostly, though the field of usefulness is more extensive.

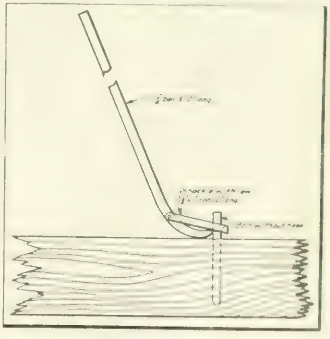
The air storage capacity has been increased by the substitution of two tanks, 5 ft. diam. by 15 ft. high, for three smaller tanks, the combined capacity of these three being only equal to one of the new tanks.

The steam, water and air connections in the locomotive house all come down the same column between the pits. Trouble is of more or less frequent occurrence in keeping the valves on these several connections tight, so that it is no uncommon sight in a locomotive house to see the floor around the base of the service column, flooded with drip water. In the locomotive house, no trouble is experienced with the present arrangement, which consists of a concrete shell box, 4 ft. square, rising to a height of 18 ins. above the floor, which surrounds the service column. The drips fall into this and are drained into the adjoining pit, from which they escape to the sewer.

The locomotive house has three driving wheel drop pits, the central one of the three having an additional drop for removing cylinders. This central pit is ordinarily kept free at all times, so that the driving wheels from the locomotives on the outside drop pits, may be removed to the central pit, and run out to the shop.

In the machine shop, group drive has been substituted for central drive. Formerly, there was a central a. c. motor, driving two lines of shafting, one on each side of the shop. As this was overloaded, small auxiliary steam engines were added at three points in the shop. All this arrangement has been taken out, and each side of the shop made a separate unit, with two d.c. motors mounted on high concrete piers for each. Incidental to this change, the whole shop has been rewired to meet the government requirements, all the cables running through conduits.

The rusting of track bolts has been considerably reduced on one U.S. road by having the track walkers go over the line, about once a year, and daub the nuts with a low grade of lubricating oil, this being done on one of their regular track inspection trips. The necessity of splitting the nuts with a chisel, when removing a rail, has thus been greatly minimized.



Shackle Bar for Withdrawing Bolts from Timber.

Orders by Board of Railway Commissioners.

[illegible] have filed the paper have a continuous record [illegible] thi[illegible]

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were issued. In many cases orders are not [illegible]

18862. Mar. 7.—Ordering that, unless it withdraws that portion of its location plan affecting lots 21 to 30, block 175, Regina, Sask., within 20 days from date, Canadian Northern Ry. shall forthwith take necessary steps to acquire said lots.

18863. Mar. 11.—Authorizing Bell Telephone Co. to erect poles and wires on and across 23 [illegible] across May and Ridgway Sts., Fort William, Ont.

18865. Mar. 15.—Approving location of C.P.R. [illegible]

18866. Mar. 14.—Extending, for six months from date, the time within which Esquimalt and Nanaimo Ry. was required to file standard tariff of maximum freight tolls.

18867. Mar. 14.—Authorizing C.N. Alberta [illegible]

18868. Mar. 15.—Approving location of C.N. Ontario Ry. station grounds at Nosbonsing, mileage 216.2 from Ottawa.

18869. Mar. 14.—Approving Alberta Central [illegible]

18870. Feb. 18.—Ordering Vancouver, Victoria and Eastern Ry. and Navigation Co. to include in its summer timetable a suburban service between Vancouver, B.C., and Bellingham, Wash., from June 15 to Oct. 15 each year until further order.

18871. Mar. 13.—Authorizing C.P.R. to build its Forsyth Branch overhead across Moreau, Forsyth, Prefontaine, Dezery, St. Germain, Darling, Davidson, Cuvellier, Aylwin, Joliette, Chambly, Nicolet and Valois Sts., and to revise grade at Forsyth, Davidson and St. Germain Sts., Montreal.

18872. Mar. 15.—Ordering C.P.R. to install, within 90 days, an improved type of illuminated electric bell at highway at Glen Major flag station, 20% of cost to be paid out of the railway [illegible]

18873. Mar. 15.—Approving location of C.P.R. [illegible] C.P.R. siding tracks in track shed at its elevator in North Transcona Yard, Man., provided men are kept off tops and sides of cars while passing through.

18875. Mar. 17.—Authorizing C.P.R. to build additional track across highway at mileage 58.0 from North Bend, Cascade Subdivision, B.C.

18876. Mar. 17.—Amending order 18698, Feb. 12, re installation of gates at Bartlett Ave., Toronto.

18877. Mar. 17.—Certifying correction in Canadian Northern Ry. location plan from Slate River westerly, mileage 12.2 to 23.2, Thunder Bay District, Ont.

18878. Mar. 17.—Authorizing Canadian Northern Ry. to build across public road between Secs. [illegible] Lake Ontario and Western Ry. (C.P.R.) to build bridge 33.2 over Fourth Depot Lake, Hichinbrooke Tp., near Parham, Ont., and rescinding [illegible]

18880. Mar. 18.—Approving National Trans[illegible] locking plant to be installed near Theriault Station, N.B.

18881. Mar. 18.—Authorizing C.P.R. to build [illegible] C.N.R. Prince Albert Branch, near Kenaston, [illegible] ecs. 18 and 7-10-14, w. 4 m., [illegible] allowance between [illegible] Con. 1, and Lot 22, B.F. Con., Darlington Tp., [illegible]

18886. Mar. 18.—Ordering Bell Telephone Co. [illegible] Ont.

18887. Mar. 17.—Ordering G.T.R. to install within 90 days improved type of illuminated electric bell at crossing of Main St., Thorndale; train movements on siding to be protected by flagman.

18888, 18889. Mar. 19.—Ordering G.T.R. to install improved type of automatic electric bells at Clara St., near Glen Robertson Station, Ont., and at first highway 150 ft. west of St. Hilaire Station, Que.

18890. Mar. 17.—Authorizing G.T. Pacific Branch Lines Co., subject to conditions of agreement, to build its Regina-Moose Jaw Branch over Main St., Moose Jaw, Sask., by temporary structure with one 20 ft. and two 15 ft. openings.

18891. Mar. 19.—Authorizing Bay of Quinte Ry. to revise grade across public road between Lot 49, Con. 1, Camden Tp., and Lot 16, Con. 3, Portland Tp., Ont.

18892. Mar. 18.—Authorizing C.N. Ontario [illegible] Burton Tp., for traffic in timber, logs being floated down Magarvatawan River and stored prior to being loaded on cars.

18893. Mar. 19.—Ordering G.T.R. to install [illegible] Gravel Toll Road, Sarnia Tp., Ont.

18894, 18895. Mar. 20.—Reporting to Governor in Council for approval, Hamilton Radial Ry. and [illegible] amending Sec. 1, of bylaw recommended by [illegible]

18896. Mar. 19.—Authorizing Toronto and Niagara Power Co. to erect wires across C.P.R. telegraph wires and across T.H. & B.R., in Lot 15, Con. 3, Saltfleet Tp., Ont.

18897 to 18899. Mar. 20, 19.—Approving proposed layout of C.N. Ontario Ry. station grounds at Davis, mileage 289.8; location of station at Janes, mileage 281.6; and proposed layout of station grounds at Spaidal, mileage 298.36 from Ottawa.

18900. Mar. 20.—Approving location of Canadian Northern Ry. station at Ceylon, Sask.

18901. Mar. 10.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build at grade across Anderson St., Whitby, mileage [illegible]

18902. Mar. 20.—Approving location of G.T. Pacific Ry. station at Prince George, mileage 467.3 from Prince Rupert East, B.C.

18903. Mar. 19.—Authorizing G.T.R. to operate siding, authorized by order 14821, Sept. 19, [illegible] and Co.'s bark mill shed at Acton, Ont., with a clearance of about 16 ft. between top of rails and [illegible]

18904. Mar. 20.—Authorizing R. and E. Kelly, F. Nash and F. Williams, of Namao, Alta, to excavate, subject to certain conditions, coal under Edmonton, Dunvegan and British Columbia Ry. right of way, on Sec. 8-55-21, w. 4 m.

18905. Mar. 22.—Recommending to Governor in Council for sanction, Hamilton Radial Ry. bylaw of Feb. 24, adopting book of operating rules.

18906. Mar. 14.—Authorizing G.T.R. to take certain lands in Hamilton, Ont., for carrying out provisions of order 16671, June 1, 1912, re shunting on Ferguson Ave.

18907. Mar. 22.—Recommending to Governor in Council for sanction Brantford and Hamilton Ry. bylaw of Feb. 24, adopting book of operating rules.

18908. Mar. 20.—Amending order 17869, Oct. 24, 1912, to provide for building of spur from C.P.R. main line east of Neebing Ave., Fort William, Ont., to 100 ft. south of C.N.R., to cross C.N.R. on Neebing Ave. at grade.

18909, 18910. Extending to Apr. 7 effective date of schedules to give effect to order 18771, Feb. 19, re C.P.R., C.N.R. and G.T.P. Ry. special joint tariffs on lumber and other commodities carried at lumber rates from west of and including Blairmore and Laggan, Alta., to Winnipeg; and extending to same date effective date of reduced rates on similar traffic from same points to east of Red River, as provided in order 18738, Feb. 19.

18911. Mar. 25.—Approving location of G.T. Pacific Ry. stations at Irmie, mileage 864.9, and Keston, mileage 875.1, North Alberta District.

18912. Mar. 25.—Authorizing G.T.R. to build extension to siding to premises of A. Bremner, Ltd., Lot 3413, St. Henri Ward, Montreal, to make changes in its location, and to alter and extend its Lachine Canal Branch, serving Dominion Textile Co.

[illegible] 1912, between Canadian Northern Ry., Midland Ry. of Manitoba, G.T. Pacific Ry., the Minister of Railways and Canals, and National Transcontinental Ry., providing for operating M.R. of M. trains over the other lines mentioned, at Winni[illegible]

18914. Mar. 25.—Relieving C.P.R. from providing further protection at crossing between Lots 5 and 6, Con. 3, near Tillsonburg, Ont.

[illegible] Mar. [illegible]—Approving location of C.P.R. stations at Kelfield, Broadacres, Vanguard, Neville and Cloan, Sask.

18916. Mar. 26.—Amending order 18881, Mar. [illegible] C.P.R. additional track at mileage [illegible] Cascade Subdivision, B.C.

[illegible] Mar. [illegible]—Authorizing Canadian Northern Ry. to build under C.P.R. Outlook Branch, [illegible] Sask.

18918. Mar. 25.—Authorizing Campbellford, Lake Ontario and Western Ry. to build between Lots 5 and 6, Con. 3, Bathurst Tp., mileage 5.22 from Glen Tay, Ont.

18919. Mar. 22.—Ordering G.T.R. to renew rails between mileage 22 and 26; pending completion, all trains between Trout Creek and Powassan to be limited to a speed not exceeding 15 miles an hour.

[illegible] Mar. [illegible]—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across Division, Ontario and Prince Edward Sts., Brighton, Ont.

18921. Mar. 26.—Authorizing C.P.R. to re[illegible] Papineau Ave., Montreal.

18922. Mar. 25.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build between Lots 4 and 5, Con. 1, Brighton, at mileage 98.12 from Glen Tay, Ont.

[illegible] Mar. [illegible] 6, re taking of certain lands in Camden Tp., Ont., [illegible] Lake Ontario and Western Ry. (C.P.R.)

18924, 18925. Mar. 27.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to take certain lands for diversion of highway be[illegible] B.F. Con., Darlington Tp., rescinding order 18444, Jan. 3, in same connection, [illegible] to build its ballast pit spur under C.N. Ontario Ry. in easterly half of Lot [illegible]

18926. Mar. 27.—Approving Hull Electric Ry. bylaw of Mar. 12, authorizing G. G. Gale, General Superintendent, to issue tariffs of tolls for its freight and passenger traffic.

18927. Mar. 27.—Authorizing Alberta Public Works Department to build road allowance across C.P.R. between n.w. ¼ Sec. 7-24-25, and n.e. Sec. [illegible], w. 4 m.

18928. Mar. 27.—Ordering Campbellford, Lake Ontario and Western Ry. (C.P.R.) to fill in highways between Lots 10, 11, and Lots 20, 21, B.F. Con., Clarke Tp., between its tracks and G.T.R., from north of G.T.R. right of way, for a width of 40 ft., and build substantial guard rails on each side, question of contribution to cost by G.T.R. reserved for further consideration.

18929. Mar. 27.—Further extending time to May [illegible], within which C.P.R. may operate over crossing with Hull Electric Ry.

18930. Mar. 27.—Authorizing C.N. Ontario Ry. to build its Ottawa to North Toronto Line, as revised, across its Sudbury Branch at mileage 8.42 from Union Station, Toronto.

18931. Ordering C.N. Quebec Ry. within 15 days to file with Board plan showing location of temporary passenger station and freight shed facilities at Maisonneuve; and within 30 days to file plans of passenger and freight station proposed to be built there; work to be completed within 90 days after approval of plans.

18932. Mar. 28.—Approving clearances as shown on plan of American Cyanamid Co.'s skip hoist over Michigan Central Rd. at Niagara Falls, Ont., provided men are kept off tops of cars operated under same.

18933. Mar. 28.—Authorizing Canadian Northern Ry. to build its Craven Northeasterly Branch under public road between Secs. 19 and 20, Tp. [illegible]

18934. Mar. 28.—Extending to May 1 time within which G.T.R. shall build two sidings for A. S. Nicholson at Burlington, Ont.

18935. Mar. 31.—Authorizing G.T. Pacific Ry. to build bridge across Willow River at mileage 1262 west of Winnipeg, Fort George District, B.C.

[illegible] Mar. [illegible]—Directing G.T.R. [illegible] Plains Road, just west of Burlington Jct., Ont.; and ordering that it be built in accordance with plan prepared by Board's Chief Engineer, on file under no. 9437.765, and marked A, apportioning [illegible]

[illegible] Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build a bridge at mileage 148.46, across Liberty St., Bowmanville, Ont.

18938. Mar. 28.—Authorizing clearances as shown on plan of spur for Skinner and Miquelon, Calgary, Alta.

18939. Mar. 28.—Authorizing St. Thomas Parish, Que., to build highway crossings over C.P.R., on Lots 117 and 118, North Jersey, St. Alexis and Lac Romer concessions, Lanoraie Parish, and Coteau Jaune concession.

18940. Mar. 28.—Authorizing City of Saskatoon, Sask., to carry Taylor St. across Canadian Northern Ry. at rail level.

18941. Apr. 1.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to connect with G.T.R. at mileage 93.2 from Glen Tay, Ont.

18942. Apr. 1.—Authorizing G.T.R. to use bridge 271 over Lachine Canal, Montreal.

18943. Apr. 1.—Approving location of 14 G.T. Pacific Ry. stations in British Columbia.

18944. Apr. 1.—Dismissing Montreal Board of Trade's application for order requiring flannelette sheets to be added to Dry Goods List of Canadian Freight Classification at same ratings as provided for cotton piece goods.

18945. Apr. 1.—Extending to May 31 time within which C.P.R. shall complete spur for Calgary Terra-Cotta Co., near Calgary, Alta.

18946. Mar. 20.—Ordering Calgary and Edmonton Ry. to build spur for Saskatchewan Land and Homesteading Co. in Sec. 21-39-27, w. 4 m., Alta.

18947. Mar. 20.—Authorizing Montreal and Atlantic Ry. to build spur for Walsh Plate and Structural Works across St. George St.; road to St. Germain and land adjacent, Drummondville, Que.

18948. Mar. 31.—Approving C.P.R. plans showing general layout of subway at Victoria Rd., Calgary, Alta.; showing general design of superstructure; and stress sheets of superstructure.

18949. Mar. 31.—Authorizing Canadian Northern Ry. to build across C.P.R. irrigation ditch in Secs. 3 and 4-24-28, w. 4 m.; and rescinding orders 11590 and 18385, Sept. 6, 1910, and Sept. 30, 1912.

18950. Mar. 29.—Authorizing C.N. Alberta Ry. to build spur through Secs. 29, 20, 19, 18, 7 and 6, Tp. 54-1, w. 5 m., Alta., to Huff's gravel pit.

18951. Apr. 2.—Authorizing C.N. Ontario Ry. to divert Bush Road, Fraser Tp., Co. Renfrew, Ont., station 2221+97, and to build across same overhead.

18952. Apr. 1.—Authorizing C.N. Ontario Ry. to build bridge over Beaver River, West Branch, Algoma District, at mileage 211.3 from Sudbury Jct.; and rescinding order 18598, Jan. 29, 1913, in so far as it authorizes this construction.

18953. Mar. 29.—Authorizing C.P.R. to build two spurs for Dominion Bridge Co., in Toronto.

18954. Mar. 31.—Authorizing C.P.R. to build its main line at grade across Calgary, Montana, Bonanza and Orient Sts., and Government Road to Fort Steel, Golden townsite, B.C.

18955, 18956. Mar. 29, 28.—Authorizing C.P.R. to build spurs for City of Winnipeg, and also spur for W. Hodge and H. Rorison, Moose Jaw, Sask.

18957. Mar. 29.—Authorizing C.P.R. to build bridge 100.5 over St. John River, at Perth, N.B.

18958. Apr. 1.—Ordering C.P.R. to divert Nine Mile Road along east side of its line to a connection with road between North Gower and South Gower Tps., Ont.

18959. Mar. 29.—Authorizing G.T.R. to build siding for Northern Aluminum Co., Toronto.

18960. Mar. 31.—Authorizing G.T.R. to build additional track across Factory St., Windsor Mills, Que., for Canada Paper Co., Ltd.

18961. Amending order 18903, Mar. 19, re operation of G.T.R. siding through Beardmore and Co.'s shed at Acton, Ont.

18962. Mar. 31.—Authorizing G.T.R. to build siding for Standard Bedstead Co., and Victoriaville Chair Co., on Lot 11, r. 3, Arthabaska Tp., Que.

18963. Apr. 2.—Approving G.T. Pacific Ry. plan showing pile abutments for bridge to be built across opening to be made in fill at Cameron Bay, near Prince Rupert, B.C., by order 15735, Jan. 2, 1912, in substitution for concrete abutments approved by order 18724, Feb. 17, 1913; and rescinding latter order, in so far as it approves the concrete abutments.

18964. Apr. 2.—Authorizing G.T. Pacific Ry. to build spur from its Melville-Regina Branch for Crystal Ice Co. in s.e. ¼ Sec. 9-21-13, Assiniboia District, Sask.

18965. Mar. 29.—Authorizing Montreal and Southern Counties Ry. to build across 18 highways in Greenfield Park, Que.

18966. Apr. 2.—Approving G.T.R. plans showing proposed interchange track with C.P.R. at Orillia, Ont.

18967. Mar. 31.—Authorizing C.P.R. to build spur for Medicine Hat Brick Co., Medicine Hat, Alta.; and rescinding order 17714, Oct. 11, 1912, relating to spur for Purmal Brick Co., Medicine Hat, Alta.

18968. Apr. 2.—Amending order 18816, re change in location of C.P.R. station at Kelloe, Man.

18969. Apr. 2.—Authorizing C.P.R. to build road diversion in Bethany, Ont., as shown on plan under file 2100.115.

18970. Apr. 1.—Amending order 16380, Apr. 24, 1912, by deleting therefrom authorization for location of proposed spur and freight tracks through Lots 21 to 30, Block 175, Regina, Sask.

18971. April 3.—Approving proposed location of G.T. Pacific Ry. station at Moricetown, mileage 204.6, east from Prince Rupert, B.C.

18972. Apr. 3.—Authorizing C.P.R. to open for traffic road crossing between Secs. 18 and 7, Tp. 9-25, and road diversion in Sec. 18-9-25, w. 4 m.; and to close up existing crossing of diverted highway between Secs. 17 and 18-9-25, w. 4 m., Alta.

18973. Apr. 3.—Extending for one month from date time within which Edmonton Interurban Ry. shall file detail plans, showing protective appliances to be installed at crossing of Edmonton, Dunvegan and British Columbia Ry., in n.w. ¼ Sec. 25-53-25, w. 4 m., Alta.

18974. Apr. 2.—Authorizing Montreal and Atlantic Ry. (C.P.R.) to build interchange track with Intercolonial Ry. in Lot 131, St. Rosalie Parish, Que.

18975. Mar. 29.—Approving revised location Toronto and Niagara Power Co.'s second transmission line from Jane St. to Islington, Ont., mileage 4.64 to mileage 7.27.

18976. Apr. 3.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across G.T.R. by a bridge at mileage 121.02, Hamilton, Tp., Ont.

18977. Apr. 3.—Approving location of C.P.R. stations at Consort, Fleet and Monitor, Alta.

18978. Apr. 8.—Authorizing Page Hersey Iron Tube and Lead Co. to build crane runway over C.P.R. siding at Guelph, Ont.

18979. Apr. 7.—Certifying correction of Campbellford, Lake Ontario and Western Ry. (C.P.R.) location plan, to include land for right of way across Mill Pond, Oshawa, Ont., at mileage 159.25 from Glen Tay.

18980. Apr. 4.—Ordering C.P.R. to make such arrangements at Strathcona station, Alta., as will enable Twin City Transfer Co., Edmonton, Alta., to transfer baggage or passengers.

18981. Apr. 4.—Authorizing C.P.R. to build spurs for Dominion Bridge Co. at Winnipeg.

18982. Apr. 7.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to cross G.T.R. by a bridge in Port Hope, Ont.

18983. Apr. 5.—Approving clearance of 3½ ft. for canopy on Bishopric Wallboard Co.'s building from C.P.R. track at Ottawa.

18984. Apr. 8.—Approving revised location C.P.R. Wilkie-Anglia Branch from Sec. 13-34-19, mileage 37.44, to Sec. 9-34-18, mileage 40.66, and from Sec. 9-34-18, mileage 40.66, and from Sec. 9-34-18, mileage 40.66 to Sec. 17-30-16, w. 3 m., mileage 77.28; and authorizing the crossing of 38 highways, and diversion of certain of them.

18985. Apr. 7.—Authorizing Canadian Northern Ry. to build its Delisle Branch across 5 highways in Saskatchewan.

18986. Apr. 2.—Authorizing Canadian Northern Ry. to build spur for Imperial Oil Co., Prince Albert, Sask.

18987. Apr. 7.—Ordering Canadian Northern Ry., until earnings at Englefield station reach requirements of flag station order, to appoint a caretaker there to keep waiting room clean and heated, to meet local wayfreight trains, and to see that freight of same is stored in freight shed under lock and key.

18988. Apr. 3.—Ordering that Canadian Northern Ry. make grade diversion in Sec. 2, and build crossing between Secs. 1 and 2, Tp. 11-32, w.p.m.; and build 8 highways in accordance with the Board's Standard Regulations Affecting Highway Crossings, as amended May 4, 1910; and build a crossing on road allowance between Secs. 19-11-32 and 24-11-33, w.p.m. to complete the work by July 31.

18989. Apr. 5.—Approving revised location of G.T. Pacific Ry., Moose Jaw Northwest Branch between Secs. 19-22-7 and 13-22-8, w. 3 m., mileage 74.5 to 75.6, Moose Jaw District, Sask.

18990. Apr. 7.—Authorizing G.T. Pacific Ry. to carry traffic over its main line east of Prince Rupert, B.C., between New Hazelton and Beament, mileage 181 to 195.

18991. Apr. 5.—Authorizing B.C. Electric Ry. to connect with Vancouver and Lulu Island Ry. near Fourteenth St., New Westminster, by interchange track.

18992. Apr. 2.—Authorizing R. H. Edgar, Bowling Green, Ont., to erect telephone wires across C.P.R. wires and track in Lot 2, Con. 3, Amaranth Tp., Ont.

18993. Apr. 2.—Approving location C.P.R. station at Veteran, Alta.

18994. Apr. 1.—Approving C.N. Alberta Ry. crossing between Secs. 9 and 10-54-26, w. 4 m.; and authorizing it to divert road about 60 ft. west of road allowance, so as to carry it under west end of trestle over Sturgeon River; and approving crossing between Secs. 9 and 16-54-26, w. 4 m., known as Lake Ste. Anne Trail, work to be completed by June 30.

18995. Apr. 7.—Authorizing C.N. Ontario Ry. to build across Toronto Belt Line Ry. at West Toronto, Ont.

18996. Apr. 7.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to take lands for station grounds in Trenton, Ont.

18997, 18998. Apr. 8, 5.—Authorizing C.P.R. to build spurs at mileage 41.0 from Crowsnest, B.C., and for Dominion Bridge Co. at Islington, Ont.

18999. Apr. 5.—Approving location of joint station for C.P.R. and Kettle Valley Ry. on site of present K.V.R. station at Grand Forks, B.C.

19000. Apr. 7.—Authorizing C.N. Branch Lines Co. to build its Sturgis-Hudson Bay Jct. Line across 3 highways in Saskatchewan.

19001. Apr. 7.—Approving C.N. Branch Lines Co.'s location through Tps. 34-37, r. 4-5, w. 2 m., mileage 0 to 21.09, Sask.

19002. Apr. 8.—Authorizing G.T.R. to build siding for Price, Cumming Brick Co., on Lot 19, r. D, Etobicoke Tp., Ont.

19003. Apr. 7.—Authorizing G.T.P. Branch Lines Co. to build bridge across C.P.R. irrigation canal at mileage 180.6 on its Tofield-Calgary Branch, Alta.

[illegible] Authorizing Montreal and Southern Counties Ry. to cross G.T.R. in St. [illegible] from Montreal.

19005. Apr. 9.—Approving alteration in Campbellford, Lake Ontario and Western Ry. (C.P.R.) location to include extra lands for station grounds in Trenton, Ont., and approving station building.

19006. Apr. 9.—Approving Canadian Northern Ry. Standard Freight Mileage Tariff C.R.C. no. E. 212 for its lines east of Port Arthur, Ont.

19007. Mar. 15.—Authorizing C.P.R. to construct sidings to premises of H. B. Harrison, Owen Sound, Ont.

19008. Apr. 2.—Authorizing C.P.R. to open for traffic its second track between Mortlach and Parkbeg, Sask., 8.4 miles.

19009. Apr. 9.—Authorizing C.P.R. to build extension to spur for Prairie City Oil Co., Winnipeg.

19010. Apr. 8.—Approving location of twelve G.T. Pacific Ry. stations in British Columbia.

19011. Apr. 9.—Ordering Canadian Northern Ry. strictly to comply with Sec. 297 of the Railway Act, and to keep certain portions of its right of way free from dead or dry grass, or other unnecessary combustible matter; work to be completed in some sections in Alberta and Saskatchewan not later than May 1, and in other sections in northern Saskatchewan and Manitoba not later than June 15; company liable to a penalty of $100 a day for default.

19012. Apr. 9.—Amending order 18717, Feb. 17, re building of C.P.R. spur for McAuliffe Davis Lumber Co., Gloucester Tp., Ont.

19013. Apr. 9.—Authorizing G.T.R. to build bridge between Cons. 5 and 6, Esquesing Tp., west of Limehouse, Ont.

19014. Apr. 9.—Authorizing G.T.R. to build spur for Telfer Bros., Toronto.

General order 103. Apr. 9.—Amending order 17211, July 24, 1912, approving certain regulations governing testing of hearing and eyesight of railway employes.

19015. Apr. 10.—Extending to May 1 time allowed under order 15703, Dec. 27, 1911, for building of Canadian Northern Ry. spur for Saskatoon Brick and Supply Co., Saskatoon, Sask.

19016. Apr. 10.—Approving revised location of C.N. Ontario Ry. Toronto-Ottawa line, mileage 4.65 to 5.27 from Yonge St., Toronto, and authorizing building of branch and Y's, mileage 0 to 1.48.

19017. Apr. 7.—Approving Niagara, St. Catharines and Toronto Ry. revised location through Niagara Tp., mileage 8.7 to 11.1; and authorizing crossing of Creek and Blackswamp Roads.

19018. Apr. 11.—Approving Canadian Northern Ry. location through Tps. 24-22, r. 4-2, w. 3 m., mileage 80.09 to 99.72, Sask.

19019. Apr. 8.—Authorizing Canadian Northern Ry. to extend foot bridge over its tracks at West Fort William, Ont., and rescinding order 13888, June 9, 1911, in same connection.

19020. Apr. 9.—Amending order 17606, Sept. 25, 1912, re building of bridge by C.N. Ontario Ry. at Forresters' Creek, Ross Tp.

19021. Apr. 9.—Approving C.N. Ontario Ry. revised location through York and Scarboro Tps., mileage 4.35 to 7.21 from Yonge St.

19022. Apr. 3.—Approving location of C.N. Ontario Ry. station grounds at Beachburg, and rescinding order 18468, Nov. 27, 1912.

19023. Apr. 11.—Ordering Canadian Northern Ry. to grade highway diversion between Secs. 23 and 26, Tp. 9, r. 32, w.p.m., and to build 7 highway crossings in Tp. 9, r. 32 and 33.

19024 to 19026. Apr. 12, 10.—Authorizing C.P.R. to build highways across its line at Herschel, Willows and Leipzic, Sask.

19027. Apr. 11.—Amending order 18911, March 25, re location of G.T. Pacific Ry. station Irmie, Sask., to read Imrie, Sask.

19028. Apr. 10.—Approving G.T. Pacific Branch Lines Co.'s site at Huxley, Alta.

19029. Apr. 11.—Relieving Bedlington and Nelson Ry. from erecting fences along its right of way between International Boundary and mileage 29.5; at bridges and trestles between mileage 29.5 and 37.5; and between Sirdar Jct. and Kuskonook, B.C., until these portions become settled or improved.

19030. Apr. 12.—Authorizing C.P.R. to build certain spurs across Eighth, McNeely and Columbia Streets, New Westminster, B.C.

19031. Apr. 12.—Approving Kettle Valley Ry. plan of standard trestle.

19032. Apr. 10.—Relieving Canadian Northern Ry. from publication of notice of proposed application for approval of amalgamation agreement with Winnipeg and Northern Ry.

19033. Apr. 11.—Ordering that highway be carried over G.T.R., at point of crossing, between Lots 8 and 9, Con. 1, Murray Tp., Ont., by a bridge; 50% of cost to be paid by Campbellford, Lake Ontario and Western Ry. (C.P.R.), and balance by G.T.R., less 20% of cost of single span over G.T.R. only, to be paid out of the railway grade crossing fund; work to be completed by Dec. 31.

19034. Apr. 11.—Authorizing G.T.R. to build siding for Quincy Adams Lumber Co., Morrison Tp., Ont.

19035. Apr. 12.—Approving C.N. Ontario Ry. location, through Nelson and East Flamboro

Tp., mileage 31.54 to 38.54; and rescinding order [illegible], Oct. 18, 1912.

[illegible] Apr. [illegible]—Approving Toronto Suburban Ry. plans of proposed undercrossing of C.P.R. at Mimico River, Etobicoke Tp., Ont.

[illegible] Apr. [illegible]—Amending order [illegible], Jan. 24, re highway crossing on C.P.R. Swift Current Northwesterly Branch.

19038. Apr. 12.—Amending order 18908, Mar. 20, re C.P.R. spur at Neebing Ave., Fort William, Ont.

19039. Apr. 14.—Approving revised location of [illegible] Campbellford, Lake Ontario and Western Ry. (C.P.R.) from Division St., Cobourg, [illegible] mileage [illegible] from Glen Tay, to Lot 25, Con. [illegible], Hamilton Tp., mileage [illegible].

19040. Apr. 14.—Authorizing C.P.R. to build bridge 47.8 over Ruby Creek, Cascade Subdivision, B.C.

[illegible] Apr. [illegible]—Authorizing C.P.R. to build highway across its line in part of Sec. 21-24-25, [illegible].

19042. Apr. 14.—Authorizing C.P.R. to build bridge [illegible] Cascade Subdivision, B.C.

[illegible] Apr. [illegible]—Authorizing Canadian Northern Ry. to build across 4 highways on its Craven Northeasterly Branch, Sask.

Authorizing Canadian Northern Ry. to build across 4 highways on its Craven Northeasterly Branch, Sask.

[illegible] Apr. [illegible]—Authorizing G.T.R. to build two sidings for Asbestos Manufacturing Co., [illegible], Que.

[illegible] to [illegible] Apr. [illegible]—Authorizing C.P.R. to build spurs for Matthew Laing, Limited, Fort William, Ont.; Imperial Oil Co., Stettler, Alta., and [illegible] siding spur in Lot Cadastral 1632, southwesterly of Bethune Ave., Westmount, Que.

[illegible] Apr. [illegible]—Authorizing C.P.R. to build two sidings for H. B. Harrison, Owen Sound, Ont., and rescinding order [illegible], Mar. [illegible].

19049. Apr. 14.—Authorizing Canadian Northern Ry. to change its location from near intersection of Dee St. and Logan Ave., Winnipeg, [illegible]; and to build across C.P.R.

19050. Apr. 15.—Extending for 30 days from date time within which Canadian Northern Ry. shall install electric bell at crossing of first highway east of Joliette, Que.

19051. Apr. 14.—Ordering C.P.R. to install gates at crossing of Centre St., Chatham, Ont.

19052. Apr. [illegible]—Approving location of G.T. Pacific Ry. Prince Rupert Westerly line, mileage 0 to 2.25, at Seal Cove, r. 5, Coast District, B.C.

19053. Apr. 10.—Approving location of C.P.R. [illegible] Branch from Sec. [illegible], mileage 0 to 115.49, and authorizing its building across 115 highways.

19054. Apr. 7.—Relieving G.T. Pacific Ry. from erecting fences from Junkins, 870 miles west of Winnipeg, to mileage 1073.5, and from Prince Rupert easterly to mileage 164, until land on either side becomes settled or improved.

19055. Apr. 15.—Approving G.T.R. plan of proposed connection and interchange track with C.P.R. at Orillia, Ont., each company to bear half cost of construction and maintenance, and rescinding order 18966, Apr. 2.

[illegible] Apr. [illegible]—Amending order [illegible], Mar. 18, re Campbellford, Lake Ontario and Western Ry. (C.P.R.) road crossing, etc., mileage 52.73 [illegible].

[illegible] Apr. [illegible]—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build [illegible] Lots [illegible] and [illegible], Con. 1, Darlington Tp., mileage 151.52 from Glen Tay, Ont.

19058. Apr. 16.—Authorizing C.P.R. to build spur for Northwestern Brass Co., Calgary, Alta.

19059, 19060. Apr. 15, 14.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build road diversion in Lot 16, Con. 1, Hope Tp., mileage 129.65 from Glen Tay; to build over same by a bridge and to close crossing of highway between Lots 16 and 17, and rescinding orders 17575 and 17953, Sept. 23 and Nov. 8, 1912; and to build across highway between Lots 8 and 9, Con. 1, Murray Tp., under bridge authorized by order 19033, Apr. 11, and rescinding order 18711, Feb. 13.

19061. Apr. 14.—Recommending for approval of Governor in Council, G.T.R. Signal Rules governing Transportation Department.

19062. Apr. 15.—Authorizing G.T.R. to build siding on and along Maitland Road, thence northwesterly for 300 or 400 ft.

19063. Apr. 16.—Amending order 19004, Apr. 7, re crossing of G.T.R. by Montreal and Southern Counties Ry., at mileage 7.45 from Montreal.

[illegible] C.N. Ontario Ry. to build bridge over Mink Creek, Pentland Tp., [illegible].

[illegible] Canadian Northern Ry. to build extension to spur for Shevlin Clarke Co., Fort Frances, Ont.

19066. Apr. 14.—Amending order 18943, Apr. 1, re location of certain G.T. Pacific Ry. stations [illegible].

19067. Apr. 15.—Ordering Michigan Central Rd. to move farm crossing in Lot 13, Con. 11, South Norwich Tp., Ont.

19068. Apr. 16.—Ordering that interlocking plant at crossing of Fredericton St. by Port Arthur and Fort William Electric Ry. be operated by day and night watchmen; as soon as gates are in operation, provisions of order 7601 are rescinded in so far as they provide for such operation by conductors of cars; and apportioning cost.

19069. Apr. 1.—Ordering that telegraph companies transmit and receive for delivery, both plain and code language Japanese telegrams, and providing certain conditions. The details of this order are given fully on another page, under Telegraph, Telephone and Cable Matters.

19070. Apr. 16.—Authorizing C.N. Ontario Ry. to build branch line across Toronto-Sudbury Branch and across Don River, at mileage 4.8 from Yonge St., Toronto.

19071. Apr. 16.—Authorizing East Kootenay Logging Ry. to build over British Columbia Southern Ry. by a bridge 1½ miles west of Jaffray station, B.C.

19072. Apr. 16.—Authorizing Winnipeg Electric Ry. to build extension along Arlington St. from William to Logan Ave., and across C.P.R. spur along Ross St.

19073. Apr. 16.—Authorizing G.T.R. to build siding and three spurs therefrom for Canadian Explosives, Ltd., Chambly West Parish, Que., to be completed within three months from date.

19074. Apr. 17.—Authorizing Canadian Northern Ry. to build diversion of its Oak Point Branch across 9 highways in Rosser, Man.

19075. Apr. 16.—Authorizing C.P.R. to build spur for Northern Electric and Mfg. Co. in Calgary, Alta., to be completed within three months from date.

19076. Mar. 26.—Ordering Campbellford, Lake Ontario and Western Ry. (C.P.R.) to install improved automatic electric bell at crossing between Lots 2 and 3, Con. 4, Scarboro Tp., Ont.

19077. Apr. 17.—Relieving C.P.R. from providing protection at crossing 350 yds. south of Crossfield station, Alta.

19078. Apr. 7.—Authorizing C.P.R. to build its Bergen Northeasterly Branch across 7 highways, mileage [illegible] to 5.88, Manitoba.

19079. Apr. 17.—Authorizing C.P.R. to divert portion of main line from Beavermouth, mileage 63.0 from Field, B.C., to mileage 89.0 at Ross Peak.

19080, 19081. Apr. 18.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across Division St., Cobourg, Ont., by a bridge, at mileage 119.76 from Glen Tay; to widen excavation on each side of subway, sod slopes, put in concrete sidewalks and leave roadway in good condition and well gravelled; and to build its ballast pit spur across 3 highways in Scarboro Tp.

19082. Apr. 18.—Authorizing C.P.R. to build spur for Seaman, Kent Co., Outremont, Que.

19083, 19084. Apr. 15, 17.—Authorizing C.N. Ontario Ry. to build bridge across Sturgeon River (middle crossing), Field Tp., mileage 257.6 from Ottawa; and to build its revised branch connecting its Toronto-Sudbury line with its Toronto-Ottawa line across C.P.R., near Donlands station, and rescinding order 18548, Jan. 17.

19085. Apr. 18.—Authorizing C.P.R. to build diversion of road allowance in Sec. 5-10-16, near Taber, Alta.

19086. Apr. 17.—Establishing express collection and delivery limits in St. John, N.B.; and ordering charge of extra toll for delivery of express freight in West St. John. This order is quoted fully on another page under Among the Express Companies.

19087. Apr. 16.—Approving Lake Erie and Northern Ry. location from station 0 at Lorne Bridge, Brantford, to station 1113+90, at Main St., Galt, Ont.

19088. Apr. 21.—Limiting publication of statutory advertisement of notice of application for approval of amalgamation agreement between Canadian Northern Ry. and C.N. Branch Lines Co.

19089. Apr. 21.—Approving location of C.N. Ontario Ry. station grounds at Dana, mileage 275.8 from Ottawa.

19090. Apr. 18.—Authorizing C.P.R. to take for its Windsor St. station and terminals and for rearrangement of tracks leading thereto certain lands in St. Andrew Ward, Montreal, and ordering it to extend a certain foot passage connecting it with remainder of Lot 1637 by stairway.

19091. Apr. 10.—Authorizing C.P.R. to cross Portland St., St. John, N.B., with spur for J. W. McCready & Son.

[illegible] Apr. [illegible]—Approving [illegible] location of C.P.R. temporary station on Hardisty Ave., Edmonton, Alta.

19093. Apr. 19.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across 5 highways in Cobourg, Ont.

19094. Apr. 21.—Approving location of G.T. Pacific Ry. station at Geikie, Alta.

[illegible] Apr. [illegible]—Authorizing Bay of Quinte Ry. to build spur for Canadian Sulphur-Ore Co., Elzevir and Madoc Tps., Ont.

[illegible] Apr. [illegible]—Authorizing Niagara, St. Catharines and Toronto Ry. to build siding for Port Dalhousie Canning Co., and approving revised location of its line between points A and B in Louth Tp. and Port Dalhousie, Ont.

Birthdays of Transportation Men in May.

Many happy returns of the day to:—

W. R. Baker, Secretary, and Assistant to President, C.P.R., Montreal, born at York, Eng., May 25, 1852.

G. S. Cantlie, General Superintendent Car Service, C.P.R., Montreal, born there May 2, 1867.

M. Donaldson, M. Can. Soc. C.E., Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, born near Edinburgh, Scotland, May 1, 1851.

A. E. Duff, ex-District Passenger Agent, G.T.R., Toronto, now of Winnipeg, born at Sherbrooke, Que., May 1, 1872.

G. C. Dunn, District Engineer, G.T.P.R., Winnipeg, born at Quebec, May 13, 1862.

G. I. Evans, Superintendent, Angus Locomotive Shops, C.P.R., Montreal, born there, May, 1880.

M. A. Fullington, A.M. Can. Soc. C.E., Assistant Engineer, Eastern Division, C.P.R., Montreal, born at Johnson, Vt., May 12, 1880.

D. J. Hackett, Superintendent, Canada Division, Michigan Central Rd., St. Thomas, Ont., born in Cass County, Mich., May 1, 1868.

G. H. Hedge, Master Mechanic, Central Division, Canadian Northern Ry., Winnipeg, born at Neath, Wales, May 26, 1865.

T. Henry, Manager, Eastern Lines, Richelieu and Ontario Navigation Co., Montreal, born there, May 29, 1865.

B. R. Hepburn, M.P., President and General Manager, Ontario and Quebec Navigation Co., Ltd., Picton, Ont., born there, May 27, 1876.

G. A. Hoag, Superintendent, Central Ontario Ry., Trenton, Ont., born at Walker's Falls, Ont., May 31, 1866.

W. T. Huggan, Accountant and Auditor, Prince Edward Island Ry., Charlottetown, P.E.I., born at Halifax, N.S., May 24, 1851.

J. Irwin, Superintendent, District 3, Canadian Northern Ry., Dauphin, Man., born at Clinton, Ont., May 28, 1866.

H. B. Sherwood, Superintendent, Bay of Quinte Ry., Napanee, Ont., born at Auburn, N.Y., May 25, 1847.

W. Stapleton, District Passenger Agent, Canadian Northern Ry., Saskatoon, Sask., born at Bristol, Eng., May 20, 1884.

E. Tiffin, Member, Government Railways Managing Board and General Traffic Manager, Government Railways, Moncton, N.B., born at Hamilton, Ont., May 5, 1849.

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, B.A.Sc., M. Can. Soc. C. E., Chief Engineer of Surveys, Mackenzie, Mann & Co., Ltd., Toronto, born at Quebec, May 25, 1855.

James Yeo, ex-Roadmaster, Intercolonial Ry., Riviere du Loup, Que., born at Bideford, Devonshire, Eng., May 1, 1830.

Clerks Wanted by G.T.R.—The Railway Magazine, London, Eng., says: "We learn that owing to the rapidly extending lines of the Grand Trunk Ry. system, there are a limited number of vacancies for freight audit clerks in the offices of that company at Montreal. Experience in freight audit office or goods station experience is essential, but promotions are very rapid. Applications for positions should be addressed to F. C. Salter, European Traffic Manager, London."

The New Jersey legislature has passed a bill calling for the elimination of all grade crossings in that state at the entire expense of the railways. The railways are trying to have the act declared unconstitutional.

Railway Development

Projected Lines, Surveys, Construction, Betterments, Etc.

Algoma Central and Hudson Bay Ry.—We are officially advised in reference to reports that it was intended to proceed with the construction of dock and other terminal facilities at Sault Ste. Marie, Ont., at once, that there wil' be no further construction on terminal facilities this year. The only work that will be done will be the finishing up of the work practically completed last season, and which was described and illustrated in our Feb. issue. No definite decision has been reached as to the building of the proposed coal dock at Sault Ste. Marie. (April, pg. 168.)

Algoma Eastern Ry.—The Dominion Parliament has extended the time within which the line from Sudbury to Little Current, on Manitoulin Island, Ont., may be completed. (Jan., pg. 20.)

Athabaska Northern Ry.—The Dominion Parliament has extended the time within which the projected railway from Edmonton to Athabaska Landing may be built. (Dec., 1904, pg. 604.)

Atlantic, Quebec and Western Ry.—Quebec Oriental Ry.—The Minister of Railways stated in the House of Commons, Mar. 31, that the Government had under consideration a proposal to take over these lines and operate them as a branch of the Intercolonial Ry. The Q. and O. Ry., formerly known as the Atlantic and Lake Superior Ry., extends from Matapedia on the Intercolonial to New Carlisle, 100 miles, and the A.Q. and W. Ry., from the latter place to Gaspe Basin, Que., 104 miles. (Sept., pg. 450.)

Bruce Mines and Algoma Ry.—The Ontario Legislature has authorized the company to change the title to the Lake Huron and Northern Ontario Ry. Co. The existing line extends from the shore of Lake Huron through Bruce Mines for 17 miles to some copper mines at Rock Lake, but it has not been operated to any great extent. The company is given power to extend the existing line to a junction with the National Transcontinental Ry. between Cochrane and Hearst, and in connection with this project the company is authorized to purchase 1,000,000 acres of land along its route at 25c. an acre for 3,000 acres a mile of line built, and 50c. an acre for an additional 1,000 acres a mile of line built; the company agreeing to place on the lands 250 settlers a year for five years, and 500 settlers a year for a second five years; the investment of $3,500,000 on wood working plants within three years; and the provision of roads, bridges and schools for the territory opened up. (April, pg. 168.)

It is said that the organization of the new company which has taken hold of the B.M. and A. Ry. has not been completed, but that when it is, a contract for a section of the line will be let to M. J. O'Brien, of Renfrew. J. H. McCaul, of the O'Boyle Construction Co. is also interested in the project, and R. A. Lyon, Toronto, has been looking after the financing.

Calgary, Edmonton and Fort McMurray Ry.—The Dominion Parliament has incorporated a company with this title to build a line from Calgary to Edmonton, Fort McMurray, Alta., and other points in Alberta. (April, pg. 168.)

Canada and Gulf Terminal Ry.—Negotiations are said to be in progress for the construction of the extension of the line from the present terminus at Matane to Gaspe Basin, Que., 223 miles. The surveys being made are for a line having a maximum gradient of 0.6%. H. J. Lyons, Matane, Que., is Vice-President. (April, pg. 168.)

Canadian Western Ry.—The Dominion Parliament has incorporated a company with this title to build a railway to connect Winnipeg, Pas, Man.; Prince Albert, Battleford, Sask.; and Lethbridge, Man. (April, pg. 168.)

Cariboo, Barkerville and Willow River Ry.—An extension of time has been granted by the Dominion Parliament for the building of this projected railway. The act also authorizes the building of an extension from Barkerville to the junction of the Clearwater and North Thompson Rivers, and an additional branch to Bear River, B.C. (Dec., 1912, pg. 604.)

Central Ry. of Canada.—An action has been entered by C. J. Wills and Co., general contractors for the building of this railway, asking that the company be ordered to deposit in court $750,000 to guarantee the cost of building the line from Montreal to Midland, Ont. The contractors claim that they have already built 20 miles and done other work for which they claim $230,000. The company has filed a counter claim for $100,000, alleging that the contractors have failed to carry out their contract, with due diligence. (April, pg., 168.)

Clay Line Ry.—The Alberta Legislature has incorporated a company with this title to build a line from sec. 2, tp. 11, range 6 northerly to sec. 2, tp. 12, range 6, west of the 4th meridian, thence to Medicine Hat, and to operate the same by any motive power. The provisional directors are: H. O. Knowles, S. G. Bannan, L. Hunt, Medicine Hat, Alta.

Dominion North Western Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Regina, Sask., to Tuxford, on the C.P.R., thence to Red Deer, Alta., with a branch through Battleford, Sask., to Fort McKay. M. J. O'Connor, Ottawa, is interested in the project. (Dec., 1912, pg. 604.)

Edmonton, Dunvegan and British Columbia Ry.—Track is reported to have been laid to 75 miles northwest of Edmonton, Alta., and it is expected that tracklaying will be completed to the Athabasca River, 120 miles, during the summer. Ballasting will be started at once, a steam shovel being put in at Irish Creek, 65 miles from Edmonton. Supplies are being sent in for the construction gangs. The right of way has been cleared to 25 miles beyond the Athabasca River, and the line has been located to beyond Lesser Slave Lake. Contracts will shortly be let, it is reported, for the grading and masonry work westerly of the Athabasca River. J. D. McArthur, Winnipeg, is President, and A. C. Galbraith, Edmonton, is General Superintendent of Construction. (April, pg. 168.)

Esquimalt and Nanaimo Ry.—We are officially advised that a contract has been let to E. R. Doe and Brother, Victoria, B.C., for the erection of a 10 stall locomotive house, a machine shop 120 by 60 ft., a boiler house and store on the Songhees reserve, Victoria. The work is to be completed by Aug. 31. (April, pg. 168.)

Fredericton and Grand Lake Coal and Ry. Co.—We are officially advised that very little in the way of construction has been done on the line in Dec., 1912. The masonry for the bridge over Nashwaak River has been completed and the steel superstructure is completed. The substructure for the bridge over the Noornan Brook is finished and the steel superstructure is to be put in place immediately. The work of completing the line is now being gone on with, and it is expected to have it opened from near Fredericton to Minto by Aug. 31. The contract for grading, bridging, tracklaying and ballasting the Marysville branch has been let to A. E. Trites and Sons. It will be 2.84 miles long, leaving the main line about half a mile from Gibson. The work is to be completed by Aug. 31. H. W. D. Armstrong, Fredericton, N.B., is Chief Engineer. (April, pg. 168.)

Glengarry and Stormont Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to build a railway from Polycarp station, Ont., on the C.P.R., southwesterly through Williamstown to Cornwall, Ont. Pringle, Thompson and Burgess, Ottawa, are solicitors for applicants. (Aug., 1912, pg. 411.)

Huron and Ontario Ry.—The Dominion Parliament has authorized the company to change its name to that of the Toronto and North Western Ry., and has given an extension of time for the building of the projected railway. T. H. Kilgore, Toronto, is Secretary. (Dec., 1912, pg. 604.)

Intercolonial Ry.—The Sydney, N.S. Board of Trade has asked the Minister of Railways to take up the question of providing suitable railway and dock terminal facilities at that port.

The Maritime Board of Trade sent a deputation to Ottawa recently to urge the Minister of Railways to take up the question of locating a new route for the Intercolonial Ry. between Amherst and Truro, N.S. The purpose of the new route is to avoid the heavy gradients over the Cobequid Mountains. M. Lodge, President of the Board, on returning to Halifax, Mar. 31, stated that in all probability another survey would shortly be made. Previous surveys had shown that in order to obtain a line with a gradient of 0.4 to 0.6% between Amherst and Truro, the distance would be increased by 13 miles.

Tenders are under consideration for the building of a spur line of 1.50 miles from Pugwash, on the Oxford Branch, to Pugwash Harbor, N.S. (Feb., pg. 83.)

Kettle Valley Lines.—The Dominion Parliament has authorized the company to enter into agreement with the C.P.R.; has extended the time for the building of authorized lines, and has given power to build the additional lines described in Dec., 1912, pg. 605.

It is reported that a 50 mile stretch of line west of Carmi, B.C., has been handed over to the operating department, and that a regular train service will be established at an early date. A further section of the line is expected to be completed during the summer. The route of the line between Osprey Lake and Penticton has not been finally steeled, but Chief Engineer McCulloch says that this will shortly be decided on, and that the entire line from Grand Forks to the Fraser River will be completed by the end of 1914.

In connection with the Spokane and Republic Ry., which is the section of the line in the United States, the difference with the Great Northern Ry., as to the route of the line in the San Poil Valley, for the extension from Republic to Spokane, Wash., which has been a matter for litigation during the past few years, has been settled, by the G.N. Ry. withdrawing all claims to the route. (April, pg. 169.)

Lake Erie and Northern Ry.—The location plans for this projected railway from Port Dover on Lake Erie to Brantford, Ont., have been approved by the Board of Railway Commissioners. The route map of the section of the line from Brantford to Galt has been approved by the Minister of Railways, and the locations are before the Board of Railway Commissioners. The location plans for the line through Brantford have recently been the subject of considerable discussion with the City Council, and G. A. Mountain, Chief Engineer, Board of Railway Commissioners, has been making special surveys with a view to settling the differences. The contract for the building of the entire line has been let, we are officially advised, to Johnson Bros., Port Hope, Ont., except so far as the steel superstructures for bridges, the station buildings and freight sheds are concerned. A subcontract has been let to P. H. Secord and Son, Brantford, for the masonry on the bridge over the Grand River, Brantford, and the masonry on the line between Brantford and Galt. It was expected that construction work would be started on the line by April 30. (April, pg. 169.)

London and Port Stanley Ry.—In a bill before the Ontario Legislature respecting the proposed electrification of this railway, it is provided that the taxpayers of London, Ont., will be asked to vote on a bylaw to raise $700,000 for the work. It was originally proposed to ask for $800,000, but it was finally arranged that a single track only should be provided, hence the reduction to $700,000. (April, pg. 169.)

The Menzies Bay Ry. Co., which is a subsidiary of the Ross McLaren Lumber Co., proposes to build a railway on Vancouver Island, to open up its timber limits.

Michigan Central Rd.—The contract for the erection of a machine shop and power house at St. Thomas, Ont., is reported to have been let to the Arnold Construction Co., Chicago, Ill. (April, pg. 169.)

North Ry.—We are officially advised that further exploration surveys are being made on sections of this projected line from Montreal to the mouth of the Nottaway River, Que., on Hudson Bay. S. T. Tomlinson, Montreal, is Consulting Engineer. The directors of the company for the current year are:—Hon. N. Curry, Hon. J. M. Wilson, Hon. T. Berthiaume, D. L. McGibbon, F. H. Clergue, C. P. Beaubien, Montreal; W. H. Thorne, St. John, N.B.; W. J. Bell, Sudbury, Ont.; W. Moore. (Feb., pg. 83.)

Pacific and Hudson Bay Ry.—The Dominion Parliament has extended the time within which the lines from Bella Coola, B.C., easterly, and other authorized lines may be built. (Dec., 1912, pg. 605.)

Quebec Eastern Ry.—An action has been entered in the Quebec Courts by Baron L. Pichon to recover from the company and Sir Rodolphe Forget $1,362,235 damages on the alleged failure to carry out contracts for the construction of this projected railway. The contract is stated to have been entered into Sept. 30, 1911, with Sir Rodolphe Forget, and transferred by him to the Q.E. Ry. Feb. 28, 1912, and was for the building of a railway from Sherbrooke to Chaudiere, Que. Baron Pichon claims to have made expenditures on surveys, etc., and made deposits and securities for payments. He now asks that the contract be set aside, and that the [illegible] damages. (Aug., 1912, pg. 412.)

Quebec, Portland and International Short Line Ry.—The Dominion Parliament has incorporated a company with this title to build a line from La Patrie, Que., to the International Boundary, thence along the valley of the North River to a junction with the Maine Central Rd., or the C.P.R. in Eaton Tp. (Dec., 1912, pg. 605.)

The Saskatoon Transfer Ry. is proposed to be built by local interests to connect up a section of the city which is being developed for manufacturing concerns, with the several railways entering Saskatoon Sask. C. A. Wentz returned to Saskatoon, April 7, from Winnipeg, and reported the progress of negotiations with the railways. The principal difficulty in the way of immediate construction is said to be the difficulty of obtaining rails. (Nov., 1912, pg. 558.)

Southern Central Pacific Ry.—An extension of time has been granted by the Dominion Parliament for the building of the lines authorized in 1903 and 1911. (Jan., pg. 21.)

Timiskaming and Northern Ontario Ry. Replying to questions in the Ontario Legislature recently the Minister of Public Works said, the only extension of the line now under construction is the branch from Iroquois Falls Jct., to the Abitibi Pulp and Paper Co.'s plant at Iroquois Falls, in Teefy tp. The branch with spur tracks and sidings will be 7.65 miles long, and is estimated to cost $126,181.27. The cost will be defrayed out of the Consolidated Revenue Fund. (April, pg. 170.)

Tobique and Campbellton Ry.—The New Brunswick Legislature has granted an extension of time for the construction of this projected railway. The company proposes to build a line in continuation of the C.P.R. Tobique Valley Branch to Campbellton, N.B. (See Tobique Valley Ry., Feb., 1912, pg. 68.)

Toronto, Hamilton and Buffalo Ry.—Tenders are under consideration for the building of a second track from Welland to Smithville, Ont., 16.5 miles. (April, pg. 170.)

Van Buren Bridge Co.—Application is being made to the Dominion Parliament to vest in the V.B.B. Co., which has been incorporated by the State of Maine, the charter rights of the Restigouche and Western Ry., (now the International Ry. of New Brunswick), to build a bridge across the St. John River between St. Leonards, N.B., and Van Buren, Me., and to authorize the company to build the bridge. A. E. McKenzie, Campbellton, N.B., is solicitor for applicants. (See International Ry. of New Brunswick, April, pg. 169.)

Railways in Alaska.—The Railroad Commission appointed by the United States Government in 1912 to investigate the transportation question in Alaska, has presented its report. The Commission recommends the building of a line from Chitina to Fairbanks, 313 miles; a branch line 38 miles long in the Bering River coal field; the construction of a line into the lower Susitna Valley, involving 115 miles of new construction; a Matanuska branch, 38 miles long, and an extension of the Susitna line into the valley of the Kuskokwim and the Iditarod section, 229 miles. The estimated cost of building these lines is put at $53,611,000, and the Commission recommends that the work be taken in hand at once.

The Titanium Alloy Manufacturing Co. announces that the sale of its products will hereafter be in charge of the General Manager, Andrew Thompson, with offices at Niagara Falls, N.Y., and that A. C. Hawley will represent the company in the Pittsburgh district, being located at the company's offices, in the Oliver Building, Pittsburgh, Pa.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	$1,829,700	$1,335,100	$494,600	$133,000
Aug	1,745,800	1,375,000	370,800	56,100
Sept	1,671,500	1,248,000	423,500	4,100
Oct	2,351,200	1,645,900	705,300	24,900
Nov	2,509,700	1,631,900	877,800	212,600
Dec	2,132,000	1,551,000	581,000	77,200
Jan	1,513,400	1,243,200	270,200	46,500
Feb	1,398,700	1,130,200	268,500	30,900
	$15,152,000	$11,160,300	$3,991,700	$585,300
Incr	$2,385,800	$1,800,500	$585,300	

Mileage in operation during the foregoing period, 4,297, against 3,981 in the previous year.

Approximate earnings for March, $1,685,900, against $1,572,700 for March, 1912.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	$12,052,398 58	$7,604,221 68	$4,448,176 90	$745,148 57

Approximate earnings for March, $10,965,000, against $10,389,000 for March, 1912.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R. for Jan., 1913, as compared with those for Jan., 1912:—

Grand Trunk Railway.

	1913.	1912
Earnings	$2,917,500	$2,506,400
Expenses	2,480,600	2,147,100
Net earnings	$436,900	$359,300

Canada Atlantic Railway.

	1913.	1912
Earnings	$168,250	$128,800
Expenses	205,400	155,900
Deficit	$37,150	$25,200

Grand Trunk Western Ry.

	1913.	1912
Earnings	$517,800	$476,000
Expenses	511,650	460,400
Net earnings	$6,150	$15,600

Detroit, Grand Haven and Milwaukee Ry.

	1913.	1912
Earnings	$150,000	$147,700
Expenses	187,850	186,000
Deficit	$37,950	$38,300

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to Mar. 31

	1913	1912	Increase
G.T.R.	$9,704,824	$8,298,538	$1,406,286
C.A.R.	546,351	459,451	86,900
G.T.W.R.	1,716,621	1,536,894	179,727
D.G.H. & M.R.	531,117	474,947	56,200
Totals	$12,498,913	$10,769,830	$1,729,113

Grand Trunk Pacific Railway Earnings.

The earnings of the Prairie Section and Lake Superior Branch, for March, were $415,377; and the aggregate for three months ended Mar. 31, was $1,167,305.

The Montreal Auto Bus Co., which has secured a Dominion charter, has an authorized capitalization of $10,000,000, of which it is said $1,000,000 will be subscribed in Montreal. Among the incorporators are Duncan McDonald, formerly General Manager, Montreal Tramways Co., who will, it is said, be General Manager of the new company; H. S. Holt, F. L. Wanklyn, and P. Galibert.

Mainly About Transportation People.

JAS. McCREA, ex President, Pennsylvania Rd., died in Philadelphia, Mar. 28.

SIR MONTAGU ALLAN has donated a cup for the hunter class at the Montreal Horse Show.

T. BELL, of the C.P.R. advertising department, Montreal, has resigned, to take a business position in Winnipeg.

J. P. MORGAN has been elected a director of the New York Central and Hudson River Rd., to succeed his late father.

H. G. KELLEY, Vice President, G.T.R., has been elected a director of the G. T. Pacific Ry., vice E. H. Fitzhugh, resigned.

W. WAINWRIGHT, Vice President, G.T.R., and the Misses Wainwright, returned to Montreal from Atlantic City early in April.

MRS. C. A. HAMMOND, mother of the late H. C. Hammond, formerly President, Northern Navigation Co., died in Toronto, April 24, aged 93.

G. D. PERRY, General Manager, Great Northwestern Telegraph Co., and Mrs. Perry, left Toronto, April 24, for a trip to England.

W. H. C. MUSSEN, of Mussens, Limited, contractors and railway supplies, has been re-elected President of the Thistle Curling Club, Montreal.

W. WAINWRIGHT, Vice President, G. T.R., accompanied by Misses M. and G. Wainwright, returned to Montreal, April 2, from Atlantic City, N.J.

MRS. O'BRIEN, wife of M. J. O'Brien, railway contractor, mine owner, etc., was seriously injured at Renfrew, Ont., April 23, in a runaway accident.

GEORGE BURY, Vice President, C.P.R., delivered an address on "Women's Place in the Business World" at the Women's Press Club, Winnipeg, April 10.

SIR MONTAGU ALLAN, accompanied by Lady and Miss Allan, sailed for Great Britain, from Halifax, N.S., on the s.s. Empress of Ireland, Apr. 4.

ALFRED PRICE, General Superintendent, Alberta Division, C.P.R., Calgary, made a trip east recently, spending a short time in Toronto.

D. M. McINTYRE, K.C., Chairman, Ontario Railway and Municipal Board, is to be given the degree of LL.D. by Queen's University, Kingston, Ont.

J. P. PENNEFATHER, M.D., who died at Winnipeg, April 14, aged 80, was father of F. R. Pennefather, District Master Mechanic, C.P.R., Cranbrook, B.C.

W. MURPHY, who died at Brockville, Ont., April 15, was father of C. Murphy, General Superintendent of Transportation, Eastern Lines, C.P.R., Montreal.

H. G. KELLEY, M. Can. Soc. C.E., Vice President, G.T.R., returned to Montreal at the end of April, from a trip to Havana, Jamaica and the Panama Canal.

R. W. REFORD, of the Robert Reford Co., Ltd., Montreal, has succeeded his late father as a director of the Crown Trust Co. and the Crown Reserve Mining Co.

SIR THOS. G. SHAUGHNESSY sailed from Halifax, N.S., on the s.s. Empress of Ireland, Apr. 4, for Great Britain, to meet Lady and the Misses Shaughnessy.

F. W. PETERS, General Superintendent, British Columbia Division, C.P.R., and Mrs. Peters, arrived in Montreal, April 11, on their way to England for a holiday trip.

F. A. BOURNE, Paymaster, G.T.R., Montreal, has, on the President's nomination, been appointed Assistant Secretary-Treasurer of the G.T.R. Insurance and Provident Society.

D. F. CREIGHTON was the recipient of a presentation from his colleagues of the Canadian Northern Ry. local freight staff on his recent transfer from Brandon, Man., to Regina, Sask.

Sir Richard W. Scott, formerly Secretary of State, who died at Ottawa, Apr. 23, aged 88, was father of D'ARCY SCOTT, Deputy Chairman of the Board of Railway Commisisoners.

A. A. MAVER was chairman, and W. D. Robb and D. Crombie the principal speakers, at the first annual dinner of the apprentices at the G.T.R. Point Charles Shops, held in Montreal, April 11.

MISS N. McNICOLL, daughter of D. McNicoll, Vice-President, C.P.R., has had three pictures accepted for the Royal Society of British artists' exhibition, which opened in London, Eng., April 7.

T. BELL, Assistant General Advertising Agent, C.P.R., Montreal, was presented with a black morocco suit case by the staff of the department, April 18, on his leaving the company's service.

H. J. White,
General Car Foreman, Canadian Northern Quebec Ry., and Quebec and Lake St. John Ry.

H. W. FLANNAGAN, a sub-contractor on the Grand Trunk Pacific Ry., in British Columbia, is stated to have been engaged in railway construction work, as a sub-contractor, for 47 years.

S. C. STICKNEY, former Vice President and General Manager, Chicago Great Western Rd., and recently in private practice, New York City, has been appointed Assistant to the President, Erie Rd.

H. G. CORAM was presented with an address and a purse of gold by the C.P.R. local freight staff, Winnipeg, recently, on retiring from the position of local freight agent there, to engage in farming.

A. A. ALLAN, of the Allan Steamship Co., Mrs. Allan and Miss Hazel Allan, left Montreal early in April for Great Britain, Mrs. Allan having been selected to christen the company's new s.s. Calgarian.

S. P. BROWN, Chief Engineer in charge of construction of the Canadian Northern Ry. tunnel under Mount Royal, Montreal, gave an address on tunnels before the Montreal Canadian Club, April 14.

The engagement is announced of WALLACE H. ROBB, of the Anchor Packing Co., Montreal, and son of W. D. Robb, Superintendent of Motive Power, G.T.R., to Miss E. H. Burrows, of Belleville, Ont.

L. S. TAIT, who died in Montreal, April 8, aged 24, was a brother of Sir Thomas Tait, President, Fredericton and Grand Lake Coal and Ry. Co., and of H. M. Tait, General Agent C.P.R., Minneapolis, Minn.

A. BRUNET, of Montreal, who died in Paris, France, Mar. 22, was the original director appointed by the Dominion Government on the Grand Trunk Pacific Ry. Board, and served in that capacity until 1911.

W. H. BREITHAUPT, M. Can. Soc. C.E., consulting engineer, Toronto, has associated with him C. B. Kingsley, A.M. Am. Soc. C.E., to continue the engineering practice of the late E. H. Keating and Mr. Breithaupt.

MRS. DARLING, wife of T. S. Darling, Manager, Canadian Northern Ry. Land Department, Montreal, who died somewhat suddenly in Duluth, Minn., April 18, was a daughter of A. D. Davidson, Land Commissioner, C.N.R., Toronto.

R. STANLEY, who has been appointed Car Foreman, G.T.R., Allandale, Ont., entered the company's service in 1882 as car repairer and inspector, and from 1903 to Apr. 1, 1913, was leading car inspector at Gravenhurst, Ont.

J. A. FULLERTON was recently presented with a silver loving cup by C.P.R. steamship department officials at Vancouver, B.C., on retiring from the position of C.P.R. Ship's Husband there, a position which he had held for a number of years.

GEORGE BURY, Vice President, C.P.R., returned to Winnipeg, Mar. 28, from a trip to Japan and China. On his way east from Vancouver, B.C., he stopped off at Calgary, Alta., where he was the principal guest at a dinner given by the Board of Trade.

In referring to the appointment of A. P. WALKER, M. Can. Soc. C.E., as Division Surveyor, Ontario Division, C.P.R., Toronto, in our last issue, he was inadvertently described as Assistant Division Engineer, which was his former position.

SIR WILLIAM WHYTE, Lady Whyte and Miss Gladys Whyte, sailed from St. John, N.B., by the s.s. Empress of Britain, Apr. 18, for Liverpool. They will spend a short time in France, and then return to England, expecting to be back in Winnipeg in June.

E. B. WINGATE, who died in Hamilton, Ont., April 22, after a long illness, was engaged some 20 years ago in engineering work on the Toronto, Hamilton and Buffalo Ry. Subsequently he was City Engineer of Hamilton, and afterwards practised privately.

SIR PERCY GIROUARD, director, Sir W. G. Armstrong, Whitworth and Co., of Elswick and Manchester, Eng., is visiting Canada, and it is reported that during his stay he will discuss probabilities of his firm embarking in the shipbuilding business in the Dominion.

W. J. HALLETT, who has been appointed Travelling Car Inspector, Ontario Lines, and part of Eastern Lines, G.T.R., London, Ont., entered G.T.R. service in 1904, and up to 1907 was engaged as car repairer and air brake inspector; 1907 to 1908, Car Foreman at York, Ont.; 1908 to Apr. 1, 1913, Car Foreman at Allandale, Ont.

[illegible] M.P. [illegible] the C.P.R.

W. H. V. [illegible] quently going to the C.P.R. service in the [illegible]

A. T. COLLINS, who has been appointed General Freight Agent, Canadian Lake Line, Toronto, was born at Island Pond, Vt., [illegible] and entered transportation service, in 1884, since when he has been, to 1886, [illegible], G.T.R., Sarnia, Ont.; 1886 to 1893, cashier, G.T.R., Sarnia, Ont.; 1893 to 1907, chief clerk, G.T.R., [illegible], Ont.; 1907 to 1913, chief clerk, Traffic Manager's office, Canadian Lake Line, Toronto.

[illegible], who has been appointed Travelling Passenger Agent, G.T.R., Montreal, was born at [illegible] Agent's office, G.T.R., Montreal; 1899 to [illegible], Montreal; 1903 to Apr. 7, 1913, Ticket Agent, Pullman Co., Bonaventure Station, Montreal.

[illegible] from Feb., 1875, to Aug., 1879, Assistant Engineer, same road, and from Apr., 1881, to Jan., 1884, Chief Engineer, Georgian Bay [illegible]

[illegible], Ont., Mar. 31, aged 68, on his return from [illegible], Toronto, [illegible]

[illegible] B.C., was announced in our last issue, was [illegible] Calgary, [illegible]

[illegible] William, Ont.; [illegible] Mar. 15, 1908, to Oct. 1, [illegible] Hamilton, Ont.

FRANK CLARK, who has recently been appointed Locomotive Foreman, Canadian Northern Ry., Radville, Sask., was born at Cowes, Isle of Wight, Eng., Mar. 20, 1884, and entered railway service [illegible], since when he has been, to June, 1905, apprentice, Isle of Wight Central Ry., Newport; June to Nov., 1905, fitter, London and South Western Ry., Guildford, Surrey; Nov., 1905, to Nov., 1906, locomotive examiner, same company; Dec., 1906, to 1907, fitter, C.P.R., Chapleau, Ont.; 1907 to Feb., 1911, in various capacities, C.N.R., at Dauphin, Man., and Edmonton, Alta.; Feb., 1911, to [illegible], 1913, assistant foreman, C.N.R., Dauphin, Man.

W. H. [illegible], who has been appointed wharfinger, Richelieu and Ontario Navigation Co., and Inland Lines, Ltd., at Yonge St. Dock, Toronto, was born at Ipswich, Eng., Aug. 28, 1872, and entered transportation service, June, 1903, since when he has been, during the navigation seasons, to 1906, Baggage Agent, Niagara Navigation Co., Toronto; and 1907 to 1912, General Baggage Agent, same company, Toronto; during the winter seasons from 1909 to 1912, he was Baggage Agent, Florida East Coast Ry., Palm Beach, Fla.; Aug., 1912, to Apr. 1, 1913, Baggage Agent, Richelieu and Ontario Navigation Co., Western Lines, Toronto.

H. J. WHITE, who has been appointed General Car Foreman, Canadian Northern Ry., and Quebec and Lake St. John Ry., Joliette, Que., and whose portrait appears in this issue, was born at [illegible], Vt., Apr. 1, 1871, and entered C.P.R. service May, 1893, since when he has been, to Sept., 1894, Joint Car Inspector, Newport, Vt.; Sept., 1894, to May, 1898, Joint Car Inspector, St. [illegible] Jct., Que.; 1898 to 1903, Car Inspector, Toronto; 1904 to Sept., 1906, leading hand carpenter at Outremont, Que.; Sept., 1906, to June, 1911, General Car and Wrecking Foreman, North Bay, Ont.; June, 1911, to Mar. 27, 1913, General Car and Wrecking Foreman, West Toronto, Ont.

W. R. HOWARD, whose appointment as Chief Dispatcher and Trainmaster, District 1, Atlantic Division, C.P.R., Brownville Jct., Me., was announced in our last issue, was born at St. Andrews, N.B., Sept. 14, 1871, and entered railway service Sept., 1887, since when he has been, to June, 1889, operator, New Brunswick Ry., at different points; June, 1889, to Oct., 1891, baggageman, C.P.R., between St. John, N.B., and Megantic, Que.; Oct., 1891, to Oct., 1895, agent and operator at different points, Atlantic Division, C.P.R.; Oct., 1895, to Nov., 1912, dispatcher, C.P.R., Brownville Jct., Me.; Nov., 1912, to Mar. 1, 1913, acting Chief Dispatcher, C.P.R., Brownville Jct., Me.

[illegible] National Transcontinental Railway, Winnipeg, [illegible] the Canada Atlantic Ry., since when his [illegible] Transcontinental Ry., Kenora, Ont.; 1906-7, Divisional Engineer, division 7, same railway; [illegible] same railway, North Bay, Ont.; 1910-11, [illegible]

C. J. SMITH, who has been appointed Vice President and General Manager, [illegible] Ry., Montreal, was born at Hamilton, Ont., Mar. 10, 1862, and entered transportation service in 1879, since when he has been, to 1880, clerk in local freight office, Hamilton and North Western Ry., Hamilton, Ont.; 1880 to 1882, in Audit and Purchasing Department, Chicago and Alton Rd.; 1882 to May, 1885, in Construction Department, C.P.R.; June, 1885, to 1886, in Traffic Department, New York, Lake Erie and Western Rd.; 1886 to 1888, chief clerk to General Manager, Chicago and Atlantic Ry.; Jan. to July, 1888, in Traffic Department, Minneapolis, St. Paul and Sault Ste. Marie Ry.; July, 1888, to Jan., 1890, in Traffic Department, St. Paul, Minneapolis and Manitoba Ry.; Jan., 1890, to Mar., 1898, General Freight and Passenger Agent, Canada Atlantic Ry.; Apr., 1898, to Mar., 1904, General Traffic Manager, Canada Atlantic Ry. and Canada Atlantic Transit Co., Ottawa, Ont.; Mar., 1904, to Mar., 1913, General Manager, Richelieu and Ontario Navigation Co., Montreal.

N. E. BROOKS, M. Can. Soc. C.E., who has been appointed Engineer Maintenance of Way, Western Lines, C.P.R., Winnipeg, was born at Sherbrooke, Que., Dec. 25, 1866, and entered railway service in May, 1886, since when he has been, to Mar., 1887, rodman, Ontario and Quebec Branch, C.P.R.; May, 1887, to Apr., 1888, rodman, Atlantic and Northwest Branch, C.P.R.; Apr., 1888, to Aug., 1889, Resident Engineer on Construction, Atlantic and Northwest Branch, C.P.R.; Aug., 1889, to Sept., 1890, Resident Engineer on Construction, Qu' Appelle, Long Lake and Saskatchewan Ry.; Sept., 1890, to Oct., 1891, Resident Engineer, Calgary and Edmonton Ry.; Oct., 1891, to Sept., 1892, leveller, Crowsnest Pass Branch, C.P.R.; Sept. to Dec., 1892, Resident Engineer, Crowsnest Pass Branch, C.P.R.; Dec., 1892, to Dec., 1895, Assistant Engineer of Construction, Montreal St. Ry.; Jan. 1, 1896, to Aug., 1903, Inspector, Calgary and Edmonton Ry. and Qu'Appelle, Long Lake and Saskatchewan Ry.; Aug. to Nov., 1903, Superintendent, Maintenance of Way and Structures, Calgary and Edmonton Ry.; Nov., 1903, to Apr. 15, 1913, Division Engineer, C.P.R., Calgary, Alta.

F. H. McHENRY, M. Can. Soc. C.E., has resigned as Vice President of the New York, New Haven and Hartford Rd. He has been Vice President in charge of maintenance and construction since 1904, and it has been under his general supervision that electric power system of the railway has been established and extended. Until a short time ago he was in charge of the construction and maintenance departments of the Boston and Maine Rd. also. He was born in Cincinnati, Ohio, Jan. 25, 1859, and was educated at the Pennsylvania Military College at Chester, Penn. He began engineering work in 1883 as a rodman on the Black Hills branch of the Northern Pacific Ry. In 10 years he passed through all the engineering grades from rodman to Chief Engineer. After three years as Chief Engineer of the Northern Pacific Ry., he [illegible] Chief Engineer. He retired in 1901, and after spending two years in Japan, China and the [illegible] Islands, became Chief Engineer of the Canadian Pacific Ry. In Oct., 1904, he was made Vice President of the Consolidated Ry., in charge of construction, operation and maintenance of the electric railway lines of the New York, New Haven and Hartford Rd. The office of Vice President in charge of construction and maintenance will be [illegible] and the duties of the office assumed by different branches of the engineering department.

Canadian Pacific Railway Construction, Betterments, Etc.

Atlantic Division. We are officially advised that it is proposed to lay 142 miles of 85 lb. steel rails on the main line between St. John and McAdam, N.B., releasing a similar mileage of 80 lb. rails. On branch lines of the division 126 miles of line now laid with 48, 56, 60 and 62 lb. steel is to be relaid with 72, 73 and 80 lb. steel. About 90 miles of line between St. John and Vanceboro is being equipped with block signals. Of this mileage 46 miles from Fredericton Jct. to Vanceboro was put in operation April 2, and the mileage between Fredericton Jct. and St. John was expected to be ready very shortly thereafter.

We are officially advised that it is proposed to build a new bridge over the St. John River at the reversing falls, St. John, N.B., some time within the next two or three years, but neither the type of bridge to be used, nor the time when it is to be built, has been decided.

Eastern Division.—The new train shed at Windsor St. station, Montreal, is in course of construction. The main part of the steel work was reported to be in place April 16, and the whole work was expected to be completed by April 30.

The Montreal City Council has granted a permit for the erection of a new car shop at the head of Davidson St. at an estimated cost of $131,000.

Press reports state that arrangements are being made for the building of the 25 miles necessary to link up the Nominingue Valley line, now terminating at Mount Laurier, with the Ottawa, Northern and Western Ry., now terminating at Maniwaki, Que.

Campbellford, Lake Ontario and Western Ry.—It is expected that this new line from Glen Tay to Agincourt, Ont., will be completed by Dec. 1. About 70% of the grading and 65% of the bridgework have been done.

Ontario Division.—The building of the second track from Islington to Guelph Jct., about 30 miles, is the principal work in hand for this season west of Toronto. On the section between West Toronto and Islington, on which the second track has already been built, there is a break, at the bridge across the Humber River, just west of the Lambton Golf Club grounds. Tenders are under consideration for the excavation, masonry and concrete work necessary for making this bridge sufficient to carry a second track. The present bridge across the Humber River, west of Lambton, consists of three spans, deck trusses, on two masonry piers and two abutments, each span being about 157 ft. long. It is proposed to make the bridge capable of carrying a second track by extending the present pier and abutments and adding two additional piers, dividing the two end spans in two, thus making four spans of 78½ ft. each and one span of 157 ft. The present steel span will be replaced with new double track spans. The detail plans for the work have not been finally approved. The work is in charge of A. L. Hertzberg, Division Engineer.

The contract for the second track from west of Islington to Guelph Jct. has been let to Jones and Girouard, Ottawa, and a start was made April 21. The work is being done under the charge of — Wellwood as Divisional Engineer, with — Morrison as Resident Engineer, from Islington to Streetsville Jct., and — Rayner as Resident Engineer west of Streetsville Jct.

J. W. Leonard, Assistant to the Vice President, in a letter, April 7, informed the Mayor of Stratford that the company had decided not to reopen the matter of the entrance of the company's line into that city, and that the projected line from Embro to Linwood, via Stratford, would be given up in favor of a connection between Guelph and Bolton.

Guelph and Goderich Ry.—An extension of time has been granted by the Dominion Parliament for the building of the uncompleted portion of this railway.

Lake Superior Division.—We are officially advised that it is intended to add largely to the shops and other buildings at North Bay, Ont., in the near future. The plans and details of the alterations and additions are not fully completed. A report states that the work will cost about $250,000, and that the buildings will consist of a repair shop with a capacity of 10 locomotives, and a car repair shop.

Manitoba Division.—The lift bridge over the Kaministikwia River at Fort William, Ont., has been completed, and the bridge over the McKellar River, between Islands 1 and 2, at Fort William, is expected to be completed early in June. Both these bridges carry a double track.

The contract for the erection of a 6 stall addition to the roundhouse at Fort William, Ont., is reported to have been let to Carter, Halls and Aldinger, Winnipeg.

Piles are being driven by the Thunder Bay Harbor Improvement Co. for the building of a new freight shed for the C.P.R. at the old coal dock on the Kaministikwia River, Fort William. It will have a capacity of 100,000 tons and will be used for the handling of the hard coal traffic.

Contracts are reported to have been let for the following works:—To A. C. Creelman, Winnipeg, for the erection of frame stations at Arnaud, Edrans, Stoney Mountain; section houses at Oberon, Shanawan, Melbourne; extensions to locomotive houses at Arcola, Minnedosa, Man.; Kenora, Ont. To Carter, Halls, Aldinger Co., Winnipeg, extensions to locomotive houses at Fort William, Ont., and Weston, Winnipeg. To C. W. Sharpe, Winnipeg, warehouses and buildings for sleeping and dining car department at Fort William, Ont. To A. Semons, for extensions to the freight car repair shops at Fort William.

The bridge construction in progress at Winnipeg and vicinity consists of a double track bridge over the Red River, 770½ ft. long, with a 258 ft. swing span; a bridge over the Red River on the new Kildonan cut off, about 1,000 ft. long, with a 312 ft. swing span, and a double track bridge, 428 ft. long over the Assiniboine River west of Winnipeg.

Saskatoon Division.—The route maps, approved by the Minister of Railways, for the projected branch from Lanigan to Prince Albert, 117 miles, shows a line crossing the Canadian Northern Ry. at Humboldt and near Birch Hills, and crossing a branch of the Saskatchewan River near mileage 105.

The Board of Railway Commissioners has authorized the opening for traffic of the second track between Mortlach and Parkbeg, Sask., on the transcontinental line west of Moose Jaw, 8.4 miles.

The track laying gang started work April 7, to complete the line from Wilkie into Kerrobert, and a ballasting gang is at work on the 48 miles of line from Macklin to Kerrobert.

Alberta Division.—A three track bridge, 470 ft. long, is being built across the Bow River, east of Calgary, to replace the present single track bridge and a double track bridge is being built across the same river 25 miles west of Calgary. The single bridge will consist of [illegible] spans, [illegible] ft. each. On the Suffield [illegible] branch there will be a bridge [illegible] ft. long over the Bow River.

The high level bridge across the Saskatchewan River at Edmonton, Alta., is expected to be completed in August. The length between abutments approximates 2,550 ft., the extreme height above mean water level is 157 ft. and the piers are [illegible] ft. high. The bridge provides for an upper deck 39 ft. and a lower deck 43 ft. wide; the upper deck will carry the railway track and double electric car tracks, while the lower will be used by vehicles and foot passengers, the sidewalks having a clear space of 8 ft. and the roadway of 23 ft.

Calgary-Vancouver Second Track Work.—There continues to be considerable newspaper speculation as to what is to be done in the way of second track construction on the line between Calgary and Vancouver, the latest report being that it had been decided to drive a tunnel, 16 miles long, through the Kicking Horse Pass at an estimated cost of $14,000,000. We understand that no surveys having in view the construction of such a tunnel have been undertaken as yet, and that it is scarcely likely that anything will be done at least for some time to come. The section of the second track work which will be first completed, we are officially advised, will be that from Golden into Vancouver. With the completion of the Kootenay Central Ry., which is expected to be ready for operation early in 1914, the company will have two routes easterly, one along the existing main line, and the second via the Kootenay Central Ry. and Crowsnest branch.

The building of the second track easterly from Vancouver is being progressed with, and it was expected to have the mileage to Mission City in operation by May 1.

Kootenay Central Ry.—We are officially advised that a contract for grading 65 miles has been let to Foley Bros., Welch and Stewart, the mileage covered being from 60 miles south of Golden to Skookumchuck, B.C. The contract reported as having been let to Boomer and Hughes was awarded in 1912, and covers from mileage 42 to 60. The construction of this section of the line includes the building of a bridge 602 ft. long.

Shuswap and Okanagan Ry.—The Dominion Parliament has extended the time for building the uncompleted sections of this line.

British Columbia Division.—Tenders are under consideration for grading and other work on the Arrow Lake subdivision.

Plans were filed at Ottawa, April 16, for the proposed tunnel under Vancouver, for the purpose of connecting the lines on the Inlet and the False Creek water fronts. The tunnel will be about a mile long.

The company has completed a new ferry slip at Esquimalt, and a car ferry service with the mainland was started April 12. This is in addition to the present service between the mainland and Ladysmith.

Trail, B.C., to Metaline, Wash.—Press reports state that surveys have been completed for a line from Trail, B.C., to Metaline, Wash., and that a route with a 1% gradient has been secured. H. M. Dibbles was engineer in charge of the party. The report states that the C.P.R., or some allied interests, is negotiating for the purchase of the Idaho and Washington Ry., which has a terminal at Metaline, and that the building of a line from Trail to Metaline is a part of the plans. (April, pg. 174.)

Railway Rolling Stock Notes.

[illegible] Ry. has [illegible] 125 [illegible] box cars from [illegible] Car Co.

The Canadian Northern Ry. has ordered [illegible] Canadian Car and Foundry Co.

The G.T.R. is reported to be enquiring prices on 3,000 forty ton box cars and 1,000 fifty ton coal cars.

The Algoma Central and Hudson Bay Ry. has received five consolidation locomotives from Canadian Locomotive Co.

The G.T.R. has received one Pacific type locomotive, 73 in. wheel, from Montreal Locomotive Works; 3 switching locomotives, 20 by 26 in. cylinders, from Canadian Locomotive Co., and 55 box cars from Pressed Steel Car Co.

The Intercolonial Ry. has received 20 [illegible] and 91 box cars from the Canadian Car and Foundry Co.; 50 Hart-Otis steel dump cars, built by the Canadian Car and Foundry Co., from the Hart-Otis Car Co.; 16 box cars, 60,000 lbs. capacity from the Nova Scotia Car Works; 5 consolidation locomotives from the Canadian Locomotive Co.; and 2 consolidation locomotives from the Canada Foundry Co.

The Canadian Northern Ry., between Mar. 14 and April 14, received the following [illegible] Pacific type and [illegible] locomotives, from Montreal Locomotive Works; 7 first class cars and 200 box cars, from Canadian Car and Foundry Co.; 4 second class cars, and 25 flat cars, 60,000 lbs. capacity, from Crossen Car Co.; 2 combination cars, from Preston Car and Coach Co., and 10 cabooses from the Company's Winnipeg Shops.

The C.P.R., between Mar. 12 and April 12, ordered the following additions to rolling stock:—160 vans, 30 steel colonist cars, 11 stock cars, 1 freight refrigerator car, 2 second class cars, 1 first class car, 2 mail and express cars, [illegible] from its Angus Shops; [illegible] cars, from its Winnipeg Shops; 7 Jordan [illegible] ers, 2 wrecking cranes, from F. H. Hopkins and Co.; [illegible] from Mussens Ltd., and 1 [illegible] from Browning Engineering Co.

The Toronto, Hamilton and Buffalo Ry., J. D. McArthur Co., and the Superior Construction Co., have each ordered one Rodger double plough distributing car, and [illegible] being built by the Canadian Car and Foundry Co. Following are the chief dimensions:

[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	[illegible]

[illegible] to rolling stock:—2 postal cars, 5 colonist [illegible] class cars from the Preston Car and [illegible] and 4 Pacific locomotives from the Mont[illegible] and 5 switching locomotives from the [illegible] dry Co.

[illegible] Steel Foundries Ltd. has re[illegible] tons [illegible] Hart-Otis Car Co. They were built by Canadian Car and Foundry Co. Following are the chief dimensions:—

[illegible]	[illegible]	[illegible]
Width over side sills	8 ft.	10 ins.
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
Height from rail to top of car	8 ft.	1⅜ ins.
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	1 ins.
[illegible]	[illegible]	[illegible]
Width of hopper door opening	2 ft.	

The C.P.R., between Mar. 12 and April 12, received the following additions to rolling stock:—2 second class cars, 1 dining car, 4 tourist cars, 7 mail and express cars, 6 sleeping cars, 16 suburban cars, 10 baggage and express cars and 4 class G2 locomotives, from its Angus Shops; 578 steel frame box cars, 58 steel frame flat cars and 48 automobile cars, from Canadian Car and Foundry Co.; 140 steel frame box cars, from National Steel Car Co.; 3 Lidgerwood unloaders, from Allis-Chalmers-Bullock Ltd.; 3 steam shovels and 2 Jordan ballast spreaders, from F. H. Hopkins and Co.; 5 steam shovels, from Mussens Ltd.; 30 air dump cars, from Western Wheeled Scraper Co., and 252 steel frame box cars, from Barney and Smith Co.

Following are chief details of the 10 consolidation superheater locomotives, and 5 are being built by the Canadian Locomotive Co., and 1 consolidation superheater locomotives, by the Canadian Foundry Co., for the Intercolonial Ry., as mentioned in our last issue:—

	Consolidation	Switching
[illegible]	[illegible] lbs.	
[illegible]	[illegible] lbs.	[illegible] lbs.
[illegible]	16 ft. [illegible] ins.	
[illegible]	[illegible]	[illegible]

The Canadian Car and Foundry Co., between Mar. 14 and April 16, received the following orders for rolling stock:—1 all wood Lidgerwood flat car, from F. H. Hopkins and Co.; 6 forty ton trucks, from Dominion Bridge Co.; 250 forty ton steel frame box cars, 2 all wood postal cars, 4 wood combination first class and baggage cars and 5 wood colonist sleepers, from Intercolonial Ry.; 75 forty ton all steel twin hopper coal cars, from Canadian Northern Ry.; 2 all wood Rodger double plough distributing cars, from Hart-Otis Car Co.; 2,000 forty ton steel underframe box cars, from G.T.R., and 39 quarry cars, from Dominion Iron and Steel Co.; and during the same period delivered 1 all wood Lidgerwood flat car to Allis Chalmers-Bullock, Ltd.; 5 first class cars and 186 thirty ton wood box cars, to Canadian Northern Ry.; 32 steel frame drop bottom [illegible] forty ton box cars and 92 forty ton steel underframe flat cars, to C.P.R.; 4 forty ton Hart convertible ballast cars, to Canadian Steel Foundries Ltd.; 1 dump car to Edmonton Radial Ry.; 50 fifty ton Otis dump cars, 142 steel frame box cars and 1 thirty ton refrigerator car, to Intercolonial Ry.; 2 steel street car bodies, to Montreal Tramways Co.; 2 forty ton steel frame box cars and 4 forty ton steel underframe flat cars, to Windsor, Essex and Lake Shore Rapid Ry.; 4 forty ton steel underframe flat cars, and 4 fifty ton trucks, to St. Lawrence Bridge Co.

Great Northern Ry. Lines in Canada.

Press reports recently stated that the G. N. R. proposed to start construction on an extension of the line serving Felon and Great Falls, Mont., to the International Boundary, between Montana and Alberta. The new line, it was reported, was already located to Dupayer, and the extension of this survey would take the line through the Blackfoot Reserve to the International Boundary near the St. Mary's River. The reports further stated that the G.N.R. has secured, or was negotiating for the purchase of, the Western Dominion Ry. charter, which has power to build a line from the International Boundary into the Alberta coalfields and through Edmonton to Fort St. John, B.C. We were officially advised, April 16, that the G.N.R. Co. had "at present no such plans in contemplation" and that the report mentioned was "purely a newspaper story."

The Vancouver, Victoria and Eastern Ry. and Navigation Co.'s line runs into the United States at several points, and from one of these points south of Grand Forks, B.C., a line had been projected along the San Poir Valley. The Spokane and British Columbia Ry., the United States end of the Kettle Valley Ry., was given rights to build along the same valley. After litigation extending over ten years, the G.N.R. announced, April 1, that it had decided to abandon the project of building this line.

Victoria and Sidney Ry.—An agreement has been made by which the rights and property of this railway have been transferred to the Vancouver, Victoria and Eastern Ry. and Navigation Co. The agreement has been formally approved by the City of Victoria and the British Columbia Government, both of which guaranteed the bonds of the V. and S. Ry. (April, pg. 177.)

Taxation of Railways in New Brunswick.

The New Brunswick Legislature has passed an act repealing the act of 1870 respecting the taxation of railways which prohibited the province or municipalities taxing railways. The Premier stated that what was no doubt a wise provision when the first act was passed, might not be so under present conditions. Up to 1875 the province expended $2,000,000 upon subsidies to railways, and since that date $2,907,000 had been expended. With the exception of Prince Edward Island (where the one railway being Government owned was not subject to taxation), Nova Scotia and New Brunswick, all the provinces of Canada taxed railways. The Government had not decided that railways should be taxed, but it was desired to have power to do so, if, upon investigation, taxation was found to be desirable.

The Province of Ontario received $48,000 from express companies operating in the province, during the fiscal year 1911-12 as follows: American Ex. Co., $3,000; Canadian Ex. Co., $17,000; Canadian Northern Ex. Co., for 1911, $3,000, for 1912, $4,500; Dominion Ex. Co., $19,000.

The demurrage rate on freight cars, which has been in force on Canadian railways since last fall, has been discontinued, and the old rate of $1 a day, has been restored.

The Canadian Northern Railway Repudiates the Industrial Shippers Guide.

It has been brought to the attention of the Canadian Northern management that the publishers of a book entitled "Industrial Shippers' Guide" are using the name of this railway in soliciting advertising, and that they also claim that, when finished, the book will be distributed by the C.N.R.

The C.N. Ry. management desires to make it perfectly clear to all concerned that if the name of the railway is being used it is done without authority, and contrary to their wishes. The company has no intention of distributing the Industrial Shippers' Guide, and has no connection therewith, and desires to have this matter understood.

Testing of Hearing and Eyesight.—The Board of Railway Commissioners passed general order 103, April 9, making a number of changes in order 17211, July 24, 1912, approving the regulations governing the testing of hearing and eyesight of railway employes.

Railway Lands Patented.—Letters patent were issued during February covering Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry.	1,756.00
Canadian Northern Ry.	470.59
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	1,610.40
Total	3,836.99

CANADIAN ALLIS-CHALMERS CO.—It is announced that the Canadian General Electric Co. has acquired the properties and assets of Allis-Chalmers-Bullock, Limited, in Canada, and that the business will be carried on as Canadian Allis-Chalmers, Limited, J. A. Milne continuing as General Manager. The transaction includes the exclusive right from the Allis-Chalmers Co., of Milwaukee, Wis., to manufacture its patented specialities in Canada.

Locomotive Boiler Reports.—The Board of Railway Commissioners has issued a circular stating that it is in receipt of information that there is now, and there has been for some time past, an unusual number of locomotive fire boxes damaged by shortage of water. In many cases the damage has been of a very serious nature, though fortunately accidents have not resulted in injuries to either enginemen or trainmen, but have only necessitated the shopping of the locomotive for heavy fire box repairs. In order to keep the Board's records for locomotive boilers correct it is of the utmost importance that the Board be furnished with a report covering all such damage as is referred to herein. The Board therefore requests that these reports be forwarded promptly by the railway companies.

The following officers and directors were elected for the current year, at the recent annual meeting of the Montreal Warehousing Co.:—President, E. J. Chamberlin; Vice President, H. G. Kelley; other directors, W. Wainwright, M. M. Reynolds and J. E. Dalrymple; Manager and Secretary, G. H. Hanna.

Until recently, the two 500 h.p. gas engines that supply the power for the Intercolonial Ry. shops at Moncton, were provided with gas from a large producer on the plant. The discovery of natural gas in the country nearby has made the use of the latter desirable, so that recently, the supply of gas for the engines was changed from producer to natural.

Canadian Pacific Railway Machinery Requirements at McAdam Jct.

The following machinery is to be installed in the machine shop which is being built by the C.P.R. at McAdam Jct., N.B.:

1 48 inch belt driven press, 200 tons pressure.
1 double axle lathe, with crane mounted on the machine.
1 42 inch car wheel boring machine.
1 80 inch driving wheel lathe.
1 24 inch drill press
1½ inch to 4 inch pipe threading machine.
1 24 inch x 12 ft. double back-geared engine lathe.
2 20 inch x 8 ft. double back-geared engine lathes.
1 36 inch x 14 ft. double back-geared engine lathe.
1 universal grinding machine.
2 18 inch x 8 ft. double back-geared engine lathes.
1 pneumatic tube welding hammer.
1 centering machine.
1 nut facing machine.
1 51 inch vertical boring mill.
1 1,600 lb. steam hammer.
1 40 ton hydraulic press, for pressing brasses in axle.

Dominion Government Railway to Hudson Bay.

A contract is reported to have been let for the building of two steel barges and two scows for work in the preparing of the harbor for the Hudson Bay terminals of this railway. As soon as they are completed the rest of the dredging plant will be got together, and sent to Hudson Bay for the work. While no decision has been announced as to the location of the terminal, it is believed that it is to be at Port Nelson. H. T. Hazen is expected to be placed in charge of the harbor construction work, and two parties of engineers have been sent overland from Cochrane, Ont., to complete the inshore work, while the s.s. Minto is being outfitted for a voyage to Hudson Bay to complete the survey of the approaches.

The House of Commons has voted a further sum of $750,000 on account of the construction of the railway from Pas to Hudson Bay, and for the provision of terminal facilities and elevators in connection therewith. (April, pg. 177.)

Canadian Freight Association, Eastern Lines

At the annual meeting in Montreal, April 18, the following committees were elected:—

ADVISORY—C. A. Hayes, W. M. Kirkpatrick, G. H. Shaw, J. H. Meglemry.

EXECUTIVE—W. M. Kirkpatrick, F. F. Backus, G. Tombs, H. C. Martin.

CLASSIFICATION—W. M. Kirkpatrick, H. C. Martin, G. Tombs, F. J. Watson, E. N. Todd, L. Macdonald, H. E. Macdonell, G. T. Pettigrew, R. E. Perry, M. H. Brown.

FREIGHT INSPECTION—R. W. Long, G. Tombs, M. H. Brown, R. W. Youngs, L. Macdonald, A. D. Huff, G. H. Clark, W. B. Bamford, W. S. Elliot.

The New Brunswick Transportation Co. has been incorporated under the New Brunswick Joint Stock Companies Act with a capital of $99,000 and office at St. John, N.B., to transport freight and passengers by means of trucks, wagons or other vehicles drawn or propelled by electricity or any other motive power. The provisional directors are:—J. C. Berrie, W. A. Dougherty, H. A. Powell, W. J. Ingram, W. H. Harrison, St. John, N.B.

National Transcontinental Ry. Construction.

[illegible] -truction came up, [illegible] as to [illegible] district D. In district E, the length of [illegible] have been completed, and 195 miles of track [illegible] -en laid, in- [illegible] Transcona to [illegible] -gth of line from [illegible] 1,804 miles: [illegible] ings, 383 miles; telegraph lines, 1,170 [illegible] Quebec before Sept. 1."

[illegible] not moved [illegible] but [illegible] tide. [illegible]

[illegible]

[illegible]

Grand Trunk Pacific Railway Construction.

[illegible] Montreal, April 11, a bylaw was passed authorizing the directors to issue an additional $25,000,000 of debenture stock, to complete the line, the provision of rolling stock and other equipment, and for general purposes. H. G. Kelley, Vice President G.T.R., was elected a director, vice E. H. Fitzhugh, resigned.

M. Donaldson, Vice President, returned to Winnipeg, April 5, after having completed a trip of inspection over the company's lines, in operation and under con- [illegible] the laying of track into Fort George, B.C., [illegible] Rupert end, for 115 miles, during this year. On the section to Fort George, two steel bridges have to be completed over the Fraser River. On the section from Prince [illegible] Gulch, 20 miles east of Hazleton. A steel bridge across the Gulch was expected to be completed by the end of April, when track laying would be resumed. When this work is completed there will remain about 220 miles to be graded and railed to complete the line through from Winnipeg to Prince Rupert. This mileage is all straight work, and unless labor troubles intervened the two sections of the line will be joined [illegible] 1914. [illegible] work is being done on the mileage on which track has been laid.

Contracts are reported to have been let for the building of the following bridges—steel superstructures on concrete and masonry piers and abutments, on the main line:—

248 ft. over McLennan Creek; 129 ft. Little Shuswap; 1,032 ft. Rau Shuswap, 129 ft. Cottonwood Creek; 129 ft. Fifty Mile River; 689 ft. Second Fraser River; 968 ft. Third Fraser River; 459 ft. Willow River; 1,227 ft. Fourth Fraser River; 642 ft. Upper Nechaco River; 154 ft. First Buckley River; 364 ft. Second Buckley River.

The Board of Railway Commissioners has authorized the opening for traffic of the line from New Hazleton, mileage 181, to [illegible] from Prince Rupert, B.C.

Work is proceeding on the dock construction at Prince Rupert.

G. T. Pacific Branch Lines.—Application [illegible] Commissioners for authority to build about [illegible] the terminals in Fort William, Ont., of the [illegible]

[illegible] freight terminals at Fort William in the [illegible] track into the yards will run down Empire Ave. and cross Vickers St. It is reported that the laying out of the yards will be [illegible]

[illegible] year. The branch from Regina to the Inter- [illegible] to the Saskatchewan River, near Riverside, Sask. It is expected to have the branch into Battleford, Sask., ready to hand over to the operating department by July 1. [illegible] Bow River, at the [illegible] Tofield-Calgary branch is well forward, and it is expected to have the line completed and in operation by July 31. Grading will be carried on to finish contracts let in 1912, on the Battleford-Cutknife branch, and on the branch from Biggar to join the Tofield-Calgary line.

Hotel Construction.—M. Donaldson, Vice President, in an interview at Winnipeg, April 5, is reported to have said that the Winnipeg hotel will be opened Oct. 1. It is proposed to erect an hotel at Regina, Sask., in connection with the terminals there. The foundations for the hotel at Edmonton, Alta., are practically completed, and work on the superstructure is to be started at once. Nothing will be done in the way of building an hotel in the mountains this year. Plans are being prepared by F. M. Rattenbury, for an hotel at Victoria, B.C., to cost about $2,000,000. (April, pg. 179.)

Intercolonial Ry. Management.—It was reported from Ottawa, Apr. 4, that [illegible] in connection with the management of the Government railways. The present Managing Board, it is stated, will be dissolved, and the entire operation placed in charge of a General Manager, for which post, F. P. Gutelius, formerly General Superintendent, Eastern Division, C.P.R., and latterly acting on behalf of the Dominion Government [illegible] tion of the National Transcontinental Ry.

Department of Railways and Canals, Canada.

Canadian Northern Railway, Construction Betterments, Etc.

Canadian Northern Montreal Tunnel and Terminal Co.—The boring of the first two miles of the tunnel under Mount Royal, Montreal, was completed April 5 when the two headings were connected. The bore is being enlarged and lined. There is yet about 8,000 ft. of the tunnel to be bored.

The layout of the city terminus of the line on Dorchester St. is being prepared, and it is stated that the work of preparing the site will be started in June. The main station will be below the street level, and for the purpose of providing the necessary space, the entire area of the two blocks from Cathcart to Laganchetiere St. will be excavated. The buildings will be above the station. Warren and Wetmore, New York, are making the plans for the building.

Montreal-Ottawa-Port Arthur Line. The Minister of Finance stated in the House of Commons April 2, that the following sums had been paid to the Canadian Northern Ontario Ry. from the proceeds of the loans authorized by chap. 6 of the statutes of 1911 for the construction of this line:—Aug. 30, 1912, $1,780,843.97; Oct. 19, 1912, $682,748.90; Dec. 12, 1912, $1,738,520.13; Jan. 14, $820,425.69; Feb. 11, $966,929.90; Mar 20, $732,522.25; total, $6,901,991.25.

Canadian Northern Ontario Ry.—The lift bridge across the Rideau River at Jones Lock, has been completed. The lift span is 57 ft. long, weighs 270 tons, and will be operated by an electric motor.

The Board of Railway Commissioners has approved of revised location plans for the line, mileage 4.35 to 7.21 from Yonge St., through York and Scarboro tps.

By a vote of eight to four, the Toronto City Council, April 8, declined to adopt the resolution of the Board of Control, favoring the annexation by the city of the Leaside townsite, on which the C.N.O. Ry. proposes to lay out terminal yards, and build shops.

Canadian Northern Ry. The new annex of the C.N.R. elevator at Port Arthur, Ont., was put into use Mar. 23, thereby increasing the storage capacity by 3,000,000 bush.

It was reported from Winnipeg, April 5, that no contracts will be let this season for new construction on Western lines.

The Oak Point Branch is being completed from Deerfield to Sheep's Rock Point, Man., 15 miles, giving access to the gypsum mines. As soon as track laying is completed the plant will be transferred to the Grosse Isle Branch, where there is about 35 miles of track laying to be completed between Inwood and Fisherton, Man.

Tenders are being asked for the building of a six stall addition to the locomotive house at Saskatoon.

Track laying on the branch from Vegreville to Calgary, Alta., has been completed to the Bow River, and when the bridges over this river and the Elbow River in Calgary have been completed, the line will be carried right into the city.

Canadian Northern Pacific Ry.—A. T. Fraser, District Engineer, Tete Jaune Cache, B.C., is reported to have stated in Edmonton, April 4, that it was expected to have track laid to the summit, 350 miles west of Edmonton by the end of July. The end of steel on Mar. 30 was at Macleod River, the bridge across which was practically completed. Track laying would be resumed immediately the bridge was completed and would be gone on with uninterruptedly until the Athabasca River was reached, where there would be a short delay pending the completion of the bridge there.

On the section of the line which is being built from Port Mann, B.C., grading and bridge work is so far advanced that it is expected to lay the steel to Kamloops, 243 miles from Port Mann, by Dec. 31. Track has been laid 10.5 miles east of Yale, where a steel bridge is being put in. About 39% of the grading is reported completed between Kamloops and Albreda Summit, on the divide between the Upper Fraser and the North Thompson Rivers.

It is reported that active work will be started on the line between Port Mann and New Westminster, early in June. This is part of the line into Vancouver, which will include a tunnel, about four miles long, to the False Creek flats. It will take about two years to bore the tunnel. T. E. Holt, Executive Agent, Vancouver, is reported to have stated April 1, that special engineers would be engaged immediately to survey and lay out the area acquired for terminals at False Creek. (April, pg. 180.)

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

Approval of G.T.P.R. Freight Tariff.

18860. Mar. 13. Re application of the G. T. Pacific Ry., under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff, C.R.C. 15, including and cancelling C.R.C. 13, to apply between stations in British Columbia, Prince Rupert to Beament, inclusive. It is ordered that the said tariff be temporarily approved, pending the result of the Board's enquiry into rates charged generally by railway companies west of and including Crowsnest, Canmore, and Thornton.

Esquimalt and Nanaimo Freight Tariff.

18866. Mar. 14. Re application of Esquimalt and Nanaimo Ry., for an order further extending time within which it may be permitted to file a revised standard freight tariff for the Board's approval. It is ordered that the time within which the company was required to file the said tariff of maximum freight tolls be further extended for six months from the date of this order.

Interchange Track at Port Hope, Ont.

18838. Mar. 13. Re application of Town of Port Hope, Ont., for an order directing the Canadian Northern Ontario and the Grand Trunk Railway Companies to furnish interchange facilities for the handling of traffic of every description between the two companies, within the limits of Port Hope. It is ordered that the C.N.O.R., at its own expense, construct a transfer track between its railway and the G.T.R., in Port Hope; plans showing the location of the track to be filed within 60 days from the date of this order for the approval of an engineer of the Board, and the work to be completed on or before Dec. 31, 1913.

Rates on Lumber in the West.

18909. Mar. 25.—Re order 18771, Feb. 19, 1913, requiring the Canadian Pacific, Canadian Northern and Grand Trunk Pacific Railway Companies to adjust the special joint tariffs filed so that, without increasing any rates shown therein, the rates on lumber and on other commodities carried at the lumber rates, from shipping points west of and including Blairmore and Laggan, Alta., to Winnipeg, shall not be exceeded for similar or less distances from the same shipping points to points in Alberta, Saskatchewan and Manitoba; and directing that schedules to give effect to this order be published and filed to become effective by April 1, 1913; it is ordered that the effective date of the schedules be extended until April 2, 1913.

18910. Mar. 25. Re order 18738, Feb. 19, 1913, directing the Canadian Pacific, Canadian Northern and Grand Trunk Pacific Railway Companies to reduce the local and joint rates on lumber, and on other commodities carried at the lumber rates, from shipping points west of and including Blairmore and Laggan, Alta., to points east of the Red River, so as to graduate less abruptly from the Winnipeg basis to the maximum basis west of Lake Superior; and requiring the said reduced rates to be published and filed to become effective not later than April 1, 1913; it is ordered that the effective date of the reduced rates be extended until April 7, 1913.

Re Rates on Flannelette Sheets.

18944. Apr. 1.—Re application of Montreal Board of Trade for an order requiring flannelette sheets to be added to the dry goods list of the Canadian Freight Classification at the same ratings as are provided for cotton piece goods namely, l.c.l. 2nd class and c.l. 4th class; it is ordered that the application be refused.

Grand Trunk Railway Betterments, Construction, Etc.

Southern New England Ry.—In a letter to the Governor of Rhode Island, E. J. Chamberlain, President G.T.R., states that $2,500,000 has already been expended upon this project, and that to complete it will require some millions more than was originally estimated. The company offers to hand over to the state the line as it at present stands, on condition that the state will complete it and operate it on one of two plans. If the state will operate it as a Government line, running powers will be given over the New London Northern Ry., owned by the Central Vermont Ry., from Palmer to Brattleboro, Vt., so as to constitute a complete division, and a traffic agreement will be given by the C.V.R. for a division of through rates on a mileage basis with an addition for terminal charges. Under the second plan the C.V.R. will lease the completed line on a rental of 5% on the actual cost of completing it. If the state will not take any action, Mr. Chamberlain says the work will be definitely abandoned. (April, pg. 181.)

Automatic Block Signalling on C.P.R.—Automatic block signals are now in operation on the Eastern Lines between Vanceboro, Que., and Mattawamkeag; Montreal and Vaudreuil, Que.; Breslay (near Mile End) and Ste. Therese, Que.; Romford Jct. and Sudbury, Ont.; West Toronto and Bolton, Ont.; Islington and Streetsville Jct., Ont. On the Western Lines, automatic signals are being installed between:—Fort William, Ont., and Molson, Man.; Stephen and Field, B.C.; Crowsnest and McGillivray, B.C.

Reports of Accidents in Railway Shops.—The Board of Railway Commissioners has decided that it will not hereafter deal with accidents occurring in railway shops, or other manufacturing establishments the property of railway companies subject to its jurisdiction; and that such accidents need not be reported, but that all accidents occurring on the railway or in connection with the operation of the railway, including locomotive houses, etc., must be fully and promptly reported to the Board.

Transportation Appointments Throughout Canada.

[illegible] is [illegible] compiled with the greatest care, so as to ensure [illegible] error in our announcements will confer a favor by advising us.

Canadian Northern Quebec Ry., Quebec and Lake St. John Ry.—H. J. [illegible], heretofore General Car and Wrecking Foreman, C.P.R., West Toronto, Ont., has been appointed General Car Foreman, C.N.Q.R., and Q. & L. St. J.R., vice J. S. Jackson, assigned to other duties. Office, Joliette, Que.

J. S. JACKSON, heretofore General Car Foreman, Joliette, Que., has been appointed Car Foreman, at the recently opened passenger car shops at Limoilou Jct., Que.

Canadian Northern Ry.—A. S. BOISVERT, heretofore joint ticket agent, Chateau Frontenac, Quebec, has been appointed City Passenger and Steamship Agent, Quebec.

T. HOWELL, heretofore General Immigration Agent, Toronto, has been appointed Commissioner of Immigration and Colonization. Offices, Toronto, and Charing Cross, London, Eng. His head office will be in Toronto, as heretofore, and not in London, as stated in the daily press.

W. M. [illegible] Immigration Agent, Toronto, has been appointed Travelling Immigration Agent. Headquarters Toronto.

G. A. [illegible] has been appointed City Passenger Agent, Winnipeg, vice N. D. Robinson, resigned to enter private business.

A. H. [illegible] has been appointed Inspector, Sleeping, Dining and Parlor Car, Hotel and News Department, Winnipeg, vice A. B. Webb, resigned.

F. [illegible] has been appointed Travelling [illegible] Sleeping, Dining and Parlor Car, Hotel and News Department, his duties being to inspect supplies issued to all dining and private cars and to look into the care and storage of them on the cars, also to instruct chefs in the uniform preparation of dishes and proper carving of meats, etc.

F. M. ATKINS [illegible] Immigration Agent at Winnipeg.

W. STOTT, heretofore Travelling Passenger Agent, Saskatoon, Sask., has been appointed City Ticket Agent, Brandon, Man., vice F. J. Creighton, transferred.

F. J. CREIGHTON, heretofore City Ticket Agent, Brandon, Man., has been appointed City Ticket Agent, Regina, Sask., vice K. E. McLeod, transferred.

R. F. McNAUGHTON, heretofore chief clerk to District Passenger Agent, Saskatoon, Sask., has been appointed Travelling Passenger Agent, Saskatoon, Sask., vice W. Stott.

K. E. McLEOD, heretofore City Ticket Agent, Regina, Sask., has been appointed [illegible]

Canadian Pacific Ry.—[illegible] Borbridge, transferred. Office, Montreal.

T. BELL, Assistant General Advertising Agent, Montreal, has resigned, to enter private business.

J. M. BURKE, heretofore District Master [illegible] has been appointed District Master Mechanic, District 4, Eastern [illegible]

W. BORBRIDGE, heretofore District Master Mechanic, District 2, Eastern Division, and Montreal Terminals, Montreal, has [illegible] District 5, Eastern Division. Office, Smiths Falls, Ont.

[illegible] Engineer, Calgary, Alta., has been appointed Engineer Maintenance of Way, Western Lines, vice R. C. St. John. Office, Winnipeg.

W. R. BARNARD has been appointed Travelling Industrial Agent, Department of Natural Resources, Winnipeg.

T. MARTIN, heretofore Foreman of repair yard, Winnipeg, has been appointed Foreman, freight car shop, there, vice H. N. Osborne, transferred.

S. J. PIGGOTT, heretofore Assistant Foreman, repair yard, Winnipeg, has been appointed Foreman, vice T. Martin, promoted.

E. HORETZKY has been appointed Travelling Industrial Agent, Department of Natural Resources, Saskatoon, Sask.

E. F. ANDREWS has been appointed storekeeper at Estevan, Sask.

A. G. BROOKER, heretofore ticket agent, Revelstoke, B.C., has been appointed Travelling Passenger Agent, Calgary, Alta., vice J. V. Murphy, appointed District Passenger Agent, as announced in our last issue.

C. J. Smith,
[illegible] Manager, North R.

H. N. OSBORNE, heretofore Foreman, freight car shop, Winnipeg, has been appointed General Car Foreman, Ogden Shops, Calgary, Alta.

W. H. MITCHELL has been appointed Travelling Industrial Agent, Department of Natural Resources, Calgary, Alta.

[illegible] has been appointed Assistant Roadmaster, District 2, British Columbia Division, vice C. Fossett. Headquarters, North Bend.

F. YOUNG, Yardmaster at Nelson, B.C., has resigned, effective May 1. Up to the date of going to press, we have not been advised of the appointment of a successor.

J. A. CHARTERS has been appointed Agent, Sleeping, Dining and Parlor Cars and News Service, Vancouver, B.C., vice W. H. Pratt, promoted.

D. C. ALEXANDER has been appointed Travelling Industrial Agent, Department of Natural Resources, Vancouver, B.C.

[illegible] has been appointed Agent, Atlantic Steamship Lines, at Trieste, Austria.

Chicago, Milwaukee and St. Paul Ry.—H. H. STEVENSON has been appointed City Ticket Agent, New Westminster, B.C., reporting to the Commercial Agent, Vancouver.

Grand Trunk Ry.—W. FYFE has been appointed General Yardmaster, Montreal Terminals, vice R. Gilmour, appointed Superintendent, Montreal Terminals, as announced in our last issue.

J. E. CROSSLEY, heretofore Ticket Agent, Pullman Co., Bonaventure Station, Montreal, has been appointed Travelling Passenger Agent, G.T.R., reporting to District Passenger Agent, Montreal.

A. RODGER has been appointed Telephone Inspector, for the line between Brockville and Montreal, and for the terminal dispatching system, Montreal Terminals. Office, Montreal.

D. GODIN has been appointed Telephone Inspector for the line between Toronto and Brockville. Office, Belleville, Ont.

JAMES ANDERSON, heretofore chief clerk, City Passenger and Ticket Agent's office, Hamilton, Ont., has been appointed Travelling Passenger Agent, Toronto, reporting to the District Passenger Agent, there.

R. STANLEY, heretofore leading car inspector at Gravenhurst, Ont., has been appointed Car Foreman at Allandale, Ont., vice W. J. Hallett, promoted.

R. E. WAUGH, heretofore Agent at Stratford, Ont., is reported to have been transferred to the Transportation Department at Hamilton, Ont.

W. J. HALLETT, heretofore Car Foreman at Allandale, Ont., has been appointed Travelling Car Inspector, Ontario Lines, and Districts 8, 9 and 10, Eastern Lines. Headquarters, London, Ont.

H. McDOUGALL, heretofore Travelling Freight Agent, Stratford, Ont., is reported to have been appointed Agent, there, vice R. E. Waugh, transferred to Hamilton, Ont.

J. W. CANATSY, heretofore Yardmaster, Wabash Rd., Montpelier, Ohio, has been appointed General Yardmaster, G.T.R., at Black Rock, N.Y., and Fort Erie, Ont., vice J. R. Hamilton, resigned.

Intercolonial Ry.—W. McKEE has been appointed Car Foreman at St. John, N.B., vice W. Ferguson, deceased.

E. GORHAM has been appointed acting Trackmaster, with territory from Campbellton, N.B., to Ste. Flavie, Que., Moncton and Ste. Flavie District, vice J. Patterson, retired. Headquarters, Campbellton, N.B.

We are officially advised that no appointment has been made to the position of Assistant General Passenger Agent at Montreal, vacant since the death of H. A. PRICE, all correspondence in connection with the office of District Passenger Agent, Montreal, being addressed to the General Passenger and Ticket Agent, at Moncton, N.B.

Kettle Valley Ry.—W. J. McLEAN, heretofore Master Mechanic, Duluth, Rainy Lake and Winnipeg Ry., and Duluth, Winnipeg and Pacific Ry., West Duluth, Minn., is reported to have been appointed Master Mechanic, K.V.R., at Penticton, B.C.

New York Central Lines.—H. L. INGERSOLL, heretofore Assistant General Manager, New York, has been appointed Assistant to Senior Vice President, performing such duties as may be assigned to him by the Senior Vice President (A. H. Smith). Office, New York.

North Ry.—C. J. SMITH, formerly General Manager, Richelieu and Ontario Navigation Co., Montreal, has been appointed

Vice President and General Manager, North Ry., in charge of construction and operation of the line, with general jurisdiction. Office, Montreal. The North Ry. is projected to be built from Montreal to the mouth of the Nottaway River, on James Bay, Que. The Hudson Bay Steamship Co. is projected in the same connection, to develop the fishery and other resources of James and Hudson Bays, and also to carry grain, etc., between the terminus of the Dominion Government railway on Hudson Bay, and the North Ry. terminus on James Bay, thus providing a route from the northwest by water and rail to Montreal.

Pacific Great Eastern Ry.—H. N. MERRIAM has been appointed Division Engineer in charge of construction from Newport to Lillooet, B.C. Office, Lillooet, B.C.

Richelieu and Ontario Navigation Co.—See R. & O.N. Co.'s appointments on pg. 243.

Timiskaming and Northern Ontario Ry.—A. T. MOTH has been appointed Locomotive Foreman at Cochrane, Ont., vice J. Walters, resigned.

Railway Finance, Meetings, Etc.

Algoma Terminal Co.—An issue of $2,636,500 first mortgage 50 year 5% bonds has been placed on the London, Eng., market. They are guaranteed as to principal and interest by the Lake Superior Corporation. The proceeds of the issue will be expended upon the completion of terminals in Sault Ste. Marie, Ont., and elsewhere, for the Algoma Central and Hudson Bay Ry., and the Algoma Eastern Ry.

Canadian Northern Ry.—A lease of rolling stock from the Imperial Rolling Stock Co. to the C.N.R., numbered series G. 1., was deposited with the Secretary of State, Ottawa, April 3.

Dominion Atlantic Ry.—Passenger earnings for March, $27,959 04; freight earnings, $46,969.20; total earnings, $74,928.24.

Pacific Great Eastern Ry.—The issue of £1,000,000 of 4½% first mortgage debenture stock, principal and interest guaranteed unconditionally by the British Columbia Government, which was offered on the British market recently, is secured by a first mortgage on the line to be built, the rolling stock, equipment, property and franchises, exclusive of terminals and any subsidies that may be granted, and subject only to the payment of working expenses as defined by the Railway Act. The proposed line, which is to run nearly north and south from Vancouver to Fort George, about 450 miles, is intended to form the main trunk route from Vancouver northward through the centre of the province, connecting at Fort George with the G.T. Pacific Ry., with which a traffic agreement has been entered into, and it is anticipated that there will be sufficient returns to ensure profitable working from the outset. The company and its capital stock, property, etc., are exempt from all taxation, provincial or municipal, until July 1, 1926, and the amount of stock or bonds guaranteed is limited to $35,000 a mile of railway. The proceeds of the issue will be placed to the credit of the Provincial Minister of Finance, to be released on the Government's order, in periodical payments, to the company as construction is proceeded with to the Government's satisfaction.

Temiscouata Ry.—Gross earnings for Jan., $19,729.16; operating expenses, $14,877.36; net earnings, $4,851.80. Aggregate net earnings for seven months ended Jan. 31, $34,562.

Victoria and Sidney Ry.—The rights and property of the V. and S. Ry., owned by the Great Northern Ry. (U.S.A.), have been transferred to the Vancouver, Victoria and Eastern Ry. and Navigation Co. The agreement provides for the payment to the City of Victoria and to the Provincial Government $60,000 on account of interest paid on the guaranteed bonds, and the assumption by the V., V. and E. Ry. and N. Co. of the payment of the entire interest during the remaining four years, for which the guarantees run, and the payment of the principal on its becoming due.

White Pass and Yukon Route.—Earnings for two months ended Feb. 28, $39,639, against $22,840 for same period 1912.

Winnipeg and Northern Ry.—Application is being made to the Board of Railway Commissioners for a recommendation to the Governor-General in Council sanctioning an agreement for the amalgamation of the W. and N. Ry. with the Canadian Northern Ry.

Lake Erie and Northern Ry. Co's Bond Issue. Etc.

When this line was first projected it was as an electric railway and was, therefore, dealt with in Canadian Railway and Marine World's Electric Railway Department. Some months ago we were officially advised that it would be built, at least at first, as a steam railway. Now, as will be seen below, it is stated that it is to be an electric line.

A prospectus has been issued of $1,000,000 1st mortgage 5% bonds of the L.E. & N.R. Co. which are offered at 92½ and accrued interest, with a bonus of 25% in common stock. The capitalization authorized and issued is as follows:—1st mortgage 5% bonds, $1,100,000; 2nd mortgage 5% bonds, $500,000; common stock, $1,500,000. The directors are J. Muir, H. Cockshutt, L. Harris, J. Sanderson, W. P. Kellett, Brantford, Ont.; R. Thomson, Paris, Ont.; F. H. Deacon, Toronto; M. N. Todd, Galt, Ont.; G. W. Farrell, Montreal.

The following are extracts from the prospectus:—The L.E. & N.R. Co. was incorporated by the Dominion Parliament, in 1911. The company is authorized to construct a line of railway from Port Dover on Lake Erie, through Simcoe, Waterford, Brantford and Paris to Galt, on the C.P.R. main line, a total distance of 53 miles. The Dominion Government has granted a subsidy of $6,400 a mile, or a total grant of approximately $340,000.

The chief object of the road is to provide a direct route between Brantford and various other municipalities in that district to connect with the C.P.R. at Galt, in addition to providing an outlet on Lake Erie to enable the manufacturers of this district to ship their goods by water, during the open season, to the northwest. It will also greatly facilitate direct importations of raw materials from the United States, such as coal, coke, pig iron, sheet metal, etc., of which these municipalities consume very large quantities. For this purpose it is proposed to put in operation a car ferry service between Port Dover and some port on the U.S. side of Lake Erie. As an example of the strong strategic position this road will occupy, we would instance the northern division from Brantford to Galt, which will give Brantford shippers direct connections with the C.P.R., with a haul of only 20 miles. At present Brantford and Paris freight consigned to the C.P.R. must first go over the Toronto, Buffalo, and Hamilton Ry. to Hamilton, and from Hamilton over the G.T.R. lines to Toronto, a distance of 62 miles before it reaches the C.P.R. This road will further permit of the T. H. & B. Ry. accepting freight from Hamilton, Buffalo and other points for Paris, Preston, Berlin, and all points along the C.P.R. main lines east and west of Galt.

Contracts have been given out for the building of the road, and an engineering force is at work completing all necessary details to permit of an early start being made in actual construction. The character of the country through which the road passes will permit of easy curves and grades without excessive excavation. There is practically no rock cutting, and the bridges are comparatively few in number and present no engineering difficulties. It is the intention to electrify the entire system from Galt to Port Dover, and throughout a high standard of construction will be maintained, including 85 lb. rails. It is expected that the road will be in operation by the latter part of 1913.

Of the bonds the total 1st mortgage issue was sold to G. W. Farrell & Co., while the 2nd mortgage issue was purchased by the various municipalities through which the road will run in the following proportions:—Brantford $125,000 and Port Dover, Simcoe, Paris and Galt, $25,000 each; and the remaining $275,000 by the directors and other interests closely identified with the road. The proceeds of the above 1st and 2nd mortgage bonds, together with the subsidy of approximately $340,000, is all available for the construction of the road, and is sufficient to provide for the building of a line costing considerably over $30,000 a mile. In view of the favorable character of the country through which this road will pass it will be evident that more than ample allowances have been made for all requirements.

It is difficult to estimate the revenue of a new road, but the earnings of roads in adjacent territory will serve as a fair basis for comparison. The net earnings per mile of main line of the Toronto, Hamilton and Buffalo Ry. are over $6,500. The net earnings per mile of main line of the Galt, Preston and Hespeler St. Ry. running north of Galt and connecting with the C.P.R. are over $3,700. To pay interest on the 1st and 2nd mortgage bonds of the L.E. & N.R., including sinking fund, and to pay 4% dividends on the common stock would require net earnings per mile of approximately $2,800. It is unreasonable to expect that the L.E. & N.R. will equal the earnings of the T., H. & B.R. for some years at least, but there is every reason to believe in view of its stragetic position and the many favorable features surrounding it, that the L.E. & N.R. should, within a very few years, show a substantial rate of earnings on its common stock.

The directors include a number of the most prominent manufacturers in Brantford and Paris, all of whom are in a position to influence a very substantial proportion of the freight originating in that territory. A traffic agreement with the C.P.R., on completion of the road, will ensure the L.E. & N.R. the handling of all freight consigned C.P.R., inbound and outbound, along the whole district between Galt and Port Dover. As the L.E. & N.R. will serve as a very valuable feeder to the C.P.R. and will give it direct access to Brantford, the support and good will of the latter corporation is assured.

G. W. Farrell & Co., Montreal, advise us that the bonds were all sold before the prospectus was issued.

The Canadian Society of Civil Engineers has removed to its new quarters, 176 Mansfield St., Montreal.

Telegraph, Telephone and Cable Matters.

F. Kenny has been apointed local manager, C.P.R. Telegraphs, Lethbridge, Alta., vice —. Miller, resigned.

C. E. Lillie, local manager, Great North Western Telegraph Co., Quebec, Que., was recently presented with a silver tea service by the local staff, on leaving the company's service.

F. Boomer, heretofore chief operator, Ottawa, has been appointed local manager, Great North Western Telegraph Co., at Quebec, vice C. E. Lillie, resigned to enter private business.

The case against G. Hogarth, local manager, Great North Western Telegraph Co., Toronto, for allowing the company's wires to be used for the transmission of messages relating to betting, was dismissed, Apr. 2.

The Great Northwestern Telegraph Co. has reopened its offices at Beamsville, Ont., and Coteau Jct., Dunham, Little Metis, Little Metis Light House and Matane Light House, Que. It has changed the name of Cedar Hall, Que., office to Valbrillant.

The Postmaster General has given notice in the House of Commons, that he will introduce a bill to provide for more advantageous conditions for telegraphic communication between Canada and Great Britain and other parts of the British Empire. It is said that the changes will involve the establishment of a board to have charge of the landing licenses for cable lines, and other matters.

C. E. Lillie having resigned his position as Manager of the Great Northwestern Telegraph Co., Quebec, Que., F. D. Boomer, chief operator at Ottawa, has been appointed in his place. Mr. Lillie, who had been in the company's service for a number of years, has been appointed office manager of the Canadian Import Co. A silver tea service was presented to him by the Quebec staff on his leaving the service.

W. J. Rooney, Superintendent of Plant, G.T. Pacific Telegraph Co., is reported to have stated in Winnipeg, recently, that the telegraph construction for the current year, will include the following lines:—from Harte to Brandon, Man.; completion of Regina-International Boundary, and Regina-Moose Jaw branch lines, Sask.; completion of the Young-Prince Albert branch, Sask.; a portion of the Battleford section through the Cutknife District, Sask.; an extension from Biggar, Sask., and the completion of the Tofield-Calgary line, Alta. The erection of telegraph lines on the main line between Tete Jaune and the Shuswap River, B.C., is proceeding, and will keep pace with the laying of steel on the G.T.P.R.

The C.P.R. Telegraph Department has equipped two of its wires between Montreal and Toronto with the printing telegraph. Each circuit is worked duplex so that on the two wires two messages can be sent in each direction simultaneously. At the sending end, is a keyboard somewhat similar to a typewriter and all that has to be done to transmit a message is for the sending operator to depress the keys in the same way as though writing a letter or telegram on the typewriter; with the instrument is a recorder which shows exactly what keys have been depressed and whether any mistake has been made. At the receiving end the operator simply feeds in ordinary message blanks as required and the messages are printed automatically on them.

The C.P.R. Telegraph Department, in conjunction with the Commercial Cable Co., on Apr. 13, established direct communication with London, Eng., from Montreal, Toronto, Winnipeg, Vancouver, Victoria and Bamfield, B.C., where the Pacific Cable Board's station for the New Zealand cable service is situated. A number of congratulatory messages were sent from the cities mentioned, chiefly to Lord Strathcona. The telegraphic codes in use in Great Britain and on the American continent are different, but this has been got over by having a number of operators at each point conversant with the British or continental code. The question of the adoption of a universal telegraphic code is one which might with advantage be taken up by the various systems, and as all the cable companies and wireless telegraph companies, and all countries operating telegraphs, apart from the American continent, use what is termed the continental code, it might with advantage be made universal.

At the end of Dec., 1911, the Russian Postal Department ordered three wireless stations for the northeastern district of Asia. Each station was to consist of two steel towers 250 ft. high, with antennæ and counterpoises, two kerosene motor sets of 24 h.p. each, coupled to 15 wilowatt, 500 cycle, alternate current generators, a transmitter of 7.5 kilowatts capacity and receiving an auxiliary apparatus. The three stations now completed and have been taken over by the Department, which has opened them up to public service. They are located respectively at Ochotsk, Nayachan, and Novomariinsk. Ochotsk, about 1,200 miles from Vladivostok, is a small town of 300 inhabitants on the western coast of the Ochotsk Sea. Nayachan, abou 1,700 miles from Vladivostok, is in an entirely uninhabited tract at the north coast of the same sea, while Novomariinsk, about 2,200 miles from Vladivostok, is a fishing hamlet on the north coast of the Behring Sea on the mouth of the River Anadyr. Nayachan and Novomariinsk are touched twice a year by the mail steamers of the Voluntary Fleet.

The Board of Railway Commissioners has ordered telegraph companies to transmit and receive for delivery both plain and code language Japanese telegrams at code language count, maximum of ten letters a word, between points in Canada and on Canadian portions of the service in, and in connection with, transmission and receipt of such telegrams to and from inland points outside Canada, until such time as a sufficiently comprehensive dictionary, including Japanese language, is prepared and approved, it being understood that code words of more than ten letters must be counted and charged at cipher rate, viz., five letters to a word, but genuine words of more than ten letters may be used in their ordinary sense in a code message or in plain language message, and in such case shall be counted at the rate of ten letters to a word. Plain language telegrams to be composed of plain Japanese words written in Roman letters and authorized by current usage of Japanese language; code language telegrams to be constructed of words, whether genuine or artificial, written in Roman letters and formed of syllables capable of pronunciation, according to current usage of the English language; such tolls to be made effective not later than June 1. (The question as to who is to judge whether a word of more than ten letters is authorized by current usage of the Japanese language, and therefore chargeable at the rate of ten letters to a word, or whether such a word is a code word, and chargeable at the rate of five letters to a word, appears to be left open. The percentage of clerks receiving telegrams for transmission who are intimately acquainted with the Japanese language is, naturally, infinitesimal.—EDITOR.)

Among the Express Companies.

W. S. Martin has been appointed agent, Dominion Ex. Co., Portage la Prairie, Man.

P. G. Donnelly, heretofore messenger, Dominion Ex. Co., has been appointed agent at Levis, Que.

C. Dowling, heretofore agent, Dominion Ex. Co., Winnipeg, has been appointed General Agent there.

E. C. Miner, heretofore Assistant to General Agent, Canadian Ex. Co., Montreal, has been appointed General Agent, there, vice R. Murphy, resigned.

C. N. Spooner, formerly route agent, Dominion Ex. Co., Winnipeg, has been appointed Assistant Superintendent, Western Division, with office at Moose Jaw, Sask.

F. Deno, heretofore claims clerk, Winnipeg, has been appointed acting route agent, Dominion Ex. Co., Winnipeg, vice C. N. Spooner, transferred to Moose Jaw, Sask.

The annual meeting of the Canadian Ex. Co., was held recently. Following are the directors for the current year:—E. J. Chamberlin, Chairman of the Board; John Pullen, President; F. Scott, Secretary-Treasurer; M. M. Reynolds, H. Paton and W. Wainwright.

The Board of Railway Commissioners has defined the express delivery and collection limits for St. John, N.B., and has ordered that for the collection and delivery of express freight within the municipal limits of West St. John, a charge of 10c. for each single shipment of one and more packages of a gross weight of 100 lbs. gross weight or less, and 5c. for each single shipment of one or more packages of a gross weight of 500 lbs. or less, and greater than 100 lbs., in addition to the ordinary toll for rail carriage to or from the St. John railway station, may be made, such additional charge to include the ferry toll.

A press dispatch from Ottawa, Apr. 23, states that the Board of Railway Commissioners has ordered a 20% reduction in express rates in Prairie Provinces and British Columbia, with rates in the east left untouched, until the Board has obtained further information as to the working of the reductions made some time ago. The Canadian Ex. Co., it is stated, has shown a falling off in its profits, from 13.1% to 6.09% in 1912, which it is considered is due more to increased expenses than to reduction in rates. The Canadian Northern Ex. Co. made a profit of 24.7% in 1912, and the Dominion Ex. Co. also did well in the West. The companies claim that the cost of doing business in the west is greater than in the east, but the Board considers this has been unduly emphasized, and therefore orders a reduction of 20% in the standard maximum tariffs for traffic classified as merchandise, in the prairie provinces and British Columbia, the present minimum charge of 25c. not being interfered with, to become effective, July 15.

The Board of Railway Commissioners has recommended the Governor in Council to sanction an agreement made between the Canadian Northern Ry., the Midland Ry. of Manitoba, the G.T. Pacific Ry., the National Transcontinental Ry., and the Minister of Railways and Canals, providing for the running of the Midland Ry. of Manitoba's trains into Fort Garry Union Station, Winnipeg.

Electric Railway Department.

Results of the Edmonton Radial Railway's Operation.

The Edmonton Radial Ry., which is owned by the City of Edmonton, Alta., and is under the control of the city commissioners, has 30.25 miles in operation, located in and between Edmonton and Strathcona.

The following comprehensive report of the result of the operations for 1912, with proposals for changes, especially in fares, for this year, was made recently by the Superintendent, W. T. Woodroofe:—

Now that preliminary statements have been prepared for Oct., Nov. and Dec., 1912, I am able to make out a report showing the operations during the year 1912, and also the prospects during 1913. These figures are not final, but are sufficiently correct to show exactly the financial conditions existing in this department.

THE CAPITAL ACCOUNT for this department was increased in 1912 by $602,006.67, bringing the total at the end of 1912 to $1,582,453.33. This increased the capital charges against revenue, in April, 1912, from $5.372.54 to $9,147.25. A considerable amount of money appropriated by this department in 1912 was not used; it appears to me that in future it would be a good policy not to raise any money unless it is decided to proceed with the work at once. As soon as debentures are issued the department is charged with 7% interest; for instance, $60,000 were appropriated for the new car barns some years ago, and $92,000 for the high level bridge. The department has been paying 7% on these debentures since that time, although the new car barns were only started last July, and there is still a large balance in the high level bridge account.

OPERATION, 1912.—The receipts and expenses were as follows:

Month.	Receipts.	Expenses.	Profit.	Deficit.
January	$27,266.62	$33,069.77	$	$5,803.15
February	26,033.76	28,111.67	......	2,077.91
March	29,966.20	35,084.61	......	5,118.41
April	33,441.45	31,663.68	1,777.77	......
May	39,276.30	44,312.74	......	5,036.44
June	41,009.31	38,393.60	2,615.71	......
July	44,926.25	41,244.64	3,681.61	......
August	50,961.83	47,113.02	3,848.81	......
September	43,433.58	48,380.44	......	4,946.86
October	46,834.59	52,441.82	......	5,607.23
November	46,142.55	51,119.40	......	4,976.85
December	47,161.47	52,013.75	......	4,852.28
			$11,923.90	$38,419.13
				11,923.90
Total deficit				$26,495.23

Only in June, July and Aug. was a profit recorded. April cannot be considered, as an item was left out of the capital charges, which accounted for this apparent profit; the following month, when the charge was transferred, an extra large deficit was shown in consequence. The reason for there being a profit during June, July and Aug. was the fact that the receipts per car mile were very high, while the expenses per car mile remained the same. These receipts in September dropped owing to the fact that extra cars were put on and the services improved on several lines, the expenses per car mile had also been reduced, but not sufficiently to maintain the surplus shown in June, July and Aug. One important reason for the expenses keeping up since September is the fact that a large increase in wages was granted to motormen and conductors, and car repairers, on Sept. 1; this increase amounts to an average of 17%. Since this change in the wage schedule was put into effect it has increased the expenses of this department as follows:

Month.	Motormen and Conductors.	Car Repairers.
Sept.	$1,683.66	$750.00
Oct.	1,758.55	800.00
Nov.	1,837.11	1,000.00
Dec.	1,919.30	1,200.00
	$7,198.62	$3,750.00
		7,198.62
Total		$10,948.62

Another charge against this department since August has been for repairing, etc., the low level bridge; these charges aggregating $11,611.39, one-third of which is charged against this department. These two items will give you some idea as to the heavy expenses which this department is up against at the present time.

Analyzing carefully the earnings, we find that every dollar earned is expended as follows:—

Maintenance of way and equipment	14%
Operation	38%
Power charges	39%
Capital	19%
Total	110%

This shows a deficit of 10%; we therefore come to the conclusion that the receipts must be increased or the expenses reduced. Every effort is being made to cut down expenses without sacrificing an efficient service or allowing the maintenance to fall behind, but no great benefit can be expected along these lines, until the system as a whole is put into better condition. We will take each item of the expense separately, in order to find whether this portion of the expense can be cut down:—

1. Maintenance of way.—The only way these charges can be reduced is by laying permanent track in place of open track, on mud bottom, now existing. The estimates for 1913 provide for replacing all temporary track with permanent construction.

2. Maintenance of equipment can be reduced by building a new car barn (which is now being done), and installing efficient tools and labor saving devices.

3. Power charges can be reduced only by using every means to economize power; this can be done by doing away with electric heaters, cutting down the time schedule, and properly instructing motormen how to handle the controllers. The cost of production can also be reduced so that the price per k.w.h. could be cut down.

4. Capital charges can be cut down by doing only work which is absolutely necessary, and work that will reduce the maintenance charges at the same time. No capital should be raised for any work, unless it is the intention to proceed with the work immediately. Money borrowed and not used increases the capital charges.

PROSPECTS FOR 1913.—I propose to increase the capital account in 1913 by approximately $1,500,000; this expenditure is to replace all present temporary track with permanent track construction; provide permanent junctions at intersecting lines; provide sufficient rolling stock to give a good service; provide substations and a proper system of power distribution; complete the new car barns and equip them with the necessary tools; build only those extensions which are absolutely necessary, and these to be put down in permanent construction.

I have made considerable investigation into the prospects for 1913, and the following statement shows the probable receipts and expenses for 1913; this is as near as can be estimated, and is made after very careful study of this system since its inception.

In preparing this statement it is assumed that the same rates for tickets is maintained as at the present time, viz.:—cash fares, 5c. straight, 5c.; red tickets, 6 for 25c, 4 1-6c.; yellow tickets, 8 for 25c., 3⅛c.; green tickets, 12 for 25c., 2 1-12c.; blue tickets ($1 books), 4c.

You will notice from this statement that probably at the end of 1913 we will show a profit of $16,163.00; the statement shows, however, that for seven months of the year a deficit will be recorded; during the summer months, in May, June, July and Aug. a good profit will be shown, and this profit more than makes up the deficit of the remaining months, leaving a fair sized balance. It would appear from this as if the prospects for 1913 are not any too reassuring. We will possibly come out all right, but we have no reserve nor anything left over for depreciation and contingent fund. The question arises, "Is it advisable to continue in the present manner?" The cost of labor and material is advancing

Month.	Receipts.	Expenses.	Profit.	Deficit.
January	$46,000.00	$49,297.25	$	$3,297.25
February	44,000.00	47,647.25	......	3,647.25
March	50,000.00	50,747.25	......	747.25
April	55,500.00	59,067.25	......	3,567.25
May	65,500.00	60,347.25	5,152.75	
June	68,000.00	61,647.25	6,352.75	......
July	75,000.00	67,747.25	7,252.75	......
August	90,000.00	77,347.25	12,652.75	
September	73,000.00	74,267.25	......	1,267.25
October	77,500.00	76,527.25	972.75	......
November	78,000.00	79,947.25	......	1,947.25
December	80,000.00	82,247.25	......	2,247.25
			$32,383.75	$16,720.75

British Columbia Electric Railway Employes' Luncheon Club.

[illegible] for less than one week. From 100 to 125 [illegible] operations, and it is probable that the membership will grow now that the organization has been successfully launched. The management of the club is vested in a committee of five selected by the members, a representative of the company's management and a representative of the social club. The only labor employed by the club is a cook and his helper, the luncheon being arranged on the cafeteria plan, each member waiting upon himself. The result of the first week's operations was a deficit of $12, but on the second week this was turned into a balance of $6, thus demonstrating that it is possible to work out the objects for which the club was organized.

The members of the staff generally agree that the project is a good one, as the luncheon club affords the members an opportunity of securing a substantial mid-day meal at a moderate price, the food and service provided being far better for the money than it is possible to obtain at public dining places in the city. One of the best results of the luncheon club is that it brings the men who usually meet each other only hurriedly and in a business way, to the club quarters, where they meet round the dining table in social intercourse and thus become better acquainted with each other. The provision made by the club of reading room, billiard room, social hall, etc., adjoining the dining room, makes the after dinner gatherings to the various quarters [illegible]

Prohibition of Intoxicating Liquors on Electric Cars.

The Dominion Power and Transmission Co., Hamilton, Ont., which controls the Hamilton St. Ry., Hamilton and Dundas St. Ry., Hamilton Radial Electric Ry., Hamilton, Grimsby and Beamsville Electric Ry., and Brantford and Hamilton Electric Ry., has amended its bylaw regulating travel on cars by adding a clause prohibiting the drinking of intoxicating liquors. The bylaw as amended and which has been approved by the Board of Railway Commissioners and the Ontario Railway and Municipal Board, is as follows:—

[illegible] Smoking [illegible] a lighted pipe, cigar or cigarette, except while in smoking compartments provided for that purpose, or except on the three rear seats of open cars only, or expectorating [illegible] is hereby forbidden and declared unlawful, and any person found guilty of a violation of this rule shall be liable to a penalty not exceeding $5.

[illegible] hereby forbidden and declared unlawful, and any person found guilty of a violation of this rule shall be liable to a penalty not exceeding $10.

"2. Passengers other than policemen in uniform, city detectives and company officials shall not be allowed to ride on the front platform of any closed car, nor to ride on the rear platform of any closed car when there is room or space which may be occupied by them inside the car, and women or children shall not ride on the front platform or seat of any open car, and passengers refusing to comply with this rule shall be considered disorderly persons and subject to a penalty in the violation of this rule not exceeding $10, and may also, on such refusal, be ejected from or put off the car.

"3. The conductor must politely call the attention of passengers violating, or who appear to intend to violate, the last two rules herein set forth, to the provisions of the said rules and firmly request observance thereof before taking any further or other action."

British Columbia Electric Railway's Victoria-Saanich Line.

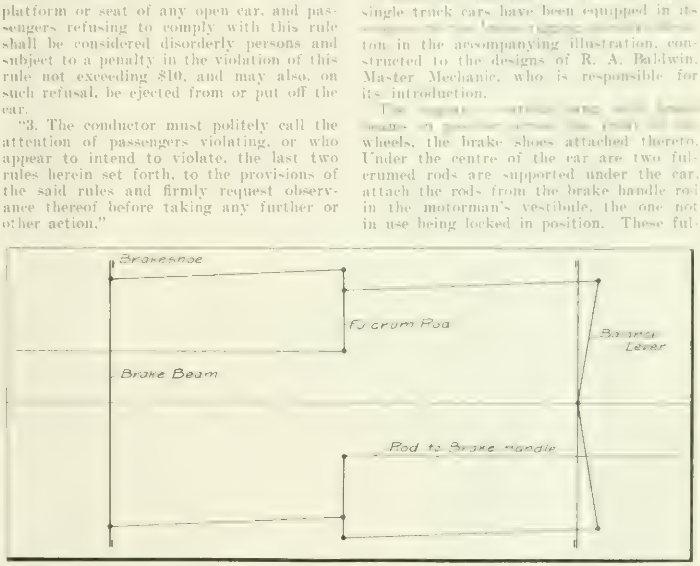
The interurban line from Victoria to Deep Cove, which will be placed in operation May 15, extends from the City of Victoria, for 23 miles to the north. It passes through the centre of the Saanich Peninsula, which is an arm of land at the south eastern corner of Vancouver Island, with the Gulf of Georgia on one side and the Saanich Inlet on the other. The district is capable of great development as an agricultural centre and also provides admirable facilities for the location of surburban homes. The Victoria press unites in stating that the opening of the district by the interurban line will do more to advance the growth of the country surrounding Victoria than could be done in any other way. The line will be the second largest interurban line operated by the B.C. Electric Ry., the longest division of the company's system being that from Vancouver to Chilliwak, 76 miles. The B.C.E.R. Co. controls several large holdings along the route of the new line, which will be developed as model town sites. It is also probable, as the dis- [illegible] route.

The rolling stock, which has been al- [illegible] posed to inaugurate the service by the op- [illegible] have been allotted for about 20 stations, located about a mile apart. Shelter struc- [illegible] provided at each of these points.

Ottawa Electric Railway Brake Rigging.

[illegible] single truck cars have been equipped in its [illegible] ton in the accompanying illustration, constructed to the designs of R. A. Baldwin, Master Mechanic, who is responsible for its introduction.

[illegible] wheels, the brake shoes attached thereto. Under the centre of the car are two fulcrumed rods are supported under the car, attach the rods from the brake handle rod in the motorman's vestibule, the one not in use being locked in position. These ful- [illegible] but not fastened in position. Rods from the ends of the brake beams attach to the other end of the fulcrum lever. One of the brake beams has mounted on its back a balance lever fulcrumed on the beam at the centre, and to the outer ends of which the rods from the central fulcrum rod attach, instead of directly to the brake beam as at the other end. By this means, a balance is maintained in the rigging, regardless of the position in which the off brake handle is locked. Its use has been most satisfactory.



Ottawa Electric Ry. Outside Hung Brake Rigging.

The New Brunswick Legislature has extended the powers granted to the St. Stephen Electric Ry. Co., in its charter, so as to enable it to generate electric power and to dispose of same for commercial purposes.

The Guelph, Ont., City Council is applying to the Ontario Legislature for authority to place the operation of its various public utilities, comprising the supply of water, gas, electric light, heat, sewage disposal, public works generally, and the Guelph Radial Ry., under a single commission.

Public Construction and Operation of Electric Railways in Ontario.

On Apr. 6, Hon. Adam Beck introduced a bill in the Ontario Legislature to provide for the construction and operation of electric railway lines in connection with the Hydro Electric Power Commission's power transmission lines. It is of such importance that it is given here in full, as follows:—

1. This Act may be cited as The Hydro Electric Railway Act.

2. In this Act, "Commission" shall mean The Hydro Electric Power Commission of Ontario. "Corporation" shall mean a municipal corporation, other than the municipal corporation of a county.

3. Whenever required by the Lieutenant-Governor in Council so to do the Commission may enquire into, examine, investigate and report upon (a) The cost of constructing and operating an electric railway, in any locality in which electrical power or energy may be supplied by the Commission under The Power Commission Act; (b) The municipalities, the inhabitants of which will be served by such railway; (c) The population of each of such municipalities as shown by the last enumeration thereof by the assessors; (d) An estimate of the probable revenue from the railway; (e) The practicability of the undertaking and its economic value to the locality to be served by it.

4. (1) A corporation or two or more corporations may, if authorized by the Lieutenant Governor in Council so to do, enter into an agreement with the Commission for the construction, equipment and operation of an electric railway to be operated by electrical power or energy supplied by the Commission. (2) The agreement may provide for, (a) The location of the line of the railway; (b) The character of the equipment and service to be furnished and the maximum tolls or fares to be chargeable thereon; (c) The proportion in which the cost of construction, equipment, maintenance and operation of the railway shall be borne by each of the corporations interested; (d) The issuing of debentures of the corporation or of each of the corporations for raising the amount of such cost; (e) The proportion of the revenue from such railway to be paid annually by the Commission to each corporation after deducting the charges hereinafter mentioned; (f) The construction of the railway upon any right of way acquired by the Commission for the transmission of electrical power or energy under The Power Commission Act and the amount chargeable to the railway by way of rental or otherwise for the use of such right of way. (3) Instead of providing for the construction and operation of the railway by the Commission, the agreement may provide for its construction by the Commission and for its operation by the corporation, or for its construction and operation by the corporation or corporations, and in either case for the supply by the Commission of the electrical power requisite for the operation of the railway on such terms and conditions as may be agreed on between the corporation or corporations and the Commission. (4) Where the railway is to be constructed and operated by the corporation or corporations, the Commission may agree with them to permit the railway to be constructed upon the right of way or other lands of the Commission on such terms and conditions as may be agreed on. (5) The agreement shall not come into effect until it has been sanctioned by the Lieutenant Governor in Council and has been approved by bylaw passed with the assent of the municipal electors of each municipality.

5. (1) The council of every corporation entering into an agreement with the Commission under this act shall annually raise and pay over to the Commission such sums as may be required by it in the construction, equipment, maintenance and operation of the railway including the costs of the supply of electrical energy to the extent and in the proportions fixed by the agreement and for that purpose may issue debentures of the corporation payable in not more than 40 years from the date of the issue thereof. (2) It shall not be necessary to obtain the assent of the electors to the passing of any bylaw for incurring a debt under this section.

6. Where the agreement provides for the construction and operation or for the operation of the railway by a corporation or by two or more corporations it shall also provide for the management of the railway and its operation by a Public Utilities Commission to be approved by the Lieutenant Governor in Council, and it shall provide as to the mode of appointing the members of the Commission and for the proportions in which each corporation shall contribute to the cost of its construction, maintenance and operation and for the proportion in which each of them shall share in the income, revenue and profits derived from the operation of the railway, and such corporation or corporations or Commission shall have the right to construct and operate the railway notwithstanding that it does not lie wholly within one or more of the municipalities, the corporations of which have entered into the agreement.

7. A Public Utilities Commission appointed under the provisions of the next preceding section shall have all the powers and perform all the duties of a Public Utilities Commission appointed under The Public Utilities Act.

8. Subject to the provisions of sec. 5, where an agreement has been entered into under sec. 4, the Commission may construct, complete, equip, maintain, and operate the railway therein provided for, and for that purpose shall have and may exercise the powers of a company incorporated by special act for the construction of such a railway under the provisions of The Ontario Railway Act, so far as the same are applicable.

9. Where land is required for any of the purposes for which land may be acquired or expropriated under The Ontario Railway Act, the Commission in respect thereof shall have the powers and shall proceed in the manner provided by The Public Works Act, where the Minister of Public Works takes land or property for the use of Ontario, and the provisions of the said act, shall, mutatis mutandis apply.

10. The Commission shall apply the revenue derived from the operation of the railway to the payment of working expenses of the railway and after payment of the same shall annually pay over the balance, if any, to the corporations, parties to the agreement in the proportions fixed thereby.

11. All sums received by the corporation or corporations shall be applied in the first place in the payment of the principal and interest of any debt incurred under the authority of this act in the manner prescribed by the Commission.

12. Secs. 68 to 97 of The Ontario Railway Act shall not apply to the Commission or to any railway constructed or operated by it.

13. Secs. 8 to 12 shall apply only where the agreement provides for the construction of the railway by the Commission.

14. No action or prosecution shall be brought against the Commission or any member thereof or any of its officers under The Ontario Railway Act without the consent of the Attorney General of Ontario.

15. Neither the Province nor the Commission nor any member thereof shall incur any liability by reason of any error or omission in any estimates, plans or specifications prepared or furnished by the Commission.

16. Every railway and the works, property and effects held and used in connection therewith, constructed, acquired, operated and maintained by the Commission under this act shall be vested in the Commission in trust for the corporations' parties to the agreement for the construction and operation of the railway.

Moose Jaw Electric Railway Finances, Extensions, Etc.

To meet expenditures for plant extensions and equipment during the past year, having in mind additional expenditures of the same nature in the immediate future, and for the purpose of providing working capital for increased operations, the directors decided recently to issue $125,000 of stock, in addition to the $500,000 previously issued, and offered the same to shareholders at $95 a share, in the proportion of one new share for every four shares held. In view of the possibility that some shareholders might not take up the new stock offered, it was decided to receive from shareholders applications for shares in addition to those they were entitled to, the result being that the issue was largely oversubscribed.

The directors have, in view of satisfactory earnings, decided to pay a quarterly dividend for this year at the rate of 6% per annum. The first payment of 1½% was made April 1.

The company has recently installed a Mirless Diesel oil engine of the enclosed type, capable of developing 465 b.h.p. at Moose Jaw's altitude, when running at 2 r.p.m. Also an interpole wound generator, 275 k.w., 550 volts no load, and 600 volts full load. The order also included one spare armature and two spare volt coils.

A large addition to the car ban which was in course of erection collapsed recently and is being rebuilt.

British Columbia Electric Railway Track Extensions.

In Victoria a line will be built from Pandora Ave., along Quadra St. to Bay St., and thence easterly to Shelbourne St., the route serving the surburban section of the city which is now rapidly developing.

In South Vancouver an extension of the track on Westminster Road nearly a mile long will be laid, provision being made for further extending the line along Westminster Road to the limits of the municipality in the future. This track will be of permanent type and will be laid in connection with permanent pavement which will be constructed this year.

Another extension to the line in South Vancouver which is planned for this year is a line connecting the South Vancouver lines with the city line, terminating at Cedar Cottage, in the extreme south eastern part of Vancouver. This line will run from Westminster Road to Cedar Cottage and will be nearly a mile long.

Electric Railway Projects, Construction, Betterments, Etc.

Amherstburg to Kingsville, Ont.—Press reports state that a United States syndicate has under consideration the construction of an electric railway along the Edison power line, from Amherstburg to Kingsville, Ont. The line would follow the Lake Erie shore through Masonic Park at Bar Point, and would serve a number of summer resorts.

Aroostook Valley Ry.—Press reports state that location surveys are being made from Washburn, Me., westerly to the International Boundary between Maine and Quebec, and that construction will be started at Washburn during the summer. This line is projected, with others in New Brunswick and Quebec, to give a short line between St. John, N.B., and Quebec. The entire project is known as the St. John and Quebec Ry., and the section of the line from St. John to Great Falls, N.B., is under construction. Power for the operation of the line in Maine will be obtained from the Maine and New Brunswick Power Co. at Aroostook Falls, Que.

Berlin and Northern Ry.—The Berlin, Ont., City Council's special committee informed the committee of the Wilmot and Waterloo townships council, that the city will not submit another bylaw to aid in the construction of the line by a guarantee of bonds and a grant of $6,000 towards the construction of a bridge. It is said that another proposal will be submitted for consideration. (Dec., 1912, pg. 622.)

British Columbia Electric Ry.—Grading on the line connecting Port Moody and Coquitlam, B.C., is practically completed. The line will be operated for some time at any rate by steam, and will be used at first to get in the machinery for the Vancouver Power Co.'s new plant.

The company's chief engineer has submitted to New Westminster City Council plans showing the work necessary to install a loop system of car operation.

Arrangements are being made for the erection of a new substation in South Vancouver at a cost of $90,000. The equipment will consist of three motor generator sets of 1,000 k.w. capacity each, and a transforming equipment of 7,000 k.w. capacity.

The company recently submitted to the Victoria City Council plans showing a number of proposed extensions. The present city and suburban system consists of 36 miles of track, of which 8.7 miles were laid last year. The extension to Saanich, 22.5 miles, has been completed, and arrangements are being made for yards and stations. (April, pg. 185.)

Calgary Municipal Ry.—The estimated expenditure on electric railway construction for the year includes $510,149 on the completion of lines, and $127,469 on sub base work on streets for further extensions. (Feb., pg. 90.)

Cape Breton Electric Co.—Press reports state that it is proposed to expend $350,000 on building a second track on existing lines, and putting in additional sidings; enlarging the car barns and adding to the power plant at Sydney; and providing an auxiliary steam plant at North Sydney, N.S. (Feb., pg. 90.)

Chestermere and Calgary Suburban Ry.—An extension of time has been granted by the Alberta Legislature for the construction of this projected electric railway. The authorized capital has also been increased from $250,000 to $750,000, and the company's bonding powers have been increased from $12,000 to $20,000 a mile. (Mar., pg. 141.)

Edmonton Radial Ry.—Plans have been approved by Edmonton, Alta., City Council for building 10 miles of electric railways in certain suburbs. These lines will be built on the local improvement plan and by private owners and the city is to be guaranteed against loss in operating them for two years. The first line to be built will be from Highlands east to Beverly Heights, about two miles. (Mar., pg. 141.)

Forest Hill Electric Ry.—The Ontario Legislature has incorporated a company with this title to build lines on Bathurst and Dundas Streets, north of Forest Hill Road, and along Forest Hill Road to St. Clair Ave., where a connection may be made with the Toronto civic car line. (April, pg. 185.)

Fredericton St. Ry.—Plans have been prepared, press reports state, for the building of a five mile electric railway to connect Fredericton, St. Marys, Gibson and Marysville, N.B. (July, 1910, pg. 584.)

Humber Valley Electric Ry.—Plans have been filed with the Ontario Railway and Municipal Board for this projected railway, which will extend from the extension of Bloor St., where it crosses Dundas St., near Islington, southerly to the Lake Shore Road, following the Humber River. The maximum gradient will be 2%, and the sharpest curve a radius of 150 ft., which will be at the subway on Queen St. The plans have been approved, and it is reported that construction will be started at once. The City of Toronto, which is interested in the development of the property to some extent, proposes to submit a bylaw to the taxpayers to secure authority to acquire the line, or to provide the money for its construction and operation as part of the city system. R. Home Smith, Toronto, is the principal promoter. (Feb., pg. 90.)

Lethbridge Municipal Ry.—The Lethbridge, Alta., City Council is considering a proposal to build an extension to No. 6 Mine, and Hardieville, two miles, during the summer. The city has $10,000 worth of material on hand, and would only require to purchase the steel rails. (April, pg. 185.)

Lethbridge Radial Tramway Co.—The Alberta Legislature has authorized the City of Lethbridge to build the following lines:—From Lethbridge to Raymond; from Lethbridge to Stafford; from Lethbridge to ten named points in Tps. 9 and 10, Ranges 20, 21 and 22, west of the 4th Meridian.

Montreal and Southern Counties Ry.—Negotiations, which have for their object the securing of a terminal station in Youville Square, Montreal, are reported to be nearly completed. With the approval of the City Council the company proposes to erect a station 70 by 300 ft., and to pave the square. (Mar., pg. 141.)

Morrisburg and Ottawa Electric Ry.—Negotiations are being carried on with the Brockville, Ont., City Council with a view of extending the projected line to that point, and building a city system. A committee of citizens has been appointed to consider the matter. J. J. Kilt, Ottawa, is President. (Mar., pg. 141.)

Niagara, St. Catharines and Toronto Ry.—The Dominion Parliament has extended the time within which the company may build the lines authorized by paragraphs b., c. and d., Sec. 1, Chap. 132 of the statutes of 1906, and by Sec. 8, Chap. 77 of the statutes of 1909.

The Board of Railway Commissioners has approved revised location plans for the extension from St. Catharines to Niagara-on-the-Lake, Ont., mileage 8.7 to 11.1. (Mar., pg. 141.)

Niagara, Welland and Lake Erie Ry.—Material is reported to be on hand for starting construction on the company's lines. The projected lines extend from Niagara Falls to Welland and Port Colborne, and thence east along the lake front to Fort Erie, Ont. Some extensions in Welland are also contemplated. T. R. Cummings is reported to have been engaged as Chief Engineer. C. J. Laughlin, Welland, Ont., is General Manager. (Feb., pg. 90.)

Ottawa Electric Ry.—Press reports state that the company proposes to construct a second track on Creighton St., between St. Patrick and Sussex Streets, 1.50 miles, to be laid with 75 lb. steel. (Feb., pg. 90.)

Ottawa, Rideau Lakes and Kingston Ry.—Following are the officers and directors for the current year:—President, N. M. Clougher, London, Eng.; directors—Hon. W. Dennis, R. H. McElroy, H. D. Ball, G. L. Dickenson. Surveys for the line are reported completed, and negotiations are said to be well advanced for financing construction. (Oct., 1912, pg. 521.)

Quebec Ry., Light and Power Co.—It is reported that the extension of the line to Limoilou, Que., will be built, now that the Drouin bascule bridge across the St. Charles River has been opened. (Sept., 1912, pg. 468.)

Regina and Moose Jaw Interurban Ry.—We are officially advised that it is intended to start construction on this projected line from Regina to Moose Jaw, Sask., 43 miles, early in the summer and to have it opened for traffic, by the fall 1915. Self generating gas electric cars will be used, and a freight and passenger business will be done. The line will pass through Grand Coulee, Pence and Belle Plain. The provisional directors are:—G. A. McCallum, W. P. Wells, J. G. Boyd, Regina, Sask.; A. Hitchcock, J. H. Grayson, Moose Jaw, Sask.; J. Friedman, Saskatoon, Sask.; W. B. Lawson, Chesterville, Ont. (Apr., pg. 185.)

Regina Municipal Ry.—The street railway committee of the Regina, Sask., City Council, is considering plans for the extension of its electric railway lines for 1914. It has been decided to build a second track on Victoria St., from Broad to Albert St., and to extend the Thirteenth Ave. line across the creek to the C.P.R. Annex. (April, pg. 185.)

St. John Ry.—The New Brunswick Legislature authorized the company to extend its lines throughout Kings county, subject to agreements being made with the highway boards of the different parishes. (Apr., pg. 185.)

St. John Suburban Ry.—The New Brunswick Legislature has incorporated a company with this title to build single or double track railway lines from the Suspension bridge at St. John, to different points in the parish of Westfield; to Spruce Lake, Loch Lomond, and from the parish of Simonds, within the city of St. John to points in the parish of Rothesay; electricity, gasoline, steam or any other motive power to be used for operating the cars. The municipal authorities of the parishes within which the company has power to build lines, may make agreements with the company granting the use of highways, bridges, etc., and such agreements shall run for 40 years. The operation of the company in St. John shall not interfere with any exclusive privilege granted to the St. John Ry., and the company is debarred from taking fares within certain areas in St. John. The company has to spend $50,000 on construction before Jan 1, 1914;

[illegible] W. Doherty, C. F. Inches, D. K. Hazen, St. [illegible]

Local press reports state that the following lines are projected under the provisions of the act:—To Loch Lomond, 10 [illegible] wick Hydro Electric Co., which is propos[illegible] Cushman is President of the Merrill Trust [illegible]

[illegible] project held in St. John, April 4, the com[illegible] being elected directors:—J. R. Graham, H. W. Cushman, M. W. Doherty, H. P. Robinson, J. M. Robinson, P. W. Thomson.

St. Stephen Electric St. Ry.—The New [illegible] company to generate electric power and to [illegible]

Saskatoon Municipal Ry.—[illegible] Sask., City Council has accepted the offer of a real estate syndicate to build a line from Saskatoon to Sutherland, by way of 8th St., and to hand the same over to the city for operation. The contract, which was signed April 10, is with the Saskatoon and Sutherland Contracting Co., and calls for the completion of the line by Aug. 15. E. Hanson, electrical engineer, prepared the [illegible]

Stratford Ry.—The Ontario Legislature has extended the time for building this line. [illegible] Northern Ry. for a [illegible] paragraph 15 of bylaw 1932, known as the "power clause," and prohibits the carrying [illegible]

Toronto and York Radial Ry.—The Ontario Legislature has authorized the com[illegible] municipal authorities interested, to build lines connecting the Metropolitan Division [illegible]

[illegible] under the franchise agreement. [illegible]

Toronto Eastern Ry.—We are officially [illegible] 1912. A branch line from the Toronto Eastern main line to the Canadian North[illegible] Whitby [illegible] and between Whitby and Pickering a little over 50%, or, on the whole line between Bowmanville and Pickering, about 65% of the grading, and the Oshawa spur, which is about 2 miles long, has been completed. The track on the Oshawa spur is practically all laid and about a mile has been laid on the Toronto Eastern main line through the [illegible] start tracklaying on the Toronto Eastern main line during May. There is very lit[illegible] more than 4 degrees, with one curve of 10 [illegible] gradient of not more than 2.7%. The formation of the country is very rolling, and [illegible] reasonable gradient at ordinary cost that the Canadian Northern Ontario Ry. is located further north.

Toronto Suburban Ry.—Work is expected [illegible] May 1 [illegible] West [illegible] Ave.

Plans have been filed showing the proposed route of the Weston-Woodbridge line, now nearing completion, from Weston into [illegible] at the intersection of Davenport and Weston Roads, through the Silverthorn Heights [illegible] C.P.R. and G.T.R. for two miles to Weston, and thence on to the Chew farm near the C.P.R.

[illegible] Lambton to Guelph at several points. Preparations are being made for putting in a subway under the C.P.R. at the Mimico River, a short distance east of Islington station, for which the Board of Railway Commissioners approved plans April 12. It is expected to get the line ready for opening as far as Cooksville by the end of summer. West of Cooksville, S. Mackenzie and A. Kee, are grading some miles in the direction of Meadowvale. The principal work, [illegible] being done directly by the general contractor, Ewen Mackenzie. The right of way is reported to have been secured for the entire distance into Guelph, although the price to be paid has not in all cases [illegible] Dec., 1912, pg. 623.

Vancouver Island Hydro Electric and Tramway Co.—Press reports state that construction will shortly be started on an electric line from Nanaimo to Nanoose, and on another from Nanaimo to Departure Bay, on Vancouver Island, B.C.

White Pass to Dawson, Y.T.—We are officially advised that the owners of the railway and steamers, etc., operated as the White Pass and Yukon Route, are not interested in any negotiations reported to be in progress for the building of an electric railway from White Pass to Dawson, Y.T. (April, pg. 186.)

Height of Electric Railway Car Steps.—The Public Service Commission, First District, New York State, considered recently various complaints received from some of the women's clubs in regard to the high step necessary in entering many of the surface cars in New York City. The following [illegible] was given: "In view of the fact that it seems unlikely that any new cars will be ordered for use in the City of New York with high entering steps rather than [illegible] steps no order need be made to [illegible] the height of steps on any such new equipment. Under the circumstances stated it seems advisable to make an order requiring the New York Railways Co. and all of the companies of the Brooklyn Rapid Transit Co.'s system, on or before Jan. 1, 1914, to reconstruct all of their closed cars for passengers, so that none of the steps will be more than 15 ins. from the ground, and requiring the New York and Queen's County Ry., the New York and Long Island Traction Co., and the Long Island Electric Ry., on or before Jan. 1, 1914, similarly to reconstruct 50% of their closed equipment; and the remainder of such closed equipment on or before Jan. 1, 1915."

Edmonton Radial Railway Co's Extensions, Betterments. Etc.

[illegible] port of W. T. Woodroofe, Superintendent, [illegible]

[illegible]

[illegible] 15 to 20 cars, which will be designed so that [illegible]

[illegible] Edmonton, Alta. We are officially advised that the following permanent track work has been decided on for this year:—

[illegible]

[illegible]

The following rolling stock will be added [illegible] semi convertible p.a.y.e. cars ordered from [illegible] 5,000 gal. sprinkler car, ordered in the U. S.; 1 line car to be built in the company's shop.

The Electric Railway Situation in Montreal.

A conference was held, April 17, between E. A. Robert, President, Montreal Tramways Co., and the City Board of Control, with respect to the best way of improving street car conditions in the city. In an interview subsequently, Mr. Robert said the interview had been satisfactory, but that until the matters which had been discussed had been considered by the directors, no announcement could be made. It was reported that the suggestions favorably considered include, in addition to the rearrangement of some existing routes, the establishment of some new routes; and the provision of additional cars. These matters refer entirely to the question of the relief of existing congestion; the question of providing for future developments being left for further discussion.

The present congestion of traffic in Montreal has been the subject of considerable discussion for some time. Three experts were engaged by three of the city newspapers to make reports. These reports have been prepared by J. P. Fox, of New York, for the Montreal Star; D. McDonald, formerly General Manager, Montreal Tramways Co., for the Montreal Herald, and A. J. Lavoie, for La Presse. The City Council referred these reports to the City Engineer, and its railway engineer, April 12, for consideration and report.

We gave on pg. 188 of our last issue a summary of J. P. Fox's preliminary report. The complete report has now been issued. It points out that the questions now at issue should be settled, before anything is done in the way of discussing a new contract. The relief of overcrowding must not be confused with other questions. The various suggestions made in the preliminary report are discussed in detail.

A. J. Lavoie, in his report, makes suggestions for the relief of congestion at the rush hours; suggests a new type of car; the double tracking of Notre Dame St.; the building of new lines so as to give additional routes, and the construction of subways, so as to make the connection between certain lines possible.

D. McDonald's report has not been made public.

Ontario West Shore Ry. Investigation.

A report by H. W. Middlemist, A.M I.C.E., of Toronto, upon the condition of the partly built O.W.S.R., was published in Canadian Railway and Marine World for April. The situation appears to be that in 1906, J. W. Moyes, of Toronto, who has on several occasions been employed by the City of Toronto, the Toronto Board of Trade, and as "an expert" on transportation questions, secured control of the line and induced the towns of Goderich, Kincardine, Ashfield Tsp. and Huron Tsp. to guarantee bonds to the extent of $400,000 to build the road. About 14 miles of line from Goderich were built and rails laid, but little or no work has been done for the balance of the distance to Kincardine. The entire $400,000 has been absorbed, and Mr. Moyes has apparently abandoned the road. Nothing was done on it last year. Mr. Moyes is said to claim that $639,000 has been spent upon the enterprise up to date.

The municipalities employed Mr. Middlemist to make a report on the cost of completing the road as intended, and what amount had been expended upon it. According to his report less than $300,000 has been put into the line.

The Ontario Railway and Municipal Board has received applications from each of the four municipalities to investigate the affairs of the company, which can be done under legislation of last session. An appointment would have been issued some time since, but Mr. Moyes' solicitors asked for some delay, it being said that he was in the Southern States. It was announced, April 16, that an appointment would shortly be taken out and the whole situation investigated by the board.

Meanwhile the company is in default in payment of interest on the bonds. To protect the interest of the municipalities a bill was introduced into the legislature April 16 to vest in trust for the municipal corporations that have guaranteed the bonds, subject to the rights of the bondholders, the interests of the company.

Halifax Electric Tramways Co. Legislation

The Nova Scotia Legislature has had under consideration for some time two bills affecting the H.E.T. Co.'s interests. The first is an application of the City of Halifax for authority to acquire the company's property and franchises on securing authority to do so from the citizens. The second part of the bill provides that the price to be offered shall be $2,980,000, being the amount of the bonded indebtedness, $600,000, and $170 a share for the common stock. In the event of this amount not being accepted by the shareholders then the price to be determined by arbitration. The third part of the bill provides for the formation of a commission to operate the railway and other properties to be required.

The second bill is an application of E. A. Robert, J. W. McConnell, W. G. Ross, F. H Wilson, Montreal; O. E. Smith, W. M. P. Webster, H. H. Smith, J. E. Wood, J. A. Neville, Halifax, N.S.; Sir Frederick Borden, Canning, N.S.; P. J. McIntosh, New York, for the incorporation of the Halifax Tramways and Power Co., having for its object the purchase, leasing or construction of tramways and street railways within the province; the development of water powers, and the distribution of electric energy for all purposes. The bill provides for the purchase of the Halifax Electric Tramway and Power Co., subject to certain conditions.

After having been discussed for some time by the Committee on Railway and Municipal Legislation, it was decided, April 16, to recommend the Legislature to read both bills that day three months; in other words, to kill them for the session.

The British Columbia Electric Railway in Burnaby Municipality.

The Burnaby Municipal Council submitted to the voters on April 26 a tram franchise bylaw in favor of the British Columbia Electric Ry. Co. The bylaw provides that the company shall construct extensions of its lines on Hastings St., east from Vancouver, and an extension of its New Westminster city lines along the North Road. The term of the franchise will be about 36 years, the general terms of the agreement being similar to the agreement under which the company now operates its systems in South Vancouver and Point Grey municipalities.

The B.C.E.R. was granted a 40 year franchise in Burnaby by the municipal council in 1909. With the passage of this measure the company built a line passing through Burnaby and connecting Vancouver with New Westminster, this line being now in operation. In 1911 a question was raised as to the validity of the company's franchise in Burnaby, because of the fact that the agreement was not ratified by the voters. The question was taken into the British Columbia courts, and last year Mr. Justice Murphy decided that the franchise was valid. Notice of an appeal from the decision of the B.C. court to the Privy Council has been given by the municipality. In the meantime negotiations were carried on which have resulted in the forming of another franchise. The passage of the measure will naturally result in the municipality abandoning its appeal to the Privy Council. Should the measure be defeated the company will press before the Privy Council for a decision that its franchise granted in 1909 is valid.

The municipality of Burnaby is developing very rapidly and the district touches both Vancouver and New Westminster, and suburban settlement for these cities is steadily advancing from either boundary. The terms of the tram agreement now proposed by the B.C.E.R. Co. would do much to assist in the development of the district.

Toronto and York Radial Railway Arbitration.

The Ontario Railway and Municipal Board delivered judgment in the arbitration between the company and the City of Toronto, Apr. 7, in the matter of the taking over by the City of the portion of the Toronto and York Radial Ry., built under the franchise granted to the Toronto and Mimico Ry. and Light Co., and situated within the city limits, together with certain land, buildings and appurtenances. The award is based on a report made to the Board at the instance of the company and the City, by W. P. Kellett, and places a value of $79,245.07 on the property to be taken over by the City. No order was made as to costs, but the City is required to pay $500 for the engineer's fee for the report, the cost of law stamps being divided between the City and the company.

Nipissing Central Railway Report for 1911-12.

The report of the operations for the year ended Oct. 31, 1912, is contained in the report of the Timiskaming and Northern Ontario Ry. Commission, by which the line is operated for the Ontario Government.

The revenue from transportation was $53,170.44, of which $52,747 were passenger fares; the miscellaneous revenue was $691.25, making a total revenue of $53,861.69. The expenditures were: Maintenance of way and structures, $4,911.82; maintenance of equipment, $2,041.07; traffic expenses, $504.96; transportation expenses, $23,583.80; general expenses, $2,785.63; total, $33,827.28. The net revenue was $20,034.41.

Traffic statistics:—Passenger car hours, 14,413; passenger car miles, 144,131; passengers carried, 723,203; average daily receipts, $145.27; average receipts per car hour, $3.69; average receipts per car mile, $0.37.

General balance sheet:—Assets, $594,523.25, made up of value of line and equipment, $186,123.74; value of North Cobalt townsite property, $252,095; working assets, $35,707.05; franchise, $120,597.46. Liabilities:—Capital stock, $530,000; working liabilities, $33,157.63; deferred credit item, $7.50; profit and loss, free surplus, $31,358.12. This latter sum is made up of the balance at Oct. 31, 1911, of $10,978.11; net revenue for 1911-12, $20,034.41; received from townsite, $345.60.

The Street Railway Situation in Toronto.

The proposal for the acquirement by the city of the Toronto Ry., which has been before the public for several years in various forms, was again revived, Apr. 17, after Mayor Hocken introduced the matter to the Board of Control, and subsequently to a special meeting of the City Council. He stated that he had reason to believe that a good opportunity had arisen for the city to purchase the Toronto Ry., and with it the Toronto Electric Light Co., and that the basis for negotiation would probably be the acquirement of the railway stock at 160, and the electric light stock at 135, which latter is the same price at which it was acquired by its present owning company. The special meeting of the council was called to authorize immediate application to the Ontario Legislature for authority under which negotiations for purchase might be carried on, and he asked the council not to attempt any discussion at the moment, as such preliminary negotiations as had been made, had not advanced sufficiently for any public good to be gained by discussion, but he hoped that on the return of Sir William Mackenzie, the President, from England, they would be completed, and a final recommendation on the matter laid before council.

A bill was immediately prepared and introduced into the Legislature the same evening, when it was given its first and second readings. Generally speaking, the bill gives the city authority to purchase the rights and interests of all companies owning or operating street or electric railways within the city limits, including real and personal property, and all the assets, rights and franchises of the Toronto Electric Light Co., and for such purpose to borrow the money by the issue of 40 year debentures without the necessity of submitting the question of the issue to the ratepayers. The debentures are to be secured by a mortgage on all the electric railway and electric light systems owned by the city, including those purchased under the authority of the bill, and the management of the systems is required to be vested in a Public Utilities Commission of not less than three nor more than five members, of whom the mayor, for the time being, shall ex officio be a member.

At a subsequent meeting of the Board of Control, it was decided to withdraw the bill, but on a special meeting of the council being called, the council declined to authorize its withdrawal, and reaffirmed its previous decision. In the meantime an objection had been raised by Hon. Adam Beck, Chairman of the Ontario Hydro Electric Commission, on the ground that the management of the properties by the city would necessitate the continuance of the power contracts between the Toronto Ry., Toronto Electric Light Co. and the Toronto Power Co., for the remainder of the term of the railway franchise, which he claimed the city could not enter into under the terms of its contract with the Hydro Electric Commission, which confines the city to the use of power supplied by the Commission.

The final reading of the bill, which was set for Apr. 21, did not take place, a [illegible] having been adopted. The original bill was almost entirely remodelled, and referred to the Private Bills Committee. A new clause was inserted providing that no agreement for the purchase of the Toronto Electric Light Co. shall be submitted to the electors until it is approved by the Ontario Hydro Electric Commission, and the Lieutenant Governor in Council, and another clause was added prohibiting th amalgamation of the T.E.L. Co.'s properties with those of the Civic Hydro Electric System. The bill was passed Apr. 23, with all reference to the Toronto Electric Light Co. eliminated, the previous legislation giving authority to purchase this company being still in force. It is thus necessary to submit two bylaws to the vote, instead of one as originally intended.

The issue of the whole matter is a subject for considerable speculation, as it is understood that should the companies actually desire to sell, the two properties, the Toronto Ry. and the Toronto Electric Light Co., must be taken over by the city together, while the legislation being promoted is to provide for submitting the taking over of the properties to the ratepayers separately. In such case, it is possible that the decision may be in favor of taking over one and discarding the other, and in that event the whole legislation may prove futile.

Following are some details of the Toronto Ry. Co. and other allied companies:—

THE TORONTO RY. CO. has an ordinary share capital of $11,000,000; first mortgage 4½% bonds of $3,059,940 redeemable in 1921, and 6% debentures of $600,000 redeemable in 1914. It owns outright two thirds, and through a subsidiary company controls the remaining one third of the issued capital stock of the Toronto Power Co.; and owns the whole of the ordinary capital stock of the Toronto and York Radial Ry. Co., and has guaranteed the last mentioned company's bonds for $1,620,000.

THE TORONTO POWER CO. has an authorized share capital of $6,000,000, of which $3,000,000 is issued and fully paid, and which is owned and controlled by the Toronto Ry. Co., and it has £2,857,670 of 4½% consolidated guaranteed debenture stock redeemable in 1941, and £349,347 of 4% debenture stock redeemable in 1918. It owns the entire capital stock of the Toronto Electric Light Co., and 96½% of the ordinary shares, and over 50% of the first mortgage bonds of the Electrical Development Co. of Ontario.

THE TORONTO ELECTRIC LIGHT CO. has an ordinary share capital of $4,000,000, owned by the Toronto Power Co., and also $1,000,000 of 4½% debenture stock redeemable in 1916.

THE ELECTRICAL DEVELOPMENT CO. OF ONTARIO has an issued share capital of $6,000,000, divided into $3,000,000 of preference shares and $3,000,000 ordinary shares, 96½% of which latter is owned by the Toronto Power Co., and there are first mortgage 5% bonds amounting to $9,052,000 redeemable in 1933.

THE TORONTO AND YORK RADIAL RY. CO. has an ordinary share issue of $2,000,000, all of which is owned by the Toronto Ry. Co., and there are $1,620,000 of 5% first mortgage bonds guaranteed by the Toronto Ry. Co.

New Rolling Stock for British Columbia Electric Railway.

The additional rolling stock which will be demanded for the B.C.E.R. Co.'s lines during this year will represent an expenditure of over $750,000. The passenger item consists of 65 passenger cars, an order for which was given the Preston Car and Coach Company during the latter part of 1912, and delivery of which is to be made during the summer. In addition there will be 16 passenger cars for city service. For its interurban lines the company will require 3 additional passenger coaches, 3 baggage and express cars and 2 combination mail cars, the latter probably being built in the company's shops from material now on hand. For the freight service there will be required 50 box cars, 30 flat cars and 25 steel dump cars. The company's plans also call for the purchase of 3 snow sweepers.

During the past month the company received two 50 ton locomotives from the Westinghouse Co., this equipment having been ordered last year. They are of the latest type, and will be used on the Fraser Valley Division of the company's lines.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Feb., $546,040; operating expenses, $346,052; net operating earnings, $199,988; renewal funds, $51,620; net earnings, $148,368; approximate income from investments, $35,000; net income, $183,368, against $473,036 gross earnings; $290,661 operating expenses; $182,375 net operating earnings; $37,935 renewal funds; $144,440 net earnings; $25,000 approximate income from investments; $169,440 net income for Feb., 1912. Aggregate gross earnings for eight months ended Feb. 28, $4,566,538; net earnings, $1,571,079, against $3,791,667 aggregate gross earnings; $1,339,531 net earnings, for same period 1911-12.

The percentage of earnings paid to the City of Vancouver for Feb., was $3,542.95, against $3,303.67 for Feb., 1912.

Cape Breton Electric Co.—Gross earnings for Feb., $26,141.44; operating expenses and taxes, $17,005.50; net earnings, $9,135.94; interest charges, $4,881.26; balance, $4,254.68; sinking and improvement funds, $1,190; balance for reserves, depreciation, etc., $3,064.68, against $26,693.29 gross earnings; $15,356.19 operating expenses and taxes; $8,337.10 net earnings; $4,495.83 interest charges; $3,841.27 balance; $1,140 sinking and improvement funds; $2,701.28 balance for reserves, depreciation, etc., for Feb., 1912. Aggregate gross earnings for two months ended Feb., 28, $57,976.87; net earnings, $23,210.88; interest charges, sinking funds, etc, $11,894.45; balance, $11,316.43, against $52,020.73 aggregate gross earnings; $19,169.23 net earnings; $11,271.66 interest charges, sinking funds, etc.; $7,897.57 balance, for same period 1912.

Lethbridge Municipal Ry.—The total earnings for March were $4,960.32. Passengers carried during the month, 117,153.

London St. Ry.—Gross earnings for March, $26,589.78; expenses, $18,531.43; net earnings, $8,058.35; deductions, $2,467.75; net income, $5,590.60. Aggregate gross earnings for three months ended Mar. 31, $76,689.59; expenses, $53,367.56; net earnings, $23,304.03; deductions, $7,139.85; net income, $16,182.18.

Montreal Tramways Co.—At a recent special meeting of shareholders the directors were authorized to issue $18,000,000 of capital stock, as and when required for the expansion of business and for new lines. In the course of a conversation, subsequently, E. A. Robert, President, is reported to have said that the first issue would probably be between $3,000,000 and $4,000,000, but no decision had been arrived at as to when such an issue would be made, much depending on the reports and estimates in course of preparation, and on any agreement which might be arrived at with the city.

An interim dividend of 5% on the paid up capital stock has been declared. It is also announced that an issue of $1,000,000 of new capital stock will shortly be made at par.

Nelson St. Ry.—The operating account for the year ended Dec. 31, 1912, shows receipts of $13,232.50, and expenditures of $17,394.42. Deducting from the latter amount the value of supplies on hand $2,900, the loss for the year was $1,261.92. The general balance sheet shows liabilities of $45,245,06, and assets of $67,158,31. Following are the directors for the current year:—J. E. Taylor, Jas. Johnstone, A. S. Herswell, G. F. Mohon, W. Dauche, W. R. Maclean, M.P.P.; C. R. Hamilton, K.C.; E. A. Crease, W. J. Meagher, Dr. W. O. Rose.

Ottawa, Rideau Lakes and Kingston Ry.—The following have been elected directors for the current ear:—N. M. Clougher, President; Hon. W. Dennis, R. McElroy, G. L. Dickenson and H. D. Ball.

The Public Service Corporation, which is a subsidiary of the Montreal Tramways Co., is arranging for the issue of $1,250,000 5% gold mortgage bonds, with a bonus of 100% of common stock. It is stated that the proceeds will be used in payment for the franchises of the Dominion Light, Heat and Power Co., and the St. Paul Electric Light and Power Co. The authorized capital stock of the Public Service Corporation is $5,000,000.

St. Thomas Street Ry.—Cash fares for March, $462.68; tickets, $1,138.75; total, $1,601.43, against $1,114.10 for Mar., 1912. Passengers carried 45,718, against 32,460 in Mar., 1912.

Toronto Ry., Toronto and York Radial Ry., and allied companies.—Gross earnings for Feb., $718,313; operating expenses, maintenance, etc., $377,483; net earnings, $340,830. against $640,246 gross earnings; $320,408 operating expenses, maintenance, etc.; $319,838 net earnings, for Feb., 1912. Aggregate gross earnings for two months ended Feb. 28, $1,495,241; net earnings, $716,603, against $1.296,356 aggregate gross earnings; $649,276 net earnings, for same period 1912.

Winnipeg Electric Ry.—Gross earnings for Feb.. $320,431; operating expenses, $177,897; net earnings $142,534, against $299,246 gross earnings; $164,942 operating expenses; $134,304 net earnings, for Feb., 1912. Aggregate gross earnings for two months ended Feb. 28, $671,928; net earnings, $294.500, against $618,680 aggregate gross earnings; $278,325 net earnings, for same period 1912.

Electric Railway Notes.

The Edmonton Radial Ry. has received a dump car from Canadian Car and Foundry Co.

The Montreal Tramways Co. has received 2 steel street car bodies, from Canadian Car and Foundry Co.

The Halifax Electric Tramway Co. has ordered six closed street cars from the Nova Scotia Car Works.

The duties of Superintendent of the Saskatoon Municipal Ry., Saskatoon, Sask., are being performed by E. Hanson, City Electrical Engineer.

The Moose Jaw Electric Ry. has recently received two semi convertible, single truck cars, equipped with Westinghouse 89 motors, etc.. from Ottawa Car Co.

The Ontario Legislature has approved of a section in the Toronto and York Radial Ry. Co.'s bill, authorizing it to operate Sunday cars on its Metropolitan Division.

The Windsor, Essex and Lake Shore Rapid Ry. has received 2 forty ton steel frame box cars, and 4 forty ton steel underframe flat cars. from Canadian Car and Foundry Co.

The Port Arthur and Fort William Electric Ry. has recently received four semi convertible, pay-as-you-enter trailer cars, 46½ ft. long over all, mounted on 27-G-1 trucks, from Ottawa Car Co.

The Dominion Power and Transmission Co., Hamilton, Ont., has received 12 double truck city cars, mounted on 27-G-1 trucks, with Westinghouse 101-B-2 motor equipment, from Preston Car and Coach Co.

The Montreal and Southern Counties Ry. has recently received four interurban cars, 50 ft. long over all, equipped with Westinghouse H.L. multiple unit control motor equipment, and Westinghouse air brakes, from Ottawa Car Co.

It was recently suggested at a meeting of the Toronto City Council that the Toronto Ry. be asked to sell annual tickets for the use of the public, and in response the General Manager stated that the rates of fares were settled by the Council at the time the franchise was granted and the company has no power to depart from them, but if the Council decided on a change the company would probably comply with the request, being influenced, of course, by the rate proposed to be charged for such annual tickets.

In what is known as the Vipond-Lovett case, now before the Quebec courts, the question of the production of a certain document connected with the formation of the Montreal Tramways Co., has been under discussion for some time. An order was made by Justice Charbonneau, early in March, that this document should be produced by E. A. Robert, President M.T.C., and Secretary Mallison of the Imperial Trust Co. Several motions have been made on the matter since, and Justice Charbonneau, April 17, made an order directing the parties to appear and "show cause why such condemnation should not be meted out to them" for disobeying the order to produce.

Personal Paragraphs.

F. D. BURPEE, Superintendent, Ottawa Electric Ry., was married in Oswego, N.Y., recently.

P. G. GOSSLER, of New York, formerly of Montreal, has been elected First Vice President of the Macon Ry. and Light Co., Macon, Ga.

T. AHEARN, President, and JAS. D. FRASER, director and Secretary-Treasurer, Ottawa Electric Ry., returned to Ottawa early in April, after a trip to Panama, etc.

JAMES ANDERSON, General Manager, Sandwich, Windsor and Amherstburg Ry., returned to Windsor, Ont.. early in April. from a trip to the Mediterranean.

J. C. GRACE, Secretary, Toronto Ry. Co., and Mrs. Grace, left Toronto for England early in April to place their daughter at school, intending to return about the middle of May.

H. LONG, heretofore Electrical Engineer, Lac du Bonnet water power generating station, Winnipeg Electric Ry., has been appointed Electrical Engineer for the company, vice —. Ross, resigned.

A. T. GOWARD, Manager British Columbia Electric Co., Victoria, B.C., was presented with a cabinet of silver by the local officials and employes of the company and its other concerns, April 11, on the occasion of his approaching marriage.

REDMOND QUAIN has been elected a director of the Ottawa Electric Ry., to fill the vacancy caused by the death of G. P. Brophy. He is a native of the city, and was one of the pioneers and one of the first directors of the old street railway there.

S. B. THOMPSON has resigned as Mechanical Superintendent, British Columbia Electric Ry., Vancouver, and has become associated with J. A. Roosevelt, formerly of the Third avenue Ry., New York, N.Y., under the firm name of Roosevelt & Thompson, to investigate and report on electric railway and light properties.

H. C. DONECKER, Secretary-Treasurer, American Electric Railway Association, has been appointed Assistant General Manager, Public Service Ry., Newark, N.J., from July 1. He will continue in charge of association matters until after the next convention.

M. F. WERTH, heretofore chief clerk to Mechanical Superintendent, British Columbia Electric Ry., Vancouver, has been appointed acting Mechanical Superintendent, vice S. B. THOMPSON, Mechanical Superintendent, resigned to enter private business.

International Transit Co's Earnings, Etc.

Following is a comparison of this company's earnings of 1911 and 1912, the figures including the operation of an electric railway in Sault Ste. Marie, Ont., and a ferry service between that town and Sault Ste. Marie, Mich:—

	1911.	1912
Gross earnings	$123,668	$143,372
Operating expenses, taxes, etc.	73,836	73,071
Net earnings	$49,832	$70,301
Bond interest	14,000	13,000
Surplus	$35,832	$57,301

The amount required for bond interest is reduced each year by $1,000 owing to an annual repayment of principal of $20.-000, the next payment of that amount being due July 1. 1913. This will then leave only $240,000 of the bonds outstanding.

Pennsylvania Rd. Electrification.—The directors have authorized the expenditure of nearly $4,000,000 for the electrification of the main line between Philadelphia and Paoli for suburban passenger traffic. The plan includes increasing the track capacity at the Broad St. station, the acquisition of all the property on Filbert St. and the release of such property to the city as may be needed for the Parkway.

Railway Electrification in England.—The electrification of the London, Brighton and South Coast Ry. Co.'s suburban railways, near London, has given excellent results in the economy and the number of passengers carried. Comparing steam and electric traction, the number of trains in and out of Victoria station in one day has risen from 496 to 739. At London Bridge the number has risen from 663 to 901. The number of passengers carried on the South London line since electrification has increased over 4,500,000 each year over that carried during the last year of steam operation. The cost of maintenance of the overhead equipment has worked out at about $107 a mile per year, and the other conditions of maintenance are stated to be equally satisfactory.

Conductor and Ticket Agent Imprisoned.—A. Collins, conductor, and J. A. Bailey, ticket clerk, at Three Rivers, Que., were sentenced at Montreal recently to nine months imprisonment for conspiracy to defraud the C.P.R. Co. After selling tickets to passengers the ticket clerk would board the train, and after Conductor Collins had taken up the tickets he returned them unpunched to the ticket clerk, who caught the first homeward bound train and resold the tickets the same day. The judge told the prisoners that they were liable for seven years imprisonment, but it being their first offence he was inclined to deal leniently with them.

Marine Department.

Coast, Lake and River Officers for 1913.

[illegible] principal navigation companies engaged in Canadian navigation for their various steam vessels and tugs for the current year, have been officially reported to Canadian Railway and Marine World by the managements. In the first column are given the names of the vessels, in the second those of the captains, and in the third those of the chief engineers:—
